If Mr. Abbott is not already a member of the Society for Psychical Research, he should be straightway elected. In this book he shows himself a clever "performer," one who is not likely to be deceived. As a performer—for that is the name given to the professional medium—he can do all the tricks of the séance; and as an observer he keeps cool. He has, indeeed, never received any of those thrilling messages which have been the joy of Mrs. Piper and her satellites; nor have any whispers from departed psychologists reached his ears. He writes chiefly of those wonders upon which the "scientific" spiritualist looks with undisguised contempt. He has been about among the mediums and explains all their devices. Sealed envelopes, slate messages, tappings, and luminous clouds have no terrors or mysteries for him. And all those who have a kind of shamefaced desire to know just what spiritualists do and how they do it will be entertained by his exposures. Even those who go full of faith to consult palmists, clairvoyants, fortune-tellers, and other modern sorcerers, will find him interesting. The lady who shudders when the prophetess gives her name and address with her eyes shut, and the gentleman who reads with avidity the letter written by his deceased mother-in-law, can here discover the *modus operandi*—and go back for more.

One of the most diverting parts of Mr. Abbott's book is concerned with fashions in spiritualism:

> As soon as the first mediums could induce the spirits of the departed to return to earth and rap on tables and furniture, the fashion rapidly spread, and mediums all over the country sprang up with exactly these same powers. . . . As soon as a leading medium spoke of his magnetic powers, all of the mediums in the country had magnetic powers, which, strange to say, could act on wood, and could also act in ways in which magnetism was never known to act. As soon as a leading medium started the fashion of having an Indian guide, all of the mediums in the country had Indian guides.

From what the author says, it may be inferred that belief in the genuineness of spirit manifestations, clairvoyancy, and other forms of magic is induced in two ways; first by the skill of the performer, and second by the inability of the victim to observe what really takes place. Even the initiated have to be on their guard to avoid being taken in. Indeed, a part of the mediums' skill consists in producing that confusion of mind which makes the visitor an easy prey. It is possible, for example, for one person to pretend to have both his hands in contact with those of another, while all the while one of them is free to fan the air, to move musical instruments about, and to strike the dupe on the face and head. Extraordinary pains are taken to prearrange the manifestations of the séance. Many of the audience-chambers of the spiritualists are fitted with elaborate contrivances — curtains, trap doors, and concealed entrances which hide or admit confederates. One medium uses "many elegant costumes, all made of the finest silk." He has one piece "consisting of twenty-one yards of the finest white French bridal veiling, which can be contained in a pint cup." This, after having been painted with a luminous fluid, brings the spirit world into the most dingy hall. And in all performances the means employed to confuse and distract the witness are varied.

Then, too, clairvoyants often have a detective system by which they learn the circumstances of their clients. When in doubt about what to say they may make assertions with a rising inflection of the voice; and in this way they get involuntary answers. The visitor will probably deny afterwards that he has made any response:

> Systems of pumping or fishing are an art with mediums, and they grow very expert at it, and do it so naturally that it takes an expert to detect that he himself is giving the medium information.

Apparently also spiritualism is a profitable business:

> A medium once told me that the public never knew half of the money that is gathered by mediums. . . . He also said that it is not the common people who are the best patrons of mediums, but doctors, lawyers, merchants, teachers, and the more intelligent class of persons.

The author's disclosures should make any unbiassed reader more than ever skeptical as to even the best authenticated stories of modern miracles. The professional medium may not earn his money honestly, but he earns it by great cleverness and industry. Men who have had a limited experience of the world are unfitted to outwit such shrewd and nimble-fingered men and women.

The Khasis. By Major P. R. T. Gurdon, with an introduction by Sir Charles Lyall. (Published under the orders of the Government of Eastern Bengal and Assam.) Illustrated. London: David Nutt.

Three years ago the Government of India ordered the preparation of a series of monographs on the more important tribes and castes of Assam. The object was to give a systematic account of the people, their manners and customs, their ethnological affinities, their laws and institutions, their religious beliefs, their folk-lore, their theories as to their origin, and their language. This volume on the Khasis is the first of the series, the author being deputy-commissioner of the district in which they dwell, as well as superintendent of ethnography in Assam. He does not attempt to write for the casual reader, but the result is, according to Sir Charles Lyall, "an important contribution to the data of anthropology."

The Khasis, numbering 176 614, are an exceptionally interesting race, because of their isolation in the midst of a great encircling population, all of whom belong to a different stock; and because of the remarkable features presented by their language and institutions. Their social organization presents one of the most perfect examples still surviving of the matriarchate, carried out with wonderful logic and thoroughness. The mother is the head and the source and only bond of union in the family. In the most primitive part of the hills she is the only owner of real property, and through her alone is inheritance transmitted. The father has no kinship with his children, who belong to their mother's clan. On marriage, it is usual for the husband to live with his wife in his mother-in-law's house, but in some of the clans he only visits his wife there:

> In Jowai, some people admitted to me that the husband came to his mother-in-law's house only after dark, and that he did not eat, smoke, or even partake of betel-nut there, the idea being that, because none of his earnings go to support this house, therefore it is not etiquette for him to partake of food or other refreshment there.

The principal deities worshipped are females, and a woman is high priestess. The sun is a woman, the moon a man, while in their language, which, so far as known, is the only member of the Mōn-Khmēr family having a grammatical gender, the feminine nouns immensely predominate.

Another remarkable custom, which prevails to this day, is that of erecting stone memorials, very similar to the menhirs and cromlechs which are found in western Europe, northern Africa, and western Asia. One of the most surprising experiences of the traveller, unprepared for the scene, is to find himself on a plateau surrounded by great groups of standing and table-stones, exactly like those at Stonehenge:

> The table-stones are always placed towards the centre of the group, generally in front of the great central menhir. These groups of stones are usually situated alongside roads or close to well-known lines of route, where they readily attract the attention of the passers-by. They do not necessarily face in any particular direction, but are to be found fronting all points of the compass. There is nothing, therefore to show that they were erected so as to face the direction of the sunrise, or of any particular planet's.

A method of divination for ascertaining the causes of misfortune and the remedies to be applied is identical with that employed by the Romans, the inspection of entrails. Another, which seems to have been known to diviners in ancient Hellas,

consists in throwing an egg violently in the middle of an "egg-breaking" board and judging by some established rules, which are given, together with a diagram of the board, the good or evil prognostics, according as the fragments lie.

Major Purdon's book leaves a pleasant impression of the people, who are cheerful, industrious, good-tempered, moral, and trustworthy. They are fond of nature:

A Khasi loves a day out in the woods, where he thoroughly enjoys himself. If he does not go out shooting or fishing, he is content to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths.

These are traits rarely found in the people of India. The author gives an interesting selection from the folk-tales, of which the Khasis possess a considerable number. A sketch of the history of the race, so far as it can be traced, their origin being still undetermined, is contributed by Sir Charles Lyall. The illustrations are colored plates, pictures of the natives, and reproductions of photographs, three of which are of the memorial stones.

Science.

Foods and Their Adulteration. By Harvey W. Wiley. Philadelphia: P. Blakiston's Son & Co. $4 net.

The mustering out of Dr. Wiley's much-talked-of "poison squad" at Washington nearly coincides with the publication of this book, which is itself to be followed, according to the publisher's announcement, by a companion volume on "Beverages." The long-fought campaign for the Pure Food law has made the name of the Agricultural Department's chief chemist one to conjure with at this country's dinner-tables. The Congressman who gave up iced tea because Dr. Wiley, in testifying before a House committee, had incidentally spoken against its use as a summer beverage was in the class with many thousands of unofficial persons. Unscrupulous packers and canners might furiously rage together, but a public, concerned as never before about its diet, continued to feel confidence in the official "food men."

In more than six hundred octavo pages, Dr. Wiley goes through the catalogue of substances used for human food, beginning with beef and ending with invalids' food, giving the chemical composition of each, the sources, methods of preparation, and the forms of sophistication against which the consumer should be on his guard. Occasionally, as in the directions for making soup stock, it touches on the field of the cook-book, and in other places on those of technical manuals, but in general it furnishes information which the person who desires, so to speak, to eat scientifically, ought to possess but rarely does.

The doctrine of *caveat emptor* has no place in the philosophy of modern food-reform. Full and accurate information for the consumer is its key-note. On this Dr. Wiley is insistent. For the use of artificial colors and preservatives he has no tolerance. Admitting the "great temptation" to use boric acid or sulphite of soda to preserve beef juice, he considers both these substances "objectionable on the score of possible injury to health." In meats he holds all preservatives "are highly objectionable because they keep meats apparently fresh while in reality changes of the most dangerous character may be going on." Even the plea of the tomato ketchup manufacturers that their wares, which are used gradually from the bottle, will spoil before it is finished, he dismisses as "not of sufficient value to warrant the exception of tomato ketchup from the ordinary regulations respecting pure food." The coloring of butter "is open to suspicion with respect to unwholesomeness." The "floating" of oysters to fatten them is "reprehensible in every respect."

On other points Dr. Wiley is more tolerant than the man in the street. Thus he calls horse-meat "wholesome and nutritious," and for the proverbially distrusted sausage has only the mildly-phrased criticism that "much which is not eaten under its own name may be found in sausage."

This is not the book of a crank, and Dr. Wiley's views regarding the future of the American food-supply are in general optimistic. Thus: "It seems quite certain that in the near future practically all the milk that is sold upon the market will be of certified quality." Of meat, he only says, "It is hoped that the new methods of inspection established by the Secretary of Agriculture will secure the desired purity of meat products." He foresees high reputation, on their own merits, for fancy cheeses of American origin. Dr. Wiley's prediction of an increased use for vegetable oils and fats in place of lard and suet is interesting to the housewife, but it is to be feared that the scientific imagination runs away with the scientist when he remarks that "now that the use of horses for draught purposes has *practically been superseded* [our italics] by the automobile and the trolley, . . . the production of real koumiss from mare's milk might become a very useful field of industry in the United States."

A series of appendices containing the texts of the pure food law and other Federal statutes relating to food products, as well as a summary of administrative decisions under these acts, including the food standards established, is a valuable feature, which will become still more valuable if a later edition should be issued after the rulings, statutes, and court decisions have been worked into a coördinated body of laws and regulations on this most important subject.

"Useful Birds and their Protection," by Edward Howe Forbush (Massachusetts State Board of Agriculture), is a large volume containing a surprising amount of information, valuable both to the ornithologist and the farmer. If the people of Massachusetts do not hereafter discriminate between useful and harmless birds, and do not benefit from the encouragement of the former class, it will be because they wilfully refuse to be advised by this competent ornithologist and entomologist. The first one hundred pages contain a thesis on the value of birds to man. Then the most useful birds of the State are taken up in respect to their usual habitat—orchard, woodland, garden, and marsh. A clear and terse description is given of each species and a brief résumé of its habits, with a full account of its feeding. This forms the most valuable part of the volume, and brings together a host of hitherto widely scattered and uncorrelated facts. Checks upon the increase of useful birds are then considered, such as man, cats, squirrels, rats, hawks, owls, shrikes, and English sparrows. Mr. Forbush accuses not only the proverbially carnivorous red squirrel, but also the gray and the chipmunk, of devouring eggs and nestlings. Evidence is furnished that cats are perhaps the greatest enemies with which our native birds have to contend. The protection of birds is the subject of the final chapter, and every phase is admirably treated. Many of the illustrations are excellent photographs of living wild birds. The style is interesting.

The physical condition of the school children of Glasgow has been the subject of a recent interesting and valuable report by the school board. It is based not only on records of physical measurement, but also on investigations as to the housing and physical surroundings of the children. For purposes of examination, seventy-three schools, with 72,857 pupils, were divided into four social grades, including the poorest and wealthiest districts of the city. The report states that at each age, from five to eighteen, the average weight and height were uniformly below the standard of the anthropometrical committee, with the exception of those in the highest grade. They were in weight practically identical with the standard, and in height a shade over the standard. "It cannot be an accident," it says, "that boys from two-roomed houses should be 11.7 pounds lighter on an average than boys from four-roomed houses, and 4.7 inches smaller. Neither is it an accident that girls from one-roomed houses are, on the average, 14 pounds lighter and 5.3 inches shorter than the girls from four-roomed houses." The conclusion is inevitable that the poorest child suffers most in nutrition and growth. This is the most extensive investigation ever undertaken in Britain as to the heights and weights of school children in primary and higher-grade schools, and the report has just been issued as a Blue-Book.

Drama.

THE CAREER OF MANSFIELD.

Richard Mansfield, who died at New London last Friday, was born on the island of Heligoland in 1857, and was educated chiefly in England. At first he was designed for the Indian Civil Service; later he turned his attention to painting, even going to the length of opening a studio in Boston. Before long he returned to England and went on the stage. His first appearance was in a little piece by Alfred Cellier, called "Charity Begins at Home," which won temporary popularity. Not long afterwards he became associated with some of the earliest successes of the Gilbert and Sullivan comic operas. Report credits him with a capital performance of Sir Joseph Porter in "Pinafore," and the Major-General in "The Pirates of Penzance." As a singer he was always remarkably effec-

tive, having a baritone voice of great power and richness, and an admirable method. After a season of obscurity and occasional privation, he secured an engagement with the London Royalty Theatre Company, appearing in a variety of parts, among which were those of M. Phillips, in "Out of the Hunt"; Herbert Elwyn, in "Dust"; the Burgomaster, in "Geneviève de Brabant"; Old Sherman, in "The Fisherman's Daughter"; Brigard, in "Frou-Frou"; Ashley Merton, in "Meg's Diversion"; and Theophilus Woolston, in "Not Registered." Then in May, 1882, he played Laurent, in "The Mascotte."

In the autumn of that year he came to America and played first Dromez in "Les Manteaux Noirs"; next Nick and Jan in Planquette's "Rip Van Winkle," and the Lord Chancellor in "Iolanthe." While the "Iolanthe" company was in Baltimore he sprained his ankle and returned to New York. It was a lucky accident, inasmuch as it gave him a chance to volunteer for the part of Baron Chevrial in "A Parisian Romance," at the Union Square Theatre, in January, 1883. After that memorable evening he steadily grew in popularity. In "Prince Karl" he found a character which long displayed some of his most attractive gifts. Other parts in which he won favor before he set out on his career as a star were those of Von Dornfield in "Alpine Roses"; Von Schnitzel, in "La Vie Parisienne"; Babolena, in "Gasperone"; Kraft, in "In Spite of All," and Baron de Mercas, in "Victor Durand."

His first tour as a star was made in 1886, when he started out with "A Parisian Romance" and "Prince Karl." In the following season he produced "Dr. Jekyll and Mr. Hyde." Theatrically, beyond question, this was a very striking performance, but it was a great belittlement, if not a positive vulgarization, of the original. In Stevenson's sketch, of course, it was only some strange and indefinable suggestion of uncanniness about Hyde that made him so repulsive, whereas Mansfield invested him with all the horrors that paint and hair and green lights could express. A more artistic performance was his André Rossini Mario de Jadot in "Monsieur" in 1887. He was then preparing for the invasion of London. After a preliminary appearance in "Jekyll and Hyde" at the Lyceum Theatre, he leased the Globe Theatre and there produced "Richard III." in a magnificent manner, so far as the scenery and costumes were concerned, although he took terrible liberties with the text. His Richard was received with scant critical praise and faint public approval. His London season, in fact, resulted in heavy loss. For this, however, he soon found compensation in his rapidly increasing fame at home.

His earliest important success after his return from England was in the "Beau Brummel" of Clyde Fitch, produced in New York May, 1890. Although his impersonation conspicuously lacked some of the essential characteristics of the exquisite of the period—notably ease of manner and artificial "graces" of deportment—it nevertheless was often exceedingly effective in its rigid individualism, its calculated insolence, and its drawling imperturbability. For many years it ranked among his most popular characterizations. His Don Juan, his Emperor Nero, and his Tittlebat Titmouse, 1891-1892, are illustrations of the laudable ambition which impelled him to undertake the most widely diversified parts without much regard to his own personal or artistic qualifications. In Arthur Dimmesdale, the hero of "The Scarlet Letter," he found a part better suited to his abilities. In 1893 he attempted Shylock in "The Merchant of Venice," avoiding failure, but falling far short of triumph. His performance was marked by unfailing intelligence and vigor, but it was feeble in tragic power when compared with the embodiment of Edwin Booth, and tame and unimaginative in contrast with the romanticism of Irving. From Shakespeare he descended to the glittering shallows of George Bernard Shaw, being one of the first to discern the theatrical possibilities of "The Arms and the Man." In Captain Bluntschli he interpreted the cynical and paradoxical humor with brilliant effect. He added nothing to his reputation, though detracting nothing from it, by his Napoleon or his Don Pedro ("King of Peru"), but his intense acting in the grim Russian drama, "The Story of Rodion, the Student," made a strong impression. Soon afterward he won another success as Dick Dudgeon in Shaw's "The Devil's Disciple."

All this time he had been steadily building up a reputation as an actor of high ambition, artistic purpose, rare intelligence, and strangely interesting if rather monotonous personality, and a manager of great liberality, wide experience, and excellent taste. His scenery was always of the best, his costumes rich and accurate, his company well-trained and fairly competent, and his orchestral music admirable. A new production by Mansfield came to be regarded as a notable theatrical incident. Thus expectation was raised to a higher pitch than usual when it was announced in 1898 that he would produce Rostand's "Cyrano de Bergerac." To the general public Mr. Mansfield's Cyrano seemed to be a source of unalloyed delight, but to more discerning observers it brought disappointment. Able as it was, it nevertheless lacked true eloquence, the real fire of passion, full nobility of pathos, and poetic elevation. It was inferior to the impersonation of Coquelin, who played the last act with genuine inspiration. Mr. Mansfield next essayed the character of Shakespeare's Henry V., with only moderate success. In this one character George Rignold, an actor of far lower intellectual calibre, greatly excelled him. In "Beaucaire" he once more exhibited his finished skill in eccentric and romantic comedy. This impersonation will always be accounted among the best of his lighter achievements. His Brutus, in "Julius Cæsar," was sadly deficient in dignity and moral elevation, and further was blurred by elocutionary faults, long habitual to him, but especially conspicuous in such a part. It was not worthy to be compared with the Brutus of either Edwin Booth or E. L. Davenport. A more notable impersonation was that of his Czar Ivan, in "Ivan the Terrible," a minute and powerful study of senile suspicion, superstition, and savagery, blended with the consciousness of despotic authority. In this the actor manifested a clear conception, finished technical skill, and indisputable emotional power, albeit of a rather low order. In 1906 he furnished another proof of his enterprise, and intelligence by producing an English version of "Le Misanthrope," a representation which was received with general favor, although it cannot be said that his own contribution to it was one of his most brilliant efforts. He followed this with a version of "Don Carlos," and then in the winter of 1906-7 put forward the elaborate representation of Ibsen's "Peer Gynt," which is said to have caused his physical breakdown.

Duffield & Co., New York, and Chatto & Windus, London, have arranged for the publication of a series to be called the Shakespeare Library, in which will be included various volumes indispensable to a thorough understanding of the author, but never before issued at reasonable prices. The library will be divided into four parts. Part first will include "The Old Spelling Shakespeare," published in forty volumes and in the orthography of the poet's own time, the text under the editorship of Dr. Furnivall; part second, The Shakespeare Classics, under the general editorship of Prof. I. Gollancz, will include the various romances, histories, plays, and poems used by Shakespeare as the originals or direct sources of his plays; part three, Shakespeare's England, will include volumes illustrative of the life, thought, and literature of England in the time of Shakespeare. A fourth part, to be called the Lamb Shakespeare for Young People, will be based on Charles and Mary Lamb's Tales, in which an attempt will be made to put into prose those passages from the plays with which the young reader should early become acquainted. The first of the volumes in the second part will be Lodge's "Rosalynde," the original of "As You Like It," edited by W. W. Greg. Other volumes to follow shortly will be Greene's "Dorastus and Fawnia," the original of the "Winter's Tale"; Brook's poem of "Romeus and Juliet," "The History of Hamlet," "The Play of King Leir and his Three Daughters," and various other source books. Among the first volumes to appear in Shakespeare's England will be "Robert Laneham's Letter," describing part of the entertainment given to Queen Elizabeth in Kenilworth Castle in 1575; Shakespeare's "Holinshed," edited by the late W. G. Boswell Stone; the Shakespeare Allusion-Book, in which the allusions originally collected by Dr. Ingleby, Miss L. Toulmin Smith, and Dr. Furnivall will be for the first time arranged in chronological order and supplemented with further material. The whole library is expected to be completed between September, 1907, and 1909.

It is now five years since the world has been talking about the new poem and play of Edmond Rostand—"Chantecler," in which animals were to speak as in the mysteries of the Middle Ages. The play was promised to Coquelin as a fit successor to "Cyrano de Bergerac." Since then Coquelin has had consecutively two Paris theatres, but he has been unable to present the new masterpiece. Stories are told of the poet's reading his work to the actor through a night, only to tear it up fastidiously in the morning. Now it is announced, semi-officially, as the result of a visit of Jean Coquelin to Rostand in his solitude at Cambo, that a contract has been signed by which "Chantecler" is to be delivered into the hands of Coquelin this coming autumn.

Music.

PLANS FOR THE OPERA.

Heinrich Conried has practically completed his plans for the winter at the Metropolitan Opera House. The season will be the longest ever attempted at the Metropolitan, beginning Monday, November 18, and lasting twenty weeks. Thursday evenings have been included in the series of regular subscription performances. The company engaged is as follows:

Sopranos—Mmes. Bessie Abott, Lina Cavalieri, Emma Eames, Geraldine Farrar, Rita Le Fornia, Olive Fremstad, Johanna Gadski, Anne Girard, Martha Leffler-Burckhard, Lucille Lawrence, Lucy Lee Call, Marie Mattfield, Berta Morena, Marie Rappold, Marcella Sembrich, Marion Weed.

Mezzo-sopranos and contraltos—Mmes. Louise Homer, Josephine Jacoby, Frida Langendorff, Kirkby-Lunn.

Tenors—Messrs. Julius Bayer, Alessandro Bonci, Alois Burgstaller, Carl Burrian, Enrico Caruso, Andreas Dippel, Heinrich Knote, George Lucas, Riccardo Martin, Giovanni Paroli, Albert Reiss, Charles Rousselière, Giuseppe Tecchi.

Baritones—Messrs. Bernard Begue, Giuseppe of Campanari, Eugene Dufriche, Otto Goritz, Adolf Muehlmann, Antonio Scottl, Franz Stiner, Riccardo Stracciari, Anton Van Rooy.

Basses—Messrs. Raffaele Barocchi, Robert Blass, Theodore Chaliapine, Marcel Journet, Vittorio Navarini, Pol Plançon.

Conductors—Messrs. S. Bovy (opera in French), Rodolfo Ferrari (opera in Italian). Aldred Hertz (opera in German), and Gustav Mahler.

Berta Morena, a dramatic soprano, has been singing with success at the Wagner festival at Munich. She has in her répertoire all the Wagner operas, as well as "Fidelio" and several operas in Italian. Martha Leffler-Burckard, from the Berlin Opera House, will be heard during the latter part of the season, as she has only a short leave of absence. Frida Langendorff, contralto, is from the Prague Opera House. Rita Le Fornia will be heard in light soprano rôles. For the German operas, Heinrich Knote will return for the first two months of the season, and will then be followed by Carl Burrian; while Alois Burgstaller will join the company in the latter part of December, and will remain until the end of the season. Enrico Caruso will sing for the entire season, and Alessandro Bonci, who was at the Manhattan Opera House last year, has also been engaged. George Lucas, who has been singing first tenor at the Paris Opéra and at Nice, will assume the rôles formerly entrusted to Jacques Bars, in addition to appearing in French and Italian opera. Riccardo Martin is a young American tenor. With the addition of Giuseppe Campanari, the list of baritones will be the same as last year. He will be heard, after an absence of several years, in his favorite parts. Among the bassi the interest will centre in Theodore Chaliapine, the Russian, who has been warmly received in Paris and Monte Carlo. Pol Plançon will come to America for the last three months of the season. Raffaele Barocchi, an excellent basso-buffo, will take the place of the late Archangelo Rossi.

Among the new productions will be "Iris," by Mascagni, in which the principal rôles will be assigned to Emma Eames and Signor Caruso. Caruso will also sing in the revival of Verdi's "Otello," in "Adrienne Lecouvreur," by Cilea, perhaps in "Andrea Chenier," and in Verdi's "Trovatore." Besides "Iris," Mme. Eames will add the rôle of Donna Anna in "Don Giovanni" to her répertoire. Boito's "Mefistofele," with Chaliapine in the title rôle, and Mme. Cavalieri or Miss Farrar, will be produced on a great scale. Chaliapine will also appear as Basilio in Rossini's "Barber of Seville," as Mephisto in Gounod's "Faust," and possibly as Leporello in "Don Giovanni." To the German répertoire will be added a completely new production of Wagner's "Der Fliegende Holländer," and, later on, under Mahler's direction, Weber's "Freischütz" and Beethoven's "Fidelio." Mme. Fremstad will sing the rôle of Isolde, and will also be ready with "Fidelio." "Die Meistersinger" will be revived early in the season. The rest of the Wagner operas, including "Der Ring des Nibelungen" and "Parsifal," will be given as usual. Mme. Gadski will appear in her usual répertoire, including Elvira in "Don Giovanni," and, it is hoped, Leonora in "Trovatore." Kreutzer's "Das Nachtlager von Granada" will, in all probability, be offered. Knote will add to his répertoire "Otello" in Italian.

The Macmillan Co. is about to publish "The Evolution of Modern Orchestration," by Louis Adolphe Coerne. The basis of this book is a thesis, which together with the orchestral score of the opera "Zenobia," was accepted by Harvard University when the degree of Ph.D was conferred on Mr. Coerne in 1905.

There will be no dearth of violinists in our concert halls the coming season. Among those expected are Fritz Kreisler, Maud Powell, Jan Kubelik, Mischa Elman, Marie Nichols, Hugo Heermann, Florizel Reuter, and Francis Macmillen.

The neglect of Massenet in New York is difficult to explain. In Paris he is far more popular than Puccini. No fewer than ninety-three performances of six of his operas were given at the Opéra Comique last season. The six operas were "La Navarraise," "Marie Magdaleine," "Griseldis," "Le Jongleur de Notre Dame," "Manon," and "Werther."

Art.

Art Primers of the Pennsylvania Museum and School of Industrial Art, Philadelphia. By Edwin Atlee Barber, A.M., Ph.D., Curator. Tin Enameled Pottery, Maiolica, Delft, and other Stanniferous Faïence; Salt Glazed Stoneware, Germany, Flanders, England, and the United States. New York: Doubleday, Page & Co. 90 cents net each.

The latest handbook of pottery usually reflects in epitome the taste of collectors of thirty years ago—a defect, if it is such, from which Dr. Barber's monographs are not free. Particularly the little work on "Tin Enameled Pottery" avoids present-day enthusiasms in favor of those which have become traditional. The stanniferous pottery of the near Orient, for example, immensely more interesting in the sight of advanced collectors than Delft, or its English imitations, is dismissed thus:

It is a well-established fact that the bricks of Babylonia and Assyria were coated with a white stanniferous enamel many centuries before the appearance of maiolica in Italy. At a later period tin enamel was in use by the Arabs, and early in the fourteenth century this method of glazing was extensively employed by the Moorish potters of Spain.

No space whatever is given to the superb creations of the Persian potters and of their contemporaries on the northern slopes of the Caucasus, although scholarly investigation has been particularly concerned of late years with this Oriental development. Mention is not made of recent controversies as to the so-called "Rhodian" enamelled pottery, which has turned out—so most scholars are convinced—to be a product of Anatolian shops and not to have been made on the island of Rhodes at all. Yet the best of this Levantine pottery, marked with conventions obviously derived from far Eastern sources, is so beautiful that it makes nearly all the productions of the potter's art in lands of western Europe—excepting perhaps some of the finest maiolica of the Italian Renaissance—seem ineffectual and unimaginative. To ignore it is to follow the habit of practically all collectors of a few years ago, and of too many collectors of to-day. Some of the books, it is true, which are cited by Dr. Barber as those to which he is especially indebted for facts presented, have similarly failed to give any adequate account of the works of artists whose art came down directly from potters contemporary with Omar Khayyám. Such a work, however, as the little handbook on "Majolika" by von Falke of the Kunstgewerbe Museum of Berlin does not evade this newer enthusiasm of the amateurs.

Within limits, then, imposed evidently by personal judgment and predilection rather than by collation of the latest judgments, Dr. Barber has prepared a safe little book. A particularly valuable portion discusses the Mexican maiolicas, regarding which many facts not hitherto published are brought out. On apparently good grounds Dr. Barber discards the theory that the presence of Oriental design in much Mexican pottery is due to an importation to this continent of Chinese potters. He contends that Oriental wares came into Mexico through the port of Acapulco, and that their designs were copied by native artists. In support of such a view it is notable that Orientalism frequently appears unexpectedly in one and another of the European applied arts. In early Italian maiolica it is not surprising to find ornamentation that is clearly derived from near or far East; but it is sometimes startling to note, around one of the realistic representations of the high Renaissance, decoration that is unmistakably Chinese.

In other respects Dr. Barber's book is judicious and accurate. Considerable space is given to Delft and to the English stanniferous potteries. These are unquestionably the wares which are of especial interest to the class of amateurs for whom a manual of this character is likely to be valuable. The numerous attempts to produce stanniferous faïence in the United States are described. The illustrations are drawn mostly from the collections of the Pennsylvania Museum, of which the author is curator; though objects from the Museum of Fine Arts, Boston; the Historical Society of Pennsylvania, the Trumbull Prime collection at Princeton University,

and the private collection of George Cuthbert Gilespie are included. The treasures of faïence, valuable but not yet judiciously weeded out, in the Metropolitan Museum of Art are not even mentioned.

The primer on "Salt Glazed Stoneware" invites less criticism on the ground of what is not comprised, because this product belongs to the countries with whose industrial arts Dr. Barber is particularly familiar. Since the invention of the process of glazing by throwing common salt into the superheated kiln immense quantities of highly fired, partially vitrified stoneware have been put upon the market by German, Flemish, French, English, and American potters. Comparatively little of it has high artistic merit—as compared with Chinese porcelains or with Persian enamelled tiles and pottery. It is more adapted to containing beer, say, than rose leaves or tea leaves; and its ornamentation, when this is worth anything at all, is in character. The English, imitative in this as in other branches of ceramic art—for their sole original achievement was the creation of Wedgwood—did not sensibly improve upon the quality of the Grès de Flandres or of the wares of Grenzhausen and Bunzlau. At the same time the potteries of Albion, in full blast for many years, have made the different varieties of salt glazed stoneware—Fulham, Nottingham, Staffordshire, and Lambeth—very well known, and, for historical reasons at least, interesting. The modern Doulton ware Dr. Barber describes with evident enthusiasm, and he names Miss Hannah B. Barlow, who draws spirited animal pictures on prosperous-looking and substantial British vases, as a close second to Rosa Bonheur.

As regards American pottery, Dr. Barber writes authoritatively, for he has given more attention to the subject than, probably, any other American. His account of the establishment of stoneware potteries in the American colonies as far back as the beginning of the eighteenth century and of recent developments of the art in a number of our cities is particularly enlightening. The tributes to the work of Charles C. Benham of Brooklyn and of Mrs. S. S. Freckelton of Chicago are well deserved.

The next volume in Doubleday, Page & Co.'s Art Primers, by Professor Barber, is "Artificial Soft Paste Porcelain." It includes the Frit Porcelain of France, Italy, and other Continental countries, and England, with a chapter on Marks.

The F. A. Stokes Company will issue this autumn "The Story of American Painting," by Charles H. Caffin. The book is to contain reproductions of 143 paintings of American artists. The same firm will publish a series entitled "Masterpieces in Color." Each volume will treat of the life and work of a painter, and will contain reproductions in color. The volumes for this autumn are on Velasquez, Reynolds, Romney, and Turner.

The comparatively neglected subject of Roman sculpture is treated by Mrs. Arthur Strong, in a volume published in this country by the Scribners. Mrs. Strong follows Wickhoff and others, for the most part, and while we detest the jargon of "illusionism," "frontalism," and the rest, in which the criticism is couched, her book will be found useful and even interesting, while it is unusually fully illustrated. Partly on account of the abundance of illustrations, the volume is much larger in bulk than its fellows, but the text is also near a hundred pages longer than the average.

W. Roberts's volume on Sir William Beechey, in the same series, is a very dull book, the text consisting of little more than an expansion of the list of works that is given at the end. The illustrations are well enough done, but the seeing of a number of Beechey's pictures together is not calculated to enhance one's estimate of his importance as an artist.

Another artist who does not gain by a collection of his works is Murillo. One can stand one Immaculate Conception, but not a dozen and a half of them, each more sickly-sweet than the others. The glory of Mr. Calvert's volume on that artist in the Spanish Series (John Lane) is that it contains reproductions of more than 165 of the Spanish painter's pictures. The result is surfeiting in the extreme.

Alfred E. Jones's handsome volume on "The Church-plate of the Diocese of Bangor" wil be regarded as distinctly encouraging by the historian and the antiquary. Judging from the descriptive list, this district can still boast of a considerable number of curious and beautiful pieces. The Pre-Reformation and Elizabethan examples are, of course, the most valuable. Among the earlier group special mention should be made of the Llandudwyn chalice, one of two still left in Wales, which escaped turning "into decent communion-cups," and the fifteenth-century Mazer bowl at the church of Clynnog in Carnarvonshire. Elizabethan chalices appear to be more rarely met with in these regions than in the diocese of St. David's or of Llandaff. The surviving examples exhibit few differences of form, but no small variety of decoration even when they are from the hand of the same artist. The volume, which is richly illustrated, has been put out by Bemrose & Sons.

The house of Alphonse Picard & Fils begins a series of complete reference books in art-history by the "Manuel d'Art Musulman," comprising Egypt, Syria, North Africa, Spain, Sicily, Persia, Turkestan, Asia Minor, Turkey in Europe, India, Birmania, and the Far East. The first volume—Architecture—is by H. Saladin, a member of the archæological commission of North Africa. After a general introduction, he takes up systematically the various schools—Syro-Egyptian, Mogreb, Persian, Ottoman, with the monuments of India, China, and the Far East. The second volume—Plastic and Industrial Arts—is by Gaston Migeon, curator at the Louvre Museum. He begins with a brief history of the Mussulman civilizations, and then takes up in succession painting and miniature, sculpture, wood carving, ivories, goldsmith's work and jewelry, coins, brass incrustation, bronzes, and iron, arms, ceramics, glass enamels, rock crystals, and engraved stones, tissues, and carpets. Each volume is 500 pages 8vo., and has about 800 illustrations, with the very moderate price per volume unbound of thirty francs. Those who know the difficulty of finding the information essential to an understanding of art-history, or even of history in general where art is concerned, will appreciate the value of such volumes. The series is to continue with three volumes on prehistoric, Celtic, and Gallo-Roman art; and others on Byzantine art by the well-known specialist, Prof. Charles Dichl; on Primitive Christian art; and two further volumes of C. Enlart's archæology of the Middle Ages, comprising furniture, industrial arts, sculpture, painting, stained glass, and iconography.

John Belcher has been president of the Royal Institute of British Architects; and he is one of the two authors of an important book published six years ago, "Later Renaissance Architecture in England," a folio with photographic plates. He has now issued a thin octavo, imported by Charles Scribner's Sons, and entitled "Essentials in Architecture: An Analysis of the Principles and Qualities to Be Looked For in Buildings." It is fully illustrated, with a photogravure frontispiece and half-tone prints, seventy-four pictures in all, of which about half are full page. The subjects are chosen from all parts of Europe and all periods since the tenth century, with at least one ancient Grecian temple to illustrate what no modern building would explain so well. The text is a brief examination of the general principles of design which the author finds in his architectural examples. "Balance and Symmetry" (p. 122) are exemplified by fig. 55, the front on the Embankment of Somerset House, London. The next plate is the east front of the Louvre, the famous colonnade; and two paragraphs of the warmest praise are given to the design of Perrault for other merits than symmetrical arrangement alone. A third plate shows Greenwich Hospital, which is announced to be "a more extended example of fine balance and symmetry." The author is stanch in his advocacy of the sound doctrines of verity, simplicity, and realism of design. He shows a half-finished steel-cage-built skyscraper as an example of what ought not to be, because violating this essential requirement of truth. The Fuller building at Twenty-third Street is shown, and we are told that it "stands condemned as pretending to be what it is not." And so the examples praised, Newgate, the Palazzo Quaratesé, the lovely renaissance narthex of Santa Maria delle Grazie, Arezzo, and the famous monument of Mastino II. della Scala, are chosen to present different forms of truthful expression. One likes particularly the author's frank advocacy of a visible tie-rod in cases where the arch cannot be solidly held by its abutments. He is inclined to denounce the devices used in the case of the Albert Memorial, where a concealed structure of iron prevents the spreading of the great arches. In these ways the book may be useful, and one has only to regret the too obvious and every-day tone of the criticism. It is an odd fault to find with the a book devoted to analysis—but one does really long for a little more subtlety, a little finer splitting of hairs, and here and there something unexpected.

The Chauchard collection of French paintings of the school of 1830 has long been an object of curiosity to art-lovers. In the July promotion of the Legion of Honor the French Government has recognized the collector's patriotic merits by

conferring on him the highest grade of the order. It is a belated recompense for saving the Angelus of Millet from its American purchasers. The occasion has been taken to publish some interesting details of the magnificent collection. It is housed at present in the owner's Paris residence on the Avenue Velasquez; but it is understood that it will eventually become national property by legacy. The collection numbers some 150 paintings of its special school. Of Millet, besides the Angelus, there is the standing shepherdess, La Bergère—knitting, with her sheep browsing behind her; the Vanneur (winnower), exhibited at the Salon of 1848; the Fileuse, a spinning woman seated by the roadside; a Petite Bergère; a notable pastel La Fermière; and finally the wonderful moonlight scene, La Rentrée des Moutons dans le Parc (a shepherd driving home his belated flock). There are not less than forty paintings by Corot, most of them masterpieces and, together, forming a complete exposition of his art. There are several Mornings and Evenings, with characteristic sky and water; a Danse des Nymphes and Danse Rustique in woodland glades; the Chevrier (goats and goat herd in a forest amid moss-grown rocks); and L'Amour Désarmé—a nude woman holding up the bow which she has taken from the pleading Cupid at her feet. Troyon has almost an equal place. Besides the numerous paintings of oxen and cows in his usual style, there is a Return from the Market and a Gamekeeper with his Dogs. Of Théodore Rousseau—*primitif* and leader of 1830—there are two forest roads—La Charrette and L'Avenue de la Forêt de l'Isle Adam—and the very fine Orage (a storm over Bas-Préau; and other important canvases of this painter, whose work is not easily accessible to students. There are good examples of Daubigny and Jules Dupré; ten paintings of the best time of Ziem (Venice and Constantinople); and, among other specimens of Diaz, the particularly noteworthy Sous-Bois (forest at Barbizon) and the picturesque sorceress Maléfice. To another group belong the Tiger Hunt of Delacroix; a Fantasia of Fromentin; good examples of Decamps; and a half-dozen superb feudal scenes of Isabey. A special list would have to be made of the works of Meissonnier—paintings, sketches, and studies. It is in the Chauchard collection that Frenchmen will have to study this master. This by no means exhausts the treasures of the collection even in painting. It is also rich in art objects, some of historic interest. There is the famous drawing of Moreau le Jeune—La Revue dans la Plaine des Sablons—bought at the Goncourt sale. And there are extremely rare series of Gobelins and Beauvais tapestries.

Finance.

THE AUTUMN TEST OF THE FINANCIAL SITUATION.

It is a tradition of the money markets that, in a year of uncertainty, September is the time when the real nature of the situation is tested. For this the sufficiently familiar reason is that the crop shipments ordinarily start on a large scale with the opening of September, and that the communities from which the crops are moved begin at that time to call heavily on their own outlying reserves of currency. A decade or more ago, the cause of what were then and are still called the interior remittances of currency was that the West, then a community ill-provided with capital, came to the Eastern banks to borrow.

Such needs are normal result of harvesting and shipping the agricultural products of the year. In the first place, the harvest transforms a vast district from a comparatively inactive trading community, with no great demand for ready cash, into the busiest part of the United States. Hundreds of thousands of laborers are employed in gathering, storing, and shipping the grain; there must, therefore, be an exceptional amount of actual currency for wages. Furthermore, in anticipation of these supplies of cash in the purses of the laborers, merchants throughout the crop country provide themselves with goods, and must have money for making small change and carrying their stocks. Behind all this stand the interior banks, which have been able, during the dull season which ends about this time, to conduct their affairs on a fairly narrow margin of reserves, but which now find it necessary to respond to expanding trade with largely increased local loans, and which are therefore compelled to add to their reserves in order to support the resultant fresh liabilities.

Thus there is no mystery about the much-discussed "harvest movement"; it is, in short, a natural flow of capital and currency to the part of the country which peremptorily needs them. The only difference now, as compared with a dozen years ago, is that the great wealth of the prosperous West, since the turn in agricultural prosperity during 1897 and 1898, has cancelled that section's debts to the East, and placed it in a position of lender rather than borrower. In other words, where, in such a year as 1890, the Western banks came to the East in September to borrow, they now send their own money to the East in the inactive seasons, leaving it on deposit with banks at New York and elsewhere, to be drawn home at harvest. The money they call for is their own. This is the condition at the present time; it explains why even the urgent demand for money in the East, and the very low level touched by New York bank reserves, cannot prevent the movement of money in quantity to the West.

A month or two ago, unquestionable uneasiness existed as to how New York could meet these calls. The New York bank position was weak, and, what was more to the point, European markets, which usually provide the capital in gold to replace currency sent West, were generally taking the attitude that the usual remittances to New York could not be spared. Had this policy been pursued, conditions during the three or four coming weeks would have been seriously embarrassing. A fortnight ago, something like panic broke out in financial London, based primarily on belief that New York would draw such quantities of gold as to place the Bank of England in an awkward position. The bank had already, with such expectations in mind, advanced its own discount rate to a much higher level than is usual in August; following this, the private banks of London started to take the unusual protective measure of refusing to discount American paper sent forward to relieve pressure on New York institutions. But at this hasty and unwise procedure the Bank of England promptly entered the breach, accepted all the bills and, in fact, taught the private bankers that caution was one thing and unreasonable timidity another. At the same time London began to realize what it had certainly not realized before—that in the markets for international trade, the United States was by no means as weak as events of the past two years had led the foreigner to imagine.

The outcome of the world's harvests, which determine largely international credit, has been remarkable in many ways. As will be remembered, there was an acute apprehension through many weeks in the early summer of an actual harvest failure in at least half a dozen countries. The upshot has been that, although our own wheat crop will certainly be much reduced from a year ago, it never-

theless will in all probability be large enough to spare a handsome surplus for export. This happens at a time when crops of Continental Europe have run so far short of normal as to increase largely the requirements from other countries. The Liverpool *Corn Trade News* not long ago figured out that, while in 1906 the wheat requirements of importing nations were 67,500,000 quarters of eight bushels, and the export supplies available were 67,680,000, at the present time requirements are 71,700,000, and supplies only 62,500,000. The bearing of these facts on American export trade—supposing even a moderate surplus from our wheat crop of 1907—is sufficiently obvious. The situation has already been reflected in the advance of wheat to a price 25 per cent. above that of a year ago—which means that, even with a heavy reduction in the export surplus, the aggregate value of our grain exports may approach, if it does not actually equal, that of 1906.

In the end, therefore, the United States would be able to command from Europe the usual remittances, even if Europe should refuse to follow the usual practice of remitting in advance through the medium of bankers' drafts. But that under such circumstances Europe would refuse the advance of capital, which in any case it would have to surrender later, is not probable. The process has begun already, and presumably it will continue a legitimate factor of relief throughout the autumn. At the same time, through the medium of our wholesale Stock Exchange liquidation during August, the burden on New York banks has been so far reduced that the surplus reserve, though still below what might be desired, stands nearly four times as high as it did a year ago, and exceeds by 50 per cent. the figures even of this date in 1905. It is with this very fortunate preparation that the markets enter the trying period of the autumn.

NEW YORK, THURSDAY, SEPTEMBER 12, 1907.

The Week.

Secretary Taft has accepted as an honor Mr. Bryan's designation, "The Great Postponer," and at Tacoma he has reiterated his belief that the Republican party will without fail revise the tariff the year after the election. Revision will be a good thing; he wants it; the country must have it. But not now. Though a great wrong is being done to the consumers, something in the very nature of revision is so dangerous that grave harm might be done were the remedy applied prior to the election. Of such stuff is always the counsel of compromisers, of men who, admitting the wrong, do not dare do right for fear of hurting somebody or something now profiting by wrong. If Mr. Taft can show no firmer fibre than this, his candidacy for the Presidency is not likely to sweep the country. "I am a party man," he declares, and his attitude on the tariff makes that fact sadly clear without his assurance. He knows the history of his party on revision. The Republicans can show enough good intentions and broken promises to repave hell.

Though not a word comes from Albany to show that Gov. Hughes is even aware that we are to have a Presidential election in 1908, strange, unreasoning politicians all over the country persist in bringing forward the name of a man who bears the aureole of no august approval, who stands for no policies but his own, who finds it unnecessary to prove that he did not filch his most popular principles from the Democrats. Now it is Gov. Floyd of New Hampshire who declares that if Gov. Hughes succeeeds in making the record of his second year in office tally with the first, New England will be strongly for him. But conservative New England is not alone. Kansas is responding with amazing warmth to the appeal of silent efficiency and independent achievement.

The result of the New York *Herald's* canvass of Congressional sentiment regarding the Philippines is astonishing in view of the pitifully small number of Republican votes which it has been possible to obtain in Congress for bills or resolutions that looked toward Philippine independence. Out of 138 Senators and Representatives of all parties, only 27 put themselves on record in favor of the retention of the Philippines. Since members of the Opposition are naturally somewhat readier than those of the majority party to air their views, one might suppose this minority to be the Republican element in the poll. On the contrary, more than half of the Republicans whose opinions are here cited oppose the retention of the Philippines. Some declare themselves ready to support any reasonable way of getting rid of our Oriental burden. "I would be in favor of getting out to-morrow if there was any honorable way of getting out," is the expression quoted from Speaker Cannon. Where the declaration for independence is qualified, it is usually by the statement that we should give the Filipinos more time to prepare for self-government. Moreover, the sentiment favorable to giving up the islands is not localized. Republicans are quoted on this side from the States of Maine, Vermont, Massachusetts, Connecticut, New York, Pennsylvania, Ohio, Indiana, Michigan, Illinois, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Colorado, and Washington. But the most remarkable revelation is that enough Republican Representatives are desirous of leaving the Philippines now, or at some future date, to hold the balance of power in the House, and, if they are willing to act with the Democrats, to outvote the Imperialists. These facts are not, of course, to be taken as indicating unanimity in regard to particular policies. The sale of the islands, which few friends of the Filipinos would consider seriously, receives more attention than the project of neutralization. But that the time is at hand for giving the Philippine cause a hearing in something more than the barren "general debate" of the House is becoming apparent.

The return of Senator Depew from Europe with his solemn talk about a third term for President Roosevelt and his evident attempt to resume his old position in the public eye serves no other useful purpose than to recall afresh the pitiful Senatorial plight of the Empire State. How long must Republicans and Democrats alike writhe under such misrepresentation as that of Platt and Depew? How much longer will the leaders of the Republican party permit it to continue? So far as Platt is concerned, no honest Republican conceals his disgust at the latest scandals in which this tottering old man has been enmeshed. And Mr. Depew need not deceive himself as to his own status. No lapse of time, no midsummer circulation of his speeches, no desperate clinging to his office, will restore to him such popularity as he once possessed. So far as actual weight in the councils of the nation is concerned, they have none. New York in all truth is without representation in the Senate. In the solution of all the great political problems of the day this commonwealth has only such influence as is wielded by Representatives in the House from the upper part of the State. The plight of the city of New York is particularly grievous; save for a couple of Republican Congressmen, it might as well have no one in Washington. To say that the Republican party is helpless, that it cannot force its Senators to get out, is the humiliating apology made for the apparent indifference of those of its leaders who still lay claim to moral standards and ideals. A petition headed by such names as those of Joseph H. Choate, Gen. Horace Porter, Seth Low, President Nicholas Murray Butler, Dr. Albert Shaw, Henry W. Taft, ex-Gov. Morton, and ex-Mayor Schieren of Brooklyn, or resolutions in local party conventions, could not fail to get beneath the skin of both Platt and Depew.

The perennial subject of desertions from the army is engaging the attention of the Acting Inspector-General, Major Galbraith. The figures of the last fiscal year have not yet been published, but there is every indication that the evil is growing rather than abating, while the number of soldiers who are buying themselves out increased greatly during 1905-1906. The Acting Inspector-General reports the most important causes of desertion as due to the constant changes among company commanders, the deterioration of the regimental spirit, tyrannical sergeants, and lack of home interest and encouragement such as help to cheer and sustain volunteer regiments. Major Galbraith urges a first enlistment of one year only, after which the soldier who was satisfied with the service could reënlist for three years. Since his opinion is the result of an exhaustive inquiry, the experiment might well be made with a few selected regiments. But a more serious fact is that few men who now serve out their enlistments think of reënlisting or of making a career of the army. So far as home ties are concerned, we name our battleships and cruisers after States, but never our regiments. In the English army, however, territorial designations are rigidly adhered to. Thus there are such historic names as "The Royal Fusiliers (City of London Regiment)," "The Royal Warwickshire Regiment," "The King's (Liverpool Regiment)," "The Manchester Regiment," "The York and Lancaster Regiment," and "The Gordon Highlanders." It by no means follows that all the enlisted men in a regiment to-day come from London or Liverpool or Warwickshire

or Lincolnshire; but the town or territorial connection is still regarded as of value. If we should follow this plan, as Major Galbraith would have us, we could assign the First United States Cavalry to New York, the Second to Massachusetts, the Fourth Infantry to Ohio, etc. Then the War Department could see that, so far as feasible, officers appointed and men enlisted from a State should go to that State's regiment. Finally, a distinctive uniform might be adopted. But after all, the problem is whether the native American can be made to soldier in time of peace as a livelihood. In our opinion, the American character being what it is, the restraints of military life and its emptiness and non-productiveness will never make a strong appeal to young Americans, save in war-time and periods of industrial depression.

The work of restoring the frigate Constitution is said to have been accomplished with exceptional success. But the Secretary to the House Naval Affairs Committee insinuates that Boston can be weaned of its love for "Old Ironsides" by receiving his solemn assurance that there is not a piece of wood the size of a toothpick in the present vessel that was in the Constitution of 1812. There are evidently two ways in which people can look at inspiring relics. Mr. Bonaparte, when Secretary of the Navy, saw no objection to using the old ship as a mark for target practice, though if she had been the original "Old Ironsides" he would doubtless have shared the reverence of the Bostonians. We think that to most people the fact that a vessel has always retained its name and individuality, even though every separate bolt and timber has been replaced once or more, is enough to carry on traditions glorious or inglorious. It is not always the authentic memorial that is most inspiring. The original Declaration of Independence is a sheet of blank parchment, Perry's unreconstructed flagship, the Niagara, is, we believe, a knot of timbers discernible at the bottom of Lake Erie. But Hull and Stewart would recognize in the Constitution of 1907 the ship whose decks they once trod, and that ought to be enough to satisfy our generation.

Mark Twain has declined to stand at the wheel of the steamboat which brings President Roosevelt to the Waterways Convention at Memphis next month. The presence of this former pilot was only intended, however, as a mere incident of the project for interesting the rest of the country in a deep waterway from the Great Lakes to the Gulf. Half a dozen States directly interested are still smarting with their grievance against the Congress which adjourned last March without giving them the appropriation they asked. The plan is of just the sort to stimulate the imagination. The trade of the entire west coast of South America, according to John Barrett, director of the Bureau of American Republics, belongs to the Middle Western States, if only the Lakes-to-Gulf waterway is completed in time to supplement the Panama Canal; "otherwise it will be for Japan, Germany, and England." Western river cities are looking forward with the utmost complacency to the time when transatlantic steamships shall regularly load and unload cargoes at their wharves. There is, we believe, no other engineering project now under way so costly as the construction of the proposed inland waterway. A great amount of Congressional inertia remains to be overcome, but the promoters doubtless feel that they will never have a better opportunity to overcome it than now when Theodore Burton, who so long counselled slow progress on the Mississippi work, is at last to retire from the Rivers and Harbors Committee chairmanship.

On the Pacific Coast no form of Saturday night and Sunday diversion can compare in popularity with the baiting of Asiatic laborers. Vancouver, in British Columbia, has now given evidence of a determination on the part of its citizens not to let San Francisco and Bellingham, Wash., retain their laurels unchallenged; and it must be admitted that for a mere beginning the expulsion of 2,000 Chinese from their homes is not a bad showing. Great Britain's difficulties in this matter of growing conflict between her colonies and her Asiatic subjects and allies continue to increase. Australia will not admit either Hindus or Japanese. Canada seems to be ready to go a step further and adopt rough-and-ready methods of restricting immigration. Probably the Chinese were the only victims of Saturday's rioting, because, as we are told, of extra exertion on the part of the police to protect the Japanese quarter. Had an attack been delivered on the latter, the British Government might find it hard to allay the irritation of Japan. As it is, the famous Anglo-Japanese alliance is showing signs of strain, and western Canada only has to keep up its agitation by word and deed to place Great Britain in the same awkward situation with ourselves in regard to that Empire.

The action of the Interborough-Metropolitan directors in passing the dividend on the $45,000,000 preferred stock should have caused no surprise. When this so-called merger of the subway and street railway lines of New York City was put through in January, 1906, every vicious expedient known to modern finance was adopted in the process. Among these interesting devices was gross overcapitalization of the property as a whole, and the promising to the preferred stock of a "cumulative dividend" which there was no reasonable prospect that the company could earn. A company which fixes a cumulative rate higher than its earning capacity has a burden of charges rolling up, year by year, and is almost invariably forced to reorganize its scheme of capitalization. In one notable instance, that of the United States Leather Company, an 8 per cent. cumulative preferred stock, issued in 1893, never paid more than 6, and often less. By 1905 41½ per cent. in back dividends had accumulated, and the whole enterprise had to be reorganized through issue of bonds and scaling down of dividends. As for the Interborough-Metropolitan, the mere scratching of the surface by the Public Service Commission has already established *prima facie* evidence of something so close to embezzlement that it will be difficult to keep the matter out of the criminal courts. The complacent testimony of its officers that the Metropolitan's books, covering this critical period, were sold as junk, will hardly help the suspected parties. It is a highly appropriate irony of events by which the very expedient of 1906, through which these people hoped to escape the light of day, is bringing their exploits into publicity and the courts.

British domestic politics of late have been absorbing enough to withdraw public attention from the far-reaching measures which the Government has been engaged upon with regard to the unrest in India. Advance reports of the contents of the Anglo-Russian agreement, which has been or is about to be concluded, make it practically certain that the two Powers have entered into an arrangement which tends to remove England's chronic anxiety about the northwestern frontier of India. Within the peninsula great reforms are at hand. A document issued by the India Office in the last days of August announces the impending creation of an Imperial Advisory Council, "which, without impeding the free action of the Executive Government of India in the general conduct of affairs, would in some degree associate the great ruling chiefs and territorial magnates of British India with the Governor-General in the guardianship of common and Imperial interests." Provincial advisory councils are to be created for the discharge of analogous functions within narrower limits. The Imperial Council is to consist of about sixty members for the whole of India, including some twenty native chiefs. In the provincial councils the great and small landowners and the professional classes will be represented. In addition to these new bodies, the existing Indian and provincial legislative councils are to be ex-

tended, in what precise manner it is not yet stated, but probably in a direction that shall result in giving the native population a far more important influence than at present. The leaders of the popular movement will not be satisfied with these concessions, inasmuch as their aspirations reach towards a parliamentary form of government, if not complete independence. Even of the former, however, there can be little hope, in view of Mr. Morley's declaration that the Government of India "is, and must inevitably remain, absolute and personal."

President Castro of Venezuela characterizes as "an insult cast in the face of the smaller nations," the proposal to constitute the international prize court and arbitration court on a basis of graduated representation. He says:

> The nations in this case must not be classified by appearances, as their standing as free, sovereign, and independent nations makes them equal, one with the other.

Passing by the fact that at the time of the boundary dispute Venezuela was very willing to recognize our Government's claim to superiority by letting us espouse her cause as that of an inferior nation, there is still excellent material on this continent for an answer to Castro's argument. The equality of the great and small States is one of the postulates of the American Union. Nevada and New York are equal in the Senate, and sovereign within their fields. But that does not mean that their influence is equal in the affairs which they undertake jointly. Even aside from the House of Representatives, where the differences of population are expressly recognized, the greater States make their superior importance felt. In practice, our Supreme Court, for example, is constituted almost exactly on the plan suggested for the new Hague tribunals. Some of the larger States have been almost continuously represented on the Supreme Bench, while the majority have furnished a justice only at intervals, if at all. If that plan is accepted without protest by States which were, in the beginning, at least, intensely jealous of their privileges, it is hard to see a burning wrong in giving the great Powers rather more than their share of places in a court that will deal largely with causes of a kind which the smaller nations are unlikely to bring up at all.

Morocco is getting very much into the condition of a Donnybrook Fair, with Moors knocking each other's heads, and France as the police constable who will ultimately gather the rioters in to receive a sentence of so much indemnity and so many days—or years—under French occupation. There is the Sultan at Fez, there is the Sultan lately proclaimed at Marakesh in the south, there is the Pretender in the northeast, Raisuli in the northwest, and various Saintly Fathers of the Faith, of the People, and of the She Ass, promiscuously distributed over the empire. Official opinion at Paris still clings to the assertion that nothing beyond the restoration of peace and the enforcement of the provisions of the Algeciras Convention is contemplated. The French press, however, generally perceives that the situation is one approximating a state of war, and the demand is growing for a summoning of Parliament, which shall deal with the needs of the case in a proper way. Meanwhile, we have the rather amusing spectacle of French official authority insisting, "We don't want to conquer Morocco," and German official authority, through an inspired press, clamoring, "Go ahead, and do it." Bismarck is said to have looked with favor upon the beginning of French colonial enterprise, because it tended to dull the memory of Alsace-Lorraine. The policy would be far sounder in the present instance, since Morocco offers not only a field for expansion, but a chance for keeping France actively engaged for years to come.

Like the traditional testator, the date of whose probable demise is a subject of eager speculation for his heirs, the Dowager Empress Tsu-hsi may yet go on baffling diplomatic expectations for years to come. The question of the appointment of an heir to the throne is said to be agitating the Peking court and the ranks of the Manchu governing classes. But the matter is by no means so important now, from the point of view of international politics at least, as it would have been only three years ago. Then China's fate hung in the balance, and the personality of its ruler would have been undoubtedly an important factor in any crisis that might have arisen. To-day China's national integrity is guaranteed by an imposing series of compacts to which Japan, Great Britain, Russia, and France have subscribed. The choosing of a successor to the weakling Emperor Kwang-hsu is of importance chiefly to the Chinese themselves, in so far as it will affect the relations between the mass of the people and their Manchu rulers. To Japan alone the possibility, or at least the hope, may be open of swaying to some extent the action of the present Government in its plans for the future; for Japan has now undoubtedly means of exercising pressure, peaceable or otherwise, which the other Powers lack. Dread of Japanese interference, strengthened by recent events in Korea, may be partly responsible for the reported growth of anti-Japanese feeling in China.

In the London *Times*, Paul Sabatier criticises severely the reactionary policy of the Pope, especially his attitude towards "modernism." He declares that more should be conceded to the liberal Catholics. The representatives of "two mentalities, two civilizations" confront each other, and modernism must prevail. So Pius X. should give up the futile struggle and become reconciled to the champions of progressive thought. Moreover, Sabatier begs the Pope to "hear the silent prayer of so many millions of human beings who hunger and thirst and wait." They are not looking for any supernatural manifestation or revelation, but only "a word of human truth, of living reality." Even if it were possible for the Pope to break with the traditions of the Latin Church, and encourage a crusade in behalf of liberal thought, he could take no such step without being wholly inconsistent with his formal utterances, such as his letter to Cardinal Svampa, in 1905, prohibiting the Congress of Bologna and his recent bull directed against Biblical critics. If modernism is to prevail soon, it must be without, not within, the Catholic Church.

In spite of the mass of affirmative evidence that mental processes may be localized in the brain, there is still skepticism among men of science. At the recent Congress of Anthropology at Strasburg, Prof. Alfred Stieda of Königsberg read a paper on the convolutions of the human brain. Although the cerebrum of the lower animals is smaller and simpler in structure than that of man, the professor denied that complexity is a sign of superior psychical powers. He made a report of his examination of the brain of the Swedish linguist Sauerwein, who, besides being a sort of *doctor universalis*, was master of fifty-four languages. If, he argued, physiologists are right in regarding the second frontal convolution as the centre of speech, one might expect to find some peculiarity about this part of Sauerwein's brain; but, as a matter of fact, it was quite ordinary. Moreover, in deaf mutes, there is nothing abnormal in Broca's convolution, as that region is called. Professor Stieda opposed the generally accepted idea that the anatomist can distinguish a diseased from a healthy brain, and scoffed at Lombroso's doctrine of the "criminal type." That which alone differentiates one brain from another, he held, is the amount of gray matter present. Since the time of Goltz there have always been a few neurologists who doubted localization, and they have usually been able to make out a strong case by presenting a number of "negative instances." The evidence in favor of localization is, however, well-nigh overwhelming.

PRESTIGE OF THE MAYORALTY.

Representative Burton's consent to stand for the mayoralty of Cleveland, against Tom L. Johnson, will attract national attention to the ensuing political contest. This will be because of the issues as well as the personalities involved. The event will also give us a new measure of the political importance of the mayoralty of a great city. Mr. Burton has conquered a distinguished place at Washington. No man in the House carries more individual weight. A studious, independent, and useful legislator in the national field, he now turns aside, at the urgent call of the Republicans of Cleveland, to accept a local office, if the voters decide to confer it upon him. This fact of itself challenges to a comparison of the opportunities offered by these two forms of public service.

Mr. Burton does not conceal his reluctance to take the step. He yields only to an almost overwhelming appeal. It is a dubious battle to which he is summoned; but in his statement of the conditions under which he is willing to assume the leadership, he marks out the lines upon which he means to conduct the fight. In stipulating that the rest of the ticket shall be made up of men commanding public respect and acceptable to him, he guards against the great handicap under which Edward M. Shepard labored, when he took the Tammany nomination for Mayor of New York. Mr. Burton does not propose to be himself a good candidate pulled down by bad associates. And in demanding that the platform and the campaign be entirely free from domination by the traction interests of Cleveland, he does all that he can to meet in advance the charge that he is put up by the companies to beat their great enemy, "Three-cent Tom." Cleveland has for years been convulsed by the street-railway issue. On it Mayor Johnson has repeatedly ridden into power. The question has been made a football of, both politically and financially; and Mr. Burton puts it as a condition of his candidacy that a definite plan of settling the relations of the companies to the city be proposed and carried out during his term of office, if he is elected.

When we read further that the financial affairs of Cleveland are disordered, it is clear that Representative Burton will be able to make a peculiar bid for support. He is both a student of finance and a man versed in practical financial administration. In his long service as Chairman of the Rivers and Harbors Committee he has had to deal with large matters, and has done it in a large way. Of national expenditure in general, he has made careful analysis, and his speeches on that subject in the House have shown a grasp comparable to Garfield's. If Cleveland is looking for a Mayor well equipped to grapple with details of debt and expenditure, and to put her finances on a sound basis, Mr. Burton is the man.

It is now fully twenty years since the mayoralty, in American cities, began to take on a new significance. This was partly because the office seemed to offer new possibilities of political advancement. Mr. Cleveland's march from the mayoralty of Buffalo to the Governorship of New York and thence to the Presidency, fired the imaginations of many. All over the country mayors began to rear their heads as fair marks for political lightning. In this respect, however, the seeeming promise of the mayoralty has not been fulfilled. The office of mayor has been the tomb of many political ambitions. New York mayors have been peculiarly unlucky in this regard. After the recent examples of Hewitt and Van Wyck and Low and McClellan, an inscription might well be placed above the door of the Mayor's room in the City Hall: "Leave all political hope behind, ye who enter here." Taking the country by and large, there have been a few exceptions: Gov. Higgins of Rhode Island began as mayor of Pawtucket; but the mayoralty has not, as a rule, been a stepping-stone to political advancement. Neither "Golden Rule" Jones of Toledo nor Tom Johnson of Cleveland was able to become Governor of Ohio. Nor was Mayor Quincy of Boston promoted to be Governor of Massachusetts; Harrison of Chicago failed to be made Governor of Illinois, and so on. "There's them as has done it," said the mayor-elect of a small town, when gravely told that he was in the right way to become Governor and then President. So there are; but they are as few as the righteous men in Sodom. As a means to the gratification of political ambition, the mayoralty cannot be said to make to-day the appeal that it once made.

Yet the real importance of the position of mayor has been heightened, year by year. This has resulted inevitably from the great municipal movement in this country during the past two decades. A city-consciousness has been developed. Cities throughout the land have set themselves with new earnestness to the task of making themselves more sanitary, more safe, and more beautiful—more worthy, in a word, of the increasing millions who inhabit them. As an aid in this vast work, the office of mayor has been clothed with more power. The tendency of all the new city charters is to centre responsibility in him. In that aspect Cleveland's charter is one of the most progressive, and if Mr. Burton is chosen mayor, he will have a free hand in moulding the municipal administration. All told, then, if a man desireth the office of a mayor, he desireth a good thing. It is no bed of roses; it is a very uncertain basis for expecting even the gratitude of one's fellow-citizens, to say nothing of their political rewards; but it furnishes a chance for doing a large work which may well appeal to any man sure of his capacity, as well as of his public spirit.

A SUGGESTION TO LABOR LEADERS.

On Labor Day at the Jamestown Exposition Samuel Gompers paid his respects to "rampant, vindictive, and greedy employers." Within ten days his words have been followed by swift and sharp comment. Strikers at San Francisco have assaulted non-union employees of the United Railway; strikers at Antwerp have set fire to warehouses and burned up property worth several millions of francs; and both in this country and Europe there have been a number of minor outrages upon workmen and employers who prefer not to submit to the dictation of labor unions. Now, no one will deny that there have been and are to-day employers to whom the adjectives "rampant, vindictive, and greedy" justly apply. For such men we share Mr. Gompers's abhorrence. Furthermore, no one will deny that certain capitalists, relying on their wealth and power, have defied the civil and criminal authorities and broken our laws; and Mr. Gompers is no more anxious than we are to see such men receive exemplary punishment—not mere fines, but imprisonment.

We conceive, however, that Mr. Gompers, as president of the American Federation of Labor, can at the present moment render his greatest service to the community in general, and wage-earners in particular, not by indulging in cheap denunciations of employers and "injunctions as issued against workmen," but by instructing the members of his Federation in certain rudiments of economics, and showing what they can and cannot legitimately attempt. The movement for the open shop is steadily spreading throughout this country; and it is spreading simply because the demands of the men for whom Mr. Gompers is spokesman are so preposterous and unjust. The labor unions often impose conditions under which it is impossible to conduct a manufacturing enterprise, conditions that must ultimately result in ruin of the labor union itself.

We do not now refer to the crimes or violence which have marked this last week. For destruction of property and assaults upon person there is no conceivable excuse. These, however, are the regular and trusted weapons of labor unions throughout the United States. The leaders and the walking delegates sometimes make half-hearted professions condemning disorder; but in their heart of hearts these leaders place their reliance on brickbat and dynamite. They

know that if the life of a non-union worker and the buildings of an open shop were perfectly safe, many of the unions would fall to pieces in twenty-four hours. More than one labor organization lives simply and solely because it can terrorize both employer and employed. But the resort to violence, though secretly encouraged, is publicly disavowed.

Our criticism is rather of certain avowed policies which are almost as indefensible as rioting itself. Let us illustrate by one or two typical instances. Not long ago, Doubleday, Page & Co., publishers, of this city, installed machinery which will feed paper to printing presses with greater regularity and at greater speed and consequently with greater economy than men can feed it. Thereupon the Feeders' Union in New York insisted that as many men should still be employed as would be required if no mechanical feeder had been invented; in short, that a number of men should be kept on full wages, with nothing to do but sit around and see the presses fed better by machinery than by hand. When Doubleday, Page & Co. refused to grant this crazy request, the feeders—and the pressmen, who had no grievance—struck; and, according to last accounts, they are still out. Fortunately, the firm is strong enough to fight its battle through. Far different has been the outcome of a similar contest in Berkeley, Cal. Three young men started there a small daily paper, the *Independent;* having carried on their project successfully for several months, they scraped together all the capital they could lay hands on and invested over $15,000 in a modern press and stereotyping machinery. Such a plant had been operated elsewhere by two men, or at most two men and an assistant, with an expenditure of between $40 and $50 a week for wages. But the local Web-Pressmen's Union insisted upon four pressmen at $30, $24, $24, and $15 a week, and two stereotypers at $30 and $24. The payroll would thus be $147 a week. Since the six men were forbidden to do any other work except that for which they were specifically engaged, they would not have had over two hours of work apiece daily. The proprietors of the *Independent*, seeing in such terms nothing but bankruptcy, refused to start their new labor-saving machinery. The union then revised its schedule, and cut the wages down to $96 a week. That was still twice as much as necessary; the union remained obdurate; and the publishers of the *Independent* have been forced to sell out.

To multiply examples is useless. We might refer to the silly rules against handling non-union material though that material—say a carved mantel of the fifteenth century—is made under conditions in which the unions cannot have the slightest interest. But the point which we wish to emphasize is that, from New York to California, the unions are still busy resisting the introduction of labor-saving devices—as busy as if that cause had not been hopelessly lost a hundred years ago. The progress of invention has been marked by a thousand bitter struggles in which labor has invariably been defeated. The cruel hardships endured by displaced workers and the methods of ameliorating their sufferings are topics for separate discussion. But if the history of the factory movement proves anything, it proves that the economic forces which impel men to use machinery whenever it is cheaper than hand-labor are absolutely irresistible. If there is any one fact with which a labor leader should be familiar, it is that. If there is any one truth which Mr. Gompers and his associates should spend their days and nights in impressing upon their followers, it is that those who contend against the immutable laws of the development of civilization, like those who appeal to violence instead of reason, are foredoomed to defeat.

MISSIONARIES AND COLONIAL RULE.

Dispatches from London speak of a serious strain between the American Congregational missionaries in Natal and the authorities. The Government's hostility is based on the alleged fact that in the formidable Zulu insurrection of 1906, the spirit of disloyalty was particularly strong among the natives connected with Christian missions. The Congregational system of erecting churches under native pastors is specially objected to, on the ground that it tends to inculcate in the natives a spirit of independence which is incompatible with the safe maintenance of European control. The charges of disloyalty have been denied by the Secretary of the American Board of Foreign Missions, who asserts that out of the thousands who participated in last year's uprising in Natal, "our converts showed loyalty to the Government by jeopardizing their lives," and altogether "less than fifteen did anything that could possibly be interpreted as disloyalty."

The situation in Natal is typical of the growing hostility with which colonial administrators the world over look upon the white missionary. He is unpopular throughout British South Africa and in India, King Leopold does not love him in the Congo, Germany has had trouble with him in Southwest Africa and the Cameroons, and he has been described as a general nuisance in China. And the reason is everywhere the same. The native convert, "spoiled" by too literal an interpretation of the gospel and excessive humanitarian coddling, becomes restless, insubordinate, and imbued with ambitions that are totally at variance with political expediency. The Rev. James L. Barton's reply that less than fifteen Christian converts took part in the Zulu insurrection may, for instance, turn out to be a fairly damaging admission, if it should be shown that these fifteen were among the prominent leaders of the revolt. That is precisely the grievance of the various colonial administrators, that the educational work of the missionaries serves to create a class of native leaders who in turn act upon the mass of the population. Thus in Natal the Government insists that native pastors be replaced by white clergymen, or, in other words, that no African be allowed to attain a position of prominence.

We fail, however, to see why the missionaries should think it necessary to assume an apologetic attitude in the matter. Rather, their position should be the militant one. For they must know that not only have they been in large measure the pioneers who have built up colonial realms for Europe, but they are still a powerful instrument for the prosecution of that civilizing work which the military commander and the trader would so greatly like to have out of the way. It is really an open question whether, for every native uprising that missionary education can be made responsible for, you would not have a dozen uprisings if the missionary influence were not present to act as a restraint upon political and economic oppression on the part of the dominant whites.

Practically, what the Jingo Imperialist says to the mission worker is this: You may show the way to us by exploring and mapping virgin country, as Livingstone did; you may compile native syllabaries and accounts of customs and modes of thought, so that we may communicate with our subjects in the performance of our duties; you may build hospitals, orphanages, and houses of refuge, and preach physical cleanliness and sanitation; you may occasionally offer a victim to the fury of the mob; you may even erect schools, if you will see to it that the knowledge imparted is in direct line with the preordained subjection of the colored man to the white, and raises no difficulties about such necessary phenomena as hut taxes, forced labor, and judicial floggings. Once you have imbued the native mind with these fundamental ideas of Imperialist evolution, it were best if you stood quite aside and let us manage things. We can imagine the extreme official view as taking the form that the only good missionaries are dead missionaries. In that state they are worth huge indemnities and entire Chinese provinces. Alive, they are only in the way.

From the days of Las Casas it has been the province of the Christian minister among subject peoples to fight

against their unscrupulous exploitation by foreign masters. The rôle is difficult and unpopular, but essential to the conception of the missionary's office. Without it, he would be defenceless against the charge that his advent has been only the heralding of a "civilization" that has come unasked upon the native, and come upon him for his enslavement and destruction. With it, the missionary vindicates his position as one who seeks to introduce the benefits of a higher civilization, while mitigating its evils. Missionaries may be called busybodies or disguised political agents, or self-seeking, or anti-patriotic. As a matter of fact, we do not believe that the American missionaries in Natal fomented sedition among their converts; or that E. D. Morel, the agitator for reform in the Congo, draws a subsidy from the British Government; or that the Catholic brethren in the Cameroons wanted to make themselves absolute masters of the colony. On the other hand, what the world has learned about Zulu taxation, or the rule of King Rubber in the Congo, or the amiable practice of German officials in cutting off the limbs of insubordinate servants and tying women to the trunks of trees until death by starvation ensued, is of distinct value. We owe it almost wholly to missionaries.

"RECONSTITUTING" HISTORY.

Continued skepticism and criticism respecting Francis Laur's account of the secret meeting between Bismarck and Gambetta in 1878, have at last drawn an explanation from the latter's literary executor. Challenged to produce his authority and his documentary evidence, if he had any, M. Laur writes a long letter to the London *Times*. In it he exhibits a most engaging frankness, combined with a simplicity which few historians could hope to rival. Documents? *Dieu vous garde*, he hasn't a scrap of written evidence. Bismarck left no record. Gambetta never wrote about the affair. But his companion, Mme. Léonie Léon, shortly before her death told M. Laur about the secret interview (place and time both indefinite), and thereupon, "with the aid of my notes, I was able to reconstitute the narrative."

Such a justification of the original story is really its destruction. M. Laur has shown himself so inaccurate in many of his details that it is fairly open to doubt if he correctly understood or remembered what he heard from Mme. Léon. This is the more probable when we find him admitting that she "did not attach importance" to her revelations. But if Gambetta actually did meet Bismarck and discuss with him for three hours the question of limitation of armaments, and a general good understanding between France and Germany, it was an event of the highest importance. No one could have been more keenly aware of this than the gifted woman with whom Gambetta shared for years his political secrets and ambitions. If she slighted her story, as given to M. Laur, it is altogether probable that he did not at the time catch its true drift, and afterwards greatly exaggerated both facts and inferences.

One touch in M. Laur's defensive letter is exquisite. Taking up one of the formidable objections to his whole narrative, he undertakes to show why Bismarck himself never spoke of the historic scene with Gambetta, why he concealed it from everybody, "even from posterity." The reason lies in Bismarck's extreme delicacy of feeling. Count Henckel-Donnersmarck had before sought to arrange an interview between Gambetta and Bismarck, but his efforts had failed. Therefore, writes M. Laur:

> Bismarck did not want—and the sentiment is one for which we can only do him honor—to wound Count Henckel by letting him know even by posthumous revelation that the interview for which he had taken so much trouble had actually taken place and was kept from the knowledge of so devoted a friend as himself.

But this is a revelation to the world more startling than anything M. Laur had divulged. If Bismarck was not a rough man, trampling with his military boots upon the tenderest susceptibilities, and strewing his conversation, letters, and reminiscences with brutal references to men and women, but was truly a being all compact of the finest consideration for the feelings of others, then, indeed, it was time that M. Laur set about "reconstituting" the biography of the German Chancellor. But his attempt to set up such a Frenchified Bismarck will cost him more labor, and cause more hilarity at his expense, than his account of the covert meeting between Bismarck and Gambetta at Friedrichsruh or Varzin or somewhere else, some time in 1878, or some other year.

In fact, Bismarck did not simply conceal the interview; he denied that it had ever taken place. This is made clear by Lucien Wolf, in his destructive analysis of M. Laur's explanation. The Donnersmarck letters established the fact of the effort of Count Henckel to bring about an interview. But Mr. Wolf now reports:

> The *démenti* of the 1878 interview appears as a note to the correspondence with Count Henckel in the "Briefwechsel" (vol. ii., p. 505). Here it is distinctly stated that "eine Zusammenkunft hat nicht stattgefunden." When I quoted this in my letter to the *Times* of the 21st inst., I was under the impression that it was only an editorial statement of Prince Herbert Bismarck. Dr. Horst Kohl, who performed the editorial work under Prince Herbert's supervision, has now informed us that the statement was made to him by the Chancellor himself when he confided to him the *carton* containing the Henckel-Donnersmarck correspondence.

After that, we scarcely need the round denial of the Hamburg *Nachrichten*, still inspired by the Bismarck family and tradition, to make us believe that the famous interview never occurred.

With the main edifice destroyed, it may seem hardly worth while to look at the ornamentation, yet M. Laur's vivid "reconstitution" of the conversation between the French and the German statesman has its suggestion for historical writers. His method might be said to be, in its way, an imitation of Thucydides, who must have invented many of the speeches he put in the mouths of Cleon and others. The contrast is between the picturesque school and the dryasdust. A passion for documents of any or all kinds has long dominated historical research. This was highly necessary, and yielded important results, but it did often lead to terribly dull writing. Sainte-Beuve exclaimed against the "déchiffreurs de chartes et de parchemins d'archives," whom he said he loved and revered for their learning, but who had wrought the evil of introducing into literature the worship of old papers. We have suffered many things from that cult, and could welcome a reaction in favor of histories which would not necessarily be untrustworthy simply because they were interesting. But M. Laur's unhappy plight shows us that the "reconstitution" of history must be done only by a man sure of his facts, who has himself done the requisite grubbing down among the dead men, and comes up, not with skeletons, but living human figures.

THE ETHICS OF TOYS.

A clergyman having attacked the Teddy bear on the ground that its substitution for the doll is undermining the maternal instinct, one of the magazines of "new thought," *The Stellar Ray*, comes forward with a qualified defence of that popular toy. "Perhaps," it suggests, "the love of the Teddy bear tends to dispel the fears that formerly haunted the dreams of childhood, perhaps it tends to broaden the sympathies of the little mother to the animal kingdom, cultivating a spirit of protective love for all creatures."

A friendly disposition toward bears is an excellent thing to have, especially in a community which is not infested with real bears that might take unfair advantage of a child's advances. The bear which waits around the corner to devour naughty little boys and girls loses its terrors when the child knows by experience what an amiable, comfortable beast it is. Thus the toy may have robbed childhood of one of its terrors. Those "conflicting impulses toward fearing and fondling" which, according to the psychologist, beset the child in presence of

a new animal, are intelligently directed. The fear of wild animals being no longer in civilized countries an aid to the survival of the race, it is just as well that bears should be regarded as friends of humanity.

In fact, there is no reason why other ferocious beasts, like the lion, the crocodile, and the shark, than which no creature is more feared by the children of inland towns, may not be admitted to a similarly intimate footing in the family. We speak of intimate footing, because these beasts have been actually present in the nursery for generations. But the Noah's Ark bear and the Teddy bear are not close kin. The Noah's Ark animals are no more capable of inspiring affection than Shem, Ham, and Japhet, or their indistinguishable wives. The Teddy bear's vogue—if that astonishing phenomenon, which would so greatly perplex the archæologist who might dig up one of our cities buried this year, can be explained at all—is due to the touch of quaintness and humor with which the little beast is portrayed. We do not mean to say that that same touch would insure popularity to another toy animal, but merely that popularity would doubtless be very hard to obtain without it.

Moreover, it is not the part of reasonable and foresighted men to discuss the ethics of the toy that is with us without considering also those that are still to be designed. The American rabbi who recently returned from an unsuccessful mission to persuade the Nuremberg toymakers to give up the manufacture of toy soldiers did thus look to the future. The interest of the small boy in martial trappings must, in his view and that of other well-meaning people, breed a temper favorable to future wars. Toys connected with the arts of peace will, conversely, interest the father of the man in the pursuits which make nations really happy and great. It is somewhat singular in this connection that the toys which do concern the arts of peace, like miniature engines and toolboxes, are among the most dangerous in the whole toy-shop. That Tommy, while safeguarded from the unhallowed influences of the tin soldier, may be blown up by a tin boiler or saw off his fingers, is one of the factors that make this whole problem so complicated. We can barely refer to the historical argument that from the ruins of the most martial civilizations of antiquity, like those of Rome and Assyria, our archæologists are perpetually digging up children's toys, not in the shape of soldiers, but of dolls and cats and little clay pigs.

Beneath and behind all these charges of demoralization by playthings is the more comprehensive anxiety lest modern toys may be destroying the child's imagination. As the scenery now provided has destroyed in theatre audiences the faculty of seeing forests and castles and palaces on a bare stage, so, it is charged, the perfection of our "practicable" toys has inhibited the child's invention. The train that runs by real steam, on a real track, with real switches, furnishes nothing like the stimulus of "playing train" with blocks of wood. Thus we are developing a generation of Peter Bells, which can see only what is before its eyes, and which therefore is painfully open to literal impressions. The old-time child to whom a clothes-pin might be at one moment a soldier and the next a pillar for a cantilever bridge, could not be much harmed. But the new, to whom a toy soldier is a soldier and nothing but a soldier, will have the suggestion impressed upon his consciousness till he goes to Congress and votes an appropriation for 50,000-ton battleships and an army of 500,000 men.

We think, however, that this theory is unjust to childhood. Juvenile imagination has not been killed. Made unnecessary in some of the mechanism of play, it has expressed itself in new channels. And nowhere is it more active than in counteracting the dangerous suggestions of the toys themselves. It can make a twenty-dollar mechanical toy as protean as a lump of coal. The Teddy bear, having supplanted the doll, is put to bed, invited to tea, and engages in all manner of other evolutions familiar to dolls, but utterly foreign to the nature of bears. The toy soldier, despite the fact that every button of his uniform conforms to the latest edition of the army regulations, will go to tea with the same bear, become a savage or a farmer, or take any other part his commander chooses for him. On the other hand, the nursery *Kriegspiel* involves the impressment not only of civilians, but of building blocks and crayons. The child can play at war without military toys; he can also play at peace though he has nothing but martial equipment to do it with. It is the clear perception of this fact that gives the alarmists of the toy-shop such small audiences.

THE SITUATION OF HISTORY IN SECONDARY SCHOOLS.

It is less than nine years since the American Historical Association, in the report of its Committee of Seven, submitted a carefully framed plan of historical study for secondary schools. The essential features of that report were: first, the indication of four historical fields — ancient, mediæval and modern European, English, and American—in which instruction should be given, and which, singly or in combination, should be accepted by colleges as part of their admission requirements; and, second, the repudiation of the exclusive devotion to the textbook, which, up to that time, had generally obtained, and the insistence upon the vitalization of historical instruction by enlarged and systematic use of collateral reading, informal lectures, special reports, map drawing, historical pictures and objects, and student note-books.

The wide and vigorous discussion of this report, not only by special bodies like the New England History Teachers' Association, but by educational organizations of a more general character as well, has resulted in a very considerable acceptance of its recommendations, in whole or in part, by leading colleges and universities. The specification of requirements in history adopted by the College Entrance Examination Board is that of the Committee of Seven. So far as any scheme of historical instruction in secondary schools, whether with or without reference to preparation for college, may now be regarded as a standard, it is the one formulated in the report in question.

In the light of the experience of these nine years, it seems worth while to consider once more the recommendations of this epoch-making report. No one individual, of course, can have close personal knowledge of more than a few schools, nor has the present status of history teaching in the United States been comprehensively inquired into. It may be proper for me to state, accordingly, that the observations here made are based mainly upon my experience as a college teacher, one of whose duties is the preparation and conduct of certain entrance examinations in history; upon inquiries systematically pursued during the past six years at summer schools at Harvard, Cornell, the University of Chicago, and the University of California, where the students include teachers from a large number of States; and upon two years' service as chief examiner in history for the College Entrance Examination Board.

Speaking generally, it may be said that the methods of teaching history in secondary schools have undergone, within the brief period under consideration, fundamental and praiseworthy change. Formal use of the textbook, with its inevitable insistence upon verbal repetition and the dry memorizing of dates and names, has much declined, and in most of our best schools would not now be tolerated. The content of the subject, too, has changed: less time is spent on military events and incidents of romance or adventure, and more on the social, economic, and international aspects of the field. History, in other words, has come to be looked upon less as a body of chronological facts to be learned outright, and more as the interesting story of vital social development. Reference libraries in schools, though still far from adequate, have multiplied and improved, and the public library has lent its aid. There is general insistence upon map drawing, and increasingly generous provision and use of illustrative material, notably pictures. As a direct result of these new methods, there has arisen a demand, largely unknown hitherto, for specially trained teachers, a demand which the history departments of colleges and universities, by changes in their own methods and programmes, are endeavoring to supply.

These are substantial gains, and of the right sort. They testify to the vitalization of a subject from which an unintelligent formalism had squeezed most of the breath of life. On the other hand, there have been some failures and reverses, to-

gether with some persistent criticism of the fundamental plan. For one thing, the delimitation of the field of ancient history by the Committee of Seven is strongly, and on the whole increasingly, objected to. As bounded by the report, ancient history is made to include not only the history of Greece and Rome during what is often called loosely the classical period, but also the history of Egypt, Babylonia, and other Eastern nations on the one hand, and the history of western Europe from the end of the line of Western Roman Emperors to the time of Charles the Great on the other. I must confess never to have been able to see the propriety, on historical or other grounds, of the delimitation in this case recommended by the committee; and I am sure that a very large number of our best teachers, in both colleges and secondary schools, are of the opinion that the history of Greece and Rome, with the story of Rome ending not later, certainly, than the latter part of the fifth century, is the portion of ancient history most suitable for secondary schools.

A more serious criticism has to do with the method of instruction which the present requirements presuppose. While it is generally agreed that the pupil should read as widely in historical literature as possible, anything more than incidental use of collateral reading has been found, in practice, so time-consuming as to be well-nigh out of the question. Undoubtedly the difficulty here is less with the method than with the excessively crowded curriculum of the average school; nevertheless, with conditions as they are, it has not yet been proved generally possible to secure from a class any considerable use of books other than the textbook, without giving to history a disproportionate amount of time. In other words, books of biography, of travel, of reminiscence, and the like, besides formal histories, may now and then be dipped into as pleasant and useful expansions of the textbook narrative, but their systematic use as a really substantive part of the instruction is impracticable with the time available. Moreover, the developed use of collateral reading presupposes library facilities, and especially provision of duplicates, such as few schools yet possess; nor can most public libraries supply the demand which the needs of large classes inevitably create. As for the preparation of student notebooks based upon reading or research, that has frankly become a farce, most of the creditable books being those which the teacher, rather than the pupil, has made.

The character of the pupil's attainments in history, too, has changed, if examination questions and answers are a safe criterion. There is a striking lack of orderly and exact knowledge, even of elementary matters, and a pervading reliance upon the general and the vague. Examination questions have often tended to become general rather than specific, and to demand a breadth of knowledge and maturity of judgment beyond what most young people possess. The colleges having insisted that the schools shall not teach dates exclusively, many schools have responded by not teaching dates at all. As a consequence, it not seldom happens that an answer in an examination book contains little specific error, and yet fails entirely to show whether or not the writer really knows anything about the subject. I do not think that this unsatisfactory condition is to be ascribed to any lessened use of textbooks; for textbooks, notwithstanding the reprobation of them, continue to multiply, the best of them are infinitely better than the best of twenty years ago, and there is scarcely a history class anywhere that does not make systematic and predominant use of them. Certainly teachers of history are not to be indicted for lack of zeal or industry, nor, in the larger and better schools, for less fitness for their task than teachers in other departments. The cause, I am convinced, lies chiefly in the fact that the amount of work involved in the recommendations of the Committee of Seven cannot, as a rule, be satisfactorily accomplished in the time generally available, if the method which those recommendations also propose is to be followed. In other words, the prevailing requirements in history for admission to college cover too much ground, and cover it in a manner beyond the powers of the average pupil and the resources of the average school.

I venture to suggest three steps which, it seems to me, it would be helpful to take under the circumstances. The first is a reconsideration of the requirements, especially those in ancient history, and, by consequence, in mediæval and modern European history. This is appropriately the work of the American Historical Association, which gave its sanction to the recommendations of its committee, and which should be asked to approve any proposed changes. The second is the abandonment of the attempt to test collateral reading or general historical knowledge, as such, by means of examination questions, and the restriction of examination questions to topics specifically dealt with in the best text-books, and to historical geography. This is a matter for the colleges and universities, and for such bodies as the College Entrance Examination Board. The third is the radical simplification of the crowded curricula of secondary schools, in the direction of fewer subjects at a time, and those more thoroughly taught, together with the provision of facilities, such as books, maps, and illustrative material, for the teaching of history as adequate in all respects as the facilities admittedly necessary for every other subject in the study programme. This is a matter for school authorities and the public, as well as for teachers everywhere.

WILLIAM MACDONALD.

Providence, R. I.

NEWS FOR BIBLIOPHILES.

The interest in first editions of Kipling, which fell away a few years ago, seems to be reviving. He is the ideal author for the collector. His early books were printed in India in small numbers and in fragile paper covers, and two, at least, were suppressed. His later books have been printed in large editions, and can never become scarce, but in some cases, at least, he has prepared good hunting for future collectors by printing several poems and some prose articles in exceedingly small numbers, mainly for copyright. Just how many of these privately printed pamphlets have been prepared we do not know. Of his poem "Cleared," which appeared in the *Scots Observer* in 1891, some copies were pulled off separately as a broadside. Of "White Horses," which appeared in *Literature* October 23, 1897, a few copies were printed as a pamphlet of ten pages in a lilac paper cover. Of "Captains Courageous," which ran as a serial in *McClure's*, a few copies were printed from the types of the magazine as an octavo pamphlet before the appearance of some of the instalments. The text of this pamphlet issue was slightly revised for the first edition of the book, published here by the Century Company, and in London by the Macmillans, 1897. These pamphlets, though rare, are not unknown to collectors, and several have been offered at public sale. The seven following pieces have not, we believe, been described before. They are all handsomely printed small 12mo. pamphlets, except "The Islanders," which is an octavo. We give a line for line transcript of the titles and a short collation of each piece:

Cruisers | A Poem | By | Rudyard Kipling | Copyright | MDCCCXCIX | By | Rudyard | Kipling | All Rights | Reserved | The Doubleday And | McClure Company | MDCCCXCIX

9 leaves, cover lettered "Cruisers."

The Reformer | A Poem | By | Rudyard Kipling | Copyright | MDCCCCI | By | Rudyard | Kipling | All Rights | Reserved | Doubleday, Page | And Company | MDCCCCI

8 leaves, cover lettered "The Reformer."

The Lesson | A Poem | By | Rudyard Kipling | Copyright | MDCCCCI. | By | Rudyard | Kipling | All Rights | Reserved | Doubleday, Page | And Company | MDCCCCI

10 leaves, cover lettered "The Lesson."

Bridge-Guard | In The Karroo | A Poem | By | Rudyard Kipling | Copyright | MDCCCCI | By | Rudyard | Kipling | All Rights | Reserved | Doubleday, Page | And Company | MDCCCCI

11 leaves, cover lettered "Bridge-Guard | in The Karroo."

The Islanders | A Poem | By | Rudyard Kipling | Copyright | MDCCCCII | By | Rudyard | Kipling | All Rights | Reserved | Doubleday, Page | And Company | MDCCCCII

8 leaves, cover lettered "The Islanders."

The above, which are all in verse, are printed upon one side of the leaf only, and the leaves, not pages, are numbered. They are all interleaved with blank paper, for the purpose, apparently, of giving more bulk. The two following pieces are in prose, and the leaves are printed on both sides, the pages numbered:

Railway Reform in | Great Britain | By | Rudyard Kipling | New York | Doubleday, Page & Co. | 1901

Title p. [1]; copyright and imprint of Norwood Press, p. [2]; text, pp. 3-27; blank, p. [28]. Cover lettered "Railway Reform in | Great Britain | Rudyard Kipling."

Below the Mill Dam | By | Rudyard Kipling | New York | Doubleday, Page & Co. | 1902.

Title p. [1]; copyright, p. [2]; text, pp. 3-29; blank, p. [30]. Cover lettered "Below the Mill Dam | By Rudyard Kipling."

According to pencil inscriptions in the copies described twenty-five copies of "The Islanders" were printed, but there were twelve copies only of each of the others.

The books known among collectors of Americana as "captivities" are attractive, and early editions always excite interest in the sales-room. They are the narratives of experience, often very curious, of persons who in the early days were taken captive by the Indians. The writers were sometimes actuated by religious zeal and a spirit of thankfulness in publishing the accounts of their adventure. The H. R. Huntting Company of Springfield, Mass.,

has just reprinted in old style as a "dumpy" little volume (350 copies) the "Narrative of the Captivity of Mrs. Johnson," first printed at Walpole, N. H., in 1796. There were other editions printed at Windsor, Vt., in 1807 and 1814; Lowell, Mass., in 1834; New York, in 1841, etc.

Correspondence.

MISS COLERIDGE.

TO THE EDITOR OF THE NATION:

SIR: The sudden death of Miss Mary Elizabeth Coleridge on August 25 has left a void in literature as well as a dear memory with many friends. It is just ten years since the publication of her best novel, "The King with Two Faces," announced the advent of another Coleridge to that world of English letters where her family had filled so large a part, and of another Coleridge gifted with the same fine quality of intangible romance, and with much of the same "shaping spirit of imagination," as had haunted and distinguished the greatest of them all. Miss Coleridge had already published before that a characteristic book, "The Seven Sleepers of Ephesus" (1893), in which her friends had realized her strength. But in this earlier book a certain want of definiteness, an inclination to love half-shadows overmuch which her novels did not always escape, prevented any popular recognition of her work. With more than a touch of her great-uncle's genius, she had inherited some of his elusiveness, too. "Coleridge's poetry," a considerable critic once wrote, "leaves too much of the feeling of a walk through a fine country on a misty day"—peeps of great beauty with tantalizing shadows interspersed; from this perplexing quality Miss Coleridge's earliest book, like some of her latest books, was not quite free. But in "The King with Two Faces" she came into her own. She struck at once a note of high romance: and the story and its setting were such as all the world could understand.

Miss Coleridge was not a rapid worker, and the claims of family and friendship always with her came before her own. It was some years before this success was repeated. Her next novel, "The Fiery Dawn" (1901), with its brilliant sketch of the Duchesse de Berri and her forlorn high-spirited enterprise among the Legitimists of France, original, characteristic, and full of fine romantic interest as it is, was less clear and striking than its predecessor; and the slighter sketches of modern life which followed it, unconventional and imaginative as they are, were less suited to the genius of a writer who worked best upon a high, ambitious theme. But "The King with Two Faces" stands apart. As a historical novel, it has had no rival of late years. Its treatment is in the highest degree original. Its canvas is singularly large. The art which can carry the reader without effort through some of the most stirring scenes in the life of Gustavus of Sweden—that crowned knight-errant, half hero, half demented dreamer, but always impressive, wayward, picturesque—and which, unsatisfied with that full theme, can plunge him into the heart of the French Revolution, and reproduce the touching gallantry of Fersen and the brilliant egotism of Madame de Staël, without losing the romance of the story in the larger romance of the history it enfolds, is art of no ordinary kind. Mystery and adventure are ever present in the air; and mystery, touched with a rare imagination, is the atmosphere which it seems natural for the Coleridges to breathe. The dramatic opening of the book, the charm and wonder of the early chapters, the haunting sense of calamity impending, the fresh and captivating movement of the tale, the picture of Gustavus appearing on a gaunt hack, worn, draggled, imperturbable, alone, after midnight, at the gate of Gothenburg, the picture of Marie Antoinette, a stately and beautiful woman sitting by the fire, holding a little child in her arms, and singing to it low and wearily, while yet a touch of irresistible gayety in the soft, sweet voice brought tears into the listener's eyes—

> Ah, que je fus bien inspirée
> Quand je vous reçus dans ma cour!—

touches and pictures such as this help to make up a story which lovers of good literature will not allow to die.

But admirable as this great novel is, and full of charm, of fancy, of discrimination as are the essays which Miss Coleridge occasionally published, and the criticism of books which she contributed to the *Monthly Review* and to the literary supplement of the London *Times*, her most characteristic work was in her verse. Literary criticism was a form of writing which gave her great pleasure, and which she did specially well. Literary counsel and encouragement, things which she appreciated greatly, and which perhaps to some extent she needed for herself, were gifts she never grudged her friends. Henry Newbolt and Robert Bridges, who were for years among her literary intimates, and other writers not less known and distinguished, delighted to exchange opinions and confidences in literature with her. And many who knew her closely owed almost as much to her fine taste and to her fastidious judgment, as to the example which she unconsciously set them of a beautiful and an unselfish life. She had the power which Carlyle attributed to Samuel Taylor Coleridge, a signal power of "attracting brave souls." But the two little volumes of exquisite verse which she published anonymously, "Fancy's Following" and "Fancy's Guerdon," small in bulk as they are, contain the most delicate and finished work which she produced. Imagination of a rare intensity, a sense of melody most finely tuned, and a fancy touched in no small degree with that magic and enchantment which have led Shelley and Swinburne to speak of Coleridge's lyrics with almost exaggerated praise, stamp these little volumes with a quality which only high poetry attains. Sympathy and understanding fell to Miss Coleridge in a measure in which they fall to few. Her critical faculty, always watchful and illuminating, perhaps aroused self-criticism which checked her in creative work. But in her short literary life she has left us enough to justify a great tradition, and to win the admiration of the public as well as the hearts and the homage of her friends. M.

West Horsley, Leatherhead, England, August 30.

Miss Coleridge also published two other novels, "The Shadow on the Wall," 1904, and "The Lady on the Drawing-room Floor," 1906; and a volume of essays, "Non Sequitur," 1900.

GERMAN METHODS OF STUDYING LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: I have been much interested in Professor Kuno Francke's letter (*Nation* of August 15) in defence of Lamprecht's "Germany in the Eighteenth Century," and especially in their common opinion of the methods of the literary historian who thinks he has explained everything when he is able to point to some foreign literary influence, and to whom the tracing of the formal influence of one writer upon another is the chief end rather than one of many means. But what does Professor Francke mean when he says: "Fortunately, we may add, such views are not held by any one worth considering"? Is it not a fact that such views are the almost unanimous opinion of the academic scholars of Germany? Though in the study of modern German literature itself there may have been some advance, there are a hundred or more university professors whose special fields lie in English, French, Italian, Spanish, Scandinavian, or mediæval literature; I challenge Professor Francke to mention more than half a dozen whose point of view is other than the one he condemns. Thousands of doctoral dissertations in these fields, the results of the university training of their authors, have been published in the last decade; I challenge him to mention half a dozen whose point of view is not the same. When he says that "such views are not held by any one worth considering," does he mean to bring a general indictment against the literary training of the German universities? J. E. SPINGARN.

Leedsville, N. Y., August 29.

TO THE EDITOR OF THE NATION:

SIR: I am very glad indeed to find in Professor Spingarn an ally against the soulless and spiritless methods of studying literature which prevail to-day, not in German universities alone. If he were t press me, I should feel bound to admit tha of the doctor dissertations on literary jects, either from Germany or Amer which have come to my knowledge during the last ten years, the bulk seemed to me hardly worth serious consideration. As to living literary historians of repute, I certainly could not name more than half a dozen who approach a work of literature from within rather than from without. But is not this a good many? Does not in this respect also the old saying hold good: Εἷς ἐμοὶ μυρίοι? KUNO FRANCKE.

Gilbertsville, N. Y., September 4.

INFANT MORTALITY.

TO THE EDITOR OF THE NATION:

SIR: In reading the interesting review of Dr. Newman's "Infant Mortality" published in your issue of August 1, (p. 104), I felt a suspicion that the statistical foundation for the author's argument was not beyond challenge. Can you grant me a little space in which to raise the question?

Dr. Newman states his subject as follows:

> The infant mortality rate . . . is not declining, and this is the broad fact which constitutes the problem to be considered. Children under twelve months of age die in England to-day, in spite of all our boasted progress, and in spite of an immense improvement in the social and physical life of the people, as greatly as they did seventy years ago (p. 18).

Elsewhere he generalizes his results for England in the statement: "The infant mortality rate, as a rule, is stationary or even increasing" (p. 7).

Every one knows that deaths of very young children constitute a great proportion of all deaths, but to be informed that they constitute an increasing proportion, that the steady and rapid decline of the death rate at nearly every age does not extend to infants, but that they, almost alone in the community, are not profiting from the medical and sanitary progress in which we take pride, may have aroused in the minds of others of your readers, as it did in mine, both surprise and incredulity.

The question not considered by Dr. Newman, but of primary interest to your readers, Is infant mortality in the United States increasing? may be considered first. The best answer to it is found in the rates for the registration area. These were 206 deaths per 1,000 infants living under one year of age in 1890, and 165 deaths per 1,000 infants in 1900. The conclusion from these figures is supported by evidence from Massachusetts, our most important registration State. In that State the average death rate under one year of age to 1,000 births for 1890 to 1894 was 16.3, for 1895 to 1899 was 15.2, and for 1900 to 1904 was 14.1. This evidence points to a marked decline of infant mortality in the United States.

Let me ask in the second place whether Dr. Newman is correct in his general statement of "the problem to be considered," whether it is true as a rule that the rate of infant mortality "is not declining," but "is stationary or even increasing." The French Government has recently made a compilation of the vital statistics published by the several European countries from the earliest period, and has analyzed the results. In the section dealing with deaths, published in 1906, the conclusion regarding infant mortality is stated as follows: "In almost every country, infant mortality is decreasing, the exceptions being the United Kingdom, Ireland, Denmark, and Belgium," and the tables preceding this discussion show a decrease of infant mortality in fourteen countries of Europe, and an increase in only five, three of which are England, Scotland, and Ireland. Apparently a decrease of infant mortality is the rule in Europe, and not the exception.

Let me ask, finally, Does England constitute a real exception to the general fact? Does the country at whose feet in matters of registration and of sanitary legislation the world has been sitting for three-quarters of a century stand almost alone in showing no decrease of infant mortality? The evidence offered by Dr. Newman, seemingly conclusive as it is, fails to convince me. When he probes that evidence carefully he finds that "there has been an *increase* in the deaths in the first trimester, accompanied by a *decrease*, or at least an almost stationary position, in the last two trimesters of the first year of life"; and that "within the first quarter the rise has been almost wholly in the first month, and within the first month almost wholly in the first week" (p. 15). He does not hold then that there has been any significant increase of infant mortality in England after the first week of life.

Nearly forty years ago one of the leading statisticians in France, Dr. L. A. Bertillon, published the following statement:

> In England we cannot hope to measure infant mortality accurately, because there are many omissions in the registration, both of births and of the deaths of infants.

In support of this statement he pointed out that an interval of six weeks was, and I believe still is, allowed to elapse between a birth and its registration instead of the three days usually prescribed in the Continental countries; that no registration of still-births was required; and that the rates of infant mortality in France and England after the first month were almost identical; but that for the first month the rate in England was only half that in France, showing clearly "that many deaths of children occurring during the first month are not registered" (sc. in England). I am not aware that this criticism has ever been answered. Certainly it is accepted as valid by the French publication of 1906 already quoted. A committee of the House of Commons reported in 1893: "There is reason to think . . . that the number of children buried in the United Kingdom annually as still-born is enormous"; that is, that many children born alive, but dying within the forty-two days allowed for registration, are buried without registration of the birth or death. Now we have only to assume that these violations of law have become a little less frequent during the period covered by the figures in order to find in that change a complete explanation of the apparent increase in the mortality of very young infants in England.

WALTER F. WILLCOX.

Cornell University, Ithaca, September 2.

Notes.

The Macmillan Co's fall announcement list includes a new novel by F. Marion Crawford, "Arethusa," a tale of Constantinople; "The Gulf," an American story by John Luther Long; new translations of Björnson's "In God's Way" and "The Heritage of the Kurts"; "Theodore Roosevelt: the Boy and the Man," classed as a "juvenile," by James Morgan; "The Iliad for Boys and Girls," by A. J. Church; "Florence and the Cities of Northern Tuscany, with Genoa," by Edward Hutton; Highways and Byways in Kent," by Walter Jerrold, illustrated by Hugh Thomson; "Rivieras of France and Italy," painted and described by Gordon Howe; "The Seven Ages of Washington," by Owen Wister; "My Life in the Underworld," by Jack London; the Memoirs of Alexander Dumas, translated by E. M. Waller; "The Gentlest Art," an anthology of the most entertaining letters in the English language, edited by E. V. Lucas; "Philosophical Essays and Discussions," by Frederic Harrison; "A Self-supporting Home," by Mrs. Kate V. Saint Maur; "An Artist's Reminiscences," by Walter Crane; the Letters of the late Dean Hole; the second volume of Prof. Edward Channing's "History of the United States"; "British Colonial Policy, 1754-1765," by George Louis Beer; a new volume of poems by Alfred Noyes; "Specimens of Modern English Literary Criticism," selected by Prof. William T. Brewster; "England," a discussion of the organization and construction of its government, general, local, and colonial, by Prof. A. Lawrence Lowell; "Essentials of Economic Theory," by Prof. J. B. Clark; "The Rate of Interest," by Prof. Irving Fisher; "The Government of European Cities," by Prof. William Bennett Munro; "Essays in Municipal Administration," by Prof. John A. Fairlie; "The Outlook for the Average Man," by Dr. Albert Shaw; "Primitive Secret Societies," by Prof. Hutton Webster; "Negro Races," by Jerome Dowd; "British State Telegraphs" and "Public Ownership and the Telephone in Great Britain," by Prof. Hugo R. Meyer; "Railway Corporations as Public Servants," by Henry S. Haines; "Principles of Taxation," a volume in the Citizens' Library, by Max West; "Introduction to the Study of Comparative Religion," by Frank Byron Jevons; "the Seeming Unreality of the Spiritual Life," by President Henry Churchill King; "Religion and Social Reform" and "New Theology Sermons," a companion volume to "The New Theology," by the Rev. R. J. Campbell; volume ii. of Edward Westmarck's "Origin and Development of the Moral Ideas"; "Life in the Homeric Age," by Prof. Thomas Day Seymour; "Linguistic Development and Education," by Prof. M. V. O'Shea; "Psychology and Pedagogy of Reading," by Prof. Edmund B. Huey; "Pupil Self-government," by Bernard Cronsom; "Theories of Style," by Prof. Lane Cooper; "Educational Woodworking for School and Home," by Joseph C. Park; and "Economics for High Schools," by Prof. Frank W. Blackmar. The works of Byron, with a biographical sketch by the late Sir Leslie Stephen, will be added to the Globe Poets.

The Century Co. will issue this fall a new series of books made up of stories and sketches reprinted from *St. Nicholas*. There will be six of these books of adventure, travel, and description, the scenes laid in different sections of the United States; the books will be called: "Western Frontier Stories," "Stories of the Great Lakes," "Island Stories," "Stories of Strange Sights," "Sea Stories," and "Stories of the South."

The Baker & Taylor Company will publish soon the Memoirs of Frédéric Mistral and "The Story of Joseph"—the Joseph of the Old Testament—by George Alfred Williams.

Harper & Brothers are publishing immediately "In Wildest Africa," illustrated with many photographs by the author, C. G. Schillings; and "Discoveries in Everyday Europe," an illustrated volume of humorous sketches by Don C. Seitz.

Frederick McCormick, a war correspondent for the Associated Press, has written the story of the struggle between Russia and Japan as he saw it. The Outing Publishing Co. will issue the book under the title "The Tragedy of Russia in Pacific Asia."

The Burrows Brothers Company has just issued Dr. Bernard C. Steiner's Life and Correspondence of Dr. James McHenry, Secretary of War under Washington and Adams,

which was awarded the John Marshall prize at Johns Hopkins for 1907. The work presents a number of letters, hitherto unpublished, from men of the Revolutionary period. The Birch miniature portrait of Washington is used as frontispiece.

"The Story of a Cannoneer under Stonewall Jackson," by Edward A. Moore of the Rockbridge Artillery (New York: The Neale Publishing Co.), is a "plain, unvarnished" narrative of a private soldier of the Confederacy, a narrative as full of incident and adventure as any novel ever penned. He who likes to read of hard fighting will be more than satisfied with it, for the Rockbridge Battery of Artillery was one of the two or three best-known artillery companies of the Confederate armies. Enlisted at Lexington, Va., in Rockbridge County, the site of Washington College (now Washington and Lee University), and of the Virginia Military Institute, in which Stonewall Jackson was a professor until called to the field, this battery was composed largely of Washington College students and sons of prominent families, including after a while, as a private, a son of Robert E. Lee. The Rockbridge Artillery followed Jackson until his death and then fought on until Appomattox Courthouse. Mr. Moore, owing to his youth and the previous enlistment of his brothers, did not join the Rockbridge Corps until March 10, 1862. After that he shared its fortunes save when at home from wounds or disability. He makes no effort to describe or comment on the campaigns, but he has remembered so many details of camp and battle, so many comic, so many moving and tragic incidents of his service and of his comrades, that the book possesses genuine value despite occasional eccentricities of style which careful editing would have avoided. Certainly, no one can read Mr. Moore's homely but bright narrative without receiving a vivid picture of what the civil war meant to the Southern private. For this reason it deserves a place in all libraries of that war, particularly as it includes a roster of what was a singularly gallant and well-commanded organization among many such in the Confederacy. Introductions by Robert E. Lee, jr., who served with the artillery, and by Harry St. George Tucker add nothing to the value of the volume.

Albert Stickney's "Organized Democracy" (Houghton, Mifflin & Co.) is one of those radical pleas for political reconstruction which, however little likely to be adopted or even seriously considered, are not without usefulness as criticisms of existing political evils. Mr. Stickney is convinced not only that we have not true democracy in this country, but also that we cannot have true democracy so long as the present electoral and administrative systems prevail. Under popular election of all officials for fixed terms, joined to the party system, all that the voter can do is to vote for the candidate of this or that machine; his own personal choice, if he have one, he cannot possibly register. The remedy Mr. Stickney urges is the establishment, in local, State, and Federal Government, of a system of single-headed administration, with the heads of departments controlled directly by a Legislature the members of which are popularly chosen by *viva voce* vote. For tenure during short terms there would be substituted tenure during good behavior. Congress, for example, would become a body of one house with the power of removing the President, but without control over subordinate appointments. We fear that Mr. Stickney is too optimistic, and too little appreciative of the difficulty in this country of achieving reforms by wholesale; but his shrewd observations and obvious seriousness make his book not uninteresting. Incidentally, we commend to the curious the extraordinary punctuation of the volume.

President Nicholas Murray Butler's "True and False Democracy" (Macmillan Co.) comprises three addresses, the two besides the title paper dealing respectively with "Education of Public Opinion" and "Democracy and Education." There is here no exposition of a novel theory, nor yet a plea for revolutionary changes in political machinery or organization. To President Butler, the bases of political health are in personal right thinking and right acting, in clear intellectual perception and sturdy moral conduct. With the fundamental errors and still more dangerous half truths of socialism in mind, he insists that true democracy can never mean equality, save of opportunity, but that its essence is liberty, exercised with due regard for the rights of others and instinctive respect for law. There is an earnest plea for better political education, for wiser leadership, and for the repudiation of the boss, who does not lead, but drives. The papers are admirably phrased, and merit thoughtful reading.

"Races and Immigrants in America," by Prof. John R. Commons (The Macmillan Company), is a worthy addition to the literature of a subject whose significance is, we fear, too little apprehended as yet. Beginning with a brief survey of the historical relation of race to democracy, Professor Commons goes on to consider somewhat in detail the varied race elements in the American colonies, including the negro, and the geographical and social sources of the nineteenth century additions. With this foundation, he then takes up the combined questions of race and immigration as related to or affected by labor demand and supply, industrial opportunity and efficiency, rural and urban life, literacy, poverty and crime, suffrage and political status, and amalgamation and assimilation. Well fortified throughout by statistics, and evidencing a wide range of observation, the great merit of the volume is its sensibleness. Professor Commons points out, for example, that the "race hostility" of which much is said is not primarily racial in character at all, but rather "the competitive struggle for standards of living"; and that it appears to be racial "because, for the most part, different races have different standards" (p. 115). "Race suicide" among the masses of wage-earners is one of the natural results of such a struggle; and while Rooseveltian exhortation is well enough for those who can act upon it, multiplication of offspring for people to whom young children must be an economic burden amounts, in Professor Commons's opinion, to an attempt to cure race suicide by race deterioration. On the other hand, the preponderance of adults among immigrants, together with the intense desire of the immigrant to rise in life, has helped to bring about the "feverish overproduction" and consequent collapse which have characterized American industry. As regards the future of the negro, to whose unhappy lot the volume devotes a good deal of space, Professor Commons seems pretty pessimistic, though the situation is admittedly bad enough. We cannot enter into the details, however, of any of the author's conclusions, and can only commend the book as a thoughtful and enlightening contribution to the understanding of a serious subject.

In the third volume of the Student's Old Testament, "Israel's Laws and Legal Precedents" (New York: Charles Scribner's Sons), Prof. Charles Foster Kent reaches a field where classification and rearrangement of the Scripture text is of great value to the student of the development of Hebrew religion and social usages. The legal portion of the Old Testament is arranged in five general divisions: (1) personal and family laws; (2) criminal laws, comprising injuries to persons, property, and society; (3) humane laws, emphasizing the duty of kindness to animals and men; (4) religious laws, defining obligations to God; and (5) ceremonial laws, containing minute directions regarding worship and the ritual. This classification is both logical and, in a rough way, chronological. The history of the development of Hebrew legislation, its wide range, and remarkable ethical and religious significance, are by this means brought graphically before the reader. The relation of the legislation to the work of the prophets is set forth clearly, and the dependence of the Hebrew codes upon the older Babylonian enactments is frankly acknowledged. Professor Kent declares:

> Nowhere in all legal literature can the genesis and growth of primitive law be traced so clearly as in Israel's codes thus restored. They also represent the most important cornerstones of our modern English laws and institutions, and therefore challenge and richly reward the study of all legal and historical students.

One who has had experience of the mass of facts which lie ready to one's hand when one undertakes to describe any of the great religions, will appreciate the forbearance and skill with which Prof. Karl Marti of Bern has brought out the distinctive features of Hebrew piety in "The Religion of the Old Testament," now translated by the Rev. G. A. Bienemann (G. P. Putnam's Sons). So far as we are aware, no one has gathered more successfully into brief compass the more vital matters in the modern understanding of Old Testament religion. The special inquirer on a particular subject, *e. g.*, the ark, the Levites, might be disappointed to find his topic treated so summarily, but the beginner in scientific and comparative study of the Old Testament would be correspondingly grateful that a rapid glance over the whole field is afforded, with those features in the foreground which more thorough research will prove to be essential. The development of Hebrew belief is analyzed in four periods, the Nomad religion, the Peasant religion, the religion of the Prophets, the Legal religion. The general understanding is that of Wellhausen, with recognition of a large original element in Hebrew piety despite near relationship at many points to faiths of the nearer East. Professor Marti has avoided idiosyncrasies of opinion to such an extent

that one might use a phrase common among critics, and describe his work as the "product of a school," without detracting in the least from his independence of research and of judgment. As to the translation, it is usually possible to see the author's meaning, but such phrases as "it is thanks to the prophets," "religiosity" (in a good sense), "Babel" for Babylon, indicate careless editing.

Cæsar's Civil War with Pompeius has been translated with introduction and notes by the Rev. F. P. Long, for Henry Frowde. Since the masterly reproduction of Cæsar's account of his campaigns in Gaul by Holmes, we have needed a similar treatment of his Civil War; and the appearance of this translation, though very different in style, is a matter of congratulation to students of the most interesting period of Roman history. The translator prefixes to the narrative a thoughtful and well-written introduction, in which he summarizes the conditions at Rome which rendered the rise of Pompeius and Cæsar inevitable; he shows with great clearness that it is quite unjust to regard Cæsar as a rebel against a state which had practically driven him to the measures he adopted. The text on which the translation is based is that of Du Pontet, in this regard marking a refreshing change from the servility to German editions, which has characterized most English, as well as American, work in recent years. The translation itself, while not free from occasional inaccuracies or even mistakes, shows, in the main, the hand of a master of English, as well as of Latin; it is full of the dash and vigor of the original and only occasionally shows that it is a translation. In some respects, perhaps it is too English; *e. g.*, English technical terms of a rather special meaning are sometimes employed, which an American would find it a little difficult to understand, as the rendering of *consules* by *Government* in the narrow Parliamentary sense.

In his "Volkschule und Lehrerbildung der Vereinigten Staaten in ihren hervortretenden Zügen"—the fairest and most interesting book concerning American schools yet written by a German (imported by G. E. Stechert & Co.)—Dr. Franz Kuypers of Cologne disclaims any thorough study of our institutions and presents what he has to say rather as "impressions of travel." Yet he saw a great deal in the few weeks that he was here in 1904, the assembled exhibits at the St. Louis Exposition assisting him materially to get a comprehensive view. His tabulated facts, penetrating criticism, and hearty praise are brought home to the teacher by not less than forty-eight engravings, illustrating many phases of American school life from the kindergarten to the high school, as seen in New York, Boston, St. Louis, Salt Lake City, and elsewhere. In a *Vorwort* of ten pages, Dr. Kuypers contrasts the *Schulmonarchie* of the Germans with the *Schuldemokratie* of the Americans, and finds that though we may fail in idealistic training while excelling in the practical, the Germans may learn much from us, particularly by way of suggestion. A bibliography calls attention to German as well as English books on American school affairs.

Another book just imported by Stechert & Co. is Georg Kerschensteiner's "Grundfragen der Schulorganization," a collection of addresses and essays by the Munich school commissioner, dealing with the period of the German *Jungc* between school and army service, professional and general training, productive labor and its educational value, the fundamentals in the organization of high schools, the training of teachers, the reorganization of the industrial schools in Munich, and various matters pertaining to the advanced schools for girls and the relation of the municipality to the schools. Though almost exclusively German, and specifically Bavarian, in its point of view, the book will be suggestive to intelligent American teachers.

Modern archæology in Japan may almost be said to have been begun by American scholars, when A. S. Bickmore declared the Ainu of Yezo to belong to the Aryan race, and Prof. E. D. Morse discovered and opened a shell heap on the line of the Tokio-Yokohoma Railway in 1875. Now, the Japanese pursue the work themselves, having opened over four thousand tumuli, dolmens, or megalithic chambers. Besides endowing professors' chairs of ethnology, they are creating museums of the highest anthropological interest. On Yezo Island, the Rev. John Batchelor has for thirty years made the Ainu his special study, demonstrating their language to be Aryan. In a recent paper in the *Japan Mail*, he retracted his formerly expressed belief in the existence of a dwarfish and pre-Ainu race of pit-dwellers. These were called Koropokguru, and about them a voluminous popular and pseudo-scientific literature has gathered. The recent writings of Japanese archæologists are uniform in discrediting the existence of any such race, besides proving that the Ainu themselves were pit-dwellers and that they made pottery, used paint and flint knives, and lived in the stone age. Their conquerors, continental and possibly of Semitic origin, used metal, and were in other respects more perfectly equipped for conquest, which was completed only after a struggle of two thousand years. In Part I, Vol. i of the Transactions of the Sapporo Natural History Society is a valuable brochure on the *chasi*, or forts enclosed by fences or embankments used by the Ainu in defence against their Japanese conquerors. Traces of these are found not only all over Yezo, but in northern Japan, while the geographical nomenclature on both islands is in harmony with the conclusions of the archæologists, that the Ainu, speaking an Aryan tongue, once inhabited the whole archipelago.

One of the "Morning Stars of the Restoration" in Japan, was Dr. Hashimoto Sanai, horn in Fukui in 1834. The celebration in 1908 of the fiftieth anniversary of his death is to be marked hy the publication of his complete works, with a new biography. Besides being a master of Chinese learning, he studied Dutch, and through this medium knew much of the history, literature, and science of the world. He foreshadowed in his writings much that has become fact in the modern government, national policy, and education of Japan. Besides practising medicinc he founded the school of modern sciences and languages in Fukui, which was, after 1870, conducted by American teachers. He was among the first to secure steamships, develop mining on modern principles, and to adopt vaccination, modern hygiene, and European military drill and arms. When his feudal lord of Echizen, was, with other liberal minded daimios, imprisoned in the agitations which arose after the signing of the Townsend Harris treaty, Hashimoto, with nearly fifty other upright and loyal men, was seized and put to death by the arbitrary Yedo premier Ii.

Acting on the recommendation of the New York Library Association, at its last annual meeting, the New York State Education Department has undertaken the publication of a quarterly journal in the interest of the libraries of this State. While news of general library interest will be touched on briefly, and one or more articles dealing in a broad way with questions of library policy will be contained in each number, the design of the new quarterly is specifically to deal with local or State matters, with the idea of developing among the libraries of the State a stronger sense of unity and a more effective coöperation. The first issue will appear on or before the first of October, and will have as its chief topic the selection of books for small libraries. The following papers dealing with this question will be included: "Principles of Book Selection," by Corinne Bacon; "What Can We Get Out of a Henty Book?" by Caroline M. Hewins; "The One Hundred First Books for the Children's Library," by Clara W. Hunt; "One Hundred Dollars for a Reference Collection," by J. I. Wyer, jr.; "Some Useful New York State Documents," by J. I. Wyer, jr.; "Subscription Books"—advice of the American Library Association committee on book-buying. Other features of the first issue will be a paper on simple methods in library work by Mrs. E. E. Ledbetter; a "Question Box," dealing with some homely library details; "What New York Does for Libraries," and "News and Notes of New York Libraries." The journal will be sent free to all libraries and members of library boards in the State who make application. To others the cost will be twenty-five cents a year or ten cents a copy.

The project recommended at the international meeting of librarians at St. Louis in 1904, to aid public librarians in American cities in selecting current books in foreign languages by the publication of select lists made up for this purpose by expert librarians in different countries, has now been realized in the case of Italian books by the publication in English of a small serial called "The Best Italian Reading," by Dr. Guido Biagi, director of the Laurentian Library, Florence, issued as a supplement to the *Revista delle Biblioteche e degli Archivi*. The first issue, treating only of reference books and history, contains twenty-five titles. Other classes of books will be taken up in subsequent numbers. Brief but helpful annotations in English are given for each title.

The Carnegie Library of Pittsburgh has at the Jamestown Exposition, an interesting exhibit of the methods and appliances in operation at that library. As for several years this library has been known particularly for its specializations in children's work, the main interest of the exhibit attaches naturally to its showing of the details and results of this work. The following are some of the items of interest

brought out in the prospectus of the exhibit: The library maintains 168 distributing centres from which children may draw books. These include 66 schools, 50 reading clubs, 29 "home libraries," 12 deposit stations, 6 branch libraries, 4 summer playgrounds, and 1 special children's room. The attendance in the various children's rooms last year was 322,239, and for the nine years that these rooms have been in operation the total attendance is 2,280,536. Last year the library circulated among children 376,559 volumes, and during nine years the circulation among children has reached a total of 2,125,660. In 1901, a school for the special training of children's librarians was instituted, the only one of its kind in the world. During the six years of its operation, it has sent out 70 skilled workers to fill positions in children's departments, and such has been the demand for these workers that many more positions could have been filled had the supply been sufficient.

The varied educational activities of a typical city library in Great Britain are well illustrated in the annual report of the Liverpool Public Library. Ten circulating branches with reading rooms are operated —in addition to a large central reference department. With a total stock of 280,000 volumes, there were issued during the year 1,362,000 volumes for home reading, and 1,410,444 for reference use, making a total of 2,773,436. This means an average of about ten issues for each book in the library, rarely if ever equalled in a library of its size. A feature of work much emphasized in this as in most other British libraries is the free lecture, covering all sorts of educational topics, designed specifically to introduce hearers to different classes of books in the library. During the year 178 such lectures were given in nineteen centres, with a total attendance of 97,426 persons. To these lectures much of the popularity of the library is attributed.

According to the British Museum Return for 1906, 246 books, mostly of German and Italian origin, printed before 1500 have recently been added; and, in addition, the Museum has, through gifts from Lord Strathcona, the Hon. Walter Rothschild, and others, received 158 works or editions hitherto unknown. The Museum has now, exclusive of duplicates, 9,088 books printed before 1500. During the year 28,498 volumes and pamphlets have been added to the library, and 64,977 parts of volumes, issues of periodicals, etc. The Department of Manuscripts has received two Greek papyrus rolls from Herculaneum, twenty papyri from the Egyptian Exploration Fund, two manuscripts of Chaucer's "Canterbury Tales," and a volume of English metrical romances dating from about 1400.

The crowding of Russian students, particularly Jewesses, into the Swiss universities has become so serious a problem that at a conference of Swiss university rectors, held recently in Lausanne, it was decided to make the entrance requirements so stringent as to exclude a large percentage of this element. Berne, in particular, has suffered, because this university has been especially liberal in admitting foreigners. As a consequence, its enrolment of Russian students in the summer semester just closed was 709, as compared with 614 during the preceding half-year. Of these 709, the women numbered 430. The authorities of the Zürich University took steps in this matter last year, with the result that its Jewish-Russian enrolment decreased by more than fifty in a single term.

The commission appointed to prepare the programme for the coming International Archæological Congress next spring in Cairo, has sent out from the Egyptian Museum of that city the preliminary announcement. The experience of the last congress, held in Athens in 1905, convinced the majority of the participants that the work had been too minutely divided. Accordingly, the next congress is to have only six groups: (1) Pre-classical Archæology; (2) Classical Archæology; (3) Papyrology; (4) Christian Archæology; (5) Numismatics and Geography; (6) Byzantine Archæology. This arrangement, however, does not meet with universal approval. The Munich *Allgemeine Zeitung*, for example, while expressing pleasure at the fact that the new science of papyrology has attained to the dignity of a separate section, regrets that Inscriptions has been assigned to a subordinate place; as also that Christian Archæology has not been united with Byzantine Archæology.

René François Armand Sully-Prudhomme, the French poet and critic, died suddenly September 7 at his villa, near Chatenay. He was born in Paris in 1839, the son of a merchant. After completing the courses in science and philosophy at the Lycée Bonaparte, he began work in the office of an ironmaster at Creusot. This employment he abandoned with the intention of entering the legal profession, and he actually began as a notary's clerk. But his inclinations were in the direction of literature; and in his twenty-sixth year he published his first volume, "Stances et Poèmes," which secured the enthusiastic recognition of Sainte-Beuve. One poem, in particular, "Le Vase Brisé," was singled out as a little masterpiece, equally noticeable for its exquisite finish and its delicacy of sentiment and style. Fortunately, a modest patrimony enabled him to devote himself to literary work without wholly depending on it for a livelihood. His second collection of verse, "Les Épreuves," appeared in 1866; in it he expressed the sadness of unbelief. Three years later followed "Les Solitudes" and his rhymed translation of the first book of Lucretius, "La Nature des Choses," in which he wrote a brilliant and widely discussed preface. "Impressions de Guerre" (1870) dealt with some of the phases of the Franco-Prussian War; "Les Destins" (1872) and "Vaines Tendresses" (1875) are of a more personal nature. These writings established his reputation as one of the most vigorous and exact of contemporary French writers, and one of the most distinguished for lofty sentiments and philosophic ideas. His first great philosophical poem, "La Justice," appeared in 1878, and to it he owed his election to the French Academy in 1881. In this poem he insisted upon the justice which he found in universal nature. His next work, "Le Prisme: Poésies Diverses," published in 1886, was a return to the more personal style. His best-known poems, however, and those on which his reputation most firmly rests, embodied idealized philosophical conceptions, such as solitude, justice, and happiness. "Le Bonheur," 1888, is a sort of vision of the progress of humanity toward the ideal state of supreme happiness. M. Sully-Prudhomme's "Testament Poétique," 1901, won the Nobel prize over such competitors as Ibsen, Tolstoy, Frédéric Mistral, Sienkiewicz, Ossip-Lourié, Hauptmann, Rostand, D'Annunzio, Freitag, and Echegaray. Although by no means a rich man, the poet devoted a considerable portion of the prize to establishing an annual award for excellence among the younger French poets. As a critic he published two volumes, "L'Expression dans les Beaux Arts" and "Reflexions sur l'Art des Vers." He wrote for the *Revue des Deux Mondes*, among other articles an important study of Pascal. For many years before his death, a sufferer from rheumatic gout, he had lived a quiet life in his country house.

NOTES ON TEXT BOOKS.

A revised edition of Myers's "General History," and "A Short History of Ancient Times," by the same author, extracted from the former work, are published by Ginn & Co. Mr. Myers's text books have long been popular with schoolmasters, and require no extended comment. The chief feature of these new editions is that they are brought up to recent investigations in early Oriental civilization. The same firm publishes "Outlines and Studies," by Florence Leadbetter, a series of brief notes and questions intended to be used with Myers's text books. These three books all belong to that class which aims at reducing history as nearly as possible to tabular statements, for the specific purpose of answering examination questions.

School histories of the United States still continue to be published with great regularity. Three recent ones are by Prof. J. B. McMaster (American Book Co.), R. L. Ashley (The Macmillan Co.), and Professor Prince (Scribner's). The first two are well illustrated and produced; the latter is very short, not illustrated, and aims at presenting a "bird's-eye view." None of these books is of exceptional merit, and a search for novel features discloses little beyond the fact that Professor Prince is rather more Southern in his views than his two competitors.

A successful English text book is the "History of England, for Use in Schools," by Arthur D. Innes (New York: G. P. Putnam's Sons). The three volumes in which it previously appeared have now been united in one. The book is well supplied with outline maps, there are good summaries and tables, but illustrations are wanting. The standard of accuracy is reasonably good.

"Outlines of Roman History," by H. F. Pelham, Camden professor of ancient history at Oxford (G. P. Putnam's Sons), is well known from the previous editions. The new version differs from its predecessors chiefly in the larger space given to the history of the Flavian Emperors and of Trajan, to the annexation of territory beyond the Rhine effected by the former, and to the Dacian and Parthian campaigns of the latter. Since Professor Pelham belongs to the school of Niebuhr and Mommsen, he is decidedly skeptical concerning the traditional account of Rome under the kings and

in the early Republic. Yet, back of all this, he admits, lie genuinely ancient Roman beliefs which frequently afford a clue to the truth. He grants, for example, that a Sabine invasion of Rome took place in very early times, but argues that after all the Sabines exercised little, if any, influence upon the development of Rome. Since Professor Pelham holds such views concerning the early history, he is naturally able to carry us down to the beginning of the struggle with Carthage in 113 pages. Pages 201-512, more than half of the whole book, deal with the period which extends from the tribunate of the elder Gracchus (133 B. C.) to the death of Nero (69 A. D.). A book which gives in 600 pages a good general survey of the whole course of Roman history deserves at once a hearty welcome; when to such comprehensiveness are added scholarship of a high order and familiarity with modern writings on the subject matter as well as first-hand acquaintance with the ancient authorities, we have a highly valuable work. The numerous references in the footnotes to the authorities, ancient and modern, constitute a valuable feature. Four maps give the increasing extent of Rome territory in 486, 134, and 49 B. C., and in 69 A. D. A map of Roman territory in Trajan's time might, however, have been added, and the loss of Roman territory might well have been traced. The printing of this new edition seems to have been rather hasty; there are too many typographical errors, as Arcananians (for Acarnanians), Timacus (for Timæus), Ennius ap. Testum (for Ennius ap. Festum).

"A Source Book of Greek History," by F. M. Fling (D. C. Heath & Co.), is intended for high-school pupils, and presents a selection of extracts of Greek authors from Homer to Pausanias, which stand in the same relation to a narrative text on Greek history as photographs, casts, or originals do to a text-book on art, or citations from Greek literature to a text-book on that subject. Without such illustrations, the one would be an absurdity, and the other an insufferable bore. But is the same thing true of Greek history? Is the student to grasp the subject (for which, unfortunately, only the very briefest time is allowed in high schools), by using a fluent narration, such as that of Botsford, who merely refers to his sources, for the sake of those teachers who may have the time or spirit to consult them; or should he study the sources themselves, and so construct his own narrative as an independent investigator? The author is not sure. He prophesies that "by the majority of teachers these sources will probably be used as illustrative material." He may be quite sure, however, that practically all teachers who make use of the book at all will use it in this way. The critical study of sources, as a stimulus to which he has completed this book, is not for high school pupils, or even for college freshmen. It is for those maturer minds who are devoting particular attention to history. For such as these, whether student or teacher, this book is important. The knowledge of Greek itself has practically disappeared from our colleges, except in the narrow circle of the Greek department. And even here it is doubtful whether any but the most advanced would be able to sift out their sources, as it is done for them in this book. But for the ordinary student, whether of history, art, or literature, the narrative account is the only practical method of treatment, supplemented by suitable illustrative material. Moreover, narrative history does not to-day "take refuge behind the dogma of infallibility," for which Professor Fling seems to have conceived a needless fear; else it falls into immediate oblivion. With all that is ancient of days in Grote, it is his splendid narrative, bulwarked by the ancillary props of source citations, that saves him; and the same is true of Gibbon. But Professor Fling will line up with students like Hicks and Hill, who, without making an attempt to reconstruct Greek history themselves, or beget in their students the critical attitude, content themselves with appending the illustrations necessary to make more vivid the facts that the narrative embodies.

What is needed more, perhaps, than anything else just now for the study of English, is a well-edited set of classics to take the place of the generally unsatisfactory run of reading-texts by prentice teachers, who have in many cases no better qualification for their task than an inordinate desire to advertise themselves. Such a model set of classics should be annotated for reading exclusively, and above all should be accompanied by first-rate critical introductions, to awake as far as possible the student's literary observation and judgment. To some extent Henry Holt & Co.'s English Readings conform to these specifications, although the individual volumes are of unequal merit. The latest addition to the series, in particular, "Selections from Addison," by Edward Bliss Reed, is distinctly inferior from the literary point of view to the best of its predecessors. The introductory essay on the "Writings of Addison" is by no means what one has a right to expect in this connection. It is meagre and inadequate, and shows too clearly the coldness and reserve of the day toward the writers of our Augustan period. In other respects, however, and particularly in comparison with the great mass of its kind, it makes a much better impression. At all events, it is as good a piece of work in its way as the year has produced. The selections are well made to exhibit Addison on his various sides; the notes are fair and without too much "scholastic" apparatus; while a general bibliography is in a way to supply the editor's own critical lapses.

Quite out of the dull and plodding way of ordinary text-books lies a new "Composition-Rhetoric," by T. C. Blaisdell (New York: American Book Co.). Not only is it a text-book with a style, though that would seem distinction enough in itself; but it aims directly at the creation of original literature within the unpromising pale of the classroom. "The aim of art is to convey feeling from one soul to another," says the author at the outset; and the remainder of the volume consists of an elaborate analysis of the means by which the soulful schoolboy may bring about this happy result. Among them appears such cryptic devices as "Mood Hints," "Visualization," "Word Meanings," "Environment," "Subordination." It is impossible to say exactly how many there are in all; for the author seems occasionally to have confounded his *procédés* with his *genres*, and such an effect as "atmosphere" appears rather incongruously foisted in between a chapter on "Book Reviews" and another on "The Prose Poem." The climax of the volume, however, is reserved for chapter xviii., "Literature: a Definition," in which the writer, gathering up his resources, arrives at a sort of universal formula or recipe, so simple, so illuminating, that it can hardly fail to commend itself to the veriest little Philistine that ever bit a lead pencil:

> The artist finds himself tingling with inspiration. This feeling clamors for expression. He applies chisel to marble, brush to canvas, bow to strings, or pen to paper, and the world is richer by a masterpiece.

What could be easier? With every tingling schoolboy transmuting his experiences into the refined gold of art through the medium of Mr. Blaisdell's "literary touch," what abundance of intellectual riches may we not hope soon to possess!

There is much that is obvious in Miss Albright's book, "The Short Story, its Principles and Structure" (The Macmillan Co.); but such a result is probably unavoidable, if matters of the sort are to be seriously studied. Provided the student of English is to be exercised in original literary construction as distinguished from the mere practice of language, such a form as the short story furnishes no doubt as good a discipline in composition as any other literary *genre*. In such a case Miss Albright's book is likely to have its uses. Though there is the usual inevitable tendency to create a special terminology about the subject by the use of manufactured terms and phrases, yet on the whole the great merit of the volume consists in the fact that it does not reduce the story to a single inflexible formula. "The analysis of literary effects into mechanical devices is always arbitrary and, in a sense, profitless," says Miss Albright justly enough; though as a matter of fact it may be doubted whether the text-book can possibly do more for the student. Indeed, the sentence contains a kind of condemnation of the whole ulterior aim of the writer. For what after all is the advantage of encouraging the production of a merely imitative and second-hand literature of which we have altogether too much already? It is to the reader rather than the writer that such a book is really useful, and to the former it may be mentioned as a more or less flexible and suggestive discussion of a topic whose importance is rather exaggerated at present.

In "An Anthology of German Literature," Professor Calvin Thomas, long and favorably known as a student of modern German, adds another volume of value to the library of German. The work is intended to give in compact form and modern German an intelligent idea of German literature of the early centuries. Max Müller edited two volumes of the German classics to accompany Scherer's history of German literature; but Müller is compendious and his chips are all from original German blocks. Professor Thomas feels that to make friends for mediæval German poetry he must provide a text that can be used by those who never studied, or may never care to study, Old or Middle German, and he must select only those specimens that show the literature in its strength and beauty. Although students seldom agree as to just what should be included in an anthology, these selections indubitably show taste and judgment. Whenever he could not

find a good translation of the text he wished to present, Professor Thomas has made an excellent one himself. About half of the translations he gleaned from Bötticher, Behringer, Simrock, and others. Doubtless considerations of space as well as the aim to make the book an aid to literary, rather than linguistic study, excluded original texts, but there are many who will wish that here and there an extract had been given, to suggest the *Geschmack* of the old and strange. It is to be hoped that both Professor Thomas and the publishers, D. C. Heath & Co., will be encouraged to follow up this first volume with one or two more, bringing the German literature down to date.

In "A German Science Reader," prepared by Dr. William H. Wait (The Macmillan Co.), the selections have been taken from the works of German specialists, and have been so grouped as to form masses of related reading, giving to students in several fields fifty or more pages of matter that they may well absorb for the content, and that in style and vocabulary will suggest the German investigator in his laboratory. Limited but essential notes accompany the text, and there is a complete vocabulary. The book will be of value especially to students of science, who often find themselves miserably at sea because their hard-won vocabulary of the poets does not help them in reading the works of chemist and physicist. Inasmuch, however, as all scientific matter is not printed in the Latin letter, it would seem better if a few pages of this German reader had been set in German type.

Joseph Wright is editor of a student's series of historical and comparative grammars in English, published by Henry Frowde. Mr. Wright himself, who has had a free hand since the completion of his contribution to the "English Dialect Dictionary," undertakes the first volume, an "Historical German Grammar," and a thorough piece of work it is, with its index of 4,000 words. The book will meet the wants of the steadily increasing number of people who take a real interest in the scientific study of language. Of course, no one ignorant of modern German can get much out of this historical grammar, but while its use presupposes an acquaintance with the later forms, the indefatigable labors of the compiler render a knowledge of Old or Middle German unnecessary.

Those who prefer a combined reader and drill book like Lange's "German Method" will no doubt welcome Dr. Paul V. Bacon's "German Grammar" (Boston: Allyn & Bacon). It is not, however, a reference grammar, and can never take the place of either Thomas or Joynes-Meissner. Some fourteen pages are devoted to the alphabet, vowels, and consonants; and ninety-seven pages of prose and poetry—from Goethe, Heine, Uhland, and others—are followed by 320 pages of syntax. Considerable pains have been taken to give a vocabulary of grammatical terms, such as the German for "vowel," "pronoun," "gender," "accusative," etc., but almost no provision is made in the German sentences for using the words and idioms thus required. Typographically, the book is all that could be desired.

D. C. Heath & Co.'s "German Lesson Grammar," by Dr. Edward S. Joynes of the University of South Carolina, should prove of little less value than his well-known Joynes-Meissner. Professor Joynes has been assisted by Prof. E. C. Wesselhoeft of the University of Pennsylvania. Inasmuch as the method of this new German grammar is already more or less represented in the Joynes-Meissner, it might puzzle the critic as to why another grammar had been attempted; the authors, however, seem to have aimed at opening a middle path between the lesson book on the one hand and the rigidly systematic grammar on the other.

Dr. Carl Edgar Eggert of the University of Michigan has edited for publication by Henry Holt & Co. Conrad Ferdinand Meyer's "Der Heilige," giving notes and a rather extensive biographical and critical introduction. There is a bibliography of German, English, and French works pertaining to Meyer, and also a spectacled portrait of the story-teller.

Ludwig Fulda's growing popularity in America should pave the way for a hearty reception of "Das verlorene Paradies" (Ginn & Co.), edited by Prof. Paul H. Grummann, under authority from Fulda and Heinrich Conried, the American owner of the play. Fulda's plays are particularly rich in colloquial German, and Professor Grummann has profited by the opportunity to provide some twenty-six pages of *Fragen* for the discussion of the text in German. There is an introduction, in which the editor points out what he believes to be the influence of Sudermann, rather than Hauptmann, upon Fulda.

Dr. R. Clyde Ford of the Michigan State Normal College, Ypsilanti, has edited Sudermann's "Teja" for D. C. Heath & Co. As a one-act historical drama (first appearing eleven years ago as part of "Morituri") "Teja" has deserved the favor shown it at home and abroad. A biographical sketch based on Kawerau and Meyer, and a brief history of the Goths in Italy, should make the book serviceable to beginners.

"Lessons in French Syntax and Composition" (Henry Holt & Co.) is an attractive little volume of 178 pages devised by W. U. Vreeland and William Koren of Princeton, who believe in brief doses of syntax, plenty of idiomatic phraseology, and a direct application of the principles of syntax. The sentences are not connected discourse, and the subject matter is not all French, but there is compensation in the attempt to prevent mechanical translations.

The "Elementary French" of Fred Davis Aldrich of Worcester Academy, and Prof. Irving Lysander Foster of the Pennsylvania State College, is expanded from "Foundations of French"; and the logical arrangement of topics in the original has been retained, while a greater variety of exercises and full vocabularies have been added. An effort is made to secure unity and system by grouping the lessons around a common topic, such as the verb, the pronoun, etc. Whether the placing of the phonetic reproduction of the earlier portions of the French text in a remote appendix is as good a plan as giving some phonetic transliteration in the early pages themselves is an open question, but the student will find a concise and useful outline of elementary French inflection and syntax in a syllabus of questions and answers by Prof. Roscoe J. Ham of Bowdoin College. The book is published by Ginn & Co.

Dictation has long been a part of the French public school system in the teaching of language, and it is surprising that such a work as Mary Stone Bruce's "Dictées Françaises" (D. C. Heath & Co.) should have been so long in appearing. The book has forty-six pages, divided into simple anecdotes from four to fifteen lines in length, sentences to illustrate agreement or non-agreement of past participles, well-known proverbs with English equivalents, and quotations from distinguished French writers.

Judged by the several issues of the Oxford Modern French Series (Henry Frowde), edited by Léon Delbos, which have already appeared, the new undertaking is full of promise. The editor has little use for the "natural" or "direct" methods of teaching, at least in so far as they have laid too much emphasis on the study of modern tongues for utilitarian ends, and he is plainspoken in his advocacy of the study of languages in order to appreciate the literatures they convey. The texts thus far chosen are Balzac's "Le Colonel Chabert," edited by H. W. Preston; De Bourrienne's "La Jeunesse de Bonaparte," edited by A. Canivet; and Michelet's "Louis XI." and "Charles le Téméraire," edited by E. Renault. The volumes are among the best-printed and best-bound school books put on the American market by British publishers. The introductions are short, and in concise, clear English, with none of the marks of a German laboratory. The notes are literary and historical, seldom grammatical, and there are no vocabularies. An equally well-made edition of Balzac's "Pierrette," edited by Theodora de Sélincourt, of Somerville College, Oxford, also comes from the Clarendon Press, being one of the first of a more advanced series, and supervised also by Léon Delbos. Elementary matters are passed over in the notes, and only the most interesting points are treated. A portrait of Balzac, supposed to represent him at the time he wrote "Pierrette," is given. A companion volume from the Clarendon Press is Sand's "Jeanne," edited by Cécile Hugon of Oxford, and having an old-time print of Sand. Besides a critical introduction, there is a biographical note.

There is no over-done introduction to Prof. R. L. Sanderson's "Le Père Goriot," by Balzac (D. C. Heath & Co.), for there are only 32 pages of notes for 327 of text, but what has been done is well done. There is a bibliography, without, however, one work in English, and the questions arise whether every student equipped for Balzac is able to handle reference French easily, and whether every college library possesses most of the reference volumes listed.

Alexandre Dumas's "Le Chevalier de Maison-Rouge," one of the most powerful works of fiction dealing with the French Revolution, has been abridged and edited with notes and vocabulary by L. Sauveur and E. S. Jones of the Allen School of West Newton (American Book Co.). In their preface they endeavor to answer the questions, "Is the Chevalier de Maison-Rouge an historical personage? Did he ever exist?" They review the labors of the enthusiastic investigator, M. G. Lenôtre.

Prof. George N. Henning's "Polyeucte, Martyr," by Corneille, is a modest little volume (Ginn & Co.), but it contains sev-

eral features out of the ordinary. There is an introduction discussing the tragedy before Corneille, Corneille and his contemporaries, the religious drama, "Polyeucte, Tragédie Chrétienne," the sources and historical elements, the dramatic structure, characters, and literary value. Then, in addition to a bibliographical note and about thirty-five pages of annotation, there is an appendix presenting forty subjects for composition in French, a note on the tercentenary celebration of Corneille's birth, and a series of jottings made at the Comédie Française, June 10, 1906, offered as an aid to visualize the play.

Henry Holt & Co. issue "Le Cid, Horace, and Polyeucte," by Corneille, edited with an introduction by Prof. William A. Nitze of Amherst, assisted by Stanley L. Galpin, who has supplied the notes. There is no vocabulary. The volume is really a companion to Professor Warren's "Racine," with which it agrees in plan and arrangement; and it is probably because the study of Corneille necessarily precedes that of Racine that the general introduction to the former has been made so full (xxvii. pp.).

In Jean Rotrou's "Saint Genest and Venceslas," edited for Ginn & Co., with an introduction and notes by Prof. Thomas Frederick Crane of Cornell, we have the first edition of any work of Rotrou's ever published outside of France, although Rotrou may well be mentioned after Corneille and Racine in French literature of the seventeenth century. Rotrou seems to have imitated Corneille in his "Polyeucte," and this stimulates the curiosity of the reader. The two plays being based upon Spanish ones, and Spanish being now so generally studied, Professor Crane gives copious extracts from Rotrou's sources, in the hope of awakening an interest in the Spanish drama of the same century. The volume contains an introduction of 135 pages, a bibliography, and two indexes, making in all a scholarly work.

Racine's "Les Plaideurs" (D. C. Heath & Co.) finds sympathetic treatment at the hands of Prof. Charles H. Conrad Wright of Harvard, who begins his introduction with a compact chronology of Racine's life. There is a summary of all three acts, which should readily give the reader his bearings—one of those guide-posts that might well accompany every play or story edited for class use—and notes, interspersed with frequent quotations in English. There is no vocabulary.

The revival of the study of Spanish in America is marked by several new publications. There is a "Spanish Reader," edited by Dr. Carlos Bransby of the University of California (D. C. Heath & Co.), who has tried to meet the wants of the beginner and the more advanced student by arranging progressively short and easy anecdotes and stories from the classics. This selection of sketches has enabled the editor to introduce much useful information regarding the geography, history, manners, and customs of Spain. There are several hundred specimen questions for conversation and sentences for prose composition based on the first three stories.

Another work from Heath's press is "Cuentos Alegres," by Luis Taboada, whose facile pen ceased to move only last year. Taboada was successively a government clerk, a playwright, and a satirical journalist. The editor of this book, Murray Anthony Potter of Harvard, has done wisely in selecting those narratives that place the American student face to face with life and types met with in Spanish streets, government bureaus, humble households, and cheap boarding-houses, for therein Taboada is at his best.

More advanced and heavier reading, but nevertheless a story full of Spanish atmosphere, is "El Sombrero de tres Picos," by D. Pedro A. de Alarcón, which Prof. Benjamin P. Bourland of Adelbert College has edited, from the thirteenth Spanish edition, with commentary and glossary (Henry Holt & Co.) This story first appeared in 1874, and one has but to read its admirable dialogue and note the skill of construction to understand its enduring popularity and its high rank as one of the best two works of the struggling Alarcón.

The same author's popularity is further attested in nine or ten stories grouped together by Prof. W. F. Giese of the University of Wisconsin, under the title "Novelas Cortas" (Ginn & Co.), and accompanied by a frontispiece portrait. A vocabulary is supplemented by notes, and there is a novel idiomatic commentary, designed to encourage the student to observe and commit to memory certain expressions peculiar to everyday Spanish.

"Principles of Secondary Education," by Prof. Charles DeGarmo of Cornell University (The Macmillan Company), is the first of two volumes which aim to present in a systematic way the fundamental principles of American secondary education. The present volume is devoted to the curriculum. The studies are classified into convenient groups, and the function and the relative educational value of each group and each study are discussed. Upon the basis of this analysis the author endeavors to find the best possible combination of studies for the various curricula which our complex modern society demands. Curiously enough, considering the wide extension of secondary education in this country, this is the first effort to present in any complete or comprehensive form the principles which should underlie it. It is a fact that the teaching in the average secondary school is less efficient than in the elementary; and this in spite of the fact that most secondary school teachers have a much better equipment of education. They are, however, generally specialists along some narrow line. They know their own subject matter; but they know little and concern themselves less with the place which their subject should have in the general scheme of secondary education, with its relation to the other parts of the curriculum, and with the aims in teaching it. The provision which our colleges and universities are now more and more making for furnishing professional training for prospective teachers in secondary schools, similar to that which the normal schools furnish to teachers in the elementary schools, is encouraging to those who are interested in American education. Professor DeGarmo's book, which is designed as a text-book for students of secondary education, is a welcome addition to the increasing facilities for this special training.

"Methods in Teaching," by Rosa V. Winterburn (The Macmillan Co.), furnishes in some detail an exposition of the methods employed in the public schools of Stockton, Cal. The book grew out of a series of monographs on the various subjects of the curriculum accompanying the exhibit made by the Stockton schools at the St. Louis Exposition. It has the merit of telling in a clear, definite way just what is being done in each grade and in each subject in an admittedly good system of schools. It is a record of experience, of the deductions made by a body of practical teachers working together for a considerable period. As such, it is of value—of greater value perhaps to many teachers than a more profound statement of theoretical pedagogy. While the work does not contain anything that is especially new or original, it is thoroughly sane and is in harmony with the most rational ideals of present-day educational thought. English teaching forms the subject of about one-third of the book.

CURRENT FICTION.

2835 Mayfair. By Frank Richardson. New York: Brentano's.

It is interesting to discover from the press notices prefixed to this book that Frank Richardson is not only, according to Clement K. Shorter, "the eminent publicist and profound thinker," but, by the testimony of other authorities, is "the satirist of the hour," "the eminent whisker-expert," and "the wittiest of all Anglo-American authors." The third-named of these characterizations happily throws light upon the otherwise cryptic "Notice to the Reader," which prefaces the narrative: "This work does not deal to any great extent with the subject of whiskers. Certain concessions, however, have been made for the benefit of persons interested in the topic." What follows would be called, we suppose, a psychological extravaganza. A noted London physician conceives the idea of so merging his personality with that of some woman as to become in effect a woman. Three days in the week he is himself in his own body; and three days he is a feminine version of himself in the body of his victim. The Mayfair house connects by a secret passage with a house in another street where dwells (three days at a time) "Miss Clive," his beautiful and brilliant feminine embodiment. The body which is not in commission is locked in a cabinet of which the active body keeps the key. He becomes fascinated with the experiment, and keeps it up much longer than he has at first intended, the woman of him becoming engaged in a love affair with his best friend. Eventually, "Miss Clive" is the victim of a serious accident, and the masculine body, not being released in time, perishes. Follows a revelation of the facts to the astonished and not altogether delighted friend and lover. She (or he) is, on the whole, content to be a woman. "I have come out of it very well," she says reflectively. "I have only lost a leg, and . . . Miss Mingey's soul—which was scarcely an asset." This cheerful theme is developed and embroidered upon with much careless and apparently spontaneous humor.

Clem. By Edna Kenton. New York: The Century Co.

"Clem" is a story recognizably Jacobite in manner, and indeed in method. The heroine is a young barbarian cast into the

midst of a group of sophisticated and, with all their amenity, rather ineffective persons. She has innocently got herself engaged to the boy of them, and becomes the subject of a disciplinary experiment on the part of his mother. She becomes, that is, a member of a very select house party, and is presently made to feel that what these people have and she has not forms an insuperable obstacle not only to her taking up a new life with them, but to a resumption of the old one on the old terms. Their ways are not her ways; their talk, "subtle and polished, filled with brilliant hiatus," half allures, half affronts her:

Sometimes she felt all but smothered in the webs of verbal finesse which this sort of people wound skilfully, delightfully, yet so futilely, it seemed to her, about trivial happenings and worse than trivial emotions. No motive seemed simple any longer; double after double was presented to fleeting view, and was then buried beneath some light shaft of wit as an inconsequent thing, over which it was absurd to spend further time.

Clem herself has been reared in a very different, and indeed a most unpromising atmosphere. Her mother was a third-rate actress who eventually went the way of her kind; her father was a financial adventurer who did not "make his pile" till the girl had passed her teens. Some smattering of education she picks up thereafter: a little French, a little music, hardly more. She has beautiful clothes and jewels, and is surrounded by men wherever she goes, since she is herself beautiful and has the charms of perfect spontaneity and unassailable good humor. She cares little for women or for the formal society which is the invention of women. Her experience among this group of well-bred people cruelly embarrasses not so much her pride as her sense of the harmony and desirableness of things. But whatever is finest and strongest in her own nature comes through unscathed. She, rather than the boy lover, the cold hostess, the middle-aged gentleman adorer, is really magnanimous, really human. Inevitably her path converges with that of the only man of her acquaintance—even more man than gentleman—who is worthy of her. Let her be slangy, let her be conspicuous, let her be socially improbable or impossible, there is yet something in her to justify the homage of the man who becomes her mate. "She looked the primitive woman," he says at the beginning of the story, ignoring a feminine slur; "she might have been the primeval woman walking untrodden sands, pressing the springing earth when the world was young."

The Serf. By Guy Thorne. New York: R. F. Fenno & Co.

This book, dedicated to the members of the National Liberal Club, is written with a certain animus which differentiates it from the merely literary historical fiction of the day. The author seeks deliberately to strip the tinsel glories from mediæval romance, and to paint feudal society for us as it really was. He has a decided theory of history:

The only certain way in which it is possible to get at the inner meaning of a period of history, is by comparison of the attitude of an individual brain toward his time, and the attitude of a general type of brain. The individual with the point of view must, of course, be a known quantity.

Our enthusiast goes on to say that this is a method of extraordinary possibilities, concluding somewhat quaintly: "It combines the pleasures of the laboratory with the pleasures of psychology, and never was Science so happily wedded to Art." The point is that we are to study the feudal institution through the eyes of a single serf, a man of natural nobility and form.

Having just finished reading a feudal romance *à-la-mode*, full of mediæval lingo lugged in for effect, and with an atmosphere obviously as false as fair, the present reviewer rubbed his eyes incredulously after a few pages of this forthright narrative. Realism and the middle ages had seemed as far asunder as the poles; yet here they met, or seemed to meet. The author has had, no doubt, his own romantic impulse; to celebrate those humble and forgotten masses who have been at best the footstools of all accredited mediæval heroes and heroines. He frequently leaves the straight path of his narrative in order to preach a modern doctrine of brotherhood. But what strikes one most is his ruthlessness in presenting the sordid and distressing aspects of the life of the mediæval baron. It was, he declares, "a bestial, malignant, inhuman time." Brutal manners and filthy habits of living were common to the aristocracy and the herd. "A dog-kennel would hardly have suffered any one of our heroes and heroines. That is one reason why it is so difficult for the veracious historian to present his characters as they really were. It is hard to explain them, people are too accustomed to romance." Apart from its didactic quality the story has a good deal of force; Hyla the serf and his fortunes are worth following for their own sake.

The Old Home House. By Joseph C. Lincoln. New York: A. S. Barnes & Co.

In these entertaining yarns Mr. Lincoln succeeds in expressing the true salt humor of the Cape-Codder. His skippers have not quite the reality of Mr. Wasson's Down East worthies; or rather have not their innocent indigenous quality. And, indeed, it is hard nowadays to find a Cap'n Jonadab or a Cap'n Barzilla on the Cape whose bloom has not been more or less rubbed off by contact with the accursed summer boarder. The 'longshore skipper who spins these yarns has long since ceased to skip, except as an incident in his chosen trade of "amputating the bank accounts of the city folks"; and city folks, in their appointed part of victim, really constitute the burden of his song. The mutual relation between native and "summerer" is sufficiently pregnant with a humor which the present writer has happily expressed. It is not surprising that the book has run into several editions in the course of a month or two.

Biographical Sketches of the Graduates of Yale College, with Annals of the College History. Vol. IV. July, 1778—June, 1792. By Franklin Bowditch Dexter. New York: Henry Holt & Co. $5.

Under a modest title, this volume contains a mass of important historical and genealogical matter, clearly and pleasantly presented. Professor Dexter is well fitted for the work by an exquisite habit of accuracy, which makes men of experience hesitate to question any of his statements, by a sense of proportion, and by a memory which has aroused the wonder of many college generations. He has been in the service of Yale University longer than any other officer of the institution, and his offices of secretary, professor of American history, and assistant librarian, have all aided him in these researches. The first volume of this work was published in 1885—the very year in which appeared the third and last volume of Sibley's "Harvard Graduates." Mr. Sibley's work doubtless suggested Mr. Dexter's; the form, as well as the plan, is nearly the same, though the biographical sketches now before us are rather more condensed, allowing on the average only about a page and a half to each graduate. Professor Dexter is more fortunate than Mr. Sibley, in that the latter lived only to bring his work down to the graduates of 1689, and no successor has been found for his task, while Professor Dexter is within sight of the completion of his work, and is younger now than Mr. Sibley was when he published his first volume.

The fifth volume, the preface tells us, will include classes from 1792 to 1805. The gap which remains between these "Biographies" on the one hand, and "Obituary Records" (published annually since 1860) and modern "Class-books" on the other hand, is not very broad. Two members of the Yale class of 1797 published half a century after graduation a thin volume of biographical sketches of their classmates, and this has had many successors. The first published "Obituary Record," prepared for the Yale alumni meeting in July, 1860, opens with a sketch of the life of the Rev. T. M. Cooley, who was a member of the class of 1792, and thus almost admitted to the volume before us. Mr. Dexter's work has now reached a period where family traditions and papers are fairly abundant. For example, three children of a member of the class of 1787 are now alive, the son being himself an honored graduate of the class of 1836.

The years included in this fourth volume are the first of President Stiles's administration, a period particularly familiar to Mr. Dexter, as the editor of Dr. Stiles's voluminous "Literary Diary." The learned president clearly had the confidence of the community, and Yale was then the largest college of the country, as, indeed, it continued to be through most of the first two-thirds of the nineteenth century. The numbers varied curiously. In 1785, 70 were graduated at Yale, and only 32 at Harvard; but in 1790, only 24 were graduated at Yale, and 42 at Harvard. The total number of graduates in these fourteen years, however, was distinctly larger at Yale. The beginning of President Stiles's administration was in troublous times. For six years no public commencement was held. In the year 1778-79, the winter vacation, "instead of covering the usual three weeks, continued for seven weeks and a half, on account of the difficulty of obtaining flour and other provisions for the supply of the College Commons." In July of the same year, the British troops landed in the suburbs of New Haven. The students were dismissed,

and although a company of them assisted in checking the British advance, they were not assembled again for study, and lost about two months of the college year. The first sketch of this volume is of Joel Barlow, author of "The Vision of Columbus," "The Hasty Pudding," and important political works, and United States minister to France at a critical time. Many other familiar names meet the eye as one turns the pages—Jeremiah Mason, Abiel Holmes (father of the poet), Joshua Meigs, Noah Webster, Jedidiah Morse, Judge Lyman of Northampton, Judge Gould of the Litchfield Law School, the Rev. Joseph Badger, Chancellor Kent of the "Commentaries," Edward Dorr Griffin, Peter B. Porter of Niagara Falls, and so on. In one class, that of 1785, were Samuel Huntington and Return Jonathan Meigs, each of whom, in turn, was first chief justice and then Governor of Ohio. Indeed, this volume bears abundant evidence of the close relations between Connecticut and the Western settlements, and families in the Central States will find a personal interest in it. Of the 543 graduates here included, 443 were born in Connecticut, but only 256 of the class made their home there; the rest went West or South. College men a century ago were not so plentiful that their light was to be hid under a bushel, but when we think how many of our college acquaintances disappear and are not to be found by even the most persistent class secretaries, we may well wonder that Mr. Dexter has had to confess himself wholly foiled in only two of the 543 Yale graduates between 1778 and 1792. Both of these men came from Dartmouth College, near the close of their course, and evidently did not long continue their relations with Yale. In spite of the large number of persons who inspire no special interest, Mr. Dexter's style does not become perfunctory, but justifies the degree of doctor of letters which Yale conferred upon him at her bicentennial.

The "Annals" of Yale College between 1778 and 1792 contain little of importance. The steward's detailed bills for commencement dinners are interesting for the information which they give, and for the comparison of prices with those of our own day. Fowls at ten shillings a dozen do not seem expensive. Two delightful extracts are given from a letter and a journal of freshmen, in 1781, and in 1790, affording glimpses of their daily routine of college life. The bell rang for morning prayers at half-past five o'clock, but the reader is relieved to learn that (if not presented too often) excuses were accepted, such as *non audivi campanam*, *habui amicum*, or *habui speciale negotium*. Manasseh Cutler, in 1785, just before he was occupied with organizing companies for the settlement of the Northwest Territory, visited Yale, and set down in his diary an interesting account—here given—of the college and New Haven, comparing both with their condition at his graduation in 1765.

Yale College is happy in having such a historiographer as Professor Dexter. His work is of more than local interest and is valued by all who care for New England history and genealogy.

A Book of the Pyrenees. By S. Baring-Gould. With twenty-five illustrations. New York: E. P. Dutton & Co. $1.50 net.

Through Portugal. By Martin Hume. With thirty-two illustrations in color, by A. S. Forrest. New York: McClure, Phillips & Co.

Rarely is a book of this kind so fascinating as Mr. Baring-Gould's. It is brimful of facts, historical and otherwise, yet not a bit prosaic or dry. It indulges in none of those rapturous descriptions which carry in their very superlative a warning of disappointment to the reader who proposes to follow the author's footsteps. On the contrary, a quiet charm lies over every landscape. One is sure that this charm of the book is also that of the country. Moreover, there is none of the personal experience, the attempt to tell the traveller how he ought to feel when he himself shall stand before the shrines of Pyrenean nature and history, which give to so many books of travel the disagreeable features of the "personally-conducted" tour. There is absolutely no pretension to fine writing. The wonderful histories of Bearn and Navarre, Gascony and Rousillon, open naturally before one like the valleys of their mountains, and the intrinsic interest of both leads one on through a wealth of anecdote and story to a real familiarity with the region and those who have made it famous—that familiarity which comes from the reading of old French chronicles and memoirs, but rarely from the standard history. It is refreshing to find an author who so credits his readers with imagination.

Mr. Baring-Gould does not belong to the guild of those who, having discovered a country which everybody knows, feel bound to record a personal impression. Those who know the Pyrenees will be inclined to say as they turn the pages that they know them less well than the author. In the approach from Bayonne one takes his hand with confidence, and parts company with him regretfully at Perpignan. Naturally, we journey along the northern slopes, for Spain has not yet made the southern valleys inviting to those in search of rest or pleasure; but so far as history and romance are concerned, the author's survey embraces both sides of the chain, and he occasionally crosses the watershed into Spanish territory. There are chapters on Gascony, Bayonne, Orthez, and Pau, Oloron, the Lavedan, Luz, and Tarbes, Bagnères, Luchon, Couserans, and Foix, the valleys of Ossau and Aure, and an interesting account of the origin and growth of the Lourdes legend. The book can be heartily commended both to those who travel and those who stay at home. If one must find a fault at all hazards, it will certainly be with the map, which is a mere sketch, noting not the tenth of the places touched upon, and therefore wholly inadequate for reference.

Major Hume, the editor of Spanish State Papers, and author of "Philip II.," "The Year after the Armada," "Spain, its Greatness and Decay," etc., etc., was educated in Madrid, where branches of his family have long resided, and where it seems he imbibed the Spanish prejudice against things Portuguese, for he tells us in the preface of "Through Portugal" that he "had been brought up in the stiff Castilian tradition that Portugal was altogether an inferior country, and the Portuguese uncouth boors who in their separation from their Spanish kinsmen had left to the latter all the virtues, while they themselves had retained all the vices of the race." Having chosen Portugal, however, in the search for change and health, after seeing with his own eyes he declares his book "my apologia as a self-prescribed penance for my former injustice toward the most beautiful country and the most unspoilt and courteous peasantry of Southern Europe." Those to whom Portugal is unknown, or for whom it means only Oporto and Lisbon, may challenge this statement, but certainly not those who know the interior of the country. Where in Europe, indeed, can be found a lovelier spot than Bussaco? A hotel built for a royal residence, in the Crown domain, six miles in circumference, formerly belonging to the Carmelites, bowered in a wood of palms, Lebanon cedars, oaks, oranges, acacia, cork, and fig trees, the most luxuriant forest on the continent, if not anywhere outside of Brazil. The author's description of this retreat, which two hundred years of monkish care have made famous for the rare trees and plants sent by the Carmelite brethren from wherever the flag of Portugal once waved, and of the views from its cloistered terrace, makes one feverish for instant travel. The truth is, only the inaccessibility of Portugal can explain its neglect. It is difficult to reach, and, being on the road to nowhere, is difficult to leave—a true *cul-de-sac*. Yet the hill towns of Italy surpass only in their art treasures this land of hill-top strongholds.

Thomar, with its castle-monastery of the crusading knights of the Order of Christ; Leira, overshadowed by its cyclopean mediæval fortress and Sanctuary of the Incarnation; Batalha, Alcobaça, Cintra, Setubal, Troya, and Evora—each is embosomed in scenery of unsurpassed beauty and contains objects of genuine artistic and antiquarian interest. Unlike the "Book of the Pyrenees," "Through Portugal" is the record of personal impressions. Its first word is the personal pronoun. It ought to be a revelation to those who know Portugal only from a guide book, or who think of it only as an unimportant strip of seashore to be neglected for royal Spain. Major Hume has succeeded in passing on to one reader at least the enjoyment of an appreciative traveller. The attractiveness of the book is greatly enhanced by a series of thirty-two charming illustrations in color, and closes with an excellent chapter of practical hints.

Poesie raccolta completa con note e glossario. By Salvatore Di Giacomo. Naples: R. Ricciardi.

It is doubtful whether dialect prose and verse, however admirable, can ever claim admittance on an equal footing with literature of a national tongue. Notwithstanding the natural directness and spontaneity of dialects in general, few or none out of the scores which to-day are being used as channels of literary effort can satisfactorily meet the reasonable tests of charm, conciseness, and eloquence capable of enduring beyond the local enthusiasms of the

hour. Of the Neapolitan dialect one need say only enough to make intelligible a brief notice of what is perhaps the most important volume of Neapolitan poems ever published.

Prof. B. Croce, authority on all matters Neapolitan, tells us that formal literature in the dialect of Naples dates from the beginning of the seventeenth century. Before this period, sporadic fragments occur here and there. For example, we have various bits of prose dating from the earliest part of the Arogonese usurpation of southern Italy; and there are not a few poems of slight importance printed in this dialect. Obviously there were Neapolitan poems and folk songs in great number which have never been printed and of which only the bare influence and tradition exist. Unless we know them on their own ground we find it difficult to understand how stubbornly even such serious and intelligent people as the Piedmontese, for instance, cling to their dialect in face of all national feeling. We recall how Cavour himself to the day of his death in addresses preferred French to his clumsy Italian. Now the Neapolitans, who are much the most un-Italian of all the provincials, hold to their dialect with insistent fondness; and not only in conversation but in their plays and reading care solely for their vernacular idiom. Moreover, there are those who doubt whether, with the possible exception of Provençal, one can find any dialect so completely convincing and melodious as Neapolitan. We must judge this not upon any superficial experience of listening to street traffickers; for, indeed, we are not so apt to find pure Neapolitan in Naples as in such outlying towns as Nola. There we are far less confused by the interpolations which always creep into the lower class idiom of large seaports.

The Neapolitan of to-day is a strange conglomeration of mixed Levantine types. His is a voluptuous nature, replete with cozenry, superstition, pornographic vulgarity, smallness in scandal-mongering, and a thousand petty traits. But despite the repulsive grotesqueness of these native humors, there is a persistent vein of poetry, a liveliness and dashing wit that go far toward reconciling us to this composite character, especially on the printed page. One reason, perhaps the chief one, for our unqualified admiration of the volume before us, is that, besides his abundant qualifications, both in technical skill and inspiration, Di Giacomo is a highly representative Neapolitan; that is, although of an upper middle class family, he is thoroughly imbued with the spirit dominating the poetry and prose of the infinite subclasses all the way from the fisherman (by day scudding over his matchless domain, the Bay of Naples, by night steering his craft among the shoals off Posilipo) to the stripling novitiate in the monastery on the hill, whose craving for the freedom of his secular days often comes near to toppling over his vows. Di Giacomo knows them all, has been with them and of them his life long. He sympathizes with them as only an unpatrician poet may do. But in addition to this, he enjoys the advantage of such long acquaintance with lettered people that his sensitiveness is tempered with a juster sense of perspective than is given to such of his most popular followers as F. Russo and the host of young writers of Neapolitan songs.

Born in Naples in 1862, Di Giacomo began his career by contributing poems in dialect to the local newspapers. From time to time they have been gathered into little volumes which pass from one edition to another far more rapidly than do the several prose works from his pen, some of which exist in French and German translations. His verse is quite untranslatable. Even in Italian it loses the marvellous aroma of the original. Is this in itself not the strongest superficial proof of its excellence? Italian authors of repute detest Neapolitans as a thriftless band of erotic lotus eaters; and yet they have nothing but praise for these poems of Di Giacomo which so perfectly mirror the Neapolitan spirit, and in such wise as to draw rather than repel one's sympathies.

In the main this collection consists of love lyrics, many of which have for years been sung on the streets and in coffee houses where the popular music of Naples is most in vogue. But they are not all of this sort. There is an amazing range of theme, comprising countless rhapsodic though faithful vizualizations of the life of the Neapolitan in all its multitudinous phases. Besides the note of intimacy running through his poems, there is a tone of sincerity which would have given the volume, in the eyes of such a critic as Taine, a value quite incalculable for its documentary importance, its evidence as to the kind of folk the Neapolitans are and are ever like to be.

Although intuitively so accurate and minute a summarist of the life of Naples in detail and in the aggregate, although so supersensitive to the scenic exquisiteness of sea and sky and land to the feelings of the scene—despite all this it is not as themselves forming a significant component of the scene—despite all this it is not as a historian of local manners and customs that Di Giacomo appeals to us, nor yet as a landscapist; but rather it is his power to fuse these two elements harmoniously into a melodious counterpart of what actually is there. This makes his sway over us well-nigh complete. There is in these poems the exact proportion of sunny gaiety and the sub-conscious sense of *lachrymæ rerum*, which is a dominant trait of southern peoples in general and Neapolitans in particular.

The Psychology of Religious Belief. By James Bissett Pratt. New York: The Macmillan Co. $1.50 net.

The questions which Professor Pratt has set for consideration are: Why do men believe? On what do their religious creeds actually rest? In what region of our psychic life is faith mainly intrenched? The answer, in brief, is that while many individuals believe from mere inertia and on unquestioned authority, and others because of the real or imagined force of a particular course of argument, the actual foundation of faith in the case of the large majority is an inner emotional experience, an irresistible personal intuition and conviction. The author takes pains to demonstrate that a large share of the most worthy and practical beliefs of mankind in other spheres than the religious are founded upon insight rather than upon demonstration, and his chief contention is that the faith of the present, based as it is upon emotional experiences which have their seat in the "fringe" rather than in the "centre" of consciousness, has a foundation upon which it may build securely. He contends that, as a matter of fact, spiritual insight is the present basis of belief with the large majority of thoughtful men, and the faith which is based on reasoned argument as well as unthinking credulity, is destined to grow less and less. But this fact, he holds, is not a discouraging one for the friends of religion; for upon this foundation a stronger piety than the past has witnessed is destined to be established.

One will be reminded of Schleiermacher's definition of religion as the feeling for the eternal, and it may perhaps be said that Professor Pratt has merely reached by labored psychological investigations results which prophets and mystics have long since declared in forms of rare beauty and with the larger carrying power of intense personal conviction. It is something, however, to have the passionate vision of Augustine, "Thou, O Lord, hast made us for Thyself, and our souls are restless till they rest in Thee," declared in the duller speech of the schools, which possibly some may hear whose ears are dead to the prophets. Professor Pratt labors painstakingly with the machinery of a questionnaire, and his review of religious belief in India, Israel, and the Christian Church, conveys the impression that the results of his observations of these faiths have been colored somewhat by conclusions from his own experiments; yet his answer to the question why men believe does not differ greatly from that which students of humanity have found most nearly true.

Memoirs of the Comtesse de Boigne, 1781-1814. Edited from the original MS. by Charles Nicoullaud. New York: Charles Scribner's Sons. $2.50 net.

The Comtesse Osmond de Boigne was, during the first half of the nineteenth century, a clever and attractive woman, whose salon was frequented by many distinguished persons. She is not to be ranked with Mme. Récamier, and though Sainte-Beuve, in a brief obituary notice at the end of the tenth volume of the "Nouveaux Lundis," gives her a few paragraphs of the same sinuous and lambent appreciation which he devotes in a longer essay to the greater social queen, the relative posthumous glory of the two women is probably what they deserve.

The Comtesse de Boigne, however, could use her pen as Mme. Récamier could not. She wrote a couple of novels, and she will be for a brief period the subject of renewed interest because of her recently published "Memoirs," edited by Charles Nicoullaud, of which the earlier portion, from 1781 to 1814, has appeared in English. Mme. de Boigne lived until 1866; consequently we have here only the first experiences of a long career, but they include a time of great social change, the last years of the old monarchy, the upstart Napoleonic court, and the régime of the Restoration, when Louis XVIII. tried to return to traditions of etiquette which had already become an anachronism. Her childhood was spent at Versailles, and she remembered many strik-

ing customs of court manners and precedence. No less vivid are the descriptions of the feelings of the Parisians at the arrival of the Emperor Alexander and the allied armies, the lack of breeding of Louis XVIII. towards his benefactor, and of tact on the part of the whole royal family towards their new court.

For the rest, the volume is made up chiefly of anecdotes concerning persons of more or less notoriety in France, Italy, and England. In this last country the writer's family lived as *émigrés*, and there at the age of sixteen she was married to a man of forty-nine, a successful soldier of fortune, but a man whose temperament, affected by a life largely passed in the East Indies, made the marriage scarcely a union of Strephon and Phyllis. Mme. de Boigne gossips about Lady Hamilton, Mme. de Staël, Mme. Récamier, Mme. de Talleyrand; and the names of various decorous and indecorous dukes, marquises, generals, cardinals, bishops, and abbés, are sprinkled over her pages. She is more successful in her pen portraits and brief character sketches than in her allusions to the historical events with which she was indirectly concerned. The work contains much distinguished trifling, and is interesting for desultory reading or as a mine for quotation. But much is in the order of newspaper reporting, and it is clear that Mme. de Boigne's influence upon her friends was more through the heart than the head.

Science.

Plant-Breeding. By Hugo de Vries. Chicago: The Open Court Publishing Co. $1.50 net.

In this volume of 360 octavo pages, over eighty pages are given up to full-page illustrations, some of which are by no means required by the text. Hence the first impression is likely to be unfavorable. But, aside from superfluous illustration, the volume has sterling merit. It records in graphic and untechnical language the results obtained by three investigators in different but adjacent fields of study, which are of great interest at the present time. The author is a professor of botany in Amsterdam, who first distinguished himself as a contributor to plant-physiology, especially in connection with vegetable cells. Of late he has been occupied with one of the most important questions in evolution. The greatest difficulty which has confronted the theory of evolution as applied to organisms on our planet, is the fact that the time demanded for the development of their specialized parts, by the slow accumulation of structural differences, is far greater than the physicists can honestly concede to have elapsed since the surface of our earth was cool enough to become the abode of life. The period which the physicists appear to be willing to grant is from twenty to forty million years. But to most biologists the allowance of forty millions of years seems hardly enough for the production of such complicated types of organisms as now live on our earth. If the exceedingly minute variations have succeeded one another without here and there a leap or bound to shorten the time, the two classes of naturalists remain hopelessly at odds. If, however, sudden changes of considerable magnitude can be found at any points in the progress of development, the whole question becomes freed from some of its embarrassments.

It is at this portion of the field of inquiry that Professor de Vries has been conducting his investigations. He has subjected to careful examination the statement by Darwin, that "we have no evidence of the appearance, or at least of the continued procreation, under nature, of abrupt modifications of structure." Darwin recognized the occurrence of abrupt modifications, but held that only under the hand of the cultivator could these be perpetuated. Those who have of late years studied variation in organisms have reduced the subject to a system and have with one accord abandoned the old and vague descriptive terms used by Darwin and others at the outset, such as "slight," "considerable," "great," and have applied to the research sound methods of statistical investigation. Arithmetical and geometrical devices are freely employed, and, at the present time, tables and curves are important aids in precise description. Of the new school of students of variation De Vries is one of the most accurate. The author sketches his theory of sudden changes in the following manner (page 9):

Species are derived from other species by means of sudden small changes which in some instances may be scarcely perceptible to the inexperienced eye. From the first appearance they are uniform and constant, when propagated by seed; they are not connected with the parent species by intermediates, and have no period of slow development before they reach the full display of their characters. They do not always arise, but only from time to time. A parent species may produce its offspring separately at intervals, or in larger numbers during distinct mutating periods. After this production the old species is still the same that it was before, and it subsists in the midst of its children. . . . Some young species will be better fitted for their life conditions than others, and the struggle for life will induce a selection among them by which the fittest survive.

Professor de Vries has devoted a great deal of time to the examination of a comparatively few plants which have lent themselves to this sort of work, and he interprets all of his results as favorable to his theory of "Mutation." There are some weak places in his arguments, but even these, by the discussion they have raised, have increased the interest in the whole subject. All the work of de Vries, whether weak or strong, is stimulating. The present volume contains an interesting account of the methods which have been employed by Nilsson, Burbank, and others in the improvement of plants, and, as may be surmised, the results of these methods are largely and not unfairly appropriated by De Vries as strengthening his position. When one remembers that certain varieties, under ordinary cultural conditions, come "true" to seed, and when one keeps still further in mind the fact that some species manifest a remarkable tendency towards "race" variation, the conviction becomes very strong that the field of investigation, although it has of late been most assiduously cultivated, has a great deal more to yield.

This volume can be heartily recommended as an interesting and safe guide to amateurs who desire to examine more closely the variant plants around them.

The Macmillan Co.'s fall announcement list contains the second volume of the "Cyclopedia of American Agriculture," edited by Prof. L. H. Bailey; "Text-Book of Southern Agriculture," by Prof. F. S. Earle; "The Physiology of Plant Production," by Dr. B. M. Duggar; "Types of Farming," by Prof. L. H. Bailey; "Agriculture for High Schools," by Dr. G. F. Warren; "Crops for the Southern States," by Prof. J. F. Duggar; "Bacteria in Relation to Agriculture," by Dr. J. G. Lipman; "Forage Crops," by Edward B. Voorhees; "Practical Textbook of Plant Pathology," by D. F. Macdougal, Prof. F. S. Earle, and Prof. H. M. Richards, "Notes of a Botanist on the Amazon and Andes," by Dr. Richard Spruce, edited by Dr. Alfred R. Wallace; "The Dancing Mouse: a Study of Animal Behavior," by Robert M. Yerkes; "Lectures on the General Properties of Immunity, from the physico-chemical point of view," by Prof. Svante Arrhenius; "Nursing Technique," by Isabel McIsaac; "Vagino-Peritoneal Operations," by E. Wertheim and Th. Micholitsch, translated by Dr. Cuthbert Lockyer; "College Physics," by Prof. Henry Crew; Volume II. of "Elements of Electrical Engineering," Alternating Currents, by Prof. William S. Franklin and Prof. William Esty; "The Differential and Integral Calculus," by Prof. William F. Osgood; "Introduction to Higher Algebra," by Prof. Maxime Bocher and E. P. R. Duval; "Graphic Algebra," by Prof. Arthur Schultze; "Computation and Mensuration," by Prof. Preston A. Lambert; and "Larger Types of American Geography," by Charles A. McMurry.

G. P. Putnam's Sons will soon issue a "History of Nursing," the evolution of the methods of care for the sick from the earliest times to the foundation of the first English and American training schools for nurses, by Lavinia L. Dock and M. Adelaide Nutting.

In a handy little volume, "Introduction to Infectious and Parasitic Diseases, including their Cause and Manner of Transmission" (Philadelphia: P. Blakiston's Son & Co.), Dr. Millard Langfeld gives an admirable brief survey of the various organisms now recognized as distinctly harmful. The book was originally intended for nurses, but the author was persuaded to alter the plan so as to adapt it to the requirements of medical students and physicians. As to nurses—the result is another argument for those who contend with growing insistence that the training of these most useful persons is already too complex and needs to be much simplified and abridged. For other readers, and even for the general reader, however, it would be hard to find a better concise statement of the more modern view of micro-organisms in their relation to disease. Particularly interesting are the almost too brief sections on immunity, including a discussion of the opsonins, those remarkable substances which seem to many to be a sort of master key for all these protective processes; but the classification of the non-specific and specific bacteria (p. 51) is somewhat obscure, and the terminology, although justified by numerous precedents, is inconsistent. There is a chapter on disinfection too vague for practical

application, and another on the examination of secretions and excretions which contains decidedly too much or too little, according to the point of view.

Dr. R. W. Lovett's little book, "Lateral Curvature of the Spine and Round Shoulders" (P. Blakiston's Son & Co.) is quite too special for the general reader except perhaps in the few pages devoted to the bearing of school life and school furniture on these defects. While nothing particularly new is brought out, the discussion and incidental references may also be helpful to the better class of teachers and to "educators."

The *National Geographic Magazine* for August opens with a summary, by N. H. Darton, of the mineral resources of Mexico, which goes far to justify Humboldt's statement that "Mexico is the treasure house of the world." A description of the work of our Forest Service is given by one of its officials, H. A. Smith, in which there are numerous facts and figures showing the uses to which the reserves are put and the income which they bring to the Government. He closes with an impressive plea for the creation of national forests in Tennessee and New Hampshire. D. C. Falls contributes a vivacious account of the great national festival of St. Stephen, the founder of the Hungarian monarchy—who died in 1038, it may be noted, not 1036, as stated in the text—celebrated in August at Budapest. Each of these articles is profusely illustrated with full-page reproductions of interesting photographs. The other illustrations are well-chosen selections from the remarkable flashlight pictures of C. G. Schillings of the big game of Equatorial East Africa.

The most noteworthy of the contents of the *Geographical Journal* for August is Lieut. Boyd Alexander's account of his remarkable journey from the Niger to the Nile. Its chief geographical result was the demonstration of the existence of a wonderful system of waterways connecting the East with the West, the boats of the expedition having been carried but fourteen days during the three years' trip. Another valuable contribution to science was his collection of the fauna of the region traversed, which included eighteen new species of mammals, and proved the continuity of the fauna from Senegal across the Sudan to Abyssinia. His observations on Lake Chad showed that it really consisted of two lakes, separated by twenty-five miles of marsh and bush. He has a good word to say for the Congo Free State, having found the conditions of a numerous river people on the Welle "greatly improved since the Belgian occupation, for its protection shields them from the raids of the fiercer forest tribes." E. C. Young describes an interesting journey from Yün-nan to Assam to determine whether or not a trade route between China and India, south of the Tibetan frontier, was practicable. Some of the region passed through was dense forest, and much difficulty was experienced in crossing the mountain ranges, but there were districts, both fertile and populous, with physical characteristics rendering them suitable for the construction of roads and railways.

Drama.

Memoirs and Artistic Studies of Adelaide Ristori. New York: Doubleday, Page & Co. $2.50 net.

The career of Adelaide Ristori was so full, so dignified, so triumphant, so thoroughly representative of all that was best in Italian dramatic art during the latter half of the nineteenth century, that it certainly deserves some more adequate and attractive literary monument than these ill-edited memoirs, with their excess of trivial and uninteresting detail and their plentiful lack of salient observation or comment with regard to incidents—professional, social, or political—in which the life of the actress must have been peculiarly rich. Not only is the arrangement of the matter slovenly—a defect, probably, for which Madame Ristori herself is mainly responsible—but the English translation supplied by Signor G. Mantellini reflects but little credit upon the original composition. That the book is inspired by a spirit of naïve egotism is not surprising. It is a manifestation common to most theatrical autobiographies, but it is a pity that Madame Ristori, a woman of indisputable genius, and with a capacity for sound judgment in many directions, should not have taken counsel with some competent literary advisers.

It must not be supposed, however, that the book is without substantial value. With all its crudities and imperfections it will reveal to the intelligent reader the character of the woman herself and the secret of her great success. To aspirants after stage honors it ought to be especially valuable, for the plain moral of it is that she owed her triumphs quite as much to conscientious and indefatigable labor as to the qualifications, mental and physical, with which she was endowed by nature. Almost born on the stage, she first attracted public attention by her girlish beauty and occasional flashes of natural dramatic power; but the mature impersonations upon which the secure foundations of her fame were laid were the result of minute and protracted study. In the case of each of her most famous parts, Marie Antoinette, Mary Stuart, Elizabeth, Phædra, Myrrha, Medea, etc., she consulted every available authority which could throw light upon the character to be portrayed or the dramatic situations in which it is made to figure. She sought eagerly for illuminating hints concerning personal characteristics, traits of disposition, methods of expression, nice details of costume, and so forth. To prepare herself for the impersonation of the older classic heroines she first familiarized herself with all the different versions of the ancient myths, that she might comprehend more clearly the elemental passions which she was to interpret. She examined the masterpieces of Greek art for information concerning the proper pose and gesture, the correct folding of drapery, the right coiffure, appropriate ornaments, and other minor points. Over and over again she insists upon the infinite importance of trifles and the inestimable advantages of beginning at the bottom and working up. Her chief aim, she says, was to preserve a "colored naturalness." While recognizing the importance of classic traditions in the representation of classical plays, she could find nothing admirable in the rhythmical chant employed at the Théâtre Français. It was an article of faith with her that the rules of the higher Italian tragedy, in recognizing the value of personal impulse and romantic coloring, offered more encouragement to inspired interpretation than the inflexible laws of a venerated tradition; and it was the ambition of her life—an ambition most fully gratified—to demonstrate to the whole civilized world the wondrous potency, if not the absolute superiority, of Italian dramatic art. She was still a young woman when, in the very heyday of Rachel's tragic reign in Paris, she forced the reluctant Parisians to forget their prejudices and acclaim her Myrrha as one of the most brilliant achievements of the age. Madame Ristori's long story of her now forgotten trouble with the great French actress is to-day rather superfluous, but her remarks on the difference between French and Italian acting are acute and sound. Her criticism of Rachel's Phèdre is at once appreciative and discriminating.

No attempt need be made here to recapitulate the well-known facts of her triumphs in all the chief cities of the world, from St. Petersburg to Buenos Ayres, from San Francisco to Constantinople. Perhaps the most remarkable representation in which she ever took part was that of "Francesca da Rimini," in Florence in 1865, when Salvini was Lanciotto, Rossi Paolo, and she herself Francesca. It is difficult to imagine a better cast. It was in 1882, in London, that she first played Lady Macbeth in English. This was an extraordinary feat in the circumstances, but one that has been accomplished also by Janauschek and Modjeska, while the latter was also the finest Rosalind of her time. Madame Ristori's serene confidence that her English enunciation was perfect is just a little pathetic, but her performance was one of great power and intelligence, along rather conventional lines. Being the star, she depicted the character as an almost demoniacal monster, by whom Macbeth was utterly dominated. She ought to have had Henry Irving as her associate.

The latter half of her book is largely occupied by what she calls analyses of her leading characters. These illustrate, to a certain degree, her system of study, but are in no sense analytical, and are particularly disappointing, inasmuch as, while indicating the points at which she strove to create her most striking effects, they say nothing about the technical means which she employed. She describes clearly enough the mood or passion to be expressed, but is generally silent as to the best means of expression. Few of her impersonations were more vital than her Mary Stuart and her Elizabeth, and the differentiation of them, in an artistic sense, was masterly. But she did justice to neither Queen. Mary was in her eyes a sainted martyr, Elizabeth the embodiment of all that was unscrupulous, hypocritical, and tyrannical. Her study of each was a model of consistency. The innate purity and deep pathos of her Myrrha, in Alfieri's terrible play, blinded her hearers to the horror of the story. In Medea she attained to splendid heights. And it must not be forgot-

ten that she was as much admired in the comedies of Goldoni and in still lighter pieces as she was in the deepest tragedy. She was, in short, a great actress, as well as a finished artist. Moreover, she was a good and large-hearted woman, who was an honor to her profession. If her literary ability and instinct had been equal to her histrionic power, she would have given us a better book. Her judgment of her contemporaries was generous and just. She is enthusiastic in her praise of Duse, but deplores the neuroticism of which she is the victim. Bernhardt, she thinks, has degenerated, owing to her passion for climaxes. Novelli is a brilliant actor, but "abysses" below Salvini. D'Annunzio is not fit for the stage—all of which is most potently true.

"Le Voleur" of Henri Bernstein has had a great success in Paris, has been much discussed, and has provoked active rivalry among English and American managers. A version of it produced in the Lyceum Theatre of this city, on Monday evening, under the name of "The Thief," shows that it is by no means a great play, although it is an uncommonly clever and interesting bit of theatrical work. It has no high motive, or purpose, touches no vital problem, is not inspiring or instructive, and is not valuable as a human study, but it tells a melodramatic story with much skill and point, and with striking realism. Thus the entire action is supposed to occupy only twelve hours, and practically takes no longer on the stage than it would in actual life. The theme is the self-sacrifice of an infatuated youth who confesses himself guilty of theft to shield the honor of a married woman, who has persistently—in the English piece—resisted his advances. His sacrifice is in vain, as the woman falls under the suspicion of her husband, whom she adores, and is compelled at last to make a clean breast of it. The story, in its details, is as improbable as it is artificial, but in representation it is interesting and exciting, the scenes between the suspicious husband and the guilty wife, in the second act, being especially adroit, realistic, and effective. In these some excellent work was done at the Lyceum by Kyrle Bellew and Miss Margaret Illington, and there seems to be no doubt that the play will have a long run. The general presentation and management of the piece were competent to a degree not common in recent New York experience.

The programme for the coming season at the Irving Place Theatre is at all events rich in promise. In addition to works of German authors, ancient and modern, classic and popular, it includes specimens of French, Belgian, Italian, Spanish, and Russian drama. The British theatre is represented by Shakespeare and Oscar Wilde.

Music.

EDVARD GRIEG.

Edvard Hagerup Grieg died at Bergen, Norway, on September 4. He was born there in 1843. On his father's side, he was a descendant of a Scottish merchant, who emigrated from Aberdeen soon after the battle of Culloden. His musical talent he inherited from his mother, who appeared as a pianist in concert, and also sang agreeably. She it was who taught him the rudiments of his art, and who imbued him with that ardent national spirit which informs all the work of his maturity. As a boy he thought of becoming a clergyman, but at the age of twelve or thirteen he had already tried his hand at musical composition. He showed no passionate interest in the subject, however, until he was fifteen. At that time Ole Bull came to visit the boy's parents. Grieg himself has left us the record of that experience:

> When he heard I had composed music, I had to go to the piano; all my entreaties were in vain. I cannot now understand what Ole Bull could find in my juvenile pieces. But he was quite serious and talked quietly to my parents. The matter of their discussion was by no means disagreeable to me. For suddenly Ole Bull came to me, shook me in his own way, and said, "You are to go to Leipzig and become a musician."

His parents readily fell in with the proposal. At the Leipzig Conservatory, his life was hard in many ways, and his peculiar talent was not always recognized by his instructors. Hauptmann, however, appreciated the boy's work and encouraged him. Wenzel, Richter, and Moscheles also taught him much. One of his fellow-students was Arthur Sullivan. While he was at the Conservatory he suffered from a severe attack of pleurisy, resulting in the complete loss of his left lung. From the date of his entrance in 1858 till his graduation with honor in 1862 his talent developed steadily but slowly.

After graduation he went to Copenhagen, where he pursued his studies informally under Gade and Emil Hartmann. He was also much influenced by the young Norwegian composer, Richard Nordraak, in company with whom he entered upon a crusade for fostering the purely national spirit in Norwegian music. Even his early works show his strong feeling for a musical style based upon the traditional ballads of his native land, and differing sharply from the classical German art. In 1871 Grieg founded a musical society in Christiania, which he continued to lead until four years later, when he established himself once more at Bergen. By this time he had composed his two great violin sonatas, F-sharp, op. 8, and G-sharp, op. 13. In regard to Opus 8 Franz Liszt wrote to him from Rome in 1868:

> It bears witness to a strong talent for composition, a talent that is reflective, inventive, provided with excellent material, and which needs only to follow its natural inclinations to rise to a high rank.

The letter had momentous consequences, for the Norwegian Government granted Grieg a sum of money which enabled him to go to Rome and see Liszt personally and draw inspiration from him. Grieg's account of that meeting is full of interest. He played his own compositions to the great master, who continually interrupted him with exclamations of approval and delight, and strongly urged him to "keep steadily on" and cultivate his peculiar vein.

Despite impaired health, Grieg had succeeded by 1880 in establishing his fame in all musical cities as a composer, and in many also as a conductor and a pianist. At Bergen, during the seasons of 1880 to 1882, he conducted the Harmonien. He was deeply interested in these concerts, although his orchestra was, of course, not of the best. From this time on he gave occasional concerts in England, France, and Germany. In England, in 1889, at a Philharmonic concert, he led with great success the "Peer Gynt Suites," which London had heard for the first time the year before. In Paris, also, Grieg was equally popular. His originality and nervous charm were qualities to which the French music-lovers readily responded.

Rural life always had great attractions for Grieg, and from the spring of 1877 he was domiciled for several years in a cottage built by himself which overhangs the Hardangerfjord, amid scenery made famous by the Norwegian poet Wergeland. After some years passed in Christiania and abroad, he returned to the Norwegian fjords and established himself near the old city of Bergen, where he built the house known to musical pilgrims as "Troldhangen." Here he dwelt in close communion with nature in its most characteristically national phase. Here also his accomplished and devoted wife continued to aid and inspire him as she had done since the early years of their marriage. It was for her that the famous song, "Ich liebe dich," was written during the days of her betrothal to the struggling young composer, then too poor and unpopular to marry and support the woman he loved. After their marriage Edvard and Nina Grieg visited a few cities and gave recitals of his music, for Mrs. Grieg was a remarkable interpreter of her husband's songs.

Indeed, it is in his lyrics that Grieg reaches the height of his genius—both in content and form. His *Lieder* number one hundred and twenty-five, and among these are few that fall below the standard of his greatest work. They are a mine of melody, surpassed in wealth only by Schubert's, and that only because there are more of Schubert's. In originality of harmony and modulation he has, according to competent critics, only six equals, Bach, Schubert, Chopin, Schumann, Wagner, and Liszt. Though most of Grieg's works are songs and piano-forte pieces, there is yet a fair amount of orchestral and chamber music. The "Grieg Katalog," printed by C. F. Peters in Leipzig, contains a list of nine works for orchestra: Overture, "In the Autumn," op. 11; "Two Elegiac Melodies," for string orchestra, op. 34; "Norwegian Dances," op. 35; "Holberg Suite," for string orchestra, op. 40; "Peer Gynt Suites," I. and II., op. 46 and 55; "Two Melodies," for string orchestra, op. 53; "Sigurd Jorsalfar," op. 56; "Two Northern Melodies," for string orchestra, op. 66. Of these the "Peer Gynt Suites" are perhaps best known to the general public in this country. They were popularized in the first instance by Anton Seidl. Several of them, such as "The Death of Asa," "Anitra's Dance," and "In the Palace of the Gnome King," were always received with enthusiastic applause. All this "Peer Gynt" music was intensely national in its characteristics, and was extraordinarily felicitous in reproducing the moods of the particular parts of the text which it illustrated. Of this fact the late Richard Mansfield was fully aware when he caused most of the music to be played during his presentation of the play.

Volume IV. of J. Fuller Maitland's revi-

sion and enlargement of "Grove's Dictionary of Music and Musicians" will be issued this fall by the Macmillan Co.; also "The High School Song Book," by Edward J. A. Zenier.

"Job," a dramatic cantata by F. S. Converse, has just been issued in vocal score by the H. W. Gray Co. (Novello & Co.). It was written for the fiftieth annual festival of the Worcester County Musical Association, 1907.

The prospectus of Oscar Hammerstein for the coming season at the Manhattan Opera House contains a number of light operas never before heard in this country. Among his productions will be:

Berlioz, "Le Damnation de Faust."
Bizet, "Carmen."
Boito, "Mephisto."
Breton, "Dolores."
Charpentier, "Louise."
Donizetti, "Lucia di Lammermoor."
Debussy, "Péléas et Mélisande."
Giordana, "André Chenier."
Gounod, "Roméo et Juliette."
Leoncavallo, "Pagliacci."
Mascagni, "Cavalleria Rusticana."
Massenet, "Thais," "Jongleur de Nôtre Dame," "Manon," "Navarraise."
Meyerbeer, "Le Prophète," "Les Huguenots."
Mozart, "Don Giovanni."
Offenbach, "Contes Hoffmann."
Ponchielli, "Giaconda."
Puccini, "La Bohême."
Saint-Saëns, "Hélène."
Verdi, "Aïda," "Rigoletto," "Traviata," "Trovatore."
Wagner, "Lohengrin," "Tannhäuser," "Tristan und Isolde."

At the opening of the Paris opera in January, Rameau's "Hyppolyte et Aricie," produced in 1733, is to be revived; "Götterdämmerung" is to be given for the first time in Paris; and "Monna Vanna," by a young French composer, Février, is to be presented.

In Rome the opera season is to begin December 26, with Wagner's "Maestri Cantori," known elsewhere as "Die Meistersinger." The repertory will also include four operas new to Rome—the "Salome" of Strauss, Puccini's "Madame Butterfly," Cilea's "Gloria," and "Sperduti nel buio," by a young Neapolitan composer named Donaudy. At Milan the list for the coming season is headed by Wagner's "Götterdämmerung, with Mme. Litvinne as Brunnhilde.

Art.

Letters to a Painter By W. Ostwald; translated by H. W. Morse. Boston: Ginn & Co. 90 cents net.

Wilhelm Ostwald is a man of science who has amused his leisure with the study of painting, and in this volume he discusses the theory and practice of the art from the scientific point of view, with results worthy of the attention of all professional painters. He is not much concerned with the chemistry of pigments, which has been elaborately treated by others; rather he deals with the laws of optics, with the scientific reasons for those differences of effect between opaque and transparent colors on which traditional methods are founded, and with the proper use of various mediums—pastel, water-color, tempera, oils, etc.—and their different adaptability to the rendering of natural effects.

No page of the little volume is without its interest, and his discussion of fresco painting may be especially recommended to those who are inclined to regret the modern disuse of that very imperfect method; but we have been most impressed by his treatment of oil painting, the least understood to-day, as it is the most practised, of all technical methods. Of the effects to be obtained by glazing—effects peculiar to painting in oil—he says that they "appear to be disdained to some extent; perhaps because artists are not sufficiently acquainted with them, and also in part because their application demands a more complicated technique than the easy laying on of previously mixed colors." For heavily loaded or "pasty" painting he can find no justification, remarking that "colors . . . are usually made so opaque by their content of lead white that a layer a tenth of a millimetre thick prevents underlying colors from appearing at all," while the only optical effect to be gained by thick painting is that of "a bright spot of light on the smooth surface of a drop of color." While there is thus little to be gained by heavy painting, except in small spots, there is a great deal to lose, for "in the course of time an oil painting goes to pieces the more certainly the thicker the paint has been laid on." "I will not deny," he humorously adds, "that this prospect has very often been somewhat of a comfort to me in visiting exhibitions of paintings."

Not only in this matter but in a hundred others the serious student of the technical art of painting will find a clear reason given for what he has painfully learned in practice, or a necessary correction or amplification of his imperfect conclusions. And if some problems are admittedly unsolved, yet a clear view of what these problems are, and of the method by which their solution should be attempted, is afforded. The placing of the book in the hands of every art student would do more for the cause of sound education than any number of lectures on æstbetics.

The Macmillan Co. expects to issue this autumn "Great Buildings and How to Enjoy Them," Norman Architecture, by Edith A. Browne; "Pottery and Porcelain Marks," by W. Burton.

In October the Century Co. will issue Timothy Cole's "Old Spanish Masters."

Otto Walter Beck's "Art Principles in Portrait Photography" (The Baker & Taylor Co.) is an attempt to apply certain ideas of pictorial composition to the photographic portrait. It is elaborately illustrated and, for the most part, clearly enough written. Mr. Beck's "principles" are generally very good, but we cannot say as much for his practice. His method is to take the plainest kind of plain photograph, as literal and uninteresting as possible, and by manipulation of the background, and even of the figure and head, to bring it into some sort of composition. This he does with a good deal of intelligence, and easily proves that the resultant pictures are more artistic in effect than the "straight" photographs with which he started. They are also distressingly woolly and formless. Accessories and bits of costume created with a brush, to be tolerable, demand a knowledge of form and of light and shade in their creator which the practice of photography does little to cultivate. Any one able to make successfully such changes on his photographic plates as Mr. Beck recommends would know enough to dispense with photography altogether, and to create real, not bastard, works of art. The juries, composed entirely of professional painters, of the photographic salons of the last two years, almost invariably preferred "straight" to "manipulated" photographs, and there were many examples in these salons of what could be accomplished by careful selection and arrangement of subject and lighting, almost, or entirely, without subsequent retouching. The time for the application of Mr. Beck's "principles" is before, not after, the negative is made. It is true that it requires more knowledge of composition to arrange costume and background beforehand in view of a determined result than it does to lick these elements into some kind of shape afterwards, but if photographers wish to be considered artists they should be willing to take some fraction of the pains that other artists take. While we cannot, therefore, recommend any one to follow Mr. Beck's precepts, yet a photographer who is willing to apply ideas of composition in the more laborious manner of previous thought and care in the selection and arrangement of his material, may learn a good deal from this book.

Close on his "Church Plate of the Diocese of Bangor," E. Alfred Jones has produced a no less valuable volume, "The Old Church Plate of the Isle of Man." Of Pre-Reformation plate the island can still show two examples, the chalice at Kirk Patrick and the paten at Kirk Malew. The former is parcel-gilt, with the date-letter 1521-2. It has a shallow conical bowl and a sexfoil foot with an engraving of the Crucifixion. On the stem is a "knop" with six diamond-shaped projections adorned with angel faces. The paten, which Mr. Jones places circa 1525, has on its rim the inscription, "Sancte Lupe ora pro nobis." As to the identity of this saint there appears to be some doubt; some believe him to be the well-known disciple of St. German, others see in him an Irish saint, Moliba or Molipa, and suppose his name to have been Latinized into Lupus. Owing, it is suggested, to the tenacity with which the Manx people clung to the "reliques of Popish superstition," "the decent communion-cups" and paten-covers of the time of Elisabeth are conspicuous by their absence. The only example of this period still extant is the stemless drinking-cup or "beaker" at Kirk German. This is dated 1591-2, and was intended, no doubt, for secular purposes. The lip has a handsome decoration of strapwork and rose-sprays.

The Engineering Experiment Station of the University of Illinois has just published as Bulletin No. 13 "An Extension of the Dewey Decimal Classification applied to Architecture and Building." This greatly extended classification has been in use in the department of architecture for many years, but it has never before been published. In its present form it is believed that this bulletin will prove useful to architects, engineers, and constructors in classifying books, pamphlets, articles in periodicals, and all other material relating to architecture and construction. Copies

may be secured upon application to the director of the Engineering Experiment Station, Urbana, Ill., L. P. Breckenridge.

The addition of a Corot to the National Gallery in London is something of an event—a concession, it might almost seem, to the great *entente cordiale*, about which so much is heard just now, and which is to reach its climax next summer in the Anglo-French, or Franco-British, exhibition at Shepherd's Bush. The French rooms have long been a discredit to the National Gallery. The art of no country is so poorly represented there as that of France. Until quite recently, there was next to nothing to show that French art had not come to an end with Claude. It was because of this inadequate representation that one regretted the conditions under which the Wallace collection was bequeathed to the nation; if the pictures, instead of being kept together, could have been distributed to other collections where they were most needed, the French rooms in Trafalgar Square would have ceased to be the disgrace they still are. Lately, a few more modern pictures have crept into them—a Boudin, an Isabey, a Diaz, Fantin's portrait of Mr. and Mrs. Edwin Edwards. And now, at last, comes a Corot, left as a legacy to the National Gallery by Mrs. Edwards, who, some years ago, gave the portrait by Fantin. It is neither a very important, nor very characteristic Corot; a small sketch of marshes under a gray sky, cool, gray, pleasant, suggestive, but by no means a work that would explain to the ignorant the reason of Corot's reputation, or satisfy those who understand and would like to see justice done to him among the masters. However, it may be the thin end of the wedge, and certainly its presence at the National Gallery—for which hitherto Corot and the men of Barbizon never existed—is a fact to be noted. With it, Mrs. Edwards bequeathed another picture, an unusually fine painting of flowers by Fantin, to whom for years she and her husband were good friends. It is simple—a bunch of roses in a tumbler, but it is dated 1864 and was done at Fantin's finest period, before he reduced his flowers to a formula and turned them out year after year, until each new version seemed little more than a replica of the last. It is by his portraits and early pictures, like this, that he will be best remembered.

Finance.

THE QUESTION OF TRADE REACTION.

Ever since the severe strain on the security markets, reflecting an equal strain on the world's supplies of capital, assumed the foremost place in financial calculations some months ago, practically all the markets have accepted the conclusion that genuine relief could come only through decided reaction in general trade. The reason for this belief was simple. A good part of the disorder arose, no doubt, from the absorption of money by stock exchanges, notably in the United States, where the extravagant Wall Street speculation which began a year ago had most unfortunate results. But it was recognized all along that these speculative demands were only a partial cause of the abnormal situation. It is, in fact, quite possible that had the natural drafts of trade on the world's money supplies been no greater than three or four years ago, the demands for stock exchange speculation might have been easy to provide for.

The real underlying phenomenon, recognized by all experienced observers, was that the enormous volume to which the transactions of ordinary trade and production had risen had in itself directly stimulated the demand on capital beyond available supply. How much these exceptional trade requirements were a consequence of the unusually high prices, which called for more money than ever before in the conduct of commerce and manufactures, and how much was due merely to the feeling of the whole community that this was a time to spend *ad libitum* and take no thought of saving, is an open question. Undoubtedly each influence has played an important part. Not only was it true that a given enterprise, which was able to keep going half a dozen years ago by borrowing, say, half a million dollars, now had to borrow twice that sum; but the number of such enterprises, and the number of separate communities which were engaged in trade on the same large scale, had passed all precedent. Therefore, it was a natural argument that, since the fundamental difficulty was the inability of accruing capital to overtake the steady increase in requirements, these requirements must themselves be reduced. This could be done in only two ways—by such a sudden cutting-down of commodity prices as could hardly be looked for immediately, or by reduction in the volume of industry itself.

Precisely the same view was taken in 1903, when a warning similar to this year's was given by the New York Stock Exchange. The prosperous interior communities, on which the activity in trade and production then as now converged, expressed at the start complete skepticism as to the possibility of such reaction. After the middle of the year, and after several months of collapsing Stock Exchange prices, industry began to be affected, notably through the falling off of orders in the iron trade; and during the last half of 1903 there were unquestionably extensive curtailments of business throughout the United States.

The result was interesting. In the first place, it was found that in the preceding business activity such unusual sums of ready cash had been used in ordinary hand-to-hand circulation that even the moderate check to the movement which occurred toward the end of 1903 turned into the banks of every community a mass of currency no longer needed in the lighter trade. This currency was shipped to the large financial centres of the East, where the banks, if they chose, could place it at the disposal of Stock Exchange speculators or of investors. It will be recalled that, as a consequence of this eastward flow of currency, the New York banks, by the middle of August, 1904, were able to report a surplus reserve of $58,600,000, a figure never exceeded except in the absolute trade paralysis of 1894. Then the wealthy speculators of New York, borrowing on easy terms these enormous supplies of money, and believing that the industrial situation was at bottom sound, began to pave the way for the extravagant stock speculation which reached its climax in the autumn of 1906.

Now, it was natural that when warnings such as those of the earlier half of 1903 resulted thus, and when curtailment of plans not only led directly to superabundant supplies of capital, but placed the merchants and manufacturers in a position where, a few months later, they were unable to fill the demands of their own customers, some rather broad inference should have been drawn for future occasions. This perhaps explains one phenomenon of the present season—financial markets throughout the world predicting that trade activity must be reduced, and trade itself making practically no response to such predictions. In a few centres where inflation of prices had been conspicuous—such as copper—prices have fallen somewhat rapidly; but even the cut of six cents a pound in the price maintained for copper by the American producers brought the quotation to a level still far above the normal height of recent years. In other industries, such as iron, the fall, whether in prices or in trade activity, has been extremely slight—no more, in fact, than has been duplicated in a number of quiet and normal years.

In the American iron industry at the present time, notwithstanding all predictions of reaction, the output is sold up to the end of 1907; stocks on hand are very small, and for many branches of finished material delivery cannot be promised earlier than eight months hence. Exchanges of checks last week at the banks in the United States, though much decreased from this period in 1906, still ran beyond the total of two years ago this month; and as to 1906, it must be remembered how greatly the volume of bank exchanges was then affected by the stock speculation, of which hardly any sign is seen to-day.

In Europe, almost the same state of affairs seems to exist. Recent reviews of trade from Germany point out that the electrical manufacturers have orders for months ahead; that the textile industries are active, and that orders for iron and steel still come in on an extensive scale. France tells the same story. How great the normal demand of our own railways is for material of this sort may be judged from their issue of no less than $800,000,000 new securities during the very period of money stringency since the opening of last December.

Such a response to the warnings of the spring, by the industrial markets of the world, adds interest to the question whether the problems of our recent finance can be solved without the industrial reaction such as is seemingly not yet in sight. This is a question to which an off-hand answer is not easy. On the one hand, it is undoubtedly true that in recent years so much capital has been absorbed in Stock Exchange operations pure and simple that its release may possibly make good a deficiency which seemed to require far more drastic measures. The money markets at New York and London have eased quite unexpectedly this past week, at the very time when a rise in rates was naturally expected; this may or may not be a sign of permanent relief. For the rest, it will be necessary to await the action of the financial markets later in the season.

One thing may safely be said, that if the feeling, out of which the recent extravagant inflation of values and expansion of trade activity have grown leads to resist-

ance of all normal processes of reaction and rest, and if, in consequence, speculators resume their plans on the narrow margin of free capital which the world is able to offer to them, even now, the result might go far toward bringing the more serious consequences which were predicted by not a few competent observers when the troubles of 1907 began.

Factors in Modern History

And Their Application to the Problems Around Us

By A. F. POLLARD, M.A., F.R. Hist. S.,
Professor of Constitutional History at University College, London

8vo, $2.25 net

The greatest historian of the last decade, the late Professor Maitland, spoke of Mr. A. F. Pollard as "a laborious and accurate investigator, a sane and sober critic, and a good narrator, with a remarkable freedom from prejudice and a sound grasp of legal principles."

These studies were first given as lectures in London to the teachers of history, and were immensely appreciated by them as a direct guide and incentive to the vitalizing of all history-teaching.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 19, 1907.

The Week.

The Northwest's enthusiasm for Roosevelt is the theme of an interview which Senator Clapp of Minnesota has given to the press:

> The people . . . are inclined to accept the President's statements that he is not a candidate, and does not wish the office again, as the sincere desire of the President at the time he made them; but they have great hope that the President may be brought to a point where he will change his views and heed what undoubtedly seems to be the sentiment of the masses of the American people—that he should once more be the candidate.

In this way, entirely aside from the element which would force the nomination upon a reluctant Roosevelt, the man's popularity operates as a discourager of other candidacies. Ohio, Indiana, Illinois, and Wisconsin all have favorite sons, to be sure, but all or most of them would be abandoned overnight if Roosevelt spoke the word. Evidently, a great deal of the sentiment which gave Mr. Roosevelt his unprecedented popular plurality in 1904 has survived three years of his administration with unabated, if not augmented, strength. An attempt to stampede the next Republican Convention for him would find ready support among Western delegations if the Convention were to be held next week. This is not saying that the feeling toward Roosevelt is absolutely stationary and unmodified. The President's temperamental defects are recognized more than formerly. The "Ananias Club," for instance, is not taken so seriously as it would have been at one time. Yet the loyalty of the West to Roosevelt is, in a sense, all the more impressive because it is tempered more than formerly by a realization of the defects of its object. The fact that must be recognized is that Roosevelt is, in the eye of the West, the champion of the people against the powerful corporations which were exploiting them. Hence the implicit belief in the man's soundness and the urgency of his policies—a belief which has enabled him to pass without sensible diminution of popularity through episodes that would have gravely affected the career of any other politician. As for the rival candidates now showing themselves before the Republican voters, it is hard to see why the earnest Roosevelt man should be expected even to become interested in them. When the best of the open aspirants avows that he is only an excellent copy, is it a wonder that many Republicans should demand the "real thing"?

Signs of growing discontent with the proposed Pacific cruise of the battleships continue to manifest themselves within the ranks of true believers. Representative Weeks, a Republican member from Massachusetts, is the latest to condemn the project, and that from the point of view of one who in principle is not opposed to war and naval expansion. The argument against proceeding with reckless haste in so important a matter is one of the strongest objections yet raised. Says Mr. Weeks:

> The result will be a demand for increased dockage and other facilities on the Pacific, which may be necessary, but which should come after judicious and careful selection of sites, rather than as the result of this particular movement.

In other words, mere administrative efficiency requires that, if dockyards and naval bases are to be constructed on our Western Coast, the work should be carried out in accordance with some deliberate scheme, and not in all haste, as the result of a single unnecessary cruise to the Pacific. So the work of building a certain great canal was entered on with a jump, and found to entail something more in the way of preparation than unlimited optimism.

The census of Oklahoma, now finished, shows that from a total population of 790,391 in 1890, Oklahoma and Indian Territory have grown to a population of 1,408,732. The obvious comment on these figures is that Oklahoma, when suffered to enter at all, will enter the Union with a larger population than any other State had at the time of admission. It is a more remarkable distinction, however, that the population determined by actual count is larger by several thousands than was estimated for this year's "World Almanac" by the Territorial Governor. Whereas the enabling act provided for five Congressional districts in the new Territory, there is more than population enough for seven. On a basis of the populations estimated by Governors for the current year, Oklahoma is in twenty-fifth place, below Maryland and above South Carolina. Only twenty-two States in 1900 had larger populations than Oklahoma has now. The people of both Oklahoma and Indian Territory rank high in point of literacy, and the proportion of native-born is larger than in almost any other section. We give emphasis to these facts because it is in the face of them that the effort is being made to defer Statehood for another year or two.

People are not so excited as they were two months ago over the conflict of Federal and State authorities, yet the question of "States' rights" continues to present itself in new forms. On Monday the Missouri Secretary of State was enjoined by a Federal judge from revoking the license of the Santa Fé Railroad to do business within the State. At the same time, Gov. Johnson of Minnesota, in an interview in the *Wall Street Journal*, calls attention to the interesting legal situation of freight rate legislation in his State. The fight in Minnesota has been carried on without such fulminations as made the North Carolina cases conspicuous, but at bottom the conditions appear to be decidedly similar. Gov. Johnson charges that the railroads chose to test the new law by injunction proceedings, instead of by a mere refusal to comply with it, "because they believed the State courts would lean toward the State's side of the case." The railroads evidently prefer to have their cases brought to the United States Supreme Court from inferior Federal courts rather than to the highest State courts. Thus few of the leading cases growing out of the 2-cent fare and other recent State activities will have passed through the State Appellate Courts at all. Whether the Supreme Court is really more likely to favor the railroads under this procedure, is a question no one can yet answer. There is no doubt, however, that this policy has tended to offend and antagonize still further the various State authorities.

Writing in the *Journal of the Military Service Institution*, Lieut.-Col. R. L. Bullard, Eighth Infantry, makes some gratifying statements about the bearing of the American troops now in Cuba for purposes of pacification. He says:

> In this Cuban intervention, the American soldier has thus far again dignified himself and justified the faith of his friends. A surpassing excellence of conduct toward the Cubans and an unusual worthiness of conduct as a soldier have characterized him everywhere in Cuba.

So far as the officers are concerned, there has been even with the youngest a remarkable absence of mistakes and errors of judgment, or of conflicts with the civilian authorities. Col. Bullard is also properly proud of the rapidity and thoroughness with which the army mapped the island. It had no sooner landed than this work was undertaken, and whoever suggested it deserves high praise. It not only puts this Government in possession of valuable information in the event of future trouble in the island, but performs a great service for the little Republic if the maps are published as they ought to be. More than that, the making of the maps was the valid excuse for sending troops into

every nook and corner of the island, and letting the inhabitants see just what kind of men the American soldiers are. All the reports which have come to us confirm the complimentary statements made by Col. Bullard, save as to the appearance of the troops. Far from being neat, clean, and soldierly, they are much inferior to the marines in all the outward signs of the well-disciplined soldier.

One of the first arguments put forward by the supporters of Theodore E. Burton for the Cleveland Mayoralty is premised on a former criticism of his Congressional career. The Cleveland *Leader* tells us:

> In Congress, Mr. Burton has been criticised by his party associates for being too fond of sticking for abstract principles, too unwilling to yield a little to expediency. It has been said of him that he is too stiff-backed in standing out against the judgment and wishes of the majority on what is to him a point of conscience. Isn't that the ideal guarantee for justice in the Mayor's office?

It is a natural thing to glory in the taunts of the enemy, but here is a case in which the criticisms had come from men of the candidate's own party, and yet they are held up as points in his favor. Are we, as a practical people, undergoing a change in our attitude toward the theorists in politics? Are we willing to do more than tolerate the man who applies abstract standards to the acts of his public life? The politician of the other type has been with us for generations. We have ferocious fights in national and State conventions over alternative planks or resolutions, neither of which—because they were drafted with the idea of hurting no one's feelings—means anything in particular. The word "practical" as used of a politician implies a willingness to yield and concede systematically. The "main chance" of the bad politician is the "larger good" of his more reputable ally. That political life is necessarily a structure of compromises, becomes an article of faith. We even have a paradoxical breed of politicians who hold their ideal of compromise itself intolerantly and uncompromisingly. Now, nothing has been more clearly demonstrated by recent political history than that this is not the kind of statecraft which will permanently satisfy the people. We have spoken of Congressman Burton. Gov. Hughes is perhaps the leading example just now of the executive of academic ideals. A "practical" Governor who secured by "dickers" half as much from a semi-hostile Legislature as Gov. Hughes did last winter by sheer sticking to principle would be indeed a curiosity. The doctrinaire—a name which gets itself applied to many men who dissent but feebly from purely "practical" policies—has evidently a little more comfortable place in our political world than he had a few years since. It is an encouraging thing that doctrinaires are to-day looked upon as an especially "available" class of candidates.

The view has been expressed that the anti-Asiatic outbreak in British Columbia must tend greatly to facilitate the settlement of our own misunderstanding with Japan by emphasizing the serious nature of the opposition with which the Mikado's Government must reckon. But if it should prove to be true that Asiatic exclusion agitators from Seattle were prominent among the Vancouver rioters, our relations with Japan will become only more difficult. Our citizens would then be in the apparent position, not merely of refusing the Japanese fair treatment within our own jurisdiction, but of deliberately seeking to create bitterness of feeling between Japan and her powerful ally. Nor would Great Britain or the Dominion Government have any particular cause for gratitude towards these uninvited American labor champions. Following the attack on the Sikhs at Bellingham, the irruption of the Seattle agitators into Canadian affairs may easily develop into an unpleasant "incident" between the British Government and our own. But, then, white supremacy, like love and justice, knows no boundaries.

Last Saturday's further cut in the price of copper to 16½ cents a pound, coupled with the intimation that the Amalgamated Copper Company is preparing to shut down some of its mines with a view to checking the fall in the price of the metal, is interesting for many reasons. It was copper which, more than any other commodity on the list, typified the extraordinarily rapid rise in prices during 1906. As lately as 1905, a year of great industrial activity and prosperity, the average price of copper in New York was 15⅞ cents per pound, and since copper had sold at 12⅜ in 1904, the price of 1905 was justly regarded as high. Indeed, the price fixed by the Amalgamated Company in its disastrous effort to corner the market in 1901 was only 17 cents. By a series of advances during 1906 and in the early months of 1907, copper was forced up by the Amalgamated to no less than 26 cents, much above anything reached in the American market since the autumn of 1873. With the disordered conditions which befell the money markets last spring, resistance of consumers to this extravagant price naturally began. But the company made no concessions. It held to its "pegged price" from March to July; ridiculed the lower quotations given out on the floor of the Metal Exchange; declared the heavy decline in London to be a mere device of speculators; shut its eyes to the decrease within five months of 20,000 tons in the export of copper from the United States; and answered all protest and remonstrance by asserting that consumers would be forced to buy at the producer's price. Even the news that the great electrical manufacturing concerns, the chief users of copper, were reducing their working force because of the tight money market seemed to have no effect. On July 5 the president of the Amalgamated Company gave out this statement regarding the price:

> I don't know why it should change; certainly not for lower values. Europe is short of our copper and the world's demand is greater than the world's supply.

We leave it to the average business man to pass judgment on the sagacity of this conduct. When, in the middle of July, the producers began to see the light and offered copper at 22 cents, followed by a cut to 18, they found that their concessions came too late. The consumer had not been asleep while the producer slumbered, and he naturally waited to bring the Amalgamated to his own terms. That such an episode should be followed by the threat of shutting down production, and by the apparently official statement that supply is now vastly beyond demand, and that "there is no use in accumulating copper when it cannot be sold at 18 cents," is a fitting commentary on this whole story of commercial bungling.

Whether or not the Moroccan tribesmen are really prepared to make peace as suddenly as they began hostilities, the state of affairs that prevailed before the attack on Casablanca cannot be restored, and the gains which France has made in the course of the last few weeks she will in all probability keep. It is now planned to make use of the French and Spanish troops at Casablanca as a police for the eight ports, with the protection of which the Algeciras Conference was so greatly concerned. But whereas the Act of Algeciras provides for a native police under European officers, the talk is now of an arrangement that is not far removed from actual foreign occupation. While French troops may be entrusted with the protection of the coast towns only, it needs merely raids like that on Casablanca to extend the field of French activity into the interior; and it is not at all improbable that the pursuit of marauding bands might some day carry the European forces as far as Fez. Before peace can be really regarded as reëstablished, there is still the question of the new aspirant for the throne to be settled. Mulai Hafid's progress does not seem to have been so rapid as was expected at first, but unless his candidacy utterly collapses, there will be turmoil enough in Morocco to make the presence of an European army of observation far from

superfluous. It will be of interest to see whether the conclusion of peace at Casablanca will be followed by the reshipment of any of Gen. Drude's 8,000 men.

The Papal encyclical which has just appeared deals with "modernism" in the faith. Two aspects of this movement are especially disquieting to the Catholic authorities. In the first place, modernism arrays itself against ecclesiastical authority, criticises the Bible and tradition, and stands for subjective opinion. It is the Roman counterpart of the Protestant new theology. The serious side of such radicalism is that it affects the ideas of the priests, and is dangerous to faith and discipline. To counteract it, the Pope, like his predecessor, Leo XIII., will insist once more upon the importance of teaching philosophy and scholastic theology at the colleges and seminaries. Yet in spite of the prestige of Thomas Aquinas among Protestants as well as Catholics, it must be very plain to every one that his system is not flexible enough to be pitted against the various forms of infidelity which have lately arisen. As a *Summa Theologiæ*, it is imposing; but its apologetical value is of less importance. In the second place, modernism allies itself with Christian Socialism, which is constantly gaining strength in Italy as well as Austria; and against it the scholastic authors cannot be of much use.

The figures which the St. Petersburg *Slovo* gives for the casualties of the Russian revolutionary movement of the last three years have to be taken with caution, but, even if only approximately true, they illustrate both the nature and intensity of the struggle that is still under way. Counting the victims of riot, open insurrection, assassination, judicial murder, and legal execution, over 47,000 persons have suffered death or wounds since the first dramatic overture on Gapon's Red Sunday, January 22, 1905. Of these, the dead are given as 19,144, of whom nearly 13,000 fell in combat between the populace and the soldiers and police. The number of executions is set at 2,381, but this is supplemented by no less than 1,350 cases of suicide, an almost incredible total, if it were not for the fact that many opponents of the Government are women and youths who may prefer suicide to waiting for execution. Nevertheless, when we compare the total number of victims on the revolutionary side, 3,731, with the number of Government officials of all kinds reported to have fallen by assassination, 8,223, we find that the autocracy has had ample reason for complaining that its servants were being slaughtered with far greater vindictiveness than the Government displayed towards the revolutionaries. Yet in the face of such great losses on both sides, the lesson that still strikingly stands out is that the policy of revolutionary terrorism has been a failure. The revolutionaries have killed nearly three servants of the Government for every one who has fallen in their own ranks; but 3,700 is a large percentage of the entire revolutionary force, while 8,000 police constables and soldiers are but a drop in the vast resources of a Government drawing on a population of 140,000,000. To speak in terms of cold-blooded commercialism, 1,000 lives sunk in an open insurrection as at Sveaborg or Sevastopol or Moscow are a good investment, because such public events shatter the confidence of the autocracy and gain the sympathy of the world. But the same number of lives expended in removing twice as many Government officials is only wild-cat speculation.

President Fallières, in commuting the death sentence imposed on the perpetrator of a peculiarly atrocious murder, has, it is generally admitted, virtually abolished capital punishment in France. There have been street demonstrations in Paris, and certain newspapers have criticised the Government, but inasmuch as these newspapers would with equal readiness seize upon an earthquake or a tidal wave as an indication of the Government's criminal incapacity, their opposition can be largely discounted. The sense of the country has for some years been decidedly in favor of the abolition of the death sentence. Indirectly, this object was attained some time ago, through the suppression in the budget of the item providing for the maintenance of the guillotine and its presiding genius. At the present moment the Chamber has before it a bill dealing explicitly with the subject. That such action should be contemplated at a time when Paris is said to be suffering from an unprecedented outburst of crimes of violence, and that President Fallières should have exercised clemency under aggravated circumstances, is quite in consonance with the doctrinaire strain in the French blood. If capital punishment is wrong, what matters it how bestial an assassin we have to deal with? On the contrary, if public clamor and the passion of the moment can be overcome in this particularly irritating case, how much more easily will the principle be accepted when applied to the ordinary criminal?

Germany is in the midst of an unprecedented period of industrial development. Factory chimneys spring up on all sides like mushrooms, and unemployed labor has ceased to exist. A striking illustration of the movement may be found in Frankfurt on the Main, where a project for expending $14,372,500 on a large harbor is under consideration, and will probably be carried out. Every precaution has been taken for making the undertaking successful. To prevent speculators from charging usurious rates, the community has bought up all the land intended for the harbor works and for the factories that are to be built in the vicinity. Everything is to be on a large scale; the space set aside for the project covers 350 hectares, including water basins, streets, and railway tracks. There will remain about 192 hectares for factories, as compared with the 100 hectares in Mannheim and Kehl, 59 in Strassburg, 46 in Mainz, 41 in Düsseldorf, 26 in Cologne. Frankfurt thus expects to place herself, in no distant future, in the van of all these cities, and become, what it has never been before, a real industrial centre. Whether the change of the old exclusive *Reichsstadt* to a modern noisy factory town will make the inhabitants any happier remains to be seen.

The progress of reform in China is still far from that unmistakably hopeful phase which it is the custom now to insist upon. As for judging from the ups and downs in the fortunes of various Chinese politicians, we might as well give up all hope of attaining any definite knowledge. For every reactionary degraded from office at Peking we find one exalted in the provinces; and every triumph of the liberal-minded Yuan-shih-kai apparently leaves him weaker than before. We have still to depend on the conclusions drawn by Europeans on the spot, and from that source undiluted optimism does not flow. The Shanghai *Mercury* finds in the present condition of China cause for serious anxiety. There are three phases of existing discontent. First comes the purely revolutionary movement, which aims at the overthrow of the Manchu dynasty by violent means, and which, though as yet unsuccessful in its attempts, is growing in influence. Second is the reform movement, which is described as "a struggle between the bureaucracy and Yuan-shih-kai with his henchmen," with the chances on the whole favoring the latter. Finally, there is the purely lawless element of the population ready for any mischief, half-beggars and half-banditti, who, in Manchuria especially, are to be reckoned with. The danger rests in none of these three parties alone, but in a coalition of them; and of such an amalgamation the possibilities continue to increase, since the Government's hesitant attitude in the face of reform is driving the progressives into the arms of the revolutionaries. Some economic happening might hasten the welding process and bring about a repetition of the Taiping rebellion—such as the failure of a harvest with which the Yang-tse valley is threatened.

SUPREMACY ON THE OCEAN.

The superiority of the new Lusitania over any other ship afloat is manifest in spite of her failure to break all records on her maiden trip. To have done so would have been nothing less than phenomenal, for the best of machinery requires a shaking-down, and the ablest stokers must become acquainted with their boilers in order to get the greatest power out of them. Moreover, many a fine ship has suffered from being driven too fast on her early voyages. But the significant thing is that the ocean has been crossed in just about five days, and that even greater speed is in sight. No one believes that the resources of naval architect and naval engineer are exhausted. Gustav H. Schwab of the North German Lloyd Company is quoted as saying that the reciprocating engine has about reached the limit of development; but the turbine obviously has not, and the gasolene engine is merely at the beginning of its evolution. With the British Admiralty considering plans for a gasolene battleship, the day of the thirty-knot gasolene liner may not be far off.

Be that as it may, the British may well take pride in the Lusitania, even though it represents to many an unhappy alliance between the government and a private mercantile enterprise through the construction subsidy which made this ship and her sister, the Mauretania, possible. That the German shipbuilders, with all their cleverness and adaptability, would permanently take front rank, we were never prepared to believe. German blood is still too conservative, as is clearly illustrated by the German attitude towards the marine turbine. This invention has only just been adopted for certain types of vessel of the Imperial navy; for mercantile purposes it is still under a ban, despite the success of the turbine predecessors of the Lusitania and the appearance of that ship herself. The German naval architects feel that the new engine is still an experiment, and they are appalled by the coal consumption of the new Cunarders. Hence, to the English are left the honor and advantage of developing the turbine. As long as the English are willing to take up new inventions and run their chances, other nations will continue to learn of them and follow in their footsteps.

But, after all, supremacy on the ocean does not depend upon owning the fastest ship afloat. Britannia has continued to rule the waves throughout these ten years, when the Atlantic speed records belonged to the Germans. Nor are the British superior merely because they have the largest navy afloat. It is to the enterprise and shrewdness of her merchants and shipowners and to the liberal shipping laws that her ascendency is due, and it is owing to similar traits that the German shipowners have become within thirty years such mighty factors in the carrying trade of the world. Subsidies have, of course, helped in both countries, but, after all, to a comparatively slight extent. The great fleet of the Hamburg-American Company has, for instance, been created without the aid of a single Government grant of money. The Empire has generally lent only its moral aid and encouragement, and permitted its shipowners to buy their vessels wherever they could get them best and cheapest.

This fact alone ought to make Americans hang their heads. Indeed, the arrival of the Lusitania should be a mortification to all our citizens who wish to see the American flag restored to the place among the world's fleets which it occupied in the fifties, when our clipper ships were in every harbor on the globe. The rivalry for the Atlantic laurels is not between the English and the most enterprising people in the world, the Americans, but between the English and the Germans, who have but a short coast line and four or five harbors. The American trade is fought for by everybody save ourselves. There are no reports of projected American ships to surpass the Lusitania, no rumors that American invention is busy with a plan to develop a vessel that will cross within four days. To France or Germany we must look for the reply to the English challenge. Our chief American line is precisely where it was in 1892, when by act of Congress it was given the special privilege of placing two of its foreign-built ships under the Stars and Stripes, on condition that it build two others in American shipyards. Its ships are now far from modern, and it clings desperately to its mail-subsidies; but as a factor in the development of our European trade, it hardly counts, save to remind us of our humiliating position.

Just what has caused our downfall and what keeps us from entering into competition with Englishmen and Germans has recently been set forth afresh by Franklin Pierce in his book, "The Tariff and the Trusts." There are three reasons: our barbarous navigation laws, the increased cost of shipbuilding materials because of the tariff, and the direct impairment of our commerce with other countries by reason of prohibitive tariffs, which prevent both importation and exportation. So far as our navigation laws are concerned, they have come down to us with but few changes from the eighteenth century. No American can buy a vessel abroad and fly the American flag on it unless he be the millionaire owner of a steam yacht built on the Clyde and used for pleasure only. Then he can get an American registry. If he wished to earn an honest dollar through that craft, he would be compelled to hoist the British flag. The theory is that this law will compel American shipowners to build at home; instead, it means that they will not build at all; or, if they build, they must charge such prices that the Washington Government hires a fleet of British ships to carry its coal to the Pacific or its supplies to Panama. Not even the payment of a duty permits an American to buy a foreign vessel and hoist his own flag on her. Far different is Germany's policy.

So far as the tariff is concerned, Mr. Olcott, the president of the Newport News Shipbuilding Company, testified before the Mercantile Marine Commission in 1904:

> There is a difference of about 40 per cent. [in the cost of shipbuilding], on account of the tariff. . . . It is not only the steel that forms the hollow of the vessel that is affected in price; it is every conceivable item that goes into a ship.

Thus we deliberately make impossible the regaining of the shipping honors of which we were once so proud. The achievement of the latest ocean greyhound is but a fresh reminder that the United States, the richest country in the world, the greatest producer of coal, steel, and iron, with the largest and finest sea-coast of any nation, is throwing away the opportunity of becoming mistress of the seas.

INDIA AND THE PHILIPPINES.

One of the difficulties before the Secretary of State for India is that he has to face the perplexities of rule in isolation, and without that daily help which the politician dealing with home affairs can get from his colleagues, or can absorb, as it were, from the political atmosphere around him. In home matters the general trend of public opinion, or, at any rate, of the opinion of the wiser minds in the nation, is of enormous help to the statesman. . . . No such help is forthcoming for the Secretary of State for India. . . . Hore he must for the most part act alone. The minds of his colleagues are turned away from India and things Oriental, and it can very rarely happen that they are willing or able to take the responsibility of giving advice. Even those who have been viceroys or secretaries of state have in all probability lost touch with India. In the same way, little help is to be got from what we have called above the general trend of public opinion. That is a stream which does not flow into the Indian channel.

This passage is from an article in the London *Spectator* of August 31 on Mr. Morley's conduct of Indian affairs. No American can read it without being reminded of our own difficulties with the Philippines. The parallel is obvious; it has often been drawn. But the return of Secretary Taft to those unhappy islands and the renewed discussion of our relations with them lend point to a fresh examination of issues, which, to us at least, can never be trite, for on them

depends the welfare of millions of mankind.

The disadvantage under which Mr. Morley labors is nothing more than another illustration of perhaps the oldest and hardest problem of personal as well as international ethics. The man who is unjust, oppressive, cruel, to a slave, a servant, or a neighbor, fails, we say, to understand that this slave or neighbor is a creature of like passions and aspirations with himself, is alive and human. This is the burden of Shylock's pathetic cry, "Hath not a Jew eyes? Hath not a Jew hands, organs, dimensions, senses affections, passions? . . . If you prick us, do we not bleed?" And therefore it is that moralists of all ages and races have warned us that our essential error lies in our obtuseness. We do not treat men as if they were real; we regard their desires as dim and cold and pale beside our own. We cannot comprehend that we are all children of one Father.

This example from the life of the individual is not irrelevant, because, as Burke put it, "the principles of true politics are those of morality enlarged; and," he added, "I neither now do, nor ever will, admit of any other." Nor can we in America set up any other standard of judgment. We know that it is the combination of brute selfishness combined with almost invincible ignorance that always has made the phrase foreign rule a synonym for exploitation. We need not cite instances, for every schoolboy can name a hundred. The *Spectator* assures us that England does not understand India, and is not much interested in it. England has never understood India or been interested in it. That was the trouble when Burke tried to bring Warren Hastings to justice. Macaulay in a famous passage explains Burke's vehement advocacy of the cause of this "emptied and emboweled land." To Burke, says Macaulay, "India and its inhabitants were not, as to most Englishmen, mere names and abstractions, but a real country and a real people." This is why Burke felt that "oppression in Bengal was the same thing as oppression in the streets of London."

The century and a quarter that have elapsed since Burke first urged reform in the government of India have not enabled England to develop a group of administrators possessing a statesman's imagination like Burke's. Thousands of Englishmen have lived in India in the military and the civil service; thousands more have visited India for pleasure or commercial profit. The ties between Great Britain and its province have been extremely close, and yet in the whole history of the management of India crime has trodden on the heels of blunder. After all this bitter and costly experience, after the sacrifice of innumerable lives by disease and by battle, it is still true that the minds of the governing class are turned away from India, and public opinion does not flow into the Indian channel.

What, then, can we expect for the Philippines? So far as one can foresee, our relations with them, commercial and social, can never be as intimate as those between England and India. The Filipinos are remote in space, remote in language and habits of thought. For most of us, the region is and must continue to be a mere name, a colorless picture of frail huts, tropical vegetation, and half-clad savages. Our own Southern States complain angrily that the North, lying next door, connected by a network of rails and wires, speaking the same tongue, does not grasp the peculiar problems of the South. But the politicians of the South are as ready as those of the North to thrust their clumsy fingers into a delicate mechanism, which lies beyond the trackless ocean, and concerning which they know nothing whatever. There is no country in Europe with which we are not relatively familiar through trade, travel, and immigration. But any man who should suggest that we could ever become so well acquainted with the people, say, of Italy and so sympathetic with them that we could set up a successful government in that peninsula would be clapped into a lunatic asylum. The folly of the attempt would be unspeakable; but it would be wisdom in comparison with our venture in the Philippines.

There is, then, but one course for us—to get out of the islands as quickly as possible. We may execute an agreement with the Powers of Europe and Asia that the Philippines shall remain independent, under a joint protectorate for a time, if need be. But the empire in the tropics about which we heard so much a few years ago would mean nothing but vexation and violence. The thorns of that jungle have already stripped from us the last shred of illusion. England's example, fortified by our own painful experiment, is proof that among the bulk of our citizens public opinion will not flow into the Philippine channel. Under such circumstances, our representatives in Congress and our executive officers will inevitably be careless and indifferent. While the vast majority of us remain apathetic, the Philippine interests will, as a matter of course, be attended to by our manufacturers of sugar and tobacco—men whose swinish instincts have been so cultivated by a protective tariff that rather than grant the Filipinos a fair chance to trade they would let them starve.

THE FINANCES OF JAPAN.

The present condition of the money markets of the world will prevent Japan from realizing her hope of issuing a refunding loan under favorable conditions in the near future. During the active demand for stocks and bonds which followed the flush of Japan's victory in 1905, hope was entertained that all the war debt could be refunded at 4 per cent., and at a price near par. The first refunding loan was well taken, but quotations have declined to about 85, and the recent failure to float a small amount for the Manchurian railways is a warning that in the way of refunding nothing more can be done at present. That is, the heavy interest charges imposed by the necessities of the war must continue to be borne by the Japanese people for a considerable time to come.

The effect of this burden of debt upon the economic progress of Japan will furnish an interesting problem. The general budget was swelled in 1906 by extraordinary receipts of 154,140,983 yen ($77,000,000), derived from such sources as increases in the land tax, income tax, excise duty on sugar, and stamp taxes, and the assumption of the tobacco monopoly. From these taxes the people are apparently to get little relief; for, in spite of the large revenue which they afforded, the outstanding debt grew in the fiscal year ending March 31, 1907, by about 115,000,000 yen ($57,000,000) as the result of continued outlays for strengthening the military and naval establishment and meeting the expenses growing out of the war with Russia. The issue of new loans in time of peace in order to maintain a great military establishment is not an encouraging feature of the situation, although such a course is by no means unusual among the governments of Western Europe.

Comparing the relative burden borne by Japan with that of other countries, we find that the position of Japan is not worse than that of other powerful states. Definite comparison is not easy, however, because of the wide difference between the economic power of the Western and that of the Oriental nations, as well as differences in the organization of the Government. The real burden of debt in the United States could be found only by adding the amount of State and municipal obligations to those of the Federal Government; but these local obligations were small here in 1861, and they are small in Japan at the present time. The national debt of Japan on March 31, 1907, stood at about 1,987,720,000 yen, or nearly $1,000,000,000. This was regarded as a staggering load when it was imposed upon France by Germany in 1870, but it was easily thrown off by a people so rich in savings as that of France. The United States, at the close of the Civil War, with a population which was considerably less than that of Japan to-day, labored under a war debt of $2,221,311,978. Our productive power per capita,

moreover, was at that time nothing like what has been attained with the development of machinery and the extension of railways within the past generation. The per capita debt of Japan on March 31, 1907, was 45.012 yen, or about $22.60. The per capita debt of the United States at the present time is less than $11, but in 1865 it was approximately $63.50. Judging by these figures, the people of Japan are only a little more than one-third as heavily burdened as were those of the United States at the close of the Civil War. If economic power is taken into account, however, it is probable that we, even at that date, were superior in producing capacity to the Japanese at the present moment.

There is no reason to fear the inability of Japan to meet her obligations. The interest charge per capita cannot exceed materially $1.15, or 5 per cent. upon the outstanding debt. What is more to be feared than inability to meet interest charges just now is the increase of the debt to meet annual deficits caused by extraordinary expenditures for military and naval purposes, such as have at various times nearly emptied the treasuries of France, Spain, and Italy. Everything relating to the fiscal situation in Japan teaches the lesson of conservatism and the peaceful development of the large territories already won in Formosa and on the Asiatic mainland, rather than reaching out for new conquests at the expense of binding upon the backs of the Japanese people burdens too grievous to be borne.

THE SCIENTIFIC GUESS.

Before the Chemical Section of the British Association, the chairman, Prof. Arthur Smithells of Leeds, recently complained that science was going too fast. By this he meant not that knowledge is being accumulated too rapidly, but that men of science, by rash theories, are often in danger of being forced to retrace their steps. "A steady head is required," he said, and we may well ask, "whither are we going and where is the path of progress and safety?" Yet he added, "there is no reason for panic," in spite of "sensational language" employed by certain physicists. These remarks were evidently directed against those who are not only asserting the composite nature of the chemical "elements," but are attacking the atomic theory itself. In reply, Sir Oliver Lodge writes to *Nature*, protesting against the distrust of physics which is entertained by many chemists, and making light of that pessimism which fears premature hypotheses. He maintains that in science there is room for all kinds of workers, and that we are none the worse for conjectures which may, after all, prove to be unfounded. In spite of recent discoveries, the atomic theory, he thinks, may still be held, if it is useful to hold it.

The issue here raised is a very old one put into a new form. Ever since the time of Newton, with his ironical *non fingo*, there has been a dispute among logicians and *Naturforscher* as to the legitimacy of the scientific guess. Yet history shows clearly enough the value of the hypothetical method, and Sir Oliver is justified in his defence of it. For many years the dominant influence of Bacon made British inquirers very cautious in arriving at conclusions concerning nature. But for more than a century England has been the birthplace of some of the most far-reaching scientific conjectures in the history of investigation. The validity of the method might be demonstrated *prima facie* by the number of remarkable discoveries which have been made, as it were, by accident. Haüy chanced to drop a piece of calc-spar on a stone pavement and thereby came upon the law of crystallization; Goethe saw the bone of a sheep lying on the shore, and at a glance was led to form the vertebrate theory of the skull. If these achievements can be reached by accident, much more is likely to be, and has actually been, accomplished through the instrumentality of an hypothesis. In every case, however, where chance occurrences or guesses have had profitable results, the observer has been a trained man; for, as Lagrange remarked, such accidents happen only to those who deserve them. It is, moreover, quite true that many conclusions which seem to have been reached by some lucky exercise of the scientific imagination are in reality the result of long and patient experiment or mathematical calculation such as preceded the guesses and subsequent discoveries of Euler and Herschel. On the contrary, the atomic theory itself, about which Professor Smithells is so solicitous, was framed *a priori* in an age when scientific experiment was rare. What may have led Leucippus and Democritus to take such a view of the ultimate constitution of matter may never be known; but the conception certainly did not originate in the laboratory. There are indeed many well-established principles of science which, hinted at and formulated during the period of Greek and Roman philosophy, have been verified in modern times. In proof, one has but to turn to the pages of Aristotle and Lucretius, and find there, for example, the differentiation of species in Natural History, and the law of evolution in Physics.

Objection can be urged against the free use of hypothesis only when it is employed as a final conclusion, not as something to be justified by experiment. At the time of the early debates on the Darwinian theory, Huxley invented the happy term "working hypotheses" to denote an unproved theory adopted as a basis of investigation and experiment. And even those who were most active in opposing Darwin were forced to admit that his undemonstrated speculation gave an impetus to the revelation of nature without precedent in the annals of science. In vain has it been objected that the hypothesis of evolution does not account for the origin of life or the origin of mind. The vast number of facts for which it does account entitle it to a scientific standing, although it began as little else than a conjecture. At first it was received with skeptical surprise, and opposed with abuse. It has now become, with certain modifications, the commonplace principle upon which every man of science proceeds.

Yet so strong is the suspicion surrounding the employment of hypothesis, that logicians who ought to know better make rules to which they think it should conform. In his "Principles of Science," Jevons, for example, asserts that an hypothesis should agree with the laws of nature. But the laws of nature are not so fixed that such a rule can be rationally observed. In the time of Galileo it was a law of nature that the sun moved around the earth. When new facts are discovered, old laws of nature often have to go by the board. Yet it is one of the most encouraging things incident to scientific inquiry that the greater the accumulation of facts, the higher the probability of right conjecture.

LEST WE FORGET.

Fifty years ago you might meet in the west of Ireland ragged peasants who had whole books of the Æneid by heart —such at least is the assertion recently made in the English House of Commons. The inference is that familiarity with Virgil was not unusual in parts of Ireland in the middle of the last century, but that it is rare now. In this form of erudition American students have never, within our personal recollection, been able to rival the Irish. Few even of the eldest of us, can do more than repeat scattered phrases from Virgil and an ode or two of Horace; and members of the rising generation seem to be committing practically nothing to memory, in Latin, English, or any other language. The late Prof. Francis James Child of Harvard, an old-fashioned man, used to ask his classes in Chaucer, Shakespeare, and Milton to get several pages by heart—a mere trifle, perhaps not more than five or six hundred lines a term. Light as was the task, some of the youngsters were appalled by it; but the master was inexorable: a boy who could not commit a few hundred lines might just as well shut up shop and go home. Professor Child occasionally maintained with much vivacity the paradox that before the era of cheap printing—perhaps of any printing—literary culture was more widely diffused

than now. In those happy days men fed on the great literature preserved by oral tradition—sagas and ballads—things worth knowing and having at your tongue's end. But at present men debauch their minds with the trivialities and vulgarities of the newspapers. Furthermore, the person who had stored up a collection of these fine poems, who carried a "Golden Treasury" in his head, had trained not merely his taste, but also his memory.

On this argument we need not lean too heavily, for Professor Child was, as we have said, an old-fashioned man; though not destitute of humor, he was indifferent to comic supplements; though fond of a good novel, he could not even name the six best sellers of the week. But sometimes a fogy will blunder upon truth; and certainly one idea which underlay Professor Child's paradox is wholly tenable: that a memory which is thoroughly disciplined, and which retains verbatim many masterpieces of prose and verse, is one of the best products of a liberal education. Time was, we grant, when some teachers cultivated the memories of their pupils too exclusively. You learned by heart all the tables in the arithmetic, all the rules in the grammar, all the words in the spelling-book, most of the important paragraphs and all of the dates in the history, and many of the pieces in the reader. Then the cry arose that children were becoming mere parrots; they had good memories, but they could not reason. Since the reaction against this method set in, the practice has been to learn little or nothing by rote. That process, once regarded as so salutary, is discarded as mere barren drudgery, which makes school disagreeable. As amusement is both the means and end of education, modern pedagogy has spent its energy in inventing various forms of entertainment which are supposed—apparently because they can accomplish no other result—to develop the faculty of reason. Our boys and girls are to master but few brute facts, and these few they are allowed to state in their own hazy and inaccurate language. In all branches of study, precision is carefully avoided. We are reaching that condition described by Cardinal Newman, in which "learning is to be without exertion, without attention, without toil, without grounding, without advance, without finishing." In history, as Prof. William MacDonald told the readers of the *Nation* last week, many schools do not teach dates at all, and the answers to examination questions are so vague that one cannot tell whether "the writer really knows anything about the subject." In arithmetic we have attained the ideal of that Massachusetts teacher who boasted: "My pupils may not know the multiplication table, but they know something far more precious, the meaning of multiplication."

We have discovered also that if a prodigious memory does not make a philosopher, neither does total lack of memory; that the intellects of our offspring, in spite of all advantages, are not much more powerful than our own. We begin to suspect that at a certain period of childhood time spent in ratiocination is largely wasted, while drill of the memory is fruitful. At this stage the mind is little more than a receptacle for information of every kind; the first step is acquisition, gathering with both hands; the second and much later step is reduction of the heaps of fact to order and system. It is unnecessary to dwell on the virtue of exact knowledge and of the retentive memory which ministers to such exactness. School is now about the only place which does not offer a high premium for this faculty. Another point which we shall merely mention is that the lad who is encouraged or allowed to follow the prevalent mode of putting everything into "his own words" not only becomes slipshod, but he misses an important opportunity to enlarge his vocabulary and develop his powers of expression. For learning skilfully phrased rules of grammar and arithmetic, dry as they seem, helps toward that goal which we have in view in memorizing passages from the best literature.

But the best literature gives us something besides the excellent drill, and that is a standard of taste. It was Matthew Arnold who urged us "to have always in one's mind lines and expressions of the great masters, and to apply them as a touchstone to other poetry." There is no better critical method; indeed, no other. The boy who carries in his memory twenty-five or thirty pages made up from Shakespeare, Milton, Byron, Wordsworth, Tennyson, and Browning is not likely to hail as a heaven-born genius the latest clever versifier. He will, however, have an enthusiasm for the best, and that is no small thing to get from school or college. At this moment, no great living poet dominates our generation as Byron dominated his, or Tennyson his—no one to set our blood afire and set us to declaiming, no one, not even Swinburne and Kipling. But though we lack the prophet and seer who speaks to us of our own time in words which we cannot forget if we would, we may still turn back to the mighty poets who remain contemporary through all the centuries, and we may keep their lines forever present in the memory and echoing in the heart.

A LONG WAY AFTER POE.

Poe is so generally recognized as the father of the detective story that it hardly needs a magazine article by Prof. Brander Matthews, "Poe and the Detective Story," in *Scribner's*, to recall his services to this branch of literary art. Poe, says Professor Matthews, "transported the detective story from the group of tales of adventure into the group of portrayals of character. By bestowing upon it a human interest he raised it in the literary scale." In doing this he marked the way for some of the most voluminous and popular authors of his own and the next century. A large and increasing number of writers have tried their hands at the kind of story that Poe invented, and some of them have succeeded. The statement that Sherlock Holmes is the most widely known figure created by a living writer is, we suppose, hardly open to question.

It is a remark of Sir Conan Doyle himself that "the writer is left with only one quality, that of intellectual acuteness, with which to endow his hero." Those who follow Poe—at a long distance—make somewhat pathetic attempts to differentiate their heroes. These characters have been distinguished by bald heads, crazy thatches of hair, commanding figures, official positions, private retainers, offices down town, "lodgings" up town, but to very little purpose. Scratch any one of the tribe and you find a more or less successful imitation of Dupin. And beside each of them travels a counterpart of Poe's anonymous reporter, or Doyle's Dr. Watson. No one thinks in these days of charging a new writer with plagiarism, or even lack of originality, because he writes a series of stories about mysteries solved by a preternaturally clever deductive reasoner whose acts are reported by a preternaturally stupid friend and ally. These are features of a form that has now become conventional, like the fourteen lines of a sonnet, the pair of comic lovers in a rural drama, or the three volumes of the old-time novel. There are not nine and sixty ways of constructing detective stories; there is only one way. The rules of the game have been worked out and the devotees of the detective story, who are found in high and low station, among old and young, know these rules and resent any departure from them. It might be added to the current estimate of Poe's service in this department of letters that these rules go back to his small collection of detective stories, and that very few of his imitators have been able to keep to them consistently.

The Stock Exchange itself is not founded to a greater extent on confidence than the good detective story. The real detectives of Mulberry Street or Scotland Yard are misled every day by misstatements of fact, errors of observation, plain lies. The detective of fiction should never be so misled. When he errs it should be because he has drawn the wrong conclusions from evidence in itself reliable. If he fires his revolver at an apparition, and there is no sound of breaking glass, the reader

has a right to say, "Well, it wasn't a mirror," and is justly indignant when he is told later that the marksman merely missed his aim. The detective of fiction is likewise, under the rules, discouraged from discovering his important evidence at the last moment. To illustrate, one of this year's crop of long detective stories is concerned with the murder, in succession, always on the thirtieth day in the month, of the five sons of a retired army officer. Since the young men had neither friends nor enemies in common, the suggestion is at once made that the murderer must be some one who is avenging some past wrong against the father. The father is interrogated, and states that he knows of no personal enemy, and has wronged no one in his long life. The reader is thereupon entitled to discard all theories having to do with the old gentleman's past; and for nearly three hundred pages follows an amazingly intricate structure of plot. The reader learns various ingenious reasons why persons with no grudge against the father should still have desired the death of all the sons. He sees one person after another suspected and exonerated. Then, on page 280, a veiled woman comes into the story, and it appears that the officer on the thirtieth day of a bygone month had hanged two of his natural sons, and their mother was giving him tit for tat. That is an excellent example of the detective story as it ought not to be.

Poe knew the art of mystifying without resorting to the concealment of clues. Capt. Kidd's cipher in "The Gold Bug" is given the reader in full to decipher, if he can. Half-way through "The Murders in the Rue Morgue" the reader has every reason that Dupin had to supply the mischievous ourang-outang, if only he has the wit to put his facts together. It is still a paradox that Poe, the literary artist, should be the founder of a school of fiction in which, as in the puzzle corner of a newspaper, bad and slovenly writing is practically no bar to success.

OVERDONE INSTRUCTION IN ENGLISH.

When the teachers take up their work in college or school this autumn, how many of them are thinking on their noble vocation, their sacred trust, their great allies of exultations and agonies, and how many are musing on boy's unconquerable mind, and, with A. C. Benson, are calling the profession "a dingy trade"? More to the point, how many are looking at their actual work, and considering that old reproach of a monstrous disproportion between the energy expended and the results obtained? It is certain that as the great army falls into line for its campaign, many a groan goes up for the heavy knapsacks and the cumbersome arms; yet in at least one branch of the service, in the preparatory instruction of English, a very simple remedy lies at hand. At least half of the new fangled accoutrements should be thrown away.

Why and how this should be done seems reasonably clear when one considers how the practical and simple purpose in English teaching has been horribly overweighted with æsthetic intentions. Vernacular literature, which ought to be studied mainly by sample and in its most direct and obvious appeal, has been crowded into elementary instruction in such bulk as to make the ideal schoolboy or schoolgirl of seventeen a walking reference library, a kind of hundred-best-books in one volume, calf. Moreover, despite this ado about systematic reading and "classics," we are simply pushing our children into a further stage of the great American educational disease, that making play of our work and disguising the disagreeable, that coddling, wheedling, open-fires-and-hot-lunch system, which begins with sugar-plums on the letters of the alphabet and comes to perfection with "Ivanhoe" as a text-book. Some of us thank our stars that we read "Ivanhoe" in precious and productive hours stolen from algebra, and that our general knowledge of English "classics" rests on the sure foundation of a neglect of dut .

Why does the average boy still write an English incorrect in its essentials, while, on the other hand, he is fairly sure to add, subtract, multiply, divide, with practical correctness? Because in the first case he is hurried into the larger world of composition before he performs instinctively the primary processes of the sentences and paragraphs. And why this hurry? Look for answer at the maze of subjects and books through which he must toil before he attains the promised land of college. We need to go about half of the way back to ancient practice. During the past thirty years, since higher education settled down to its work in this land, we have diverted the best part of English literature into school and college courses. An older generation, to be sure, was starved; but that is no excuse for the gorging and rich food of our own day. Then there were no professors of English in college, no classics and general English reading in school, save by sample, and for such ends as elocution and parsing. Even for these ends masterpieces were mainly shunned; a good speech like "Sink or swim," a sound little poem like "Alone I walked the ocean strand," or one of Croly's sonorous Roman things, sufficed. Now the deepest and noblest lyric is culled out for first-readers, while the sub-freshman must have come into intimacy with the mind and art of Shakespeare. A child who would naturally kill flies on a window, or play at Indian massacres, is asked to watch the daffodils with that inward eye which is the bliss of solitude; a boy of seventeen is made quite at home with the Macbeths.

Such a lamentable forcing of the game may indeed be left to youth's stolid and magnificent inattention. But the pity of it all lies in an invasion and forced possession of lighter literature which time can seldom cure. Vernacular literature, after all, was written to be read; provided it still speaks our speech and thinks our thoughts, it should not be studied, at least in schools, as an end in itself. College courses in Shakespeare, in Chaucer, are obviously invaluable; they meet minds fit to grasp the deeper meanings of literature and yet able to come at these meanings only by careful study of expression and environment. Literature, so far as it is studied in school, should be ancillary; it is meant to make the boy understand and appreciate what he reads, and to prepare him for the special work of college. Instead, literature is taught for itself; romances, novels, essays, narrative poems, satires, what not, are read as a task. What is spared for the actual reader who is not under the ferule? What lands are left unknown, what seas uncharted, for those voyages of discovery, even under the black flag, which we made in happier days? What gave the teacher these rights in the new world of youth, and why should he spoil the sense of privacy in conquest? There are no more silent seas; the voice of the pedagogue resounds over all. Hazlitt nowadays would be put to his shifts to find a new book for one of those delightful sessions—over chicken and port wine, was it not?—in the lonely tavern. He would have read all the romances, or heard about them, at school under genial Mr. Blandly, the English master and former halfback. Nor are the romances alone imperilled. Nothing is safe from the series-editor. Burton's "Anatomy of Melancholy" seems so; but there is a section of it, excellent reading, which one day will be "waled wi' judicious care" and flung at the heads of our grandsons.

We said that half of the modern accoutrements should be flung away—not all. The trouble with English readings in the preparatory schools is that they cover too much ground and go too far up the heights. We should return to reading what is meant to teach the pupil how to read, and we should avoid too much æsthetic. In poetry, epic and descriptive should be preferred to emotional and dramatic verse; certainly this should be done in the lower grades, and even in the higher grades there is rare occasion for the intenser mood of literature. In school, the best is not good enough; the average, the sprightly, the attractive, the typical, should be preferred to those great masterpieces which rend our human nature and lay bare the foundation of things. Keep that dynamite for the open. Prepare boys to read the best, and make them fit for it; but leave the great things for their maturer hours. Boys are in the ballad stage of literature; there is stuff for them in the "Cheviot," and "Sir Patrick Spens" is better suited to schoolroom grief than "Evelyn Hope."

The present list of books for study and reading could be cut down to half its bulk. Precious time would thus be saved, and should be given to those subjects which call for hard, persistent, disagreeable work. For, after all, we Americans are too much at our ease in the school, as we are in business ethics and in the administration of justice. We have a surplus of accommodation to circumstances. Let the schoolboys lay their noses to the grindstone at least three-quarters of the time, and let the teacher reserve that affable archangel smile for privileged moments. Let him be a modified Busby, and we shall soon look for Drydens again.

F. B. GUMMERE.
Haverford, Pa.

NEWS FOR BIBLIOPHILES.

The valuable collection of first editions of American authors brought together by the late J. Chester Chamberlain is to be sold by the Anderson Auction Company of this city during the coming season. Mr. Chamberlain, who was a successful electrical engineer, turned his attention in 1900 to collecting as a pastime, and at his death in 1905 he had brought together a remarkable lot. He looked for books of such authors only as had achieved fame before 1876; that is, the literary work of our first century. His collections of the works of great New England writers, Hawthorne, Longfellow, Lowell, Emerson, and Whittier, were very nearly complete, and include many of the rarest items, some of which have never before been offered at public sale. Shortly after he began, he acquired in one purchase the large and important collection of Beverly Chew. While Mr. Chamberlain never gave special prominence to "presentation" and "association" copies, he understood their interest, and accumulated a goodly number; in the same way, while he never made special effort to secure manuscripts and letters, his library contains many autographs. He was so fortunate as to procure from the descendants of George Washington Greene, for whom Longfellow cherished such a fondness, all the existing letters written to Greene by Longfellow, from the Bowdoin College days, and also the series of Longfellow's own books, given by Longfellow to Greene, beginning with "Outre-Mer," concerning which Longfellow wrote before publication: "I think I shall put it out in numbers or parts, and shall, of course, send you a copy as soon as it peeps." Many of these letters have never been published, or published only in part, and some of the printed letters were much altered.

Mr. Chamberlain's plan was to get first editions in the original bindings, and in the best condition possible. By nature and training an investigator, he studied the books themselves, and was able to make a number of interesting discoveries. For example, copies of Lowell's first collection of poems, "A Year's Life," 1841, have been frequently offered as "lacking the slip of errata." Mr. Chamberlain proved that the book was first sent out without an errata slip. He traced three varieties of the published book; first, without errata slip; second, with the slip pasted in *after* the books were bound; third, with the slip pasted down upon the last signature *before* the book was bound. Mr. Chamberlain's own copy (formerly Mr. Chew's) is the copy presented by Lowell to Tennyson, and of the first variety, sent out before the errors were discovered. Longfellow's "Kavanagh," 1849, is common, but very interesting, as there were at least four editions, or issues, during the first year of publication. Mr. Chamberlain discovered that some copies were without the word "End" at the bottom of page 188. This word was not added until the third issue. Reading of a large number of copies showed slight variations in text. The issue which we may call the first, has, in the last line of page 173, "At the sight." In later issues this sentence begins "To Cecilia." This is the only discoverable difference between issues i. and ii. Besides the addition of "End" in issue iii., the words "now only," p. 180, line 6, were altered to "less than." Several additional corrections were made in the fourth issue, among them:

P. 25, l. 6, "Cartwright" corrected to "Wainwright."
P. 14, l. 14, "Arian" corrected to "Arius."
P. 132, l. 2, "yellow" altered to "golden."

The Catalogue of the Hawthorne Exhibition at the Grolier Club in 1904 was prepared by Mr. Chamberlain and in it he first made public numerous interesting notes. Had he lived, he would ultimately have published his notes on other authors. Mrs. Chamberlain, as a memorial to her husband, contemplates printing bibliographies of the more important authors; and these are now in preparation. They will be compiled by Luther S. Livingston, principally from Mr. Chamberlain's books and assisted by his notes; but descriptions of books not owned by him and additional notes will be included. The effort will be to make the bibliographies as complete as possible, especially with a view to meeting the wants of collectors. Only "first editions in book form" will be included.

The *Nation* noted several months ago that Bertram Dobell of London had discovered a manuscript copy of Sidney's "Arcadia." He writes to the London *Athenæum* of September 7 that he has procured still another copy, formerly in the Ashburnham collection, and recently sold at Sotheby's auction. He adds:

This second copy, though not so valuable as the first, inasmuch as it wants some leaves, and does not contain the "Dyvers Songes and Sonnettes," is yet an interesting and important one. Though the textual variations in it from the first MS. are many, it yet agrees with it in all essential points, except in the omission of a few passages. The evidence furnished by the two MSS., together with other evidence since discovered, makes it certain that in them we have the work as it was originally conceived and written by Sir Philip Sidney. As thus written, it was a much simpler and clearer work than it afterwards became. . . . That the story, as thus told, gains very much in interest and unity of effect will easily be understood by any one who has once attempted to make his way through the intricacies of the printed versions. What portions of the additions which appear in the printed copies were the work of the original author it is difficult to determine, though there is no doubt that the story, as it is given in the folio edition, was much altered and added to by the Countess of Pembroke. . . . In one highly interesting passage which appears in the MSS. (but not in the printed copies) the author, who, as is well known, introduces himself into the story under the name of Philisides, gives a short autobiography of himself, and an account of his love disappointments. Though I will not say that this passage supplies any particularly novel information as to the author's character or the events of his life, it is at any rate not a little interesting thus to see in what light he regarded himself and his own achievements. Here, as elsewhere, he depicts himself as a somewhat melancholy and disappointed, or at least disillusioned, person, who found himself, as all poetical and imaginative natures must do, at variance with the real world, which differed so much from the ideal one which existed in his own spirit. That these MSS. should be now in the hands of Messrs. Dodd, Mead & Co. of New York, and are therefore likely to find a permanent home in the United States, may possibly be a matter of regret, though not of surprise, to most Englishmen. But that they will go into very good hands can hardly be doubted; and probably they will be utilized before long for the preparation of a critical edition of the "Arcadia," which has only now become possible, owing to their discovery.

Correspondence.

WHO CORRECTED DE FOE'S COPY IN "ROBINSON CRUSOE?"

To the Editor of The Nation:

Sir: The latest edition (Everyman's Library) of "Robinson Crusoe" in the account of the storm in Yarmouth Roads, reads (p. 6, l. 21), "the cables veered out to the better end." In Austin Dobson's *facsimile* (London: Elliot Stock, 1883) of the first edition (1719), where everything, including the type, is carefully reproduced, it is "better end." De Foe must have used the nautical phrase, "the bitter end." A cable has two ends: the anchor end, fast to the anchor, and the bitter end, attached to the bitts. The rhetorical figure "to the bitter end" means to the last extremity, and does not involve painfulness or acerbity, as frequently implied. Is Dobson's a literal copy (with "obvious" mistakes corrected), or did De Foe's genuine first edition read "better," owing to the zeal of an intelligent compositor, or to the proofreader's oversight? Intermediate editions are not easily consulted, but it would be interesting to determine how far this error dates back. W.

Southwest Harbor, Me., September 2.

The phrase in question in "Robinson Crusoe" reads, "the Cables vered out to the better End," in the first edition; and also in the second and fourth editions, all published in 1719.—[Ed. Nation.

Notes.

The list of books to be issued from the University of Chicago Press this autumn or early in the winter includes "Value and Distribution," a survey of economic theory on these points, by Herbert J. Davenport; "Reëxamination of Exchange Value," a study of the principles regulating exchange value as they work in the market of today, by Rufus S. Sprague; "Chapters in Rural Progress," by Kenyon L. Butterfield; "Outdoor Labor for Convicts," containing an English translation of all the reports made to the last International Prison Congress at Budapest, together with accounts of various farm colonies in Belgium and Switzerland, and of outdoor work of prisoners in the United States, by Charles Richmond Henderson; "Adam Smith and Modern Sociology," a study in the methodology of the social sciences, by Prof. Albin W. Small, the first volume of a series which the author will edit on the preparations for sociology in the fragmentary work of the nineteenth-century social sciences; "Love and Loyalty," twenty-three sermons by Jenkin Lloyd Jones; "The English Reformation and Puritanism, and Other Lectures and Addresses," by the late Dean Eri B. Hulbert; "Descriptive Geography of Palestine," by Lewis B. Paton; "Ancient Chronology, volume i., from 3400 to 1050 B. C.; "Sidelights on Biblical Chronology," volume i., from 3400 to 1050 B. C., both by Olaf A. Toffteen, the first two volumes in a series to be called Researches in Biblical Archæology; "Studies in the Early History of Ancient Italy," historical and geographical investigations, by Ettore

Pais; "A Short History of Wales," hy Owen M. Edwards; "Old German Love Songs," selected and translated hy Frank C. Nicholson; "Heralds of American Literature," a study of the lives and services of a group of typical writers of the Revolutionary and National periods, hy Annie Russell Marhle; "Literature in the Elementary School," hy Mrs. W. D. MacClintock; and "English Poetry," a selection of representative English poems of the nineteenth century, by Prof. Walter C. Bronson.

G. P. Putnam's Sons announce as forthcoming "The Altar Fire," hy A. C. Bensou, a series of essays connected hy a thread of narrative; "The Folk Afield," a collection of short stories by Eden Philpotts; "A Princess of Intrigue: Madame de Longueville, and Her Times," hy H. Noel Williams; "Annals of St. Michael's," the centenary history of St. Michael's Protestant Episcopal Church, New York, prepared by the present rector, the Rev. John P. Peters; "Elizabeth and Philip, or the Whole Story of the Spanish Armada," hy Martin Hume; "Milan: the House of the Sforza," by C. M. Ady, the first of a series, Historic States of Italy; the fourth volume of Petrus Johannes Blok's "History of the People of the Netherlands"; and the third volume of the Writings of Samuel Adams, edited hy Harry Alonzo Cushing.

The fall announcement list of Little, Brown & Co. includes "John Harvard and His Times," by Henry C. Shelley; "The Woman in the Rain and Other Poems," hy Arthur Stringer; "Italy, the Magic Land," by Lilian Whiting; "Some Neglected Aspects of War," hy Capt. A. T. Mahan, to which are added "The Power that Makes for Peace," by H. S. Pritchett, and "The Capture of Private Property at Sea," by Julian Corhett; "The Mongols," by the late Jeremiah Curtin; and "What Can a Young Man Do?" hy Frank West Rollins, ex-Governor of New Hampshire.

The American Baptist Publication Society announces as forthcoming "Christ and Buddha," hy Dr. J. N. Cushing, with an introduction by the Rev. Henry M. King; "The Morning Hour of American Baptist Missions," hy the Rev. A. L. Vail; "The Formation of the New Testament," by the Rev. George Hooper Ferris; "The Boy Jesus," by the Rev. Cortland Myers; "Christian Agnosticism," hy Prof. E. H. Johnson; and "That Blessed Hope," hy the Rev. David Heagle.

Following the puhlication of other records of the findings of the American archæological expedition to Syria in 1899-1900, under the patronage of V. Everit Macy, I. N. Phelps Stokes, and others, Prof. William Kelly Prentice of Princeton has prepared for publication by the Century Company this fall all the epigraphical documents in Greek and Latin found by the expedition. The Century Company also announces "A Tuscan Childhood," hy Lisi Cipriani; a new book of verse by Richard Watson Gilder, "The Fire Divine"; and David Homer Bates's "Lincoln in the Telegraph Office."

Harper & Brothers announce "The Indians' Book," a revelation of the Indian's mind, heliefs, character, songs, and legends, hy Natalie Curtis, with an introductory note by President Roosevelt; "The Weavers," hy Sir Gilhert Parker; "Ehen Holden's Last Day a-Fishing," hy Irving Bacheller; and "Ancestors," by Gertrude Athcrton.

Thomas Whittaker has imported "Country Communion Classes," hy Arthur Lethhridge and V. S. S. Coles of Pusey House, Oxford; and "The Blessed Virgin and all the Company of Heaven," by the Rev. Dr. A. T. Wirgman, with an introduction by Canon Knox Little.

The Fleming H. Revell Co. will issue at once "Fragments that Remain," a volume of sermons and addresses by the late Maltbie Davenport Babcock; and "Christ's Service of Love," sermons by the Rev. Hugh Black.

Henry Holt & Co. announce as forthcoming an "Atlas of European History," hy Prof. Earle W. Dow of the University of Michigan; and "Wage-Earners' Budgets," a study of standards and cost of living by Louise B. More.

Dodd, Mead & Co. expect to publish this month "The Stooping Lady," by Maurice Hewlett.

The "Itinerary of Benjamin of Tudela" is soon to he published by Henry Frowde. The author, who lived in the twelfth century, one hundred years before Marco Polo, gives detailed descriptions of Rome, Constantinople, Palestine, Bagdad, and Cairo in the time of the Crusades, and furnishes particulars of the numerous Hehrew communities which he visited. The volume contains a critical text, translation, and commentary, by Marcus N. Adler. The Hehrew text is hased upon a manuscript acquired hy the British Museum, which has been collated with codices in other libraries, and it differs in many respects from the version hitherto known. Facsimiles of the MSS. are supplied as well as complete Hebrew and English indexes, and a map showing the route followed hy the traveller.

The latest volume in the Standard Socialist Series (Chicago: Charles H. Kerr & Co.) is "Socialism, Positive and Negative," hy Rohert Rives La Monte. The author modestly says that he has no ambitious hope that the hook "will convert anyone to socialism"; he intends it rather as an explanation of "what is meant by the oft-used words 'Marxian Socialism.'" The work is therefore not a detailed argument in support of the author's views hut a brief outline of them—a *credo* rather than an *apologia*.

A new volume in the Cambridge Historical Series, edited by G. W. Prothero, is "Modern Spain, 1815-1898," by the late H. Butler Clarke (New York: G. P. Putnam's Sons). The author was of acknowledged competence in matters, especially literary, pertaining to Spain, and his book is almost the only, and certainly the hest, account in English of the unfortunate history of that country during the nineteenth century. A few important points are somewhat slurred, as, for instance, the matter of the Hohenzollern candidacy; the index is poor, and there are more slips and misprints than is usual in this series, but on the whole the book may he warmly recommended. Its attitude is historical and, a special point for readers on this side of the Atlantic, its presentation of the Cuban question is temperate and convincing.

A new edition of Prof. John R. Commons's "Proportional Representation" (The Macmillan Co.) reproduces, apparently from the same plates, the text of the original edition of 1896, with appendices on the legalization of political parties, direct legislation, referendum and initiative in city government, "proportional representation from an American point of view," and "representation of interests." The ten years which have elapsed since the first appearance of the work have not witnessed much growth of popular interest in proportional representation in this country; and the only important advance ahroad has heen the adoption of the system in Belgium, in 1899. For some form of initiative and referendum, however, as well as for the direct primary, there is obviously increasing favor; and it seems rather a pity that Professor Commons, whose exposition of proportional representation has so long had definitive value, should not have taken the trouble to prepare for this edition a systematic exposition of the other subjects also, instead of merely reproducing a group of occasional addresses and magazine articles in the form of an appendix.

We have received from Principal John Rhŷs of Jesus College, Oxford, a reprint of a monograph, "The Celtic Inscriptions of France and Italy," contrihuted by him to the second volume of the Proceedings of the British Academy. It is an article of unusual interest and importance, heing the first systematic examination of Continental Celtic inscriptions since the publication of Dr. Whitley Stokes's "Celtic Declension" in 1885. A number of new monuments have come to light in the intervening years; and whereas Dr. Stokes's list contained only twenty-eight, Professor Rhŷs now mentions thirty-nine, not including three of Dr. Stokes's which he rejects as non-Celtic. Several more remain which the author has not yet succeeded in visiting, and he promises to deal with these at some future time. Professor Rhŷs, by reason hoth of his long experience with inscriptions and of his thorough knowledge of the Celtic languages, is one of the most competent of living scholars to undertake such an investigation. It is unnecessary to say that his discussion is learned and brilliant, and cannot be neglected by future students of the subject. He has not arrived at a system of interpretations which will be finally satisfactory, hut in view of the scantiness and douhtful character of the materials this was hardly to be expected. We are bound to add also that Professor Rhŷs's method seems to us at times rather too casual, proceeding too much by disconnected guesses and arbitrary combinations to yield wholly convincing results. But he has measurahly advanced the problem toward solution, if only hy the reexamination of the readings with his practised eye. Many of his suggested interpretations commend themselves as likely, and his criticisms of previous readings and renderings are always acute. In his discussion of the important group of doubtful inscriptions in the Greek alphabet he appears to us to have successfully met the arguments of M. d'Arbois de Jubainville to prove them non-Celtic. And apart from its main conclusions, this article, like everything that Professor Rhŷs writes, is full of incidental observations of interest

and value. Celtic grammarians and lexicographers and students of ethnology and religion will all find in it something to their purpose. A revised reading of one inscription, for example, yields a new epithet of the Mother-Goddesses; and another bears upon the identification of the Gaulish Esus with Mercury. In a short postscript Professor Rhŷs makes his contribution to the vexed Ligurian question, or at least registers his opinion about it.

Since children in schools must often be dealt with in masses rather than as individuals, the problems of school management will always be among the most important of which the teacher has to meet. Books on this subject are so numerous that a new one needs some unusual merit of manner or method to justify itself. Such justification exists in the case of "Classroom Management," by William Chandler Bagley (The Macmillan Co.). Its method is inductive. It states the precepts that will aid the teacher in mastering technique and interprets those precepts in the light of accepted psychological principles. Successful schoolroom practice must be the starting point from which valid principles of teaching and management are derived; and the author's data have been obtained chiefly from observation of such practice. He lays strong emphasis upon the importance of habit formation as a basic law of education. The book states both sides of the mooted questions. One is somewhat surprised to find the author a believer in the value of corporal punishment. While the book is written primarily for students of education in schools and colleges, it will be helpful to all teachers and will appeal to the most thoughtful and ambitious.

"Der Krimkrieg und die österreichische Politik," by Heinrich Friedjung (Stuttgart und Berlin: J. G. Cotta'sche Buchandlung Nachfolger), is an important contribution to the politcal and diplomatic history of Europe for the period of the Crimean war. Friedjung's work as Austrian historian of the disastrous eight years 1859-1866, and as Benedek's biographer and vindicator, has won for him such general esteem as an impartial and well-equipped scholar, that many official and private archives, which had been previously closed to historical inquiry, have been opened to him in Austria. His researches, undertaken for a work now in preparation upon the first decade of the reign of Francis Joseph, have been in consequence exceptionally fruitful; those upon the years of the Crimean war have brought to light so much of interest that he has found it impossible to bring his study of that conflict within the limits of a section of his more general work. Hence the present monograph. In his writings Friedjung takes no pains to propitiate Austrian officialdom or to excuse the past errors of his Government. Austria's conduct during the Crimean struggle was characterized by rank ingratitude toward Russia, by shameless forgetfulness of the immense service she had rendered by coöperating in the suppression of the Hungarian revolution of 1849; and his study is frankly critical. In revealing the inner workings of the Government, he clearly shows that it cannot even plead as an extenuating motive intelligent and solicitous regard for selfish national interests. From his researches it is evident that the Government had no positive views of what the country's best interests called for at this European crisis, the incapacity of those who were controlling her destinies, augmented by petty court intrigues, blinded Austria to any well-defined policy, and led her on the vacillating and disloyal course which alienated her friends and left her isolated to meet the disasters which the immediate future reserved for her. The paucity of Friedjung's detailed references to unpublished sources is much to be regretted.

"Wiener Stimmungsbilder," by Johannes Ziegler (New York: G. E. Stechert & Co.,) is one of those delightful little groups of sketches, fresh from the poet-artist's palette, which students of life and lovers of travel fondly re-read. Ziegler, although a native of Hamburg, who passed his early years in North Germany and Denmark, had the rare fortune, after taking up his residence in Vienna at a mature age, to come to know the inner life of the most complex and pleasure-seeking city of Austria, if not of the whole Continent. He lacks, perhaps, the closest touch with the *Volk*, steeped in dialect. With much the enthusiasm of a lusty *Bursch*, tempered by the conservatism of a man of affairs, Ziegler recalls his first day in Vienna, considers the charms of the Austrian capital as a place of residence, pictures again the narrow *Gasse* in which he lived, guarded by the ever-present and much liveried *Schutzmann*, mingles once more among the élite on the Kahlenberg, and bends the knee in devotion in the gorgeous St. Stephen's. So realistic are the sketches of the author, that whoever has exhilarated in the spring festivals of Vienna, eaten oysters or clinked glasses in the deep, wine-barrelled cellars, or become lost in the beauty of a Christmas-tree market, finds himself transported to the same scenes again. Ziegler's style is remarkable for a man whose early life was given up to shipbuilding. Twenty-six illustrations from washdrawings, and as many clever tailpieces in miniature, make the volume an attractive gift-book. Unhappily, as in the case of many foreign-printed books when compared with the American, the engravings are printed upon such inferior paper that they lose much of their exquisiteness.

G. E. Stechert & Co. also import "Du schöne Welt! Neue Fahrten und Wanderungen," by J. V. Widmann, a series of fresh impressions in Switzerland and Italy. Widmann is an ideal traveller. He sees vividly the green pastures and snowy summits near the Terra di Lavoro, the Torre di Pagano, Räzlihergalp and Kandersteg, and he has also an eye and a heart for every living thing. A practical question which the *Reisender* discusses at some length is the constant danger to human life in many of the Alpine hotels, due to their height, their narrow stairs and intricate windings, the kind of material of which they are constructed, their over crowding in the busy season, and the absence generally of any fire-escapes; making it not so ridiculous, after all, for Hans Christian Andersen to carry about with him in the Alps a rope ladder, which he always hung out of his window at night! The more one turns the pages of Widmann's story, the more one is impressed with the fact that this record of travel, chat about hotels and highways, tables-d'hôte and tally-ho, would, with all its literary excellence, be difficult to market in America, where the flashy Sunday newspaper supplement and the five and ten-cent magazine engross the attention of so many readers. The Americans are great travellers—for getting over long distance quickly and letting the footman and *Kellner* tell them what they have not seen—but the steadier-going German travels to see, learn, and be entertained.

Acting on the conviction that Jewish science and scholarship, largely from lack of coöperation, have not been the force in modern learned research that they should be, a new organization has been effected among European and especially German Jewish savants called "Gesellschaft zur Förderung der Wissenschaft des Judentums." The society will issue an extensive series of works under the general title Grundriss der Gesamtwissenschaft des Judentums. This collection, consisting of about thirty-six works in about forty-five volumes, is to give the results of the ripest Jewish research in all those departments in which Jewish thought can exhibit its genius and spirit. There will be four general divisions: (1) Language and Linguistics; (2) The History of Israel and the History of Jewish Literature; (3) System of the Teachings of Judaism; (4) The Practical Theology of Judaism.

A journey in northern Persia, an account of which is given by A. F. Stahl in *Petermann's Mitteilungen*, No. 6, has a special interest at this time, as it throws light on recent events in that country. The route was from the Russian frontier through Tabriz to Teheran, and thence to the Caspian. Everywhere there were indications of great natural resources undeveloped through the lack of Government and landowners' initiative. From a soil remarkably fertile and capable of bearing a great variety of grains, vegetables, fruits, and cotton, the peasant raises only enough to pay his rent and provide for his daily needs. If the crop fails, famine ensues. At Teheran a peaceful revolution was in progress. The people under the wise guidance of their Mollahs were making a great demonstration, their aim being not the overthrow but the reform of the Government. Many leading Persians assured Herr Stahl that the main object of the Progressists was "to develop the agricultural wealth of their country and to defend it from the arbitrary action of its stronger neighbor States." Dr. H. Steffen gives some facts in regard to the earthquake of August, 1906, in Chili, contained in a report of a Government commission of research, among the most important of which is that in the middle zone of the affected district there was an extraordinary vertical movement of the earth's surface. No. 7 contains an extended notice of Felix Oswald's "Treatise on the Geology of Armenia," characterized by the writer, F. Schaffer, on account of its "extremely vivid portrayal as one of the best books of its kind." The edition, he adds, consisting of only 104 copies, was printed by the author himself on a hand press, with illustrations, maps, and profiles colored by hand.

The *Annales de Géographie* has for its topic of greatest general interest in its

last issue the question as to the best method of colonizing Algeria. In 1871 the Government made a gratuitous concession of land to such natives of Alsace and Lorraine as desired to preserve their French nationality, which offer was afterwards extended to all citizens of the republic. In order to determine whether this free gift or the selling of land is the better policy an investigation has been made as to the condition of 300 different communities during the years 1871-95, the report of which has just been published. It appears to be on the whole favorable to the free gift, this being the only successful inducement to the Frenchman to emigrate. Unless it prevails, Algeria is in danger of being colonized wholly by Spaniards and Italians. An interesting fact brought out by the investigation was the marked increase in the number of births among the colonists. In France, provision is made in respect to school houses for 12 children to every 100 inhabitants. In Algeria it is 16, "and in many agricultural districts this number is rapidly increasing." A. Métois contributes some facts relating to the present condition of the French Sahara gained during a recent visit to Insalah, a great commercial centre of the caravan trade. Among the other contents is a summary of M. Lacroix's studies of the eruption of Vesuvius in April, 1906, which lead him to the conclusion that volcanic explosions are not so much caused by the chemical composition of the magma as by its physical state, its fluidity, or viscosity. M. Dereims describes the high plateau of Bolivia, with a striking panoramic picture of the ravine in which the capital, La Paz, is situated.

Progress in Tibet since its recent opening to the outside world by the English expedition is indicated by the fact that a Chinese-Tibetan school has been established at Lhassa, the capital. In it young Chinese and Tibetans will learn the languages and literatures of China and Tibet as a preparation for Government employment in Tibet. A newspaper for circulation among the people of both inner and outer Tibet has also been started, the first in the Tibetan language. The Chinese Resident at Lhassa is evidently interested in this intellectual development of the country over which he rules, as these facts are to be found in his report to the home Government at Peking.

From Government statistics compilations have recently been made of the annual cost of educating a child in the schools in fifty-five German cities, each of over fifty thousand inhabitants. It appears that the cost in Leipzig is the highest, 92 marks. The lowest on the list is Spandau, 39 marks. In this whole list, however, there are only four cities that spend less than 50 marks. Samples of what other cities pay can be seen from the following: Frankfurt a. M., 91 marks; Karlsruhe, 89; Wiesbaden, 86; Dresden, 80; Munich, 79; Bremen, 72; Breslau, 67; Halle, 63.

The anti-foreign agitation which was inaugurated several years ago at the German technological institutes and was then transferred to the universities, is beginning to bear its fruits. According to the reports for the summer semester just closed the foreign contingent at the twenty-one universities of the Empire has for the first time in a quarter of a century suffered a decrease, the total of foreigners having been 3,766 students as compared with 4,151 of the preceding half-year and 3,889 of a year ago. Although this anti-foreign movement, which started within the student body and was only slightly seconded by the authorities, has been directed chiefly against Russians, and here again against the Jews and Jewesses in particular, the reduction in the attendance of non-Germans has been general. The European contingent decreased from 3,717 to 3,349; the American, from 302 to 261. The direct cause has been stricter regulations governing admission.

A steady growth in both the number of libraries in this State receiving local tax support and the total amount of such taxation is shown by the annual report of the New York State Library on public libraries. Of the 395 libraries now connected with the Education Department, 238 received tax support last year, as compared with 212 in 1905, 184 in 1904, and 176 in 1903—a gain of 35 per cent. in four years. This is fully commensurate with the gain in the number of libraries organized during this period. It appears, however, that there are still 157 free libraries duly registered by the Regents as maintaining a proper standard which have as yet received no local tax support and are dependent entirely on private beneficence and the bounty of the State. Of the forty-five cities of the State, there are seven which appropriate nothing for public libraries. The preceding year there were ten. The total amount of tax raised in the cities of the State for library support in 1906 was $1,025,086, being an increase of $136,969 over the amount for 1905.

An annual circulation of 410,538 volumes is reported by the Somerville (Mass.) Public Library, the second largest circulation shown by any New England library, and for places of the size of Somerville probably the largest of any library in the world. For each book in stock the average number of issues was about five and a half, and for each man, woman, and child in the city there was an average issue of six books. The total cost of operation for the year was $19,726, of which $9,547 was spent for salaries, $6,362 for books and periodicals, and $2,053 for binding. Leaving out of account the reading and reference work and estimating the total expenditure of the year in terms of circulation, the average cost per issue of book would be about four and four-fifths cents. The adoption of two interesting plans is announced by the librarian—the segregation of obsolete books, and the training of each member of the staff to become a specialist in some one department of literature. As to the treatment of obsolete books, he says:

These books should not be discarded; and I think, upon mature reflection, that they should not be sequestered from the general access of the public. They should be put in ranges by themselves and plainly labelled "obsolete books," and bear a placard stating that they have been withdrawn from the general stock of books because they are believed to be outdated, and consequently untrustworthy in the light of more recent knowledge.

Of his plan for developing a corps of book specialists, he says:

Early in the coming year, each member of the staff will be asked to make a specialty of some one department of the library and to become acquainted to as thorough an extent as possible with the bibliography of that department. Of course, it cannot be expected that busy members of the staff can become thorough students in any one of the classes of the Dewey classification; such an expectation would be absurd, even if directed toward college professors. But each member of the staff will be expected to know in a general way the books that are in the library relating to her specialty and to understand something of the relative value of the books.

Dr. James Adam of Cambridge University, England, died on August 30. He was born in Aberdeenshire in 1860, and after a distinguished course at the University of Aberdeen went to Gonville and Caius College, Cambridge. There also he won distinction. He was then appointed fellow and lecturer at Emmanuel College, and at the time of his death he was senior tutor. Among his publications were "The Nuptial Number of Plato," 1891, "The Educational Value of Classics," Texts to illustrate post-Aristotelian Philosophy, editions of Plato's Apology, "Crito," "Euthyphro," "Protagoras," and Republic (Text, 1897; Text and commentary in two volumes, 1902). His Gifford Lectures on Religion and Greek Philosophy are said to be nearly ready for publication.

The will of the late René François Armand Sully-Prudhomme bequeaths $20,000 to the French Academy for the advancement of letters and leaves his residence on the Faubourg St. Honoré, which contains many literary treasures, to the city of Paris for use as a public museum.

NOTES ON TEXT BOOKS.

Prof. A. Smithells in his opening address before the chemical section of the British Association for the Advancement of Science at its August meeting voiced the feelings of a large number of chemists when he complained that their science was being taken away from them:

The perplexities of chemists at the present day do not come, I think, from the novelty of the ideas that are being presented to them, but from the great rapidity with which the whole science is growing, from the invasion of chemistry by mathematics and, in particular, from the sudden appearance of the subject of radio-activity with its new methods, new instruments, and especially with its accompaniment of speculative philosophy. The most conspicuous development of the science during the past twenty years has been, of course, on the physical side, and abundant have been its fruits; but it has seemed to demand from chemists habits and endowments which they did not normally possess.

This protest, because it is so obviously futile, has both pathetic and humorous aspects. We have before us two good examples of the kind of book which the average chemist is unqualified by training, if not, as Professor Smithells implies, incapacitated by temperament, to use to advantage; Dr. Walther Nernst's "Experimental and Theoretical Applications of Thermodynamics to Chemistry" (Charles Scribner's Sons) and "A Text-Book of Electro-Chemistry," by Max Le Blanc, translated from the fourth German edition by Willis R. Whitney and John W. Brown (The Macmillan Co.). The former consists of the lectures given by the professor of physical chemistry in the University of Berlin at Yale last fall on the Silliman foundation. This provides for "lectures designed to illustrate the

presence and providence, the wisdom and goodness of God, as manifested in the natural and moral world." No douht Professor Nernst's theorems can bc regarded as such illustrations, hut he makes no effort to deduce from them any of the attributes of the Deity. Apparently like his distinguished predecessor in mathematical physics, La Placc, he "has no need for such a hypothesis." These lectures are devoted to the development of a new theorem of thermodynamics which shall express the real truth at the basls of Berthelot's premature and inaccurate generalization that the heat given off hy a chemlcal reaction is a measure of its chemical energy. Nernst holds that this would he true at ahsolute zero, and on this hypothesis his calculations of equilihria of gaseous systems agree closely with the experimental results. Most of these results we owe to Nernst and his students, and the description of their novel methods for the determination of the speed of reaction and state of equilibrium form an interesting feature of the hook. He used tuhes and bottles of iridium, a rare and expensive metal having a higher melting point than even platinum, and in this way was ahle to make his determinations at a temperature of 2,000 degrees centigrade.

Le Blanc's "Electro-Chcmistry" has heen for more than ten years a standard authority; and a fresh English translation of the latest German edition, thoroughly revised hy the translators and newly illustrated, is welcome. It covers as large a part of its immense field as a single volume can, giving the history, theories, and formulas of the science, hut of course not including details of its industrial applications in such manufacturing establishments as we have at Niagara Falls.

In the field of electrical power transmission the mechanic treads on the heels of the advanced mathematician. The scientific chief of one of the principal electrical companies in the United States makes use of the fourth dimension in developing his shop formulas. Alfred Still in his "Polyphase Currents" (The Macmillan Co.) has adopted what he calls "a non-mathematical treatment of the suhject" which means that nothing more than algehra, geometry, trigonometry, and vector analysis are used. Like the rest of the series of Whittaker's Handhooks, this is a sound and practical guide to the electrical engineer in a field, which, just now when electrical power is heing substituted for steam, demands the most competent men.

Prof. A. E. Kennelly's "Wireless Telegraphy" (Moffatt, Yard & Co.) is written for the larger public, which wants to know something ahout this new and marvellous thing, which is already touching their lives. The author explains in considerahle detail the different kinds of apparatus, and how it works; and he is successful in making clear by ahundant diagrams what are the electric waves coming from the antennæ that we see holding their wires high on mast and cape; how they are sent out, and how received.

Prof. W. S. Franklin of Lehigh owes his success as a writer of text hooks in physics largely to the tight grip he has on hoth the aim and method of his science. He insists incessantly that physics has no other ultimate object than its practical applications, and he has a great contempt for any other mode of thought than the mathematical formula. His new "Elements of Mechanics" (The Macmillan Co.), in which Barry Macnutt collaborates with him, contains many novel examples as a result of his determlned efforts to hring together the ahstract and concrete which the average student usually keeps in separate compartments of his hrain. Thus we find that in the laundry it is the force $4\pi^2n^2rm$, which wrings the water from the clothes, and that if a hatsman will solve the equation $Mxy=K$ he can tell just where to hit the hall so the hat will not sting his hands. The diagrams and sketches used in the hook are new and to the point, the problems are numerous, and the discussions logical and concise.

There are no hranches of science in which it is more difficult to keep up with the times than manufacturing processes, both on account of their frequent changes and the secrecy that is maintained in regard to improvements. Revised editions of technological hooks are, therefore, always in order, and, in the case of such standard works as these two, especially welcome. Frank Hall Thorp's "Outlines of Industrial Chemistry" (The Macmillan Company) gives in one volume a comprehensive and clearly written description of all hranches of chemical industry. Charles D. Demond contributes a chapter on metallurgy, making a very satlsfactory text-hook for a general course. Alfred H. Allen's "Commercial Organic Analysis" is the most important work of its kind in English and indispensable in the commercial lahoratory. This volume, part 3 of vol. il., third edition, rewritten and revised hy Arnold Rowshy Tankard, deals with aromatic acids, resins, and essential oils. The advance in our knowledge of caoutchouc and essential oils has necessitated a great expansion of the chapters on these subjects. (Philadelphia: P. Blakiston's Sons.)

"The Evolution of Matter," hy Dr. Gustave Le Bon, translated from the third edltion hy F. Legge (Charles Scribner's Sons), is the storm-centre of a controversy in which personality, nationality, and standing have contributed heat. On the one side we have scientific men of authority and official position, and on the other a free-lance who dares to speculate and does not mind making blunders. In this crisis in their science professional physicists are treading with caution, guarding their language like diplomats, harely hinting at the startling conclusions toward which their experiments point, while an outsider dashes ahead, shouts out loud the thoughts they had modestly repressed, and then—here is where it hurts—claims credit for priority of discovery. For example, in 1897, Dr. Le Bon announced that radio-activity, which Niepce de Saint-Victor and M. Becquerel had discovered in uranium salts, was a common property of all matter. To this the official physicists reply, if we take M. Camphell of the Cavendish Lahoratory at Cambridge as spokesman:

> It was a lucky guess—interesting on that account, hut without scientific value, because at the time that it was first made there was no evidence for it, and since the time that it was made Dr. Le Bon has produced no evidence for it.

Dr. Le Bon's "Psychology of Crowds" was favorably received hy many critics, hut physics is under a stricter régime than sociology, and while this book has sold in France like a novel, the author makes the usual complaint of "a conspiracy of silence" on the part of the recognized authorities. When they have paid any attention to him at all it has heen to point out the absurdity of his *lumière noire*, and call him careless in his experiments. Within the last few years many scientists have come to hold similar views to his on the vast stores of energy inside the atom, and the possihility of the transmutation of the elements, hut they do not take seriously his main thesis that all matter is decaying, the universe running down like a clock, atoms hreaking down into electrons, these heing dissipated in etheric waves of heat, light, and electricity, which finally die away, like ripples on a pond, into the nirvana of universal and quiescent ether, from which in some unknown way the material world originally arose.

Five years ago, Camphell's "Universlty Texthook of Botany" (The Macmillan Company) was favorahly noticed in our columns, as a useful work quite ahreast of the times. A second edition is now before us, bearing the date of 1907, hut without the change of a single page numher from beginning to end, so far as one can see. Plate corrections are at hest very unsatisfactory, because they do not permit the incorporation of new matter to any great extent. Although this edition is stated on the title-page to he "revised and corrected," the additions which would he necessary to hring the suhject up to date are not apparent.

"Plant Physiology and Ecology," by Frederic Edward Clements (Henry Holt & Co.), embodies the method of study and general point of view of the author's earlier work, "Research Methods in Ecology," although most of the text is new or rewritten, and the chapter suhjects are more numerous. It is intended for use with classes in second-year botany in college and university, and in manuscript form has heen successfully used for this purpose for two years. In the treatment, the plant is first considered as an individual, and then is taken up in its relation to the plant group. After a hrief discussion of stimulus and response, the relation of the plant to its environment, to water, light, temperature, etc., is taken up in detail. The origin of new forms of plants is presented in the way of a short review of the various theories of evolution; and the five concluding chapters are concerned with plant formations. These are of especial interest and give in clear and not too minute a manner an account of aggregation, migration, competition and ecesis, invasion, succession, alternation, and zonation. The author writes in a peculiarly lucid and interesting way. Ecology is taking a prominent place in modern scientific study and clear explanations of ways and means of research should interest the farmer and forester as well as the university student. The illustrations, which consist of photographs and line cuts, are admirable and almost always pertinent to the adjoining text. It would he fortunate for zoologists if some one would give us a corresponding volume on animal ecology.

"A Laboratory Manual of Invertebrate Zoölogy," by Dr. Gilman A. Drew, is published by W. B. Saunders Company, Philadelphia. Another laboratory manual added to the scores now in print and gathering dust from lack of use would seem to be an unnecessary duplication, but this book posesses the unusual qualification of originality and great practical value. Dr. Drew prepared it with the aid of the members of the zoölogical staff of the Marine Biological Laboratory at Wood's Hole. The invertebrates are here considered under twelve headings, and detailed directions are given for the study of one or sometimes more forms of each division. Following this, come suggestions and questions in regard to allied forms. For example, under Hydrozoa we are introduced to hydra, obelia, parypha, and gonionemus. The most useful feature of the work is the responsibility thrown upon the pupil. Instead of telling him just what he will find, questions are set with the intention of making him find out for himself. These are often in the form, "Is such or such the case?" leaving the decision with the student, and thus developing whatever ability he may possess in research and independent thinking. If spicules of a known shape are to be sought, we all know how easily many students find them, even on the wrong slide! From a pedagogical point of view, the manual answers all requirements.

"Half Hours with the Mammals," by Charles Frederick Holder (American Book Co.), is a little book intended as a supplementary reader for intermediate grades; it is divided into numerous chapters, averaging eight pages each, giving short outlines of the principal characters of groups of mammals. Not only this, but such subjects as early man, adaptations, games of animals, intelligence, and geographical distribution are treated in the concluding chapters. The sentences are short and much information is condensed into the pages, but, in such brief space, consecutive thought is impossible. The book is fully illustrated.

The much larger second volume of Buchanan's "Manual of Anatomy" (W. T. Keener & Co.) completes the work and fairly fulfils the promise of the first. This part deals with the abdomen, thorax, head, and neck regions, and the topography of these portions of the body is carefully presented. There is a good description of the nervous system and of the eye; that of the ear seems less satisfactory and clear, more particularly in the illustrations, and the section on the larynx is similarly disappointing. Histological matters are nearly everywhere sacrificed to the demands of brevity and practical applications, a method for which a good argument may be made. An appendix gives the essentials of the Bâle nomenclature (not followed in the text), and also contains a glossary which would be still better if the pronunciation were more fully and consistently indicated.

"Physiography," by Prof. Rollin D. Salisbury (Henry Holt & Co.), has been placed in the American Science Series, advanced course, and is intended as a text-book of physical geography for students of early college or normal school grade. It is a ponderous volume of over 750 pages, and 700 illustrations. Physical geography deserves more attention than is usually accorded to it in our schools, as we are constantly meeting new phases of the action and interaction of the elements on land and sea, and a more thorough knowledge of the principles by which they operate would make many a day more pleasant. This physiography is an excellent introduction to the three well-known volumes on geology recently brought out by Professor Salisbury in joint authorship with Prof. Thomas C. Chamberlain. The work outlined is essentially that covered in the University of Chicago in a twelve weeks' course by students who have but recently entered. The field is thoroughly and consistently explored. There are excellent photographs and diagrams on almost every page. The former are from all parts of the world and give visual aid which could be surpassed only by actual field work.

"A First Course in Algebra," by Albert H. Wheeler (Little, Brown & Co.), is a voluminous book of 660 pages. It contains a very complete development of algebra from arithmetic. The fact that fifty-seven pages are devoted to the application of algebraic laws to numbers, as a preparation for the use of literal expressions, indicates the thoroughness with which the subject is treated. The book contains not only a maximum of theory, but a maximum of practical exercises as well—there being 8,189 examples. The applied problems are particularly good. They cover a much broader field than the usual algebraic problems, and many of them deal with subjects of practical interest, including the laws of physical science. A unique and interesting feature of the work is the large number of problems for mental solution. The chief objection to the book, from the point of view of the teacher, is that it is too bulky.

"Anglice Reddenda," vol. i., Latin Extracts for Unseen Translation; vol. ii., Greek Extracts for Unseen Translation, selected by C. S. Jerram (Henry Frowde), is a new edition in different form of material previously published. In the earlier form, vol. i. contained easy selections in both Greek and Latin; vol. ii. more difficult selections. In this edition the division is according to language, not difficulty. In both volumes, the selections vary from extremely easy and brief anecdotes, fables, and the like, to difficult passages in prose and poetry. In the Latin for his early selections the editor rarely goes beyond the authors read in schools, while later he culls the whole Latin literature from Plautus to Suetonius. Similarly in the early Greek selections, Æsop and Xenophon are the most prominent names, although there are occasional extracts from Herodotus, Euripides, and Homer. Later the range is much extended both in period and dialect. There are also some fifty-six passages from the New Testament, which not merely add interest, but also show quite effectively the peculiarities of that style of Greek. The selections have been made with great care, as is to be expected from a scholar like Mr. Jerram. This book, together with a similar collection by Bendall and Lawrence, published by the Cambridge Press, as well as books of the same order edited by Professors White, Tomlinson and Post in this country, are evidences of a general feeling that much more time should be devoted to sight translation than is customary. But the question may reasonably arise, whether, what is confessedly desirable, and in some degree is actually practised, is not after all the all-important aim of classical teaching. The dependence upon a lexicon by students is admitted to be the great obstacle in the acquisition of fluency in reading. It is therefore a matter of serious doubt, whether books like this, good though they all are, do not tend merely to palliate the evil rather than to remove it.

"A Beginners' Book in Latin," by D. S. Muzzey (Longmans, Green & Co.), is "quite frankly an introduction to Cæsar." In this claim, which the author makes with a certain pride, it is not different from most of the beginners' books that have appeared in recent years, but it is different in that the author feels that the limit has been reached in condensing such books, and that it is time rather to enlarge. The first part is devoted to the study of inflections only, with no reading exercises either in Latin or English. The habit, so familiar from the vogue of certain text-books, of giving the inflections in scraps and fragments, is abandoned, and the declensions are presented together, and likewise the conjugations, and the rest. The desire not to separate similars has led at times to extreme treatment, as when Mr. Muzzey gives in one chapter the first, second, fourth, and fifth declensions. The second part is devoted to syntax. Reading lessons, both in Latin and English, appear in every chapter. These are regularly complete Cæsarian sentences from the earlier part of the Gallic War; no connected sections being inserted until the third part. In the third part we find some valuable instruction in regard to the best methods of translating, the differences between English and Latin idiom—together with a number of passages from the Gallic War, to be worked out as exercises according to the directions given. Many critics will object strongly to the postponement of all subjunctive constructions to be treated as the last thing under syntax. Some of these are quite simple, and there seems no adequate reason for leaving them till the end. Many other critics will object to the total omission of reading exercises from the first twenty-five chapters. This far outdoes Mr Bennett, who would omit only English into Latin at this period. The author is evidently abreast of recent syntactical discussion; but he is not always happy in his explanations; as his treatment of the subjunctive shows, where certainly the doubtful term "anticipatory" should not appear in such a text-book. A few errors of fact have crept in; there are occasionally lapses in the proofreading, but these are surprisingly few. Altogether the book seems to be the work of a doctrinaire rather than of a practical teacher, but it is well and consistently thought out and is a genuine contribution to its class.

Plautus's "Mostellaria," edited by E. A. Sonnenschein, has been issued in a second edition by Henry Frowde. The "Mostellaria" is one of the best of the plays of Plautus, in plot, in characters, and in style, and it is remarkable that it has been so little edited, as compared with

others like the "Captivi" or "Menæchmi." But apart from the edition by Fay, the play does not seem to have appealed to recent editors, and the present edition follows its first only after an interval of twenty years. During that period the knowledge, both of the text and language of Plautus, has advanced by leaps and bounds, and no Latin author has figured as prominently in the studies of classical students. Professor Sonnenschein has himself been an active student of Plautus, and as a result the present edition has little but the name in common with the first. The text may be said to be based upon the *editio minor* of Goetz and Schoell, but it is in reality the editor's own, for he holds with justice that while all recent study tends to support the manuscript tradition, yet in the manifestly corrupt passages a good emendation, even though it is not certain, is better for a practical edition for students than an unchanged text. Accordingly a number of emendations have been introduced, many of them the editor's own, to make the text readable throughout. In the text as in the commentary the editor seems to have taken account of the most important periodical literature; of editions he has consulted those of Ussing, Leo, Lindsay, and the commentary of Lorenz. It is little short of remarkable that he seems not to know the recent edition of Fay—the most independent and interesting edition of a Plautine play in recent years; at any rate he never refers to it, although he seems to know the various papers of the same scholar. The commentary is unusually full, and is embellished by numerous parallels from English, which are genuine parallels; for Professor Sonnenschein has made extensive studies on the influence exerted by Plautus upon English literature, the fruits of which he promises to set forth at a later day. The treatment of the language and syntax of Plautus and of early Latin in general is very complete, as is also the discussion of metrical questions. In this latter matter, he is, however, inclined to great conservatism. It may be said in general that this like other recent editions of individual plays is overloaded with details as to linguistic usage. The criticism and elucidation of the play as literature are thus thrown into the background, and the book becomes not one for the lover of Latin, but one for the student only. A "gentleman's" edition of a play of Plautus would be a boon to men of scholarly tastes, but that seems at present too much to hope for.

Prof. J. R. S. Sterrett's edition of the first three books of Homer's Iliad (American Book Company) is provided with the usual helps to the student, in the form of a chapter on the dialect of Homer (pp. 53), notes (pp. 161), and vocabulary (pp. 161). By far the most interesting part of the book is the text and the chapter on the dialect. Professor Sterrett has been far bolder than any other English-speaking editor of the Homeric poems. He has based his text on that published by Van Lecuwen and Mendes da Costa in 1885, and his chapter on the dialect in large part on Van Leeuwen's "Enchiridium Dictionis Epicæ" (1892). He expresses himself as convinced that the changes made in the text by these scholars "have great pedagogical value; they simplify the language and make Homer much easier and more delightful reading for the beginner, to whom many things in the traditional text present unnecessary difficulties." He, therefore, writes the digamma in his text and notes wherever considerations of metre, syntax, and the like seem to him to give evidence of its presence. In this he seems in general justified. But he goes much further. He restores the augment, both syllabic and temporal, and uses the sign for aphæresis where the syllabic augment cannot be restored. He writes also the uncontracted inflectional forms, especially in place of certain verb forms found in the traditional text that are difficult of explanation. Professor Sterrett has thus produced a text that will appeal to many, especially in this day in which every effort is being made to coddle the American student, and to make smooth his path. One cannot, however, help wishing that he had sought to justify his text on other grounds than by insisting on its pedagogical value. The main question is not what is easiest for the student, but rather how far such forms as Professor Sterrett has accepted are justified on scientific and philological grounds, and how much weight is to be attached to the text tradition. The chapter on the dialect of Homer contains much valuable matter; Professor Sterrett has made this so full that he dispenses wholly with references to Greek grammars. The commentary is full and good. There are many fresh and original notes; the editor's travels in Asia Minor and his familiarity with the Troad, "where," as he says, "customs die hard, and, in point of fact, outlive empires, religions, and languages," have helped him here. The vocabulary is elaborate; much attention is given to etymology. There is also a map of Homeric Greece.

"Homeric Vocabulary," Greek and English word-lists for the study of Homer, by W. B. Owen and E. J. Goodspeed, is issued by the University of Chicago Press. The conviction has been spreading recently among teachers of classics that the chief obstacle to acquiring the ability to read Greek and Latin has been the failure of our present method of instruction to provide any systematic training in vocabulary. This book is the outcome of such a conviction and gives all the words that occur in Homer ten times or more, arranged in groups according to the inflectional categories, verb, noun, pronoun, etc. These groups are subdivided according to the number of occurrences thus: 500-2,000 times, 200-500 times, 100-200 times, etc. A similar list of the English equivalents forms the second part of the volume. The totals of the various groups are interesting. Of verbs, the total number occurring 10 times or more is 526; of nouns, 572; of other words, 725. Grand total, 1,823. When the extent of the Iliad and Odyssey is taken into consideration, nearly 30,000 lines, or thrice the size of Virgil's Æneid, the comparatively narrow range of the vocabulary of frequent words is as striking as is the same phenomenon in Latin. This book is, however, open to certain criticism from teachers of Homer, because there is no indication as to the best means of employing the material, beyond the remark in the prefatory note, "a moderate number of words learned each day and constantly reviewed will rapidly enlarge the students' working vocabulary and steadily better his equipment for sight reading." But any teacher knows that a "moderate number of words" cannot be learned each day just as "words." They must be useful in the every-day work, and the words learned should come from the reading lesson assigned. To make a student learn words which he may not meet at all is foolish. There should, accordingly, be some indication of the order in which these words occur in the Homeric narrative, as well as their relative value.

CURRENT FICTION.

The Helpmate. By May Sinclair. New York: Henry Holt & Co.

At last analysis, Miss Sinclair's new book fines down to a presentation of that ever fresh and insoluble problem, whether the greater harm be done by transgressors who make sin seem tolerable, or by saints who render virtue odious. The form in which she stages her question is the adjustment of the marriage relation between an average man of unusual sweetness and no great force, and a wife whose heights of personal purity are only rivalled by her depth of physiological ignorance.

Anne Majendie's world rocks to its foundations when she learns that, seven years before he knew her, her husband had been trapped into a liaison with an older married woman. Thereafter Anne's behavior is strictly modelled upon that of the Lady Rowena. Anne forgives "as a Christian," which, as Wamba truly remarked, means "that she does not forgive him at all." And as for forgetting! After the first recoil, in which she proposes leaving him, she settles down comfortably to a permanent mission of putting him through a life-long course of active penitence. Miss Sinclair has confined her problem to its one essential element, by clearing the husband of all deceit. He had reason to suppose Anne exactly informed, before her marriage. Consequently, when she decides to be a good wife to him in spite of everything, the poor man naturally regards himself as excused, and prepares to take up their existence where they left it before the storm. Not so Anne! If that were all, where would be her crown of martyrdom? In her eyes Walter Majendie is a moral leper, hopelessly tainted, to be watched, protected, taken into improving company, but never permitted to feel himself free to walk about the world like other people. She is outraged by his constant tendency to take life easily, to enjoy himself, to make love to her. She finds his attitude perfectly unsuitable to the perpetual expiation to which she condemns him. He, being sweet-tempered and much in love, puts up with her, hoping for a term to his purgatory. Her dignity is unshaken by any of the details of common life. She can be tragically consistent through a bilious attack, accept his ministrations unrelentingly, and remain an injured goddess with a sick headache!

Naturally, when the baby comes, she grows even more rigorous. A stain upon her husband was bad enough, but the blot upon Peggy's father seems bigger and blacker every time she thinks of it, and she never thinks of Walter without it. Step by step Miss Sinclair follows the downward path along which poor Walter is hounded. Those two figures dominate the canvas; the man

weak, chivalrously submissive, unable to credit the extent of his bad fortune—the woman conscientious, high-minded, invincibly ignorant. In the background two opposing groups champion the two contestants. There is a pretentious circle of provincial *précieuses*, and set of common, pleasure-seeking, commercial people, Walter's business friends, upon whom he falls back in default of all human treatment at home. These figures are sufficiently well defined, and their contrasted talk often lightens the somewhat serious pages with a gleam of welcome humor, but they play a minor rôle.

The substance of the book is that question which recurs again and again in life and in fiction: What should a wife do? In view of the fact that in the last two decades so many tendency novels have stormed and cried aloud on the subject of Women's Rights, it is perhaps an interesting sign of the times that so clear and discriminating a voice as Miss Sinclair's should now be heard, quietly and temperately asking a few discreet questions about Husbands' Wrongs!

Temptation. By Richard Bagot. New York: The Macmillan Co.

Modern Italy continues to furnish a setting for the English romancer. As a rule, the attempt seems to be to show that the Italians, though inevitably suffering from the fact of their foreign birth, are remarkably like real people. Exotic atmosphere and color serve to decorate the otherwise familiar scene; Maria sounds so different with the thinner vowel. Mr. Bagot's theme, however, could hardly be put into terms of English living, so much of it depends upon the background of tradition, and of recognizedly Italian tradition. In England or America there is little of romance in the not altogether unknown procedure of placing rough-on-rats in one's husband's coffee. The fact of murder may be sufficiently deplorable, and the means chosen perfectly effective; but the chances are there is no glamour about the affair. In Italy, at least in the Italy of Mr. Bagot, the situation is very different. His Countess poisons her husband according to the best traditions of the husband's family. One of his forbears had been a Donna Giulia Maidalchini, a sister-in-law of Pope Innocent X. Perhaps the most distinguished act of her career was the poisoning of her brother-in-law, who was also her lover. Appropriately enough, a picture of her is hung prominently in the family gallery. The present Count has married beneath him—the daughter of a merchant, with some education, but with the blood and nature of a *contadina*. The husband has the tastes of the country gentleman, the *campagnuolo* of birth and essential refinement. He is, withal, a little dull, fails to perceive the growing weariness with which his wife, a beautiful woman in the grip of a rather vulgar ambition to shine in the world, regards their common quiet life. He fancies that she regrets her lack of children, which is by no means true.

Enter the third person, a cousin of the Count, a dabbler in the positivist philosophy, opinionated, shallow, but by no means bad. The woman is pretty bad, but the passion which she presently conceives for the new-comer is true, though ignoble. The story and the picture of Donna Giulia, which have always fascinated her, gradually acquire ascendency over her imagination, and when fate puts opportunity in her way, she is quick to take advantage of it. The lover repudiates her and she shoots herself: the facts are bald enough, but they are interpreted with much skill.

Brunhilde's Paying Guest. By Caroline Fuller. New York: The Century Co.

"Brunhilde's Paying Guest" should be under the elbow of every hotel porch dweller in the resort so thinly disguised as Wistaria-in-the-Pines. Where last winter they enjoyed their picnics under the auspices of "Lady Baltimore," this year they can put themselves under a fresh guide. Beyond touching some of the same geographical points, the present story, however, has nothing in common with Mr. Wister's study of South Carolina. Although internal evidence indicates a Northern origin, the work is apparently modelled upon the most conventional type of Southern novel. The young ladies cook and flirt and jilt and make their own dresses. The gentlewoman, who keeps the boarding-house, is cut to the quick on hearing herself referred to as "the landlady." And when John Holly (her Northern paying guest) remarks: "Your garden must be beautiful in the spring," she hospitably answers: "I'm afraid it won't seem so any more when there are a lot of strangers in it."

True to that passion for being snubbed which distinguishes heroes in fiction from the young men one meets, John is so taken with this graciousness that he falls quite distressingly in love with Brunhilde. His attachment is only intensified by the discovery that she (when at the age of eight) rescued his mother from particular straits, in this very pineland, on the night of his birth! There is a surprising bit of melodrama concerning a Whirling Lady, whose disagreeable trick of leading the Holly men astray on stormy nights caused John's father to leave their ancestral Carolina home. The Lady has a try at John himself, but Brunhilde worsts her, and the story ends with three sets of wedding bells.

The descriptions of the tall trees, the festooning wistaria, the dreamy, moss-draped gardens are charming enough to evoke pleasant visions of the misty, fragrant pinelands. The negro talk is admirable, and the dialogues between the young folk abound in "go." Unfortunately, the author seems to have chosen a set of people who hardly represent the standard of elegant breeding upon which Carolinians plume themselves. Consequently, while her conversations are occasionally "bright," they invariably sound rather like the badinage overheard in trolley cars. When John greets the doctor with, "Good old Pills. . . . I've been pining for a dose of you. Come around and have a wash," he certainly suggests the drummer rather than the Harvard bred, rising New York journalist. But when Dolly says to Levis: "Some of the town girls said I hadn't a new beau this year, so I want to show them," and her cousin answers, "H'm! You care a heap about him! And if you talk any more about Miles and me," and so on, the two lovely young ladies' maiden confidences certainly seem to echo the kitchen rather than the parlor.

PLACES AND PEOPLE.

Gegenden und Menschen. Von George Brandes. Munich: Albert Langen.

The Danish critic who has become a great interpreter of the world's modern literature is also an interpreter of places and people. Seen through his temperament, the countries which he has visited in his zigzag rambles throughout Europe are invested with a new charm. For he is not content with drifting on the surface of foreign life. His method of travelling is very much like his method of reading: he sinks his individuality for the time being in that of the nation he studies; when he recovers his own ego, it is saturated with the foreign element. He understands and makes others understand; nor is he satisfied with substitutes:

> There is a great difference between the tea which the Chinese drink and that which goes under that name elsewhere. If you like it, you will try to drink it in China, and have it served by a native.

There are many passages like this in his latest work. With most of us notions of foreign peoples are much like our notion of Chinese tea. We never get the real thing, and if we did, we should not recognize it. We need interpreters of such human sympathy and catholic latitude to point out to us what is essential.

Though the literary possibilities in the scene before him are usually those that hold his attention longest, they do not monopolize it. As convalescent after typhoid, he boarded in Rome with a middle-class family, and he speaks of his hostess Maria and her niece Filomena like a novelist studying types for future use. He discerns wherein they differ from the conventional Italian woman of literature, and calls both the Roman woman of Goethe's elegies and the Graziella of Lamartine artificial. He is as much pleased with the unsophiscated naïveté of Filomena, who sings to him her *canzone d'amore*, as with the primitive rationalism of Maria, who resents the idea of divine interference with a philosophical *Anche la natura è una piccola cosa.* But the charm of bis Italian chapters lies mainly in the delightfully human relations between the foreigner and the natives. These chapters contain, however, descriptive passages which prove him a great artist. No more vivid picture of the Roman carnival has been presented than that which he has sketched in his diary. Admirable for its impressive vitality is his account of the Papal mass at St. Peter's; its waves of color and of innumerable voices, swelling and subsiding like the surf, suggest the powerful canvas by Liebermann in last year's exhibit of the Berlin Secession. Associations of ideas tempt him into far-off excursions. Sicily with its fragrance of flowering lemon and orange trees is to him the kingdom "Apfelsinia," which Solness had promised Hilde. In Scylla and Charybdis he sees an eternal symbol of the maelstroms of life. One chapter is devoted to Annie Vivanti, whose poems a Sicilian admirer had lent to him. Fascinated with the personality they reflect, Brandes limns her portrait and translates many of the poems into German.

Brandes devotes more space in his book to Russia than to any other country; for

he is attracted by its extremely puzzling problems. He probes into economic conditions, traces social developments, studies racial elements, religious tendencies, political aspects—everything that throws light upon the character of the people, their intellectual life, their literature, and art. He notes that the Russian's sense of reality gave that country realism long before it appeared in France. He credits Russian society with a generous breadth of view—*une large franchise*—"so different from English stiffness, French caution, German arrogance of rank, and Danish drivel." The contrast between the "intelligence" of Russia, with its heretical attitude towards traditional morality, and the ignorant multitude bowing to official authority—the very type of ignorance and superstition—is appalling to him. "The two fundamental forces diverge and drive to opposite extremes. Whither do they lead? Can anybody compute the parallelogram of forces, the resulting direction and the speed?" A passage in Gogol's "Dead Souls" occurs to him, Tschitschikow's *kibitka* disappearing in the distance:

> And are not you, too, Russia, speeding along like a Troika that cannot be overtaken? . . . Russia, whither speedest thou? Answer. But no answer comes. You hear the weird sound of the harness bells; the air sighs, and a storm blows up. But Russia continues her mad drive, and the other nations and empires of the earth timidly step aside and do not hinder her course.

He finds among the eminent men of Russia many instances of innate originality perverted and suppressed by the tyrannical Government. One of his most interesting portraits is that of Prince Kropotkin, whom the author regards as "a revolutionist without pathos, without emblems, who laughs at the theatrical accessories of revolution, such as vows, ceremonies, and conspiracies." But, as a mere study of character, his sketch of Katkow, the renegade and traitor, the editor with more power than the Government itself, is the most admirable achievement.

Wherever he goes, he seeks the essential and enduring traits of every nationality: its official character does not concern him. France, of which he had given us some impressions in a previous volume, "Gestalten und Gedanken," receives a large share of his attention. In Paris the very stones seem to express national traits: those of the Roman *Thermæ* under the Hôtel Cluny the surviving pagan spirit; those of Notre Dame, the Gothic. But the Voltaire of Houdon in the Theatre Français is the most characteristic of all. "Only a people who are their own master, a nation with large views, not one of petty calculation, could set up this statue in this place." Brandes enumerates Voltaire's heresies in regard to some ideals of his country: la Pucelle, the Church, patriotism. "And yet he is enthroned here! Think of Byron's memory being thus honored in England, or Heine's in Germany." In this honor to Voltaire is embodied everything that France means for people of broad modern culture. Most suggestive are the parallels Brandes draws between the art and the literature of modern France; he traces the relation between Courbet and Sue; Manet and Zola; Monet and the later impressionists, and the Concourts and Maupassant; Rops and Gustave Moreau, and Baudelaire; Barbey d'Aurevilly and Villiers de l'Isle Adam. He calls the French the most artistic nation of the nineteenth century; the visible and the spiritual expressions of their national life are more closely allied than in any other.

On his arrival in England, he is at first startled by a Londoner's praise of his city, but a drive along Kensington Gardens on an autumn evening brings home to him its attraction. He understands the charm of Whistler's Nocturnes, the charm of mist-veiled outlines, not distinct and tangible, but refined, picturesque, indefinable. And again on a sunlit Sunday morning, when he looks up and down the Thames from Westminster Bridge, and is arrested by the imposing sight of the Parliament building, he is impressed with the beauty of London, its expression of British massiveness. "A country is easily identified in our mind with some representative personality." In his youth, England was to him the land of John Stuart Mill, later of Shelley, and finally of Shakespeare—a remarkable sequence. He sees much of Dr. Garnett and Edmund Gosse; Mr. Heinemann is his host. The chapter contains some interesting opinions on contemporary English poets. The theatre attracts him. He is shocked with the popularity of "Trilby" (this was in the year 1896), delighted with Mrs. Patrick Campbell's Juliet, and more than pleased with "The Benefit of the Doubt." Though Mr. Pinero has often stopped short of producing a real masterpiece, Brandes does not give up the hope that we may yet see one from his pen. In the home of Douglas Sladen he has a most amusing conversation with the Marquis Tseng. "Essentially life is the same everywhere," says the Chinese nobleman, "in Peking as in London, in Berlin as in Paris. . . Take religion, for instance. Here the plain people are Christians: heaven is for the righteous, hell for the bad, etc. The educated have no religion at all. With us the plain people are Buddhists: heaven is for the good, hell for the bad, etc. The educated have no religion, you see, just as in Berlin, in Paris, and in London."

It is impossible to give a just idea of the wealth of his observations, the wisdom of his reflections. Nor can a review convey the charm of dignity and modesty which characterizes the work. The author says in one place:

> How difficult it is to understand a nature, a people, a country, a city. How easy it seemed in former days, say sixty years ago. . . . We see so much more to-day, so many more groups and details, and we are so much more afraid to generalize hastily.

If the average tourist doing Europe in three months, and our foreign visitors who rush on the limited express from Wall Street to Niagara Falls, then to the White House and to the stock yards of Chicago, and back to catch the next steamer, were equally timid about offering their generalizations, what a different world this would be! Here is a man of the broadest culture, who knows the flower of each nation's intelligence, who has lived among all these peoples, eaten their food, made merry at their feasts and mourned with them in their sorrows, and this man is afraid to generalize. What a lesson in international ethics!

The Gospel of Barnabas. Edited and translated from the Italian MS. in the Imperial Library at Vienna by Lonsdale and Laura Ragg. Oxford: The Clarendon Press. 16s. net.

Hegemonius Acta Archelai. Herausgegeben in Auftrage der Kirchenväter-Commission der Königl. Preussischen Akademie der Wissenschaften von Charles Henry Beeson. Leipzig: J. C. Hinrichs' sche Buchhandlung. 6m.

To Barnabas has been ascribed not only the canonical Epistle to the Hebrews, the Epistle of Barnabas, and the Acts of Barnabas, all of which are extant, but also a gospel, the title of which, Gospel of Barnabas, is mentioned in a catalogue of sixty canonical books and in the so-called Gelasian Decree. Harnack, in his "History of Early Christian Literature" (1893, pp. 18, 62), says that no single fragment of this gospel survives, while Hennecke, in his excellent "Introduction to the Apocrypha of the New Testament" (1904, p. 205), doubts whether such a gospel existed. Two sayings attributed to Barnabas, not found in the Epistle, have long been known, one from a manuscript in the Bodleian (Cod. Bodl. Barocc., 39), which is worth quoting: "In evil contests the victor is more wretched [sc. than the vanquished], for he departs from them bearing the greater sin"; the other from Gregory of Nazianzus, which need not be quoted. Both sayings may be found in Resch's Agrapha, 2d ed., 1906, pp. 282-3. In addition to this, it has been known that J. F. Cramer, in the early eighteenth century, had acquired an Italian manuscript with the title: "True Gospel of Jesus, called Christ, a new prophet sent by God to the world: according to the description of Barnabas his apostle"; and that he had presented the same, with a suitable dedication, to Prince Eugène of Savoy; and that the manuscript in 1738 found its way into the Hofbibliothek at Vienna, where it now rests. Meanwhile, John Toland had seen the manuscript, and, in his "Nazarenus" (1718) and in a later work, posthumously published (1747), had printed extracts. Braunsberger, in his monograph "Der Apostel Barnabas" (1876, pp. 15-16), on the basis of Toland's excerpts and Cramer's dedication, concluded that the Italian gospel is not the original Gospel of Barnabas, but a translation of an Arabic, and that, too, Mohammedan, Gospel of Barnabas, a view shared by Hennecke following Axon (*Journal of Theological Studies*, 1902, pp. 441-451).

In the volume before us, exquisitely printed by the Clarendon Press, the Prebendary of Lincoln and his wife have presented the *editio princeps* of that Gospel of Barnabas whose full title was given above. An Introduction of eighty-odd pages dealing solely with primary sources is followed by the Italian text with a delightful English translation facing it page by page. At the close there is an index of the subject-matter of the gospel and an index of citations from the Christian Scriptures, from the Vulgate of the same, and from the Koran.

According to Mr. Ragg, the gospel was written by a renegade Christian of the fourteenth or fifteenth century, who, in addition to canonical and apocryphal gospels, and Jewish and Mohammedan material, used perhaps in a Latin version the original

Gospel of Barnabas. The present manuscript is a "rather careless sixteenth century copy, made by a Venetian scribe, of an earlier and apparently Tuscan document." As to the widespread belief that the gospel was once in Arabic, the editors say that this opinion is due to a conjecture of Cramer in his dedication to the Prince of Savoy, and is unsupported either by external or internal evidence. Their view is sustained in a note contributed by Professor Margoliouth, who maintains that "any knowledge which the Indian Moslems may possess of the Gospel of Barnabas is due probably, if not certainly, "to Sale's Koran," and that the Arabic glosses to the Italian gospel could not have been "composed by any one whose native language was a form of Arabic." As to the relation of this Gospel of the original Gospel of Barnabas, the editors express themselves with commendable hesitation. They are inclined, however, to find in certain details of angelology and eschatology, in some of the miracles and parables, in the suppression of the Baptist, in the prominence of Pilate, Herod, and Caiaphas, in the substitution of Barnabas for Thomas or Simon Zelotes in the list of the Twelve, in the account of the birth of Jesus stated to have been *senza dollore,* and in the curiously docetic rendering of the passion narrative in which Judas takes the place of Jesus, suggestions at least that the original gnostic Gospel of Barnabas was used as a contributory source (Introd., pp. xlvi., ff.), a conclusion affirmed two years ago by Mr. Ragg in the *Journal of Theological Studies* (1905, pp. 424-433). It remains to be seen whether or not a more extended examination of the Italian gospel will confirm the opinion expressed by the present editors as to its relation to the gnostic Barnabas. It is to be observed in passing that neither of the two utterances of Barnabas alluded to above appears in the Italian version. In the meanwhile, it is to be hoped that the Spanish version of this mediæval gospel may be rediscovered.

Finally, it is to be said that the gospel is interesting reading not only because of its doctrines as, for example, the view that Paul wrongfully teaches that Jesus is the Son of God, that Jesus disclaimed Messiahship, that Mohammed is Messiah, not only because of the restraint manifested in the story of the Virgin birth, but also because of the positive beauty of some of its sayings and parables.

Passing to "Hegemonius," the sixteenth volume in the well-known series of the Greek Christian writers of the first three centuries published under the auspices of the Prussian Academy of Sciences, we find ourselves in possession of the definitive text of the main source of almost all the western accounts of Manicheism. The editor, it is pleasant to note, is an American, an instructor in Latin, if we mistake not, in the University of Chicago. Dr. Beeson holds that the author is Hegemonius, the date the first half of the fourth century, and the original language not Syriac, but Greek. The work has come down in a complete form only in a Latin version, the first edition of which was published by Zacagni in 1698. More recent editions have added little of moment to that of Zacagni, though some of Routh's conjectures have been sustained by recently discovered manuscript authority. Dr. Beeson, besides commanding all other available manuscripts, has had the advantage of using a recently discovered twelfth century manuscript now in the possession of Professor Traube, which contains the entire Latin text. The paragraphing in this edition is new, but Zacagni's chapter divisions are retained in brackets. With the Latin text are given also the Greek excerpts from Epiphanius. The careful indices are the work of Mrs. Beeson, who likewise has been connected with the Latin Department of Chicago University.

To Colonise England: A Plea for a Policy. By C. F. G. Masterman, M.P., W. B. Hodgson, and Others. Pp. xxiii., 211. New York: A. Wessels Co.

One of the most influential of the many causes which contributed to the defeat of the Conservatives and the election of Sir Henry Campbell-Bannerman's immense majority to the House of Commons in January, 1906, was the urgent need of land reform in rural England. The vast holdings of the great landlords and the landlessness of the huge majority of Englishmen have been matters of comment for so long as to have lost interest for all but those concerned. But for the farmers' sons who can get no opportunity of establishing themselves on farms of their own when they leave their father's roof, and for the agricultural laborers who "follow the plough to the workhouse door," the subject never loses interest, and ever since the Reform Act of 1884 conferred the Parliamentary vote on the agricultural laborer, his one aim and hope has been access to the land. Mr. Masterman, literary editor of the London *Daily News*, in his contribution to "To Colonise England," corroborates the judgment of Herbert Paul in his recent volume of "Modern England," that it was Mr. Gladstone's failure to fulfil the expectations of the rural laborers, even more than his conversion to Home Rule, that invited the rout of 1886. In 1892 the Liberal Unionists made a bid for the rural vote by the Small Holdings Act—an act so hedged about with difficulties that after fifteen years only nine County Councils had availed themselves of the powers it conferred upon them. From 1895 to 1905 the paralysis of Tory rule deadened all hope of land reform; but with the general election of 1906 the rural laborer and the land reformer awoke; and all eyes are now turned on the Campbell-Bannerman Government for an assuagement of the land hunger of England's rural population.

"To Colonise England" is only one of a number of books that the present crisis has called out. About a year ago, Jesse Collings—the veteran land-reformer, whose phrase "Three Acres and a Cow," incorporated in Mr. Chamberlain's unauthorized programme of 1885, first aroused the hopes of the agricultural laborer—published his portly volume on land reform; and one of the most noteworthy of more recent books is Miss Jebb's painstaking review of the small holdings of England. The aim of the authors of "To Colonise England" is to strengthen the hands of the Liberal Government in the pending land legislation; to prevent the calamity that would overtake the cause of reform, if the Government, in an effort to propitiate the Whig members of the Cabinet and the House of Lords, should pass legislation of a character that would wholly fail to fulfil the reasonable expectations of the rural voters. In concluding his contribution to the symposium which forms Part III. of the volume, F. N. Rogers, M.P., gives forcible expression to this apprehension:

> It will be something of a tragedy in the history of the Liberal party, and a disappointment past expression to its most earnest supporters, if this present opportunity be not used to the full to realize our desires. We want a Land Bill and we want it, as Hilda Wangel says, on the table.

The papers which are republished in "To Colonise England," appeared serially in the London *Daily News*. The first part of the volume, following an Introduction by A. G. Gardiner, the editor of the *Daily News*, consists of a series of sketches by the late W. B. Hodgson, under the title of "The Disease." Mr. Hodgson graphically describes the loneliness of rural England; the waste of its fertile lands given up to rough pasture, wide hedges, and coppices carefully preserved for the sake of the game, while cottages fall in ruins, and small farms are swept out of existence. "Back to the land" is a favorite cry with philanthropists, aghast at the overcrowding, and the unsanitary conditions in the slums of great cities; but if back to the land means a return to a wage of three dollars a week, out of which fifty cents must be paid for the rent of a miserable hovel, one may well echo Mr. Hodgson's expression of wonder, not that men do not go back to the land, but that anyone remains on it.

The second section by C. F. G. Masterman has a literary value that should give its author high rank among modern essayists. Much of it is occupied with details of schemes which offer a remedy for the creeping paralysis of English rural life. Details concerning rents, labor, cattle, and pigs do not well lend themselves to picturesque writing, but Mr. Masterman has the eye of an artist for the beauty of English scenery, and even the most prosaic facts are made interesting under the transmuting touch of his pen. The results of the work of the various associations, and of the nine county councils, which have put the Small Holdings Act of 1892 into operation, Mr. Masterman sums up in a brief paragraph:

> I have seen the small holdings created by the energy of the villagers in the heart of the Wiltshire Downs; created by a County Council in Worcestershire and in Norfolk; created by a Parish Council under the Malvern Hills, and by another on the borders of Birmingham; created on the lands in Lincolnshire by our present Minister of Agriculture (Lord Carrington). I have seen them on poor land and on good, near and remote from markets, buying their land or hiring it, building their houses, or buying the houses built for them. I have found a life of variable hardness and austerity; many requirements, some discontent. But in all I have found rents regularly paid; a rise instead of a fall in the population of the parish; pauperism diminished; and a spirit abroad of independence and of enterprise which one can seek for in vain in the sleek, comfortable model villages of Feudal England.

The third part of the volume consists of contributions on the land question from thirteen Liberal members of Parliament. This is the least valuable and least interesting part of the book. Naturally there

is much repetition; and the essays are each too short to be other than commonplace. In Part IV., Mr. Masterman summarizes the official testimony issued by the Board of Agriculture and the decline in the agricultural population of Great Britain, and on small holdings and rural housing. The number of holdings in England and Wales of from one to fifty acres is given at 278,926, of which one-third are from one to five acres. The legislation of 1892 added 652½ acres to the extent of the small holdings—just one square mile out of the 60,000 in England and Wales to satisfy the cravings of the 689,292 landless agricultural laborers, who were enumerated in the census of 1901.

America's Insular Possessions. By C. H. Forbes-Lindsay. 2 vols. Philadelphia: The John C. Winston Co. $5.

There can be no doubt of the author's sincerity in bringing out these two well-printed and well-bound volumes. He has produced a brief and interesting review of the history of our island possessions; has described them and their inhabitants with accuracy and sympathy; and has loyally sought to make the best possible showing for their administration under American rule. With the historical and descriptive part, which does not pretend to complete thoroughness, there is little fault to find. Sub-heads and photographic illustrations abound; and a good index makes the matter accessible. Thus the work, as a cursory account of Porto Rico, Guam, the Philippines, etc., is both useful and readable. But even in this popular treatise one could wish for more frequent references to the authorities on whom Mr. Forbes-Lindsay relies, and the lack of a map of the Philippines is inexcusable.

The entire second volume is devoted to the Philippines—a space which their importance abundantly justifies. It is in this quarter that the United States has committed the grave strategic error of establishing an outpost seven thousand miles from the principal base; and has assumed the heavy obligation of administering the affairs of a strange diversity of alien peoples. If we can succeed here, we can surely succeed nearer home and on a narrower field. In support of our policy towards the Philippines the author quotes the words of Mr. Taft, wherein that admirable official and sincere friend of the natives pleads for letting well enough alone. Could Philippine affairs lie in these honest and capable hands for the one or more generations which Mr. Taft thinks necessary, the islands would doubtless prosper materially and their inhabitants enjoy a peaceful and kindly rule with a minimum of discontent arising from vain aspirations for self government. Unfortunately, the legislative fair-dealing which Mr. Taft so earnestly besought Congress to grant has been denied his wards with an indifference which appears both studied and brutal. If such a man as he has failed to break down the tariff wall which shuts the Filipinos out from the best market for their sugar and tobacco, or to secure the passage of other remedial measures, or to overcome the Chauvinistic contempt for the natives which so many American immigrants seem to cherish as a badge of their manhood; what hope does the future hold for this people? To Mr. Taft's influence and life an end must come some day, and when either disappears from the scene, to whom can the Filipinos look for a successor? It is impossible to ignore the fact that Mr. Taft's results are based on a person and not on a principle—exit the former, what remains? A negation of the fundamental idea from which our own civilization springs.

The absence from these pages of a careful discussion of such topics is much to be regretted. Many thoughtful readers would have welcomed a dispassionate array of the arguments on both sides. So far as the book is concerned, they must content themselves with the concluding chapter made up of extracts from Mr. Taft's addresses, which, however frank and honest, are necessarily *ex parte*. Against the cheery optimism of Mr. Forbes-Lindsay and his school, it seems unkind to point to the practically stationary condition of Philippine trade (the total imports and exports having, indeed, declined from $62,000,000 in 1902 to $59,000,000 in 1906), or to the unsatisfactory condition of things political

In short, as to the past and present, this book is interesting and valuable. As to the problem of the near future it is almost voiceless.

Three Vagabonds in Friesland with a Yacht and a Camera. By H. F. Tomalin. With photographic pictures by Arthur Marshall. New York: E. P. Dutton & Co. $3 net.

This charming account of a June outing in Northern Holland makes the American reader realize vividly what an advantage the Englishman possesses in his nearness to a foreign land. In less than twenty-four hours he can exchange the streets of London for scenes of enchanting natural beauty, for solitudes whose silence is broken only by the songs of innumerable skylarks, and for water courses where one can sail for miles between banks of golden iris and every conceivable variety of flowering reed and rush. And when he treads the village streets he finds himself among a people fascinatingly picturesque in their homes, their costumes and habits; and nowhere does he see "the rows of dingy cottages, with their atmosphere of dull squalor, which so often disfigure the English [and American] country-side."

The holiday party consisted of "the Architect, the Printer, and the Scribe," and their conveyance was a little Dutch boat by courtesy called a yacht. In this they sailed and punted through the meers and canals, stopping for sight-seeing and photographing at every village. These villages gave a never-ceasing pleasure from their distinctive characteristics—no two being exactly alike—and from their beauty. Of this it is difficult for us to form a true conception, for an Austrian painter confided to our travellers "that he thought Volendam was almost too picturesque. It left nothing to the imagination. . . . An eminent French painter remarked that he saw more pictures there in one day than he could paint in a lifetime." In another village the people seemed to delight in developing the "toy idea to an almost microscopic point. The dog-kennels are miniature replicas of the little houses. The wooden sides are painted to resemble red bricks, and they are complete with green shutters and chimneys." Especially attractive were some of the farmhouses, though the people and their cattle, pigs, and fowl all lived under the same roof. In one the solicitude for the comfort of their animals was carried to such an extent that the little circular windows of the cow-stalls were decorated with "dainty lace curtains!"

Though the "scribe" is careful to assert that the purpose of his book is "to divert rather than to educate," he gives very realistic descriptions of the people and their surroundings, as well as of their industries. Referring to the coöperative system which widely prevails, and to the care of the Government to secure the purity of the butter and cheese, he says: "Toil and economy, cleanliness and State assistance of the right sort, have built up a prosperous and growing trade in this country of marshes, continually menaced by the hungry waters." In this connection it is interesting to note that "their charming girl-Queen seems peculiarly, among rulers, to typify the nation over which she reigns, and the tender sympathy which she extends to her people is given back in the form of a love amounting to adoration."

In the closing chapter some useful information is given for the benefit of those who may feel inclined to take a similar trip, as to the boat, supplies, clothing, and cost. "The total outlay," he reckons, "including the getting there and back, should amount to considerably less than one pound per day for each man." In an appendix the "architect" adds some nature notes, mainly on the birds and flowers of the region, a characterization of the village architecture, and some suggestive "photographic hints for wanderers." Mr. Marshall contributes ninety-nine photographs, not one of which is without interest, and some of which are of remarkable excellence, and a number of sketches of gables, finials, and decorative work. As the reader looks at the map which adorns the cover, and sees how small a part of the country was covered by the trip, the hope upsprings that the three vagabonds will revisit Friesland and give us another entertaining record of their experiences.

In Dwarf Land and Cannibal Country: Travel and Discovery in Central Africa. By Albert B. Lloyd. New York: E. P. Dutton & Co. $3 net.

Mr. Lloyd's book proves, if any proof were needed, the unfailing interest of a story of exploration and adventure. It is written for the most part without literary skill, and in places even crudely; there is considerable repetition, and much space is wasted on matters of trivial interest and on moralization of doubtful profit. Yet the reader who gets beyond the commonplace narrative and reflections of the opening chapters will be likely to continue to the end. For Mr. Lloyd, though by his own avowal he is an amateur at book-making, appears to be a well-seasoned sportsman and a courageous explorer. He has what cleverer writers have often lacked—an extremely interesting story to tell; and when he is under way, he tells it in straightforward and spirited fashion. He does not attempt to make anything like a precise or scientific report of his observations, and anthropologists will not find in his pages

much that is valuable for their purposes. He says little even of the native legends and beliefs, which commonly make amusing reading. But he describes the country and people entertainingly and at the same time sympathetically. His own adventures, too, and those of his followers, have enough of danger and uncertainty about them to hold the eager attention of the reader. Some of his exploits, such as driving a lion out of the road by "scorching" straight at it down hill on a bicycle and ringing the bell loudly on the way, are sufficiently extraordinary; but they do not exactly justify the familiar charge of "nature-faking."

Although the title of the book refers only to the land of the dwarfs and the cannibals, more than half of the space is taken up with Mr. Lloyd's slow and difficult journey from Zanzibar to Uganda, and with his experiences in Uganda and Toro, where he served successively as a missionary of the Church of England. Much less is said of his strictly religious work than of his general manner of life among the people, with whom he always succeeded in getting into friendly relations; and doubtless the courage, good humor, and love of sport which chiefly appeal to the reader of his narrative helped also to commend his evangel to the natives. Two chapters deal with the Soudanese rebellion of 1897, in which Mr. Lloyd took part both as an interpreter and as an actual combatant. When his health was impaired, partly as a result of these services, he was advised by his physician to take a furlough and return to England; and it was then that he undertook to travel to the west coast, through the Pygmy Forest and the cannibal country of the Congo Free State. He accomplished this journey without military escort or a single European companion, and the chapters which describe it are the most interesting in the book.

Imtheachta Æniasa: The Irish Æneid; the Irish Text, with Translation into English, Introduction, Vocabulary, and Notes. By the Rev. George Calder. Irish Texts Society, Vol. VI. London: Nutt.

The mediæval Irish possessed, in addition to their abundant poems and hero-tales dealing with native tradition, a considerable body of narrative literature of foreign origin. Like the Scandinavians, who also had their native sagas and eddas of great originality and interest, the Irish were affected sooner or later by the dominant literary fashions of Europe; and there exist in the languages of both these outlying peoples translations or redactions representing nearly all the popular cycles of mediæval story. Irish versions of the Trojan legend, following Dictys and Dares; romances of Alexander, Fierabras, Guy of Warwick, and Bevis of Hampton; tales of the Round Table and the Holy Grail; and even the travels of Mandeville and of Marco Polo have all been published in full or in part during recent years; and much more similar material awaits an editor.

The version of the Æneid now made accessible in the latest volume of the Irish Texts Society, really belongs to the same class of productions, though derived from an original unlike any of the foregoing. For the Irish Æneid is not so much a translation of the Latin poem as a retelling of the story in the manner of an Irish *scél*. The substance, as the editor conveniently indicates by marginal references, is in the main identical with Virgil's, making allowance for some rearrangement and a few trifling additions. Many portions of the Latin, especially such as are essential to the action, are rendered with closeness, and Mr. Calder, commenting on the scholarship of the translator, points out a number of Irish parallels to Latin idioms. But fidelity of translation, in any modern sense, either literary or scientific, was far from the Irish writer's purpose, and very much that is most characteristic of Virgil he passes over entirely. Passages dealing with mythology or with Roman history are curtailed or omitted, doubtless because they would have had little interest for the Irisb reader. There is no mention of Marcellus and no word of the prophetic counsel of Anchises, "Tu regere imperio populos, Romane, memento"; and many familiar lines and phrases of description or reflection—"lacrimæ rerum," "suadentque cadentia sidera somnos," "possunt quia posse videntur," "vitaque cum gemitu fugit indignata sub umbras"—have left little or no trace in the Irish text. On the other side, the translator's additions are as characteristic as his omissions. Pallas, the son of Evander, is described as a comely youth with golden hair and clear blue eyes:

> Like the purple foxglove was each of his two cheeks; you would think it was a shower of pearls that had rained into his bead; you would think his lips were a loop of coral; as white as the snow of a single night were his neck and the rest of his skin.

Again, when Nisus sees Euryalus fallen dead, we are told:

> There came to him his hero's prowess, his soldier's spirit, his champion's strength, and his warrior's hurling, and he brought a mighty, strongly assaulting tempest on Latinus's host, and hewed a gap of a hundred before him through the host; and he allowed them neither space nor truce, slaying and beheading them heroically, strongly, bravely, and manfully, till he came to Volcens, where he was biding in the middle of the host; and he plunged his sword into his gullet, and it went out through the back of his head, and Volcens fell to the ground lifeless.

This thoroughly unclassical embellishment will be recognized as a common battle "run" by readers of Celtic saga, and the description of Evander will be recalled as having been repeated in almost identical words of scores of youthful beauties, both lads and maidens, in tbe native stories. And in general, the Latin poem, conceived purely and simply as a story, is translated not only into the language and idiom of the Irish, but into the very frame and formula of its conventional narratives.

In this method of composition, the Irish Æneid resembles most of the otber romances of foreign origin of which we have spoken. Many of them are excellent pieces of Irish story-telling; and the Æneid, borrowing, perhaps, some of the richness of its original, ranks among tbe best. But the literary interest of this whole class of texts is rather historic than intrinsic. They have a second-hand quality, and are seldom as good as the versions in other languages from which they are derived; and the old Irish narrative at its best, which we have no thought of disparaging, is rather to be found in the native sagas, of which it is the original and appropriate expression. The translated texts are chiefly valuable to Celtic scholars and mediævalists, by whom their publication should be heartily welcomed. They add to existing information about the Irish language; they serve to complete our knowledge of the literary and intellectual life of mediæval Ireland; and many of them—though this is hardly true of the Æneid—bear important testimony concerning the growth and relations of the saga cycles to which they belong.

The work of Mr. Calder, the editor of the Æneid, we are pleased to add, is well done. He has taken great care with the printing of his Irish text (a matter of no small difficulty in the case of the much abbreviated Middle Irish manuscripts), and a comparison of several pages with the published facsimile of the Book of Ballymote has revealed very few inaccuracies. Some of these may be really errors of the facsimile. The translation is good, and the notes and glossary contain considerable material of lexicographical value. The introductory remarks on literary relations are the weakest part of Mr. Calder's performance, and betray lack of practice in what is becoming almost a special pursuit, the study of sources. Certainly, no sufficient reason is given for tbe suggestion that Dante exerted an influence on the Irish author.

Science.

PHOTOGRAPHING THE "CANALS" ON MARS.

IQUIQUE, Chili, July 31.

Many causes conspire to make Mars just now the most popularly interesting of planets. When Schiaparelli, during the opposition of 1877, discovered faint markings which he called *canali*, or channels, general readers promptly translated his designation by the most obvious English word, and "canals" on Mars at once became synonymous with human labor, artificial waterways, and therefore inhabitants. But this ready credence of the marvellous, the hasty leaps at conclusions by the public at large, were not reflected in the astronomical world. Immediate disbelief in his announcement was expressed or at least felt by the majority of professional observers, and an amiable tolerance of his supposedly mistaken enthusiasm was the most of sympathy that he could command. Schiaparelli's maps, however, were made with gradually increasing detail as his eye, by training, detected more. In 1877, 1879, 1881, and 1882 his maps appeared, among later additions being the apparently (astronomically) impossible feature of a duplication in lines, a strange doubling of the straight markings which had already been seen to follow a great circle course—the shortest distance between two planetary points. This almost spoiled what little effect may have been produced by announcement of the single straight lines. Such gemination seemed manifestly absurd. But years went on, and other observers

at points where the air was especially steady and clear began to suspect markings other than the dark area (Syrtis Major), and the gleaming white polar snow-caps known for over two centuries.

And then Percival Lowell, at his observatory in Arizona, over 7,000 feet in elevation, with a Clark refracting telescope especially constructed for this work, with an object glass having an aperture of twenty-four inches, distinguished farther Martian features in 1894. This line of research he has followed constantly since, with increasing success. Instrumental equipment, favorable atmosphere, remarkable eyesight, and scientific patience have brought great reward; and at each return of Mars to opposition special observation has been conducted. Accumulation of known markings has gone steadily on. During the opposition of the month just past, the planet approached within 38,500,000 miles of the earth. While not the absolute minimum (the nearest possible being 34,500,000), the distance is relatively not so very great by comparison with the 60,000,000 of opposition place at the farther side of Mars's orbit. The Amherst telescope with object-glass of eighteen inches, with which, under Mr. Lowell's auspices, we have been observing Mars for six weeks, brings the planet within practically a distance of 40,000 miles from the earth. In the northern hemisphere Mars has been seen too low on the horizon for the best work. Here in Chili it is high in the heavens, almost at the zenith; while the great, dry pampa with its clear skies has offered an exceptionally steady atmosphere for the study of Martian surfaces. Air tremors are the chief foe to satisfactory astronomical progress. To increase the size and strength of mechanical means of observation, to construct great object-glasses and photographic doublets is well; but they all magnify correspondingly those fluctuations of terrestrial atmosphere which mask and distort and render uncertain the most pregnant celestial landmarks. While positions, distances, motions—in short, the old astronomy—may be pursued with accuracy even from sea-level observatories where thick, cloudy, tremulous air is to be expected, the study of planetary surfaces can proceed satisfactorily only in a serene and steady medium, cloudless so far as possible, and away from artificial disturbances like electric lights, chimneys, and smoke. All conditions for the best results seem to be met at high elevations, particularly in arid regions of least precipitation. These facts led to the choice of the desert of Tarapacá by Prof. David P. Todd as the site for establishing the Lowell expedition station, in South America.

Even more than in ordinary astronomical work, a distinguishing characteristic of the study of Mars visually is the fact that a trained eye can detect a wealth of detail, where one without preparatory experience sees, at first, only a brilliant planetary disk. But even the casual observer, the interested spectator, is able to discover much more at his second, third, or later view than at the beginning. He is likely to exclaim that he sees bright white spots at opposite edges; then he notices a dark area, then streaks; and if his eyes are keen and accurate, he is soon able to make rough drawings of farther markings which become gradually apparent at later views. And without telling him where he should expect certain well-defined lines, it has been interesting to find that the tentative drawings of the intelligent amateur have invariably coincided with the more conspicuous "canals," as repeatedly observed by specialists.

These markings appear most clearly in occasional moments of exceptionally steady air. Even in the pampa, where conditions are peculiarly favorable, such details come, as it were, in flashes. With the eye patiently at the telescope, one is rewarded by frequent intervals of astonishing clarity. Could looking and drawing be accomplished simultaneously, a marvellous network might be delineated. So impressive as to be well-nigh startling in its revelation, was my first view of Mars through our eighteen-inch glass at Alianza. For an instant, not only the well-known features, but lines doubled, as well as single, with the oases at which they meet, appeared as clearly marked as on the most perfect map yet made—instantaneous confirmation of the accumulated knowledge of years. Later, a slight tremulousness of atmosphere blurred somewhat the amazing definiteness of detail, but the steady moments recurred repeatedly. And night after night, on a scale of five, the "seeing" was reported as four and a half; while magnifying powers of six hundred were frequently used—sometimes nearly double that.

But results chiefly photographic and not visual were planned and accomplished by our expedition. The Amherst telescope, built for latitude 42 degrees north, could not, of course, be used at 20 degrees south without important modifications. Planned by Professor Todd, these were executed at the works of Alvan Clark & Sons of Cambridge by Mr. Ilse, our mechanical expert. The polar axis was reversed in direction, as well as in the direction of its motion, or clock-work connection. This accomplished, it was fitted with appliances for photographic, rather than visual, labors, and with especial reference to use on Mars. A planetary camera, built by Gaertner of Chicago, was added, and arranged to amplify the focal image of Mars before impressing it on the sensitive plate. The camera had also especial devices for taking a multitude of images on each plate, usually not less than fifty or sixty. With this equipment, the big telescope was set up and adjusted on the tennis court of the Oficina Alianza, no dome or cover, other than a wrapping of cloth for the more delicate portions, being necessary in this rainless climate. A high wire fence prevented the approach of undue curiosity at close range; but an interested throng of dwellers in the little nitrate village lined the outer boundary for hours at a time, gazing with most amiable sentiments at the mysterious activities within, their wide sombreros, gay ponchos, silver spurs, adding picturesqueness to the scene, set in the midst of the wide, brown pampa, with its rampart of solemn, snow-covered peaks. And here, during night after night of limpid clearness, images of Mars multiplied on the plates, under the deft manipulation of Mr. Slipher, our expert photographer. More than a hundred and fifty plates were covered, making between seven and eight thousand separate images, of varying exposures. By reason of the "flashes" of wondrous steadiness already mentioned, they differ considerably in distinctness, even those of the same negative. But constantly more and more detail was caught.

Actual opposition and the nearest point to the earth did not quite coincide—July 6th and the 13th being the respective dates. For two or three weeks, however, the excellence of view hardly seemed to alter. One complete circumference was photographed, new areas coming into view as the nights and weeks went on. Polar snow caps, of course, appear on all the plates, the south one very large, the north conspicuous as well; the so-called "seas," or more likely areas of desert, threaded by canals and diversified by oases, also show plainly. Photographing the canals is a great satisfaction, considering that Schiaparelli for nine years had them entirely to himself, his drawings being regarded as imaginative productions, his every announcement tacitly derided. In the worst seeing the poorest negatives show both canals and oases. But the crowning achievement of the expedition—result of astronomical and mechanical skill, fine equipment, photographic ability, steady atmosphere, and unremitting effort, in which all members of the expedition and nature itself, must each receive credit—is the appearance on the sensitive plate of several canals manifestly and undeniably *doubled*—a phenomenon visually discovered and announced by the Italian astronomer in 1882, confirmed later by Mr. Lowell and so drawn in his maps of the planet. Most conspicuous of these doubled waterways is Nilo Syrtis, and among others so shown are Nilokeras and Euphrates, and the wide double Gihon. Most difficult of all and the narrowest yet photographed is Thoth—a veritable triumph. Photographic plates, like figures, do not lie—and now for the first time these doubled markings are unmistakably impressed on negatives.

As to an explanation of the canals, though perhaps not so plainly of their doubling the most obvious seems, fortunately, most likely to be upheld by fact. Mars has certain conditions, now well known, not essentially different from those prevailing on the earth. The planet turns upon its axis once in a little over twenty-four hours, making day and night much as with us. The Martian year is nearly twice ours, but with similar seasons; and there is clear evidence of atmosphere, though far thinner than terrestrial air. The conspicuous polar caps, always becoming much smaller with the coming of summer, indicate the presence of snow, and so of some moisture, though as with air, much less than that of our own planet. As the snows melt, a bluish belt borders the retreating whiteness, the canals become visible, then double, and certain other changes take place, which seem to indicate a conserving and distribution of the precious liquid. It is not necessary to infer that the markings seen and photographed are waterways alone. Gigantic indeed must they be, if we could thus detect them, even with the largest telescopes. More likely, it would seem that the bordering vegetation, spreading to a considerable distance and following the coming of water each season,

should show by its difference in color from the surrounding reddish brown of probable desert—the betraying evidence of the presence of such irrigating channels. Supposition as to causes of doubling may be many. But thus the canals have been seen at intervals for twenty-five years, and thus at last they have been photographed in South America, for the first time.

That Mars is much older, cosmically speaking, than our earth, seems certain, and farther on the way to geologic death. Tracing its story may be a forecast of our own in coming centuries. At all events, the surface of Mars offers a problem in planetary constitution as fascinating as unique. MABEL LOOMIS TODD.

The Chicago University Press will issue this autumn George Ellery Hale's "Study of Stellar Evolution," a popular account of modern methods of astrophysical research.

"The Chemistry of Commerce," by Prof. Robert Kennedy Duncan, is soon to be issued by Harper & Brothers.

Professors T. Lyttleton Lyon and E. G. Montgomery of the University of Nebraska publish through Ginn & Co. a little manual, "Examining and Grading Grains," that is worth notice as a pioneer in an important development of agricultural science. Animal breeding has been carried on so long that almost all farmers are, or think themselves, competent judges of good stock. At least they realize the importance of selecting an animal for the particular purpose in mind whether it is a cow for milk, a hen for eggs, or a horse for trotting. But when it comes to grain, where heredity is quite as important a factor, they are likely to plant what they cannot sell or buy the most loudly advertised seed. In the University of Nebraska the students are given score cards on which they are to record their judgment of the number of points a given sample of corn falls below the type in size, shape of kernel, spacing, arrangement, color of cob, etc. They are taught how to distinguish between low proteid and high proteid kernels, and how to detect a strain of "bad blood" in the pedigree of the ear they hold in hand. Wheat, oats, barley, and hay are graded in the same way, and methods for testing the germinating of seeds and their purity are given.

Profs. Hansford MacCurdy and W. E. Castle have summed up their recent researches in experimental zoölogy in a publication of the Carnegie Institution entitled "The Inheritance of Coat-Patterns and Coat-Pigments in Rats and Guinea-Pigs." From a study of over a thousand of the latter animals throughout several generations, it was found that by selection one could increase or decrease the extent of the pigmented areas, but it was not possible to fix this pigmentation in a particular pattern. The areas vary continuously, and out of these variations permanent modifications of the pigmentation were brought about. The question whether selection has permanent effects in evolution is regarded as still open, although the authors are led to think from their own experiments as well as from those of Fritz Müller and DeVries that selection is a most important factor, not only in the isolation of discontinuous variations, but even in their production; and that "it is fallacious to assign all evolutionary progress to one sort of variation or to one sort of inheritance."

Dr. Graham Lusk's "Elements of the Science of Nutrition" (Philadelphia: W. B. Saunders Co.), is quite too special for extended comment in these columns. An abundance of material bearing on the problems of metabolism has been brought together with great care, and the book would be useful on account of its references to the literature if for no other reason. The discussion is usually illuminating, but here and there a more liberal summary or generalization would be most helpful to students, at least to beginners, who need broad statements rather than an enumeration of facts whose bearing they do not easily apprehend. This is especially true of the chapter on the normal diet and that on the theories of metabolism.

Dr. James Carroll, curator of the Army Medical Museum, died in Washington on Monday of an affection of the heart which seized him after experimenting with yellow fever germs in Cuba. He was associated with Major Walter Reed, an army surgeon, in the study of yellow fever bacilli from 1897 to 1902. Dr. Carroll submitted to the bite of an infected mosquito which had previously bitten three persons with well marked cases of yellow fever. Four days after Dr. Carroll was taken ill with a severe attack of that disease. He recovered ultimately, but with impaired health. His case was the first of experimental yellow fever on record, and it demonstrated to the medical world that the yellow fever bacillus was spread by mosquitoes. He was born in England in 1854, and was graduated in medicine from the University of Maryland and the Johns Hopkins Medical School. He had been professor of bacteriology and clinical microscopy at the Army Medical School, professor of bacteriology in the Washington Post-Graduate School, and professor of bacteriology and pathology in the medical department of George Washington University. He was a contributor to medical journals and to the proceedings of various medical societies.

Drama.

Erinnerungen an Henrik Ibsen. Von John Paulsen. Pp. 202. New York: G. E. Stechert & Co..

How persistently Ibsen secluded himself for years from stranger and friend is apparent from the many stories told by the Norwegian dramatist and novelist, John Paulsen, who was with Ibsen several years in South Germany and Italy, and whose neat pocket volume of sketches once contributed to Norwegian journals form a cheerful antidote to the heavier Ibsen literature. While in Bergen and neighboring towns, Ibsen was seldom seen outside of his room or the theatre where he was busy; and when he went to Bavaria and pushed south across the Alps, his shyness seemed intensified. In Munich he never went to the Pinakothek or the Glyptothek, and never visited the theatre, except when his own play was to be produced; he refused all invitations from Paul Heyse and others to parties or quiet evenings in town, and was equally unresponsive in the country to the efforts made by the poet, Voss, to draw him out, keeping to his hotel apartments even when guests such as Ernst Renan were under the same roof. He worked in silence, seldom told his family what he was doing, and was ridiculously fearful lest any one should find out the latest thought in his mind. The result was that, when Frau Ibsen and their son, Sigurd, were travelling with him one summer and, picking up a slip of paper on which Ibsen had written *Der Doktor sagt* (referring to Doctor Stockmann, in "An Enemy of the People"), began to tease him about his next play, Ibsen flew into a terrible rage, and asked if he were surrounded by spies, and if the contents of his desk were really no longer sacred? Even his early application to painting failed to draw him to the exhibition galleries, and of all the celebrities in Munich, he was the least seen in the studios of the struggling Norwegian artists at work there. Acquainted with Goethe and Schiller, Hebbel and Ludwig from his youth, and strongly drawn to Dante, Ibsen nevertheless gave little or no attention to the modern German writers, knew Verga, Edmondo d'Amici, Fogazzaro and other Italians only by name, and was never known, to Paulsen, to have an Italian book or journal in his room. Like Goethe, he cared not a fig for Florence, and spent much of his time in Italy in the capital itself.. Yet he was fond of Italian art and essayed to collect old masters, with the result that, without doubt, he was often swindled by the clever makers of old canvases!

Contradictions are inevitable in the character of such men as Ibsen, and notwithstanding his tendency to withdraw from the world, he could be very companionable. He would ask most inquisitively about an evening *Gesellschaft* to which, for no particular reason, perhaps, he had refused to lend his presence—who were there, what the guests had to eat and drink, what "tips" were given, when they left; and in turn he would give out with zest anecdotes, in the telling of which he was a past master. There was the man in Skien, for example, who found pleasure in attending funerals—one or two a day—and who moved to Christiania because everybody lives to a ripe old age in Skien, and in Christiania they "die like flies." Then, too, Ibsen was astonishingly sympathetic in matters affecting the progress of the human race. Never will Paulsen forget a reception at the poet's house in the Campagna, on March 13, 1881, when every one, on his entering, seemed indescribably buoyant; the cause (to Paulsen's regret) was the news of the assassination of Alexander II.

Ibsen maintained his connection with the outer world in three ways: keeping his eyes wide open and avoiding dreaminess while walking; taking up his position regularly in restaurants near the door, and preferably before mirrors, where he could study the passing individuals, who represented to him the nation; and reading the newspapers (advertisements and all) from the top of the first page to the bottom of the last. "Writing poetry is *seeing*," he said to Paulsen in Salzburg twenty-five years

ago. To what extent, then, was life in such cities as Dresden, Munich, and Rome a gain for Ibsen? He increased his power of concentration, his depth of thinking, his freedom in feeling, and his technical readiness, but he lost in freshness and in faithfulness to local color. He continued to handle Norwegian material, but was far off, for years encompassed by German and Italian life.

Paulsen enjoyed many an inspiring *Gespräch* with Ibsen, and from these fragments we learn not a little about the Norwegian's views of men and things. Of Björnson he said: "He and I are not enemies, as many think; our partisans are at enmity with each other, but not we ourselves." Ibsen did not believe that a man could successfully divide his talent in the writing of both novels and dramas, and pronounced Björnson's "Newly-wedded Couple" a dramatic novel. Paulsen tells how Hans Christian Andersen refused to come down to a notable dinner to which Ibsen was also invited, keeping the company waiting nearly an hour. Ibsen relieved the situation by going up to Andersen's room alone, patting him on the back, and showering him with compliments. "Andersen asked me," said Ibsen, "if I really still appreciated him? It was a delightful dinner; Andersen could be entertaining and amiable as few others." Did Goethe influence Ibsen? As certainly as Shakespeare influenced Goethe. Ibsen spoke of Goethe but seldom, and yet with admiration. He spoke disparagingly of Goethe's management of the theatre at Weimar. He had heard that the old man listened to rehearsals with a conductor's baton, and tried to control them as a musical recitation; and it was evident that Goethe's desire to rule led him to shut out life from the theatre and substitute empty academic rules instead. When Paulsen confessed that he was never reconciled to Goethe for his fawning before Napoleon and his indifference to the fate of his country when it was being oppressed and abused, Ibsen listened with astonishment and replied with a smile: "The chief thing, after all, was that the 'Faust' became written!" As to Heine, Ibsen was surprised that, at twenty-five, Paulsen should not be "through with" him.

As a theatre director, Ibsen, according to the testimony of those associated with him, was not strikingly successful. In the beginning he was green, and while later he had a faculty for seeing everything that happened, he offered little or no advice. He was very sensitive and finnicky about little things, and sometimes objected to an actress even because of the size of her hand. Occasionally he insisted doggedly on his choice of a certain person for a part, as when he ordered Frau Wolff, against her tearful and laughing protests, to play the rôle of Sigrid. "God help Sigrid, you, and me!" she cried, "for we are all doing that for which we deserve to be beaten."

Special chapters in Paulsen's book are devoted to "Ibsen und Henrikke Holst" and "Ibsen und Marie Thoresen," giving the reader a pleasant insight into friendships of the dramatist and his relations to those more or less connected with his household. "Ibsen und die Frauenfrage," however, based in part on chats with Frau Collett and in part on Ibsen's works and published speeches, presents nothing new on a subject concerning which it would have been very interesting to hear more from Ibsen himself.

The University of Chicago Press will issue in December "The Tragedies of Seneca," a new translation into English blank verse, with appropriate lyric metre for the choruses, by Frank Justus Miller. Prof. John M. Manly contributes an introduction upon the influence of the tragedies of Seneca upon early English drama.

Gabriele D'Annunzio's pastoral tragedy, "The Daughter of Jorio," has been translated by Charlotte Porter, Pietro Isola, and Alice Henry. It will be issued by Little, Brown & Co. in an illustrated edition with an introduction by Miss Porter.

"Herbert Beerbohm Tree," by Mrs. George Cran (John Lane Co.), is a handy little volume which would have been a good deal more valuable if it had been conceived in a spirit of less indiscriminate eulogy. It gives a full, careful and convenient account of the career of Mr. Tree, with abundant details of his different productions, and is written with a conciseness and a degree of literary skill not often found in such theatrical appreciations. It will greatly please the most fervent admirers of Mr. Tree inasmuch as it credits him with the inspirational genius of which few critics, of recognized capacity, have been able to find any proofs in his acting. Mrs. Cran agrees, apparently, with the rather lonely dictum of Frederic Harrison that Mr. Tree's Hamlet was the finest of the many fine Hamlets that he could remember. In his list he included Charles Kemble, Macready, Irving, Edwin Booth, and Fechter. It is as useless to argue against such an estimate as it is impossible to agree with it. The principal Berlin critics, like their London and New York associates, found Mr. Tree's Shakespearean impersonations clever, ingenious, painstaking, but tricky, shallow, unreal, and unsatisfactory. His Hamlet had no soul, his Falstaff no humor. As a matter of fact Mr. Tree has rarely succeeded in sounding even a semi-tragic note, although perfectly fluent in the expression of melodramatic emotion. It is in romantic melodrama and eccentric comedy that his indisputable and versatile ability as an actor is best displayed. As a producer of stage spectacle he is probably without a rival, as he is at once liberal, tasteful, and imaginative. His artistic sins in sacrificing text to scenery are too notorious to require present enumeration.

The revival of Sheridan Knowles's "Virginius" in the Lyric Theatre on Monday evening afforded one more proof that the popular taste for the old romantic drama has survived the capacity for interpreting it adequately. James O'Neill, who, in his youth, enjoyed the training which is denied to our younger players, acted Virginius with dignity, vigor, sentiment, and passion. His elocution, though occasionally defective in emotional passages, was for the most part, clear, well modulated, and nicely emphasized. But the blank verse presented insuperable stumbling blocks to most of his associates, who spoke their lines in slovenly fashion without the least apparent appreciation of literary or poetic significance. Charles Dalton, a leading man of some local reputation, failed to exhibit any comprehension of the histrionic opportunities in the character of Appius. The Virginia was a simpering self-conscious little creature, the Dentatus a bellowing blatherskite. Most of the personages, indeed, seemed to think that noise was the one available substitute for understanding. The general representation, in a word, was utterly incompetent and unsatisfactory. It is pleasant to know that we still have a few actors, like Mr. O'Neill, Louis James, and Robert Mantell, who are capable of playing famous old parts acceptably, but it is nevertheless a fact that the whole body of poetic drama suffers a certain discredit from such interpretations as the one under consideration.

Madame Nazimova will be seen in Ibsen's "The Master Builder," in the Bijou Theater in this city on September 23. There will be much curiosity to see her in another new character, as the full range of her ability is yet to be determined.

Mrs. Patrick Campbell, it is said, will begin her coming engagement in this city with a presentation of the "Electra" of Euripides. Some notable scenic effects are promised, especially in connection with the appearance of Castor and Pollux and the apparition of the Furies in their pursuit of Orestes.

Music.

The New York Symphony Society, under the directorship of Walter Damrosch, will give twenty Sunday afternoon and eight or nine Saturday evening subscription concerts at Carnegie Hall; a subscription series of four at the Woman's Clubhouse, East Orange, N. J.; four in Montclair, N. J.; five in Brooklyn; four in the Philadelphia Academy of Music, and four in Newark, N. J. It is possible that two more series of three concerts each will be arranged for Plainfield, N. J., and New Rochelle, N. Y. A winter tour of two weeks will begin on the last day of the year; a spring tour of eight weeks will begin the day after Easter. In all, a season of forty weeks has been planned.

The Boston Symphony Orchestra this coming season will give the usual twenty-four public rehearsals and twenty-four concerts in Boston, the usual ten concerts in New York, six in Cambridge, five each in Philadelphia, Brooklyn, Baltimore, and Washington, and three each in Providence and Worcester. Enough single concerts will be given to bring the total well over one hundred. In the last week of January the orchestra, as last year, will go West for six concerts. Buffalo, Detroit, Indianapolis, and Columbus will each have one, and Cincinnati two.

PUBLIC LIBRARY

Miss Leah Luboschiz, a Russian violinist, has been engaged by Modest Altschuler for the opening concert of the Russian Symphony Society in Carnegie Hall. She was for two years a pupil of Ysaye.

According to the *Neue Wiener Journal*, Gustav Mahler, who has accepted an engagement for four years as Conried's conductor-in-chief, will pay particular at-

tention to the operas of Mozart and Wagner (not including "Parsifal," which will remain under the exclusive control of Hertz). Inasmuch as it is the operas of Mozart and Wagner that have been most shabbily treated in recent years, a wholesome reform may be looked forward to.

Art.

The Old Engravers of England in their Relation to Contemporary Life and Art (1540-1800). By Malcolm C. Salaman. Pp. viii., 224; 48 illustrations. Philadelphia: J. B. Lippincott Co. $2 net.

The work of the earlier English engravers on metal has not been made the subject of much published criticism until very recently. Early editions of English poets, and newer reprinted books of travel and conquest, are catalogued by booksellers with special attention to the work of English artists in portrait frontispiece or curious engravings of foreign lands and savage customs; but rarely has there appeared any treatise upon the engravers themselves, as filling a place in the history of art. Even the big dictionaries of artists, or of painters and engravers alone, have been rather indifferent to those early Englishmen and those men of the low countries or of northern Germany, who worked in England and pointed the way. It was left for the great "Dictionary of National Biography," under the editorship first of Leslie Stephen and then of Sidney Lee, to do proportionate justice to those engravers. That is one of the merits of this encyclopedic work, the rather un-English way in which the literary man, the artist, or the archæologist has received his share of notice. In 1905 there was published by the British Museum a folio, "Early Engraving and Engravers in England," containing forty full-page reproductions of the exact size of the originals, nearly fifty illustrations of smaller size, and a long and careful essay by Sydney Colvin, keeper of the Department of Prints. That volume includes the name of no artist later than Robert White, who died in 1703; that is, the work is limited to the sixteenth and seventeenth centuries.

Mr. Salaman's book covering this epoch, as of necessity, comes down a century later. It offers a chronological account of the artists whose work is treated in the great museum publication, two chapters extending to sixty pages; followed by a larger study of the art of mezzotint and the work of mezzotint engravers beginning in 1642 and closing with the eighteenth century. Chapter viii, then, deals with the revival of line engraving in the eighteenth century, and a discussion of such artists as Hogarth, Basire, Strange, and William Blake. The work ends with chapter ix., and the history of stipple engraving in the eighteenth century. The second division is almost twice as long as the early section, and it is also certain to appeal more strongly to the reader and to the modern student of engraving. Mezzotint is so interesting, and the works of the painters —Reynolds, Morland, and Gainsborough— reproduced by the eighteenth century men are so attractive in themselves, that it is no marvel to see the interest excited in our own times by an attempted revival of the art and the renewed study of its methods.

This treatise is the result of a wide sympathy with the art and the artists. There is discrimination, too, and a clear understanding of what is and what is not of notable and permanent value. The author, to be sure, is somewhat inclined to deprecate the taste for mezzotint, and to put down stipple as an inferior art; he cares little for the color printing of the eighteenth century; he is, in fact, a convinced advocate of simple line engraving. This point of view, however, is perfectly comprehensible. Art is many-sided, and there are those in whom the slow, formal, and severe process commands a respect which will never be given to the easier methods of getting gradation, methods which our author frequently calls "scraping." It is regrettable, therefore, that this lover of the burin and of its severe and formal work should have so little to say about its artistic result. No one can tell from the book whether Hogarth is to be taken as an engraver of great technical capacity or not. No one will discover who is, in Mr. Salaman's opinion, a great artist, and who merely a patient and conscientious mechanic.

The book makes interesting reading; and yet there is too much of a certain air of attempted jocosity. It does not seem to be affectation; the author is writing from a very personal standpoint, dealing with the old engravings as with things that he loves, and with their authors as his admired masters. He has studied the social history of the times, and he has many anecdotes to relate. It would require self-control and an overruling good taste, to avoid this fanciful tone. With those who are not offended by this playful way of writing, the familiar character of the descriptions and the criticisms will go far to make the book effective in the way of instruction. It is not evident, however, why anecdotes, some of them scandalous, should be told of public characters represented in portrait engravings, when the stories have nothing to do with the picture in hand, or with the artist who produced it. An earnest reader will ask for a more grave and orderly treatment. Indeed, the owner of this book and would-be student of its subject, having the historical sequence furnished to him by means of its pages, would do well to turn for facts and dates, and for the essential criticism of the artists treated, to the pages of the "National Dictionary" already mentioned.

Houghton, Mifflin & Co. announce for publication this autumn "Augustus St. Gaudens: A Memorial," by Royal Cortissoz. This volume will contain a memoir of the sculptor and a study of his work. It will be illustrated with photogravure pictures of St. Gaudens's work.

L. C. Page & Co. announce the publication of a new volume in their Art Galleries Series entitled, "The Art of the Prado," by C. S. Ricketts.

In J. W. Mackail's lecture on William Morris and his circle (Henry Frowde), delivered at Oxford last month to the University Extension students, the speaker summed up with lucidity and an insight born of special knowledge the main stages in the artist's development and the purpose running through his work. As a boy Morris was deeply affected by the Anglo-Catholic movement, and when he came to Oxford in 1853 it was with the intention of taking orders. This resolve did not last long. Under the influence of the Brotherhood, the group of men who clustered round him and his friend, Edward Burne Jones, the monastic ideal faded away in the light of the outer world; instead of Christian antiquities and theology, there was revealed to him the whole field of history and literature, with the golden thread of art running through all. But if the development of art in all its branches became henceforth the object of his life, art as he understood it was not, said Mr. Mackail, "an abstract and lonely thing, but the joint energy and common sympathy of many minds": for him the secret of the outer world was "fraternity." Working at first with a few friends, then with a larger association of artists and craftsmen, his ideal presented itself to him in late life as a fully "socialized" commonwealth, where, to quote the famous phrase of his mature years, art should be "by the people, for the people, a joy to the maker and the user."

The Boston Museum of Fine Arts has issued a new Handbook, designed to meet the needs of persons who desire to see the objects of greatest beauty and rarity. For those who wish only to look at special collections, separate sections of the Handbook are on sale: Egyptian Art; Classical Art; Western Art: Pictures and Prints; Western Art: Various Collections and Textiles; and Chinese and Japanese Art. Each of the sections is prefaced by a map showing the location of objects described. The introductions to the different sections are followed by lists of books recommended for reading and occasional books are suggested throughout the text. Among special features of the Handbook may be mentioned the introduction to the Greek vases, which, together with the illustrations, tells as much of vases as the average visitor cares to know; the introduction to Greek coins, in the nature of an interpretation; the general introduction to Western Art (supplemented by special introductions such as those to Dutch Painting, French and American Painting). For the first time a section of prints is included. A description of the Museum's collection is followed by reproductions of etchings, engravings, chiaroscuro, mezzotint, etc. Emphasis is laid on the study of prints as an adjunct to the study of the history of painting. The section on Textiles has been enlarged and introductions to Weavings and Lace inserted. In the part devoted to Chinese and Japanese Art an attempt has been made to give a historical summary and to establish a definite chronology. The final section is devoted to a description of the New Museum.

THE NEW YORK CITY BOND SALE.

There are no doubt two distinct and opposite points of view from which the results of last week's sale of $40,000,000 in New York city bonds may be regarded. That a 4½ per cent. bond should bring on the average a price not higher than 102, when 4 per

cent. loans were floated at 101⅝ less than a year ago, and when 104½ was paid for a 3½ per cent. issue as recently as 1903, would not ordinarily he described as gratifying. But this is hardly the proper aspect from which to consider the matter. It had become evident, three months or more ago, that investors would not pay par for a 4 per cent. loan, even when issued by a municipality with such unquestioned credit as this city can boast. That the situation thus presented was not peculiar to New York, all well-informed people are aware. Other cities in the United States—Boston, for instance—have passed through an exactly similar experience. European governments and municipalities have equally been compelled to increase the rate of interest paid on their loans, or where they have not done so, they have had to content themselves with a much lower price than was received on previous offers of the same securities.

In the rise of the interest rate New York has been confronted with a phenomenon familiar to all the markets of the year. What made the case of this city somewhat peculiar, and drew special attention to last week's offer, was the fact that New York had insisted so long on restricting its offers to 4 per cent. bonds with a minimum price of par, that it allowed two successive tenders of its bonds to be rejected by the market. Of its $29,000,000 public offer of June 28, only $2,121,000 were taken; for the $15,000,000 put on public sale on August 12, only bids for $2,713,000 were received. This, it is needless to say, was a serious blow to the prestige of the city. Such a result all great borrowers avoid with the utmost solicitude, and the city's finance department cannot be held blameless. Comptroller Metz, of course, was governed by the creditable wish to protect so far as possible, from undue depreciation in the market price of their holdings, investors who subscribed to the city's previous issues at the prices of 1906 or earlier. This was a valid reason for moving cautiously, and it may have warranted the holding to a 4 per cent. rate last June, even though the Legislature had already conferred on the city's finance commissioners authority to fix a higher rate. But the June experiment was conclusive; it proved that a 4 per cent. loan could not be sold with the charter restriction to par as a minimum price. Therefore, repeating an offer at those terms in August was a serious blunder.

It might have caused what the city had most reason, for its own sake and for the sake of its bondholders, to avoid—namely, the vague impression that somehow New York city's credit had collapsed. If such an injurious notion had actually spread, nothing could possibly have done more towards encouraging it than the next step—actually urging contractors with matured and unpaid claims to accept new 4 per cent. bonds at par in payment; this at the moment when those very bonds were selling around 95 in Wall Street. Mr. Metz, in short, fell into exactly the blunder of Secretary Carlisle's operations in the Federal Government finance of 1894, refusing to recognize the plain condition of the markets until his hesitation had brought to a dangerous crisis the very evils which he was seeking to avoid.

Happily, the liberal over-subscription last week of the $40,000,000 loan, at the higher price, has dispelled the unreasonable fears which the midsummer episode had created. The investing public now has unmistakable assurance on two important points—first, that New York city's credit is as sound as ever; and second, that at the market price, abundant stores of capital are yet to be had by borrowers.

The two considerations which remain concern the city's fiscal methods and the probable outcome of the existing situation in the market. Unimpeachable as the credit of New York city still remains, this year's occurrences should serve as a serious warning against the haphazard extravagance of our municipal bureaus and the antiquated bookkeeping system which keeps the general public, and possibly the city's own officers, completely in the dark as to the exact facts regarding income and expenditure, surplus or deficit, and debt or redemption of debt. The city's present system of accounts is an absurdity which would discredit a frontier village. When the British Exchequer is able every week to issue a short, complete, and illuminating statement of the Government's fiscal position, and when the United States Treasury publishes every day a statement which enables the ordinary reader to see exactly where it stands, and how its status has changed since the opening of the month or year, the jumble of intricate figures issued to the public once annually by New York city is inexcusable. That difficulties exist, when taxes are collected at widely separated dates and are anticipated by temporary loans, no one denies; but this is far from a proper apology for the existing lack of system.

The question, when the high price of capital—which affects the borrowing railway, manufactory, or real estate owner, as it does the borrowing State—is likely to return to the former level, is bound up in the formidable problem of the general strain on capital and rise in prices. This is too broad a question to take up at the present moment.

Noteworthy New Text-Books

Hunter's Elements of Biology
$1.25

Presents a correlation of botany, zoölogy, and human physiology, combining in excellent proportion text-book study, laboratory experiments, field work, and work for oral recitation.

Tanner's High School Algebra
$1.00

A practical text-book, perfectly adapted to actual conditions in secondary schools. It meets every real need in the teaching of elementary algebra, and embodies the views of the best teachers.

SEND FOR OUR 1907 NEW ILLUSTRATED DESCRIPTIVE CATALOGUE OF HIGH SCHOOL AND COLLEGE TEXT-BOOKS

Mumper's Text-Book in Physics
$1.20

Workable and sensible, and written in a clear, easy style. While elementary and simple, it is both scientific and truthful. It has been prepared by a teacher of experience.

Herrick's Course in General Zoölogy
Text-Book, $1.20
Laboratory Exercises, $0.60

A comprehensive course, adapted to any modern system of animal study, and covering fully the entrance requirements of any college.

AMERICAN BOOK COMPANY

NEW YORK CINCINNATI CHICAGO BOSTON

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 26, 1907.

The Week.

It was early in August that Attorney-General Bonaparte oracularly announced: "You will hear from me about Harriman within a month." That did not refer to the question of immunity for the Alton Road in the Standard Oil rebate case. It was personal to Mr. Harriman. The Attorney-General was, at the time, pining for the sight of a very rich man in jail. Nothing less would really satisfy him. And the purport of his announcement was that, if an equally impatient country would only wait a month, it would then learn whether Mr. Harriman was to be criminally prosecuted. But more than a month has passed, and silence is still like a poultice healing the blows of Mr. Bonaparte's August sound. Instead of hearing from him about Harriman, we get only vague reports that he is giving his mind to minor amendments of the Anti-Trust law. In view of all this, Mr. Harriman might well repeat his famous question, "Where do I stand?" Whatever other doubts there may be about this business, there can be no doubt that all the delay and hesitation and unkept promises have been due, not to scruples about the law, but about policy. This is what has stayed the Attorney-General's hand. And it has steadily been the opinion of men in touch both with the railways and Oyster Bay, that no action would be begun by the Government against Mr. Harriman. Various cynical reasons have been given. On some ground or other, however, it is generally agreed that the prosecution of Harriman has been given up. He will not "hear from" the Attorney-General. But politically, one thing is certain. If the President and his party stop content with what is called a "moral" victory, leaving the great offenders unwhipped of justice, a very taking cry will be put into the mouth of Mr. Bryan. He has already asked Mr. Taft why none of the rich criminals have been put in prison; and Mr. Taft has weakly responded that he, too, would like to see them there, but does not know how to get them behind the bars. Bryan, however, will know—that is, for campaign purposes. Out of power, he will have no difficulty in saying what he would do in power. It will be all very well for the Republicans to assert that they have put the fear of the law into the hearts of magnates; but temporary fright is no such deterrent to crime as the sheer fall of the sword of justice. When that weapon has actually descended, it is not necessary to cast about for "moral victories."

The New York *Times* and the Brooklyn *Eagle* have simultaneously canvassed Southern Democratic opinion, as expressed through Southern editors, in regard to Bryan. According to both reports, while Bryan has a much larger following than any other Democrat mentioned for the nomination, he has today nothing like the virtually unanimous Southern support which was promised when he returned from his world-tour, and before he delivered his Madison Square Garden speech. There are few Southern Democrats who would bolt Bryan's nomination, but there are a good many whose minds are on other men. There is an interesting outcropping of sentiment favorable to the nomination of Roosevelt by the Democrats. The *Eagle* calls attention to the small space which issues like Imperialism and tariff reform occupy in its six and a half columns of letters. One might infer that the South is now protectionist and has no interest in our dependencies; but it is not hard to account for such a subordination of issues to candidates. The Southern Democrats want to win. They supported Parker in the convention of 1904 because they believed he would be a strong candidate in the North. Their advocacy of Bryan has waxed and waned largely because of changing views about his prospects. We do not believe Bryan's nomination next year to be by any means inevitable. The most effective argument against him, however, is likely to be not denunciation of his views in themselves, but demonstration of the practical impossibility of his carrying the doubtful States. A Republican who could hold the devotion of his party's rank and file as Bryan has done would be an ideal candidate. But the Democratic nominee must achieve a great deal more. He must gain the votes of many Republicans; and Mr. Bryan is one of the last men who could accomplish this feat.

If the United States Supreme Court had been constituted to try nothing but anti-Trust cases, we fancy that there would have been considerable protest, altogether apart from Mr. Moody's personal and legal attainments, against the appointment, as justice, of the Attorney-General who presented the Government's side of most of these cases. Yet Justice Moody, who refrains from sitting in the causes which he instituted as Attorney-General, can still do his share of the work of the court in connection with other proceedings. But the appointment of Harry K. Daugherty to the Spanish Treaty Claims Commission cannot be looked at in quite the same light. The Commission hears nothing but Spanish Treaty cases, and Mr. Daugherty, as Assistant Attorney-General, prepared a majority of those cases. If Mr. Daugherty is as scrupulous as Mr. Moody he may not earn his salary; while the idea that he may be less scrupulous and sit as judge where he once served as advocate, has already caused the resignation of ex-Senator W. E. Chandler, chairman of the Commission. It perhaps deserves mention that the parties who fancy themselves aggrieved, namely, the claimants against the Government, are those very American citizens whose sufferings under Spanish misrule in Cuba were making every patriotic American heart bleed ten years ago. We wonder whether, in those days, the appointment by Spain of a quasi-judicial officer who had already taken sides energetically against our countrymen would have been left out of the list of abuses which caused the war.

Some one in authority should stir up the Navy Department's designers. Here we are professing to be a great naval Power, and looking for the biggest and best ships afloat. But on Friday last the Department awarded contracts for five turbine torpedo-boat destroyers with a guaranteed speed of only twenty-four knots. Yet, on September 7, the latest English destroyer, the Cossack, attained a speed of 33½ knots, and since then a German destroyer has approached the 33-knot mark. Similar inattention to speed has marked most of the designs of the Bureau of Construction and Repair. It is bad enough that it should be accused of blundering in the designing of our battleships, but the American people ought at least to have as fast ships for their money as other nations obtain. It would be impossible to think of England or Japan giving out contracts for 24-knot destroyers at this stage of naval development. President Roosevelt could well afford to devote some of the time and energy given to the dangerous and useless cruise of the battleships in the Pacific, to a complete overhauling of the Navy Department. If he does not, Congress should.

We may be able to send our battleship fleet to the Pacific without affronting Japan, or any other friendly nation, but interests at home are not so complacent. Here, to begin with, are the shipping men. They are to be deprived, if the Administration can find a way to deprive them legally, of the sacred right to monopolize the carrying trade between American ports. And this on the plea, forsooth, that the cost of carrying supplies in American bottoms would be "excessive and unreasonable." Con-

gress, impressed with the plight of the unfortunate shipping industry, tried to put a double lock on its special preserves. After ordering tonnage and lighthouse dues, of one dollar per ton on foreign vessels, it subsequently provided that such vessels must not enter the coastwise trade at all. While the Administration thinks it has a way of evading the latter law, there is apparently no way around the former, and the extra dues imposed on the foreign vessels will bring their rates on naval coal nearly or quite as high as those charged by American owners. But what a confession the whole episode is. The doctrine that Americans ought to be paid more than foreigners under all circumstances, that no price within reason is too high if only we pay it to Americans, pervades the Republican statute-book. Yet this is the second time that a Republican Administration has tried to throw the doctrine overboard when it had large plans to execute. And while the coal dealers and the shipowners are bewailing their fate, what about the thousands of honest workmen in the Eastern navy yards who, having no ships on which to work, will be left without occupation till the great cruise is over?

The American Newspaper Publishers' Association, at a meeting in this city last week, adopted the following resolution:

> Resolved, That it is the sense of this meeting that the duty on printing paper, wood pulp, and all material entering into the manufacture of printing paper be immediately repealed.

In effect this is a resolution against the Paper Trust. Thus, when the shoe pinches, we all become free-traders. What neater object-lesson of the relation of Trusts to tariff and tariff to Trusts could we have? And what could prove more clearly the existence of an unused weapon against the aggressions of Trusts of all kinds? The publishers want to cut off the entire tariff, not to modify it. Why should not the laboring man demand with equal justice the removal of the duty on coal, on clothes, on hides, on all the things that are as vital to him as white paper to the newspaper? We are glad that our Republican high-tariff friends of the New York *Press* and *Tribune* are joining in this crusade for free trade, or at least are agreeing to it; for they have not as yet announced their desire of paying more to the Trust in order to save the paper tariff. This present difficulty is a kind of *argumentum ad hominem* that must certainly open their minds to the fact that there are millions who are suffering from one form or another of tariff outrage or discrimination as well as they. But, then, it makes a vast difference whose ox is gored.

Among the significant facts thus far brought out in the Federal Government's suit against the Standard Oil Company under the Anti-Trust law, are its control of nineteen subsidiary companies by ownership of stock, its holdings of a stock interest in fifty-four other corporations in the oil trade, and its extraordinary increase in profits during the last eight years. The Government's table sets forth that, while the capital stock of the Standard Oil, between 1899 and 1906, increased only from $96,998,612 to $98,338,382, the net value of the assets rose in the same period from $196,220,017 to $359,400,193, the total annual profits from $34,420,314 to $83,122,251, and the yearly dividends from $14,304,188 to $39,335,320. These comparisons are the more striking from the fact that the Standard Oil of New Jersey is merely a holding company, and that these immensely increased dividends were possible with practically no increase in its own share capital. The Government has also shown that the Standard Oil Trust of Ohio, when ordered by the Supreme Court in 1892 to wind up its affairs and dissolve, continued without change in management or methods, with the same control of supply and transportation, for seven years, until 1899; and that the mandate of the Supreme Court of Texas debarring the Standard Oil combination from engaging in business there has been defied by the operations of the Corsicana Refining Company, owned by H. C. Folger and C. N. Payne of No. 26 Broadway (the home office of Standard Oil), and the Security Oil Company, said to be controlled by the Standard's friends. In other words, the Standard Oil Company has been a deliberate breaker of the law in this point, as well as in the matter of obtaining secret rebates. Of course, the lawlessness of Standard Oil has been generally suspected; certain significant facts have been widely published, notably in Miss Ida Tarbell's "History of the Standard Oil Company"; and many of them have been substantiated by strong evidence. The testimony now being taken is therefore less a revelation than a confirmation. Mr. Rockefeller, we are told, has given away over $100,000,000 of his gains; but the vast size and the great usefulness of these gifts do not alter the fact that the gains have been ill-gotten.

In D. Willis James, whose funeral was held in this city on Tuesday, New York has lost a citizen of unusual value. To him would have applied the term "captain of industry" in vogue a few years ago, were it not that meanwhile the name has become in some cases almost synonymous with *chevalier d'industrie*. Mr. James did not know how to advertise himself. He put his name on no libraries or hospitals. No one trumpeted his industrial achievements, or was paid to tell for him the story of how he opened large areas of the Southwest to industry and agriculture. When he added a million dollars recently to his former large donations to Union Theological Seminary, it was merely announced that the money came from "a friend." To Amherst College, to Oberlin, to Columbia, to Hartford Theological Seminary, as to the Cathedral of St. John, he gave richly. Yet no one complained because he had the means to do it, for his fortune was honestly amassed, without the aid of special privilege or legislation. It is trite to say of a man like this that he is a city's and a nation's best asset. Yet it is right to dwell on the fact at a time when the abuse of wealth and the mulcting of the people by dishonest methods are the two topics uppermost in people's minds. Like Marshall Field, Mr. James honored the name of merchant; he showed, too, that success and honor in such a career by no means carry with them moral deterioration or an inability to appreciate the true aims of life.

The result of the Chicago charter election is another illustration of the way in which the problem of taxation underlies all the miscellaneous questions of government. Chicago's development has been hampered in a hundred ways by lack of money, combined with a lack of centralization in the taxing power. The new charter, which increased the debt limit by basing it upon the actual instead of the assessed valuation of property, also authorized some increase in the tax-rate. The maximum increase over the taxes now levied in Chicago was estimated at something like a half of one per cent. Yet that increase, combined with the saloonkeepers' fear of Sunday closing, was enough to defeat a charter which, if not perfect, was a great improvement over the old. Residents of Chicago are singularly enthusiastic over great schemes of improvement; but they will have none of a plan to provide the funds. Their city must go on with its strange patchwork of government, proving, if it can, that good administration is possible even under a defective organic law. But there is an element of something like comedy in the fact that the city, which has now shown such unwillingness to foot the bills for necessary improvements, was two years ago the centre of municipal ownership sentiment and was impatient for the adoption of comprehensive and expensive projects along this line.

Beyond doubt, the New Jersey Republicans have come out of their convention much stronger than for some time past. Regulars and advocates of the "New Idea" had their say, and if the

latter did not succeed in nominating their candidate, they at least obtained a platform comprising nearly everything they asked for. Under the circumstances, they are content for the moment with these great gains, and will now endeavor to bring about the election of the Republican candidate for Governor, Judge Fort. They will not, however, if we read their plans aright, give up their intention to fight on until they have purified their party and wholly freed it from the control of public service corporations. Mr. Fort has been a judge of ability and of unusual courage, as when he drove the gamblers out of Long Branch and other places. Independence and aggressiveness he must display, for the Democrats, in nominating Frank S. Katzenbach, jr., have put into the field a candidate personally unassailable, whose record as Mayor of Trenton was of the best. It was during his administration that that city was to a large degree purged of the disorderly elements that disgraced it. But Mr. Katzenbach, too, must convince the electorate that he is his own man, and is uncontrolled by Boss Davis of Hudson County or ex-Senator Smith. Senator Everett Colby and his followers, if they have done nothing else, have at least increased to a large degree independent thinking in their State, and have aroused a widespread desire for the sort of administration that Gov. Hughes is now giving us at Albany. That the Republican party enters the campaign heavily handicapped no one can dispute. Its United States Senators are far from a credit to it; its Secretary of State is an offence to the nostrils of decent men; and the disclosures of grafting made by the Hahn Committee suggest that the time for Republican chastisement and humility may be at hand. The Republican platform demands popular election of United States Senators, a comprehensive civil-service system, the just taxation of franchises, a public utility commission, the separation of State and municipal elections, and the improvement of the primary system. Since the Democratic platform also calls for most of these reforms, the election must turn upon the personalities of the candidates, and the impression they make as the campaign progresses.

The directors of the various producing companies controlled by the Amalgamated Copper Company are said to have decided to reduce the output of their mines 50 per cent. We doubt the figure, because no industry can shut down on half its output all at once without seriously compromising its future. That some reduction would be made has been evident since the last cut in price failed to attract consumers. To say this is by no means to excuse the recent attitude of the Amalgamated. That the present demoralization in the trade results largely from the adherence to the 26-cent price, at a time when consumers were straitened by tight money, and exports of copper were reduced by 20 per cent., no one can seriously question. Nevertheless, if copper cannot be sold, it would obviously be poor policy to go on mining and accumulating it at the former pace. At some time consumption must necessarily be resumed, for the electrical industry is not suddenly going to cease business. The experience of the iron trade during 1903 is much in point. Reduced demand for iron and steel, as a consequence of money markets not unlike this year's, caused a fall in Pittsburgh pig-iron from an average of $22.85 per ton in January, 1903, to $13.66 in February, 1904. The country's production during the second half of 1903 decreased 711,000 tons from the year before, or not quite 8 per cent.; in the first half of 1904 the decrease was 1,534,000 tons, or nearly 16 per cent. Yet within a year consumption had so far recovered that the output for the first half of 1905 exceeded by 2,400,000 tons the largest half-yearly record in the country's history. One reason for that sudden and very large resumption of demand was that prices, though they rose above the lowest level, were not raised again, during all that season of recovery, to anything like the extravagant heights of January, 1903.

It would be an excess of skepticism not to believe that the peace protocol signed at Washington last week by the representatives of the five republics of Central America will bring rest to that troubled region for some years at least. Left to themselves, these five mighty nations would probably soon be at it again. But, displeasing as it may find the situation, Central America is gradually being made to feel the restraining hand of its two stronger and quieter neighbors on the Continent. If for no other reason than the need of resisting this attempt of the United States and Mexico at reducing them, from their point of view, to tutelage, the Central American governments should learn to get along with a minimum of counter-conspiracies, counter-invasions, and counter-assassinations. Possibly, the circumstance that Mexico, a Spanish nation like themselves, is partner in the guardianship of their good conduct, might be an influence in determining them to listen to wise counsel from abroad. On the whole, it would be a step forward in the direction of higher ideals if great nations should properly make use of their influence to persuade smaller nations to ways of peaceful thinking. The effect of good works on character is not to be denied, and in enforcing peace on others the greater Powers might be moved, partly by contagion and partly by shame, to follow up precept with practice.

Peace in Morocco seems imminent. Three of the most important tribes in the Casablanca hinterland have accepted the French proposals and promised to use their power to bring the other tribes to terms. Almost as astonishing as the powers of resistance the tribesmen have displayed is the completeness of their surrender. They have agreed to give hostages, to permit the passage of French reconnoitring expeditions through their territory, to punish the perpetrators of the Casablanca murders of July 30, to pay a large indemnity, and even to make a contribution towards the cost of the harbor works at Casablanca, opposition to which was the main cause of the uprising. The French Government is reported to be pleased at the turn affairs have taken. It has reason to be. French influence has made an enormous advance in Morocco during the last two months, without occasion being given for complaints of the infringement of the Algeciras Convention. At the same time, part of Gen. Drude's army will remain to garrison Casablanca, and possibly other points, and thus retain a valuable foothold. Conditions in Morocco are well illustrated by this latest development—a European Power making peace with a number of scattered tribes, as though they were independent Powers, without giving attention to the nominal head of the empire at Fez.

The long-awaited edict ordering the initiation of measures for the establishment of representative government in China, was issued Friday. It delegates to two high officials in connection with the Grand Council the task of framing regulations for the organization of a consultative body to coöperate with the throne, as a preparation for the introduction of a complete parliamentary régime. Taken in conjunction with the report that the progressive Wu-ting-fang has been restored to Imperial favor, the edict plainly indicates that in the long game of see-saw between reactionaries and liberals the latter are now on top, and for some time are likely to stay there. There can be little skepticism about China's real progress towards modern institutions, however we may distrust the optimism of those observers who have been promising us a Chinese Japan in ten years. If we take this edict to mean the establishment of parliamentarism in China, we shall probably be disenchanted next year. If we remember, on the other hand, that the edict is merely an order commanding certain men to get to work on the project, we shall expect them to be deliberate.

DEWEY VS. ROOT.

Admiral Dewey is apparently more disquieted by the increasing talk about getting rid of the Philippines in any honorable way possible, than he was by the Spanish guns in Manila Bay. He issued on Sunday a solemn adjuration to his fellow-countrymen never to part with the islands. Naturally, the gallant Admiral is too modest to say anything about the glory of winning them. Nor is he passionate about the flag never coming down where once, etc. Perceiving that the time has come to be as "practical" as President Roosevelt was in getting Harriman's money for the campaign, he puts the thing squarely on a commercial basis. We must keep the Philippines because only by retaining them can we get "our share of the enormous commerce of the East." "Why," he asks, "did Spain for 200 years dominate the commerce of the Orient?" We did not know that she did; but if she did, the reason was, according to Admiral Dewey, that "she had the bay and harbor of Manila." Hence the United States, having acquired the Philippines, must hold on to them, for "we cannot afford to turn over to the other nations of the world all the vast commerce of the East, and restrict ourselves to our own Pacific Coast."

All this will make people fear that the Admiral's pen is not mightier than his sword. He reasons about trade, and the way to get and keep it, in a fashion which events are every day making appear more and more obsolete. As if to give point, by contrast, to the correct view, Secretary Root has set out this week for Mexico, where he will doubtless uphold and expound the same enlightened opinions that he set forth on his recent tour through South America. The Secretary of State clearly perceives the truth to which the Admiral is seemingly blind. It is that, in order to have a profitable commerce with any given people, it is not at all necessary to be their owner or even protector; that friendship and an intelligent understanding are a much more sure quickener of trade than all the naval bases that dot the seas. Take the case of Mexico itself. Of that country, American enterprise and capital have, within the past thirty years, made a peaceful conquest. We get larger returns from our Mexican commerce in a single year than we have had from the Philippines in ten, or will get in ten more, if we go on burdening ourselves with those islands. Yet no American statesman now talks of the necessity of "dominating" Mexico, much less annexing that country. And it is partly because all hints or threats of aggression upon them long since ceased that Mexicans have welcomed the influx of American money and goods and methods.

How advantageously the Root plan of securing trade through friendly relations stands out as compared with the Dewey notion of doing it through overawing or controlling, a glance at the statistics of foreign trade will show. With Mexico, our commerce has steadily grown. In 1898 our exports to our neighbor republic were valued at $21,000,000. Last year they were worth $58,000,000. And no one alleges that the Spanish war had anything to do with the increase! We obtained by it neither "key" nor "base," as respects Mexico. We simply had products to sell her at better prices than were offered her elsewhere; we took her exports in return, to the tune of $50,000,000; and, keeping on increasingly friendly terms with her, built up peacefully this large and growing trade. Meanwhile, our exports to the Philippines have confessedly disappointed the glowing hopes of getting rich out of them. By 1902, the value of our shipments to Manila had mounted to $5,250,000, and there were many prophecies of their great expansion; but they afterward declined by more than one-fifth and last year were but $5,450,000. And if one turns to the figures for the adjoining markets, which, according to Admiral Dewey, our possession of a naval base in the Philippines is to enable us to monopolize, it will appear that the trade fluctuates from year to year, but for reasons with which our being at Manila has nothing whatever to do.

That annexation does not of itself mean trade is a conclusion which is getting into the heads of statesmen all over the world. Thus we had the dispatch from Tokio a day or two ago stating that the policy of Japan is not to annex Korea, except as a measure of dire necessity. Marquis Ito spoke of annexation as "merely a crude and cruel means of securing the desired friendship of Korea." This, of course, may be insincere, or may be repudiated later by the Japanese Government; but it at least witnesses to the growing perception that annexation is not the last word of either statesmen or merchants.

The way to get trade is to go and get it, in obedience to the laws of commerce. Statesmen may hinder manufacturers and explorers, but they cannot really help them much—except by repealing the foolish statutes which profess to help. Voltaire has a passage on the contrast between the views of the actual trader and those of the public man. The latter contends that the former cannot buy and sell in India without ruining himself. But the former, not waiting for the new legislation, said to be necessary to aid him, quietly goes into the Indian trade and makes a fortune. Similarly, when the American people truly get ready to go after the commerce of the Orient, they will do it, not because they have or have not a base at Manila, but because they see their way to a profit in the business. And they will ask no assistance from the law-makers, save to break their tariff-fetters.

CATHOLICISM AND MODERNISM.

The Pope's encyclical on "Modernism," on which we made passing comment last week, would prove, were its recommendations capable of rigorous enforcement, a staggering blow to the whole progressive element in the Church, but to none more than to the liberal Catholics in America. At the end of the encyclical Pius X. himself admits that adversaries will represent the Church as the enemy to science and progress; and despite all protests from His Holiness many ardent friends also are sure to take the same position. The provisions of the encyclical as reported by cable are in brief as follows:

(1.) The teaching of philosophy, positive theology, et cetera, is to be carried on in the Church schools and universities, but in a Catholic spirit.

(2.) Modernists are to be removed from professorships and the direction of educational institutions.

(3.) The clergy and faithful are not to be allowed to read modernist publications.

(4.) A committee of censorship is to be established in every diocese to pass upon the publications which the clergy and faithful shall be permitted to read.

(5.) The encyclical of the late Pope Leo XIII., prohibiting the clergy from assuming the direction of publications without their bishop's permission, and providing for supervision of the work of ecclesiastical writers, is confirmed.

(6.) Ecclesiastical congresses, except on rare occasions, are prohibited.

(7.) A council is to be constituted in every diocese to combat modern errors.

The object of these several directions to "the clergy and faithful" is plainly to prevent their discussing, teaching, reading, or even knowing about those current views of science, philosophy, and theology which might conceivably unsettle their orthodoxy. Thus the Pope would cut off Catholics from many of the most important intellectual movements of the age.

Without going into the details of administration, we may point out one or two principles implicit in this utterance. The removal of "Modernists" from professorships and the elaborate machinery for a censorship of printing are simply efforts to check by brute force the spread of ideas. Such attempts have not been really effective at any time since the invention of printing. To-day they are childish. Priests in the remote hill towns of Italy may be able to do something to guide and regulate the reading of their parishioners; but in America, England, Germany, and France, countries where all kinds of books and newspapers circulate easily and rapidly, such

prohibitions are worse than useless. Placing a book upon the Index is an advertisement of it, a notification that here is a volume worth attention. The terms of the encyclical are evidence that its writers have no conception whatever of the intellectual and social conditions in the United States and the more enlightened regions of Europe. The reply to these directions for muzzling teachers and suppressing books was made once and for all more than two hundred and fifty years ago, in Milton's "Areopagitica." Those who love the twilight, who are afraid of freedom of research, freedom of reading, freedom of teaching, and freedom of speech, are afraid of the truth. For, to take Milton's famous phrases, "though all the winds of doctrine were let loose to play upon the earth, so truth be in the field, we do injuriously by licensing and prohibiting to misdoubt her strength. Let her and falsehood grapple; who ever knew truth put to the worse in a free and open encounter?"

The resistance of the Pope to those new views of man and the universe that are working like a ferment through Europe, America, and even Asia, is but another skirmish in the age-long struggle between dogma and science. The story has been told at length in Lecky's "History of Rationalism in Europe" and Andrew D. White's "Warfare Between Science and Theology." Here we need do no more than point out that Catholicism rests on authority, on divinely revealed dogmas which, once defined, cannot be changed, and cannot, without sacrilege, be tested by mere human reason. The Church of Rome declares that the deliberate judgment of its whole organization is infallible—St. Augustine's *Securus judicat orbis terrarum.* This offer of certainty is the magnet which through all the centuries of Christendom has attracted wearied souls, who utter Thomas à Kempis's longing cry, "Tu vera pax cordis, tu sola requies; extra te omnia sunt dura et inquieta —Thou art the true peace of the heart, thou art its only rest; out of thee all things are full of trouble and unrest." It was this passion for some sure footing in the encircling gloom that drew Newman to Rome. This is the thesis of Mallock's brilliant but meretricious "Is Life Worth Living?" It is worth living, he argues, only within the fold of that Church which lifts us from the waves of eternal doubt and sets us on the rock of eternal verity. But eternal doubt is the one essential to scientific progress. The postulate of the scientist—and the term includes the student of history, language, and theology—is *Dubito, ergo sum.* For him there are no certainties, no dogmas, nothing but temporary "working hypotheses." He accepts for the moment the hypothesis which explains the most facts, but he searches continually for the hypothesis which shall explain more. The dogmatist reposes in the faith once delivered; the scientist demands each day a new and larger revelation.

As to the outcome of the collision between the present Pope and the forces of science, it would be idle to predict. He has seen the choicest pearls of Protestantism dissolved in the acids of the higher criticism. The awful deathbeds of Tom Paine and Voltaire no longer terrify the unrepentant. Our orthodox pulpits no longer thunder against Unitarianism; and were Channing to return to the scene of his labors he would find radical Presbyterians and Episcopalians regarding him as a reactionary. Bishops have long since ceased to explode at the mention of Darwin's "Origin of Species." Matthew Arnold's "Literature and Dogma" and "God and the Bible" are relegated to the upper shelves, as containing only the commonplaces of conservatism. As this record has unfolded before the eyes of the Roman pontiff, he may well exclaim that admission of the right of private opinion is the beginning of the end. But his system of censorship is in danger of breaking down of its own weight. Can any hierarchy hold out against the remorseless sappers and miners of science? If we follow the analogy of Protestantism, we must answer no. The Roman Church, however, seems to bear a charmed existence. Its overthrow was predicted at the Reformation, but it has withstood that shock. We commonly think of it as Newman has described it in his "Apologia"—"a religion which has flourished through so many ages, among so many nations, amid such varieties of social life, in such contrary classes and conditions of men, and after so many revolutions, political and civil"; and we incline to agree with Newman that it can still "subdue the reason and overcome the heart." That is, though it may, if it go on in its present course, alienate men of the scientific temperament, men who cannot blindly accept any creed on authority, it may, with or without a successful censorship, always overcome the hearts of those who feel that life is empty and purposeless without a grasp on what they feel is the unalterable truth as opposed to the change and development of scientific knowledge. They care nothing for hypotheses. Such men and women there have always been and always will be while humanity remains what it is.

THE ZIONIST MOVEMENT.

In connection with the proceedings of the eighth International Zionist Congress, which met at The Hague during the third week of August, a sharp controversy has broken out in this country over the question whether adherence to the principles of Zionism is consistent with the duties of American citizenship. The Zionist movement was recently stigmatized as essentially anti-American by so prominent a member of the Jewish community as Jacob H. Schiff of this city. The charge was vehemently repelled by the American delegates to the congress at a mass meeting in Cooper Union; and it is only fair to say that at first sight the supporters of Zionism have much the better of the argument. It would be interpreting patriotism in an impossibly narrow sense to assert that members of a certain nation or creed, living under a particular flag, may not sympathize with or participate in a movement designed to improve the condition of others of their class four thousand miles away. It is especially difficult to maintain such a thesis in this country, whose history has been such as to necessitate the development of a modified conception of patriotism which would permit the vast foreign element in our population to be Americans without completely severing ties of sentiment and tradition that bind them to Europe.

There is, however, opportunity for dispute in the matter of Zionism because of the lack of a precise definition for that term. Commonly, it is taken to stand for a scheme that would create a separate Jewish state in Palestine, established under political guarantees from the Powers as a home for the oppressed Jewish inhabitants of Eastern Europe. Actually, this first conception of the founder of Zionism, Dr. Herzl, has grown or changed in various directions and radically. When the difficulties connected with the foundation of a Palestinian state came to be recognized, the more impatient members of the party began to turn their eyes elsewhere. Dr. Herzl himself was ready to consider the possibility of some other location than the Holy Land, and thus supplied a powerful impetus to a movement that has been described as Zionism with Zion left out. Uganda in British East Africa, Argentina, and South Africa have been proposed, but without the slightest result. At present the I. T. O. (International Territorial Organization), as this party has come to be known, unthe leadership of Israel Zangwill, is pursuing a programme of mere colonialism. Not long ago it initiated a scheme for diverting Jewish immigration into this country from the Atlantic ports to Galveston, which was to be made a clearing-house for the entire West. This, of course, is no longer Zionism; and, naturally, Mr. Zangwill's party did not participate in the recent congress, which marked a sharp and definite return to Palestinian ideals.

But though the congress at The Hague was the scene of tumultuous debates on the ways and means of proceeding with the execution of Dr. Herzl's original scheme, there was general recognition of the fact that its complete

attainment was not a possibility of the immediate future. At the same time, the position of the Jews in Russia, whose deplorable condition supplied the first impetus to Zionism and is still its main support, has undergone such a tragic change for the worse that the need for immediate action has impelled a number of Russian Zionist leaders to attempt to utilize the spirit of national self-consciousness, engendered by the Zionist propaganda, for the attainment of remedial measures within the Empire. In other words, while Mr. Zangwill's Zionism became in turn Ugandian, Argentinian, and South African, orthodox Zionism, while clinging to Palestine as an ideal, has become in large measure Russian. The Zionists participated in the Duma elections, though with little appreciable results; they have established self-defence committees against rioters, on the model of the Socialist organizations, and they have their own programme of Russian reform. A remarkable development has been the rise of a Socialist-Zionist party which aims at the creation of an autonomous Jewish régime within the Empire on an equal basis with Russians, Poles, Letts, Armenians, and other nationalities. Undoubtedly, the name Zionist has been adopted by the party because of its intimate appeal to the mass of the Jewish population.

The extreme tendency in this direction was formulated by one of the leading speakers at the recent congress, who declared that Zionism was no longer a national or regional movement, but a universal one. In his view the choice is between Zionism standing for every aspiration of the Jewish race, or assimilation which means the complete merging of the Jewish people with its neighbors. In this sense Zionism becomes synonymous with Judaism; and it is only in this sense that, by becoming a political creed, separatist in aims, it can be called anti-American. In Russia, and in Europe generally, where the ideal of national autonomy for the minor races is widely held, Jewish separatism is at most no worse a crime than Czech separatism or Slavonic separatism. In this country it can have no proper standing.

It has been the misfortune of the Zionist movement that it has not been able to choose definitely between the two irreconcilable principles of a separate Jewish state in Palestine and universalist aspirations. The president of the Hague congress is reported to have brought its sessions to a close with the fervent utterance that Israel would yet conquer the world. The conquest, of course, is to be a spiritual one. It is the same position taken by Mr. Zangwill in the years of his earlier enthusiasm, when he exalted the rôle of Israel as a prophet among the nations and wanted a new Jewish kingdom in Asiatic Turkey as a refuge and defence against persecution. Now, it is a fair argument to advance that if the Jewish race really aspires to the rôle of missionary among the peoples of the earth, it must not object to the incidentals that go with the exercise of a divine mission. The prophet has never had an easy time of it, and the priest is not supposed to hanker after the pleasures of home life, or quiet, or rest from labor. Viewed from this point, events like Kishenev or Bialystok are not the crimes they are usually considered, but the inevitable consequences of such a rôle as Jewish millennial champions look forward to. If a Jewish state is really to be founded, it must be done on a practical, and not on a Messianic, basis.

SCHOLARSHIP AND RESEARCH.

Much recent academic discussion has turned upon the relation of scholarship to research, but few of the debaters have perceived that the admitted drawbacks of our university education are largely due to the fact that, under German leading, we have all assumed that scholarship can no more exist without research than faith without works. But a high degree of learning may exist quite apart from special investigation, whereas a considerable success as an investigator may be attained almost without scholarship. Indeed, for university purposes, one may say that these are divergent paths which may or may not meet again. For the student who occupies the three or four years of his higher studies in gaining a comprehensive acquaintance, say, with a group of associated literatures, will obviously have no time to give to minute investigation, and similarly the student who uses the working time of two or three years upon a single limited topic will have but little opportunity for discursive acquisition.

Now, the humane way to look at such divergent courses would be this: To hope that in after years the unproductive scholar may be drawn into some congenial field of research—failing that, will at least radiate a learned influence in the community—and to hope equally that time will supply to the youthful investigator that general scholarship without which his researches must remain narrow, arid, and unavailable. But, unhappily, universities have assumed that research is *bonum in se*, and, virtually, that it is the single academic aim. Scholarship without the ulterior purpose of research has been regarded as scarcely respectable—as a form of dilettantism suitable for undergraduates, but beneath the dignity of grown men. Accordingly, irrespective of vocation, our university students have been thrust headforemost into special investigation, or, more unhappy lot, have been left to flounder helplessly in the quest of a mission. Only a few have emerged with the Doctorate in Philosophy, and the rest, frequently men of no worse parts, have fallen out in a kind of disrepute, having had neither the benefits of the cumulative nor the discipline of the specialistic régime.

The tendency to give importance to the degree of Master of Arts, in Harvard and elsewhere, is a partial recognition of the rights of mere scholarship. But the value of such a concession is largely offset by the fact that university professors not unnaturally give the preference, in the matter of recommendations, to their more intimate student collaborators; while college presidents and appointing boards still regard the doctorate as an indispensable qualification. More individual and personal methods of appointment will surely come about as the colleges learn that the average doctor has had just about the most inappropriate and impracticable education imaginable for the work required of him. A little frank confession on the part of many a former university fellow in a college chair would bring out the fact that for several years he had held his position and assured his success by cleverly concealing the inadequacy of his preparation for the work of the classroom. In fact, a supplementary course in universities might be one that taught the *doctorandi* how to appear to have the acquirements expected of every cultivated man.

Take a student who, for a matter of three years, has read deeply in Italian literature, covering practically the entire field, and utilizing intelligently the results of former research and criticism; and then take a student who, after a year or two of severe training in the phonology of the Romance languages, settles for a year in some small Italian town and exhaustively records one dialect of a language the standard form of which he hardly knows by ear. Which of these two men may fairly be said to have scholarship? Which is the more available as a mentor to our idle undergraduates?

But the best way to illustrate the evil of the fetich of research is simply to judge it by its fruits. Review the doctor's dissertations that have been produced in any field in Germany and America for the past twenty-five years. It would, we believe, be impossible in the whole range of the aberrations of learning to bring in evidence an equal body of futile enumeration and speculation. Immaturity and formlessness stamp the entire production. Either the students who perpetrated these "contributions to the sum of human knowledge" have never learned to think clearly, candidly, and as practical men, or they do themselves scant justice in work produced prematurely, under pressure,

and at the expense of the studies that make for fine intellectual balance. And the evil of research undertaken without judgment or vocation reaches far into the future. It might justly be maintained that to qualify for Government positions, or for other reasons, the university graduates of Germany have attacked in fifty years, and with only the appearance of scholarship, the work that might have engaged genuine investigators for a century to come. The result is that as creative scholars arise they will find the field encumbered with previous studies too badly botched to be helpful, yet, unhappily, not quite empty enough to be negligible. In other words, through making a fetich of research, the best-instructed nation in the world has, without exhausting, discounted and staled pretty nearly every topic that may engage the future investigator.

It is time to call a halt in the interest of posterity, if not of our own higher education. The remedy lies quite as much with the colleges as with the universities, for if proficiency in research is desirable in a college professor, broad attainments in scholarship are simply indispensable. When appointments are made on this only intelligent basis, the universities will be forced to provide courses with greater regard to the human material and practical considerations involved. By the frank recognition of scholarship as an ideal apart from special research, the latter branch of learning will greatly gain. It will be a distinct advantage to reduce the seminars to those who have a serious vocation, and their output to genuine contributions to science. Meanwhile, a welcome, if impartial, reform would be effected if the universities generally would follow the lead of Harvard in printing only dissertations of a reasonably important kind. Whether we need some more formal certification of simple scholarship is a fair subject of inquiry. To some it seems that (since from the point of view of scholarship the M.A. means too little, while the Ph.D. means either too much or too much of an irrelevant sort) there should be either an advance in the requirements for the master's degree, or a new intermediate degree analogous to the French *Agrégation*. A change in sentiment must come first, with a clearer perception that scholarship and research, both worthy ideals, are not necessarily synonymous.

LITERATURE FOR EXPORT.

The proposal brought forward by the French journalist, Hugues Le Roux, for the establishment in this country of an agency to distribute the best products of French authorship as a vindication of the "proper" character of the national literature, is a plan of the kind that we remember coming across with comparative frequency. M. Le Roux deplores the fact that "the American public has come to regard modern French novels as immoral productions of the worst kind, and that in consequence of this American bookstores are being flooded with books, quite unknown in France, apparently written and published specially for foreign consumption." Eminent men of letters like Jules Claretie, Paul Hervieu, and Marcel Prévost have expressed their approval of the motive behind the plan, though not convinced of its feasibility.

No nation, on the face of things, would be content to be known abroad by its worst side—no nation, that is, except the French. It has been the tradition that the Gallic temperament takes delight in exaggerating its own vices before the world, and in stigmatizing as hypocritical every other temperament which does not. But now it would appear as though France were growing weary of its reputation as the classic home of "wickedness." More than one writer and politician, for instance, has found it necessary to protest against the common conception of French social conditions cherished by Anglo-Saxon minds. We have been assured that the atmosphere of the typical Paris bourgeois home is as pure as that of any Teutonic fireside, and far more heavily charged with the spirit of love and consideration that makes life really worth while. Now, this warning against the wiles of the boulevardier novelist is scarcely necessary, since no people could conceivably go on playing the rôle that France has filled for centuries in the history of Europe and of civilization without being grounded on a healthier basis than the "life" we find depicted in the works of even so skilled a writer as Maupassant. On the other hand, the apologists for France are trying to prove a little too much when they quote a Parisian police prefect as saying: "Keep away your English, your Americans, your Germans and Russians from Paris, and I will make the city the cleanest capital in Europe." After all, English and Americans and Germans and Russians do not go to Copenhagen or Belgrade, and do go to Paris.

In the preface to an early volume of his plays, George Bernard Shaw explains that, after agitating for many years for the foundation of a Modern Theatre to produce modern drama, and getting one finally established, he found that there were no plays that could be presented in the new theatre, and that he had therefore "manufactured the evidence." In the same way, it is to be feared that M. Le Roux and others who would erect a dépôt in America and England for the sale of French books adapted to the prevailing national taste, would have to manufacture the greater part of their apologetic literature. We are far from implying by this that the accusation of mercenary indecency brought against the purveyors of French literature "for export only" would hold good against the really high-class work that is being done in France. But, on the other hand, it is scarcely to be expected that even the manner of a Marcel Prévost or a Eugène Brieux would commend itself to the Puritan taste in this country, if that is the taste the projectors of the plan would seek to conciliate. Putting the Puritans aside, there are two classes left, the people who now supposedly read the export brand of literature, and who would not take to a higher type of reading in any case; and those who know the real worth of contemporary French literature and are willing to take even their Anatole France, in spite of his strong flavor.

French literature, however, is not entirely synonymous with French *belles-lettres*. M. Le Roux's proposed American agency would be fulfilling an important service to France and to this country if it would disseminate a broader knowledge of the admirable work that is done by Frenchmen in criticism, political and social history, and the less abstruse sciences. At the present moment, for instance, the battle against Romanticism which has been under way for some time, has entered on a sharper phase with the publication of Lemaître's lectures on Rousseau. The great world-movements of the time—colonization, immigration, Socialism, feminism—are receiving useful exposition at the hands of French savants, like the brothers Leroy-Beaulieu, Emile Boutmy, and Gabriel Tardieu, as well as a host of younger scholars who therein reveal their traditional dislike for the minute scholasticism of their German *confrères*.

In the field of fiction, on the other hand, it is difficult to see why Frenchmen should be anxious to acquire a reputation other than the one their best work has. With all its exaggerations of worship of the joy of physical life above and to the exclusion of everything else, it stands nevertheless for a system of thought and action that vast numbers acknowledge. It is, indeed, slandering the French nation to say that what we know as their "realism" in literature is the product of purely mercenary motives, rather than the expression of a natural and certainly comprehensible philosophy of life.

OUR "STREPITOUS" POETS.

A writer in the Contributors' Club of the *Atlantic Monthly* notes the appearance of a new school of poets. "Instead of loafing and inviting their souls," he says, "these gentlemen fly to the uttermost parts of the earth in search of

verbal monstrosities, and return with hordes of barbaric captives. Not satisfied with this, they seize and torture beyond recognition respectable native citizens of the language. Borrowing from one of their own number, we might call them the 'strepitous' school. . . . In four short and harmless-looking, albeit apparently serious compositions, I discovered the following words: 'Dunching,' 'planished,' 'skelloch,' 'heveril,' 'strepitous,' 'riffling,' beside the more familiar 'wastrel,' 'guidon,' and, of course, 'rede' and 'sib.' "

An equally curious collection could, no doubt, be brought up by a dredger in any month's magazine poetry. From words which regularly belong to poetry, but which everybody understands, like "doff," "tryst," "gyves," "æon," and "mart," we pass by imperceptible degrees to noble and surprising words which nobody understands. Some are gradually making their way into the conventional circles of poesy. Thus "sib" is progressing. Probably few everyday readers knew what it meant till Kipling used it half a dozen times over in "Tomlinson." Now it is a mark of strictly up-to-date culture. Some other words, like the use of "ruin" as an intransitive verb in a line to which the *Atlantic* writer points with horror, "Phaeton headlong ruining down the sky," can lay claim to Tennysonian parentage.

Ruining along the illimitable inane,

is the fortieth line of "Lucretius." But after all deductions have been made for error and over-severe standards, there still remains a singular phenomenon in this eruption of the unusual words.

It would seem, in fact, as if a good proportion of our rhymesters, in and out of the periodicals, had taken seriously the advice given by Hilaire Belloc in "Caliban's Guide to Letters," where he discusses the "prattling" and the "obscure" styles of poetry, "the only two styles possible in manufactured verse." In the course of his instructions for the former he says:

> It is at this point that I must introduce you to a most perfect principle. It is called the Mutation of Adjectives—it is almost the whole art of Occ. verse. This principle consists in pulling out one's first obvious adjective, and replacing it by another of similar length, *chosen because it is peculiar*. You must not put in an adjective that could not possibly apply; for instance, you must not speak of the "Ponderous Rabbit," or the "Murky Beasts"; your adjective must be applicable, but it must be startling, as "The Tolerant Cow," "The Stammering Minister," or "The Greasy Hill"—all quite true and most unexpected.

Dr. Caliban's strictures on the young poets who "have imagined that the mere use of strange words made up the obscure style" have been less heeded.

How far we have passed beyond the stage when Lewis Carroll could name "wild," "lonely," "weird," and "strange" as the "adjectives that suit with every word." Those are the very adjectives to be avoided now, as commonplaces of versification. As the foregoing facts show, we are developing in their place a new set of general utility vocables, including not only adjectives, but nouns, verbs, and all other parts of speech with the possible exceptions of articles and pronouns. These adorn the most ordinary subject matter, turn literalism into fancy, and finally enable the reader to distinguish prose from poetry even more quickly and certainly than by the length of the lines.

But the really tremendous fact about this innovation is the almost limitless possibility of its extension. Admit at once the odd and unfamiliar word to an honored place in letters. Repeal the old regulations of the rhetoricians in favor of clearness and simplicity, and a new world of expression is opened up. What most commentators fail to realize, though the bare facts are to be found in all the textbooks, is the almost inexhaustible stock of words ready to be used. Talk about wells of English undefiled! The young poet who is not afraid to bore—we intend no offence by the word—into new strata of language can tap a veritable Texas "gusher." We open the volumes of the "Century Dictionary" at three places, practically at random, and are rewarded by "selcouth," "seld," pegme," "pegomancy," "pejority," "pel," "goliard," "golion," "gomerel," besides a number of other words which, equally worthy in respect to sound and sense, are either worn out by age, or of shady reputation. Any one may use these who pleases. In fact, we should offer them formally to the poets who may be numbered among our readers but for the fact that any one of them who owns a dictionary may help himself to others as good or better. It would be as presumptuous to proffer these particular words as for a man to offer apples to any casual stranger standing in an orchard that belonged to neither one of them.

The world is running out of many important commodities. The good lumber is likely to be used up before the end of this generation, the petroleum before the end of the next century, the coal and iron and copper somewhat further ahead. But it is safe to predict that every one of them will be exhausted before the writer who uses the English language, at least, will lack for novel and astonishing words. And so long as such words are to be had, we shall still enjoy an adequate supply of a product which, when printed with a capital letter at the beginning of each line and occasional rhymes at the end, will look like poetry.

SULLY-PRUDHOMME AND HIS GENERATION.

PARIS, September 10.

The death of Sully-Prudhomme on September 6 was the death of a philosopher; it was the twentieth year since he published his last line of verse. Six years ago the world was astonished to learn that the poet still lived, when the Nobel prize sought him out. The mass of Sully-Prudhomme's poetry was too gray in color, too devoid of the warm life of earth, and, soaring into ideal heights, too frigid to win even a small public of worshippers. It was understood that the man was France's greatest living poet. Yet no one seemed to read his books—and every one knew by heart a few simple stanzas which had been published in his first hesitating volume. No poem ever lifted its author so suddenly and solely to the position of a classic as the lines on the Broken Vase—"Le Vase Brisé." It was a permanent sorrow to the poet that a few perfect verses should overshadow all the rest of his life's effort. They have reached even the proverbial stage, entering into the language as well as the literature of France during their author's lifetime.

N'y touchez pas, il est brisé

has been said in Parliament of the political *bloc* that held Jaurès and Clemenceau together, just as it is quoted by hearts whose love is evaporating. Another little piece —"Yeux"—may follow the Broken Vase into all future anthologies of French classic verse. For Sully-Prudhomme has already entered into immortality as an anthology poet, and the immortals change not. It was his illusion to be dissatisfied and look for his greatness where it was not.

The technical student of literature will look into the volumes of verse published between 1865 and 1888 for other than poetic reasons. Sully-Prudhomme entered on his intellectual life with the little band of Parnassians, who reacted in the sixties and following decades from the lawlessness of dying Romanticism. They held the sound doctrine of French poetry, that verse should be crystal clear and regular in its harmony. As they constituted a veritable poetic revival, having true poets among them—Leconte de Lisle, Hérédia, François Coppée, and even the wasteful Catulle Mendès, who gave the name—this little band of youth who followed Cicero's advice and determined to mount up the serene heights of the antique Parnassus, wonderfully succeeded in pulling French literature together for a term of years. All the aberration of Decadents, long since happily defunct, and the still dying Symbolism have not undone their work. Sully-Prudhomme, who began life with the scientific training of the École Polytechnique, took time in his later years to reason out the theory of French versification in a prosody which is literature and which may serve to open foreign ears, so often close shut to the beauty of sound in French poems.

It is curious that the kind of verse for which Sully-Prudhomme was to win name and lasting fame—the *Lieder* of a few sentimental stanzas, which he seems almost to have introduced among the French—should have been inspired in him by a hopeless passion. "She" married an-

other—and he, being thirty years old, did not recover. Gaston Paris, his comrade of those years, tells the story. The world liked these emotional echoes of a day that was dead, but never listened to the substitute love-making of "Les Destins" and "La Justice" and "Le Bonheur." Only the name of one of these volumes of abstract verse—"Vaines Tendresses"—took hold of the popular consciousness.

As an earnest, if not conclusive, writer of philosophy, Sully-Prudhomme may continue to be known. The work on Pascal's religious theory was recently received with favor by the public that thinks. There are chapters, perhaps whole treatises, of like speculation ready for publication among the papers left by the dead thinker. The prelude to all these was the very noble translation in verse of a portion of Lucretius, published thirty years ago.

The aged Guizot, whose own life went back to the Terror of the Revolution, felt himself stirred by the first poems of Sully-Prudhomme. Last March a score of friends of the French Academy came out to Chatenay to celebrate the twenty-fifth anniversary of the poet's election to their learned body. The hand of death was already upon him. But to the one who read in a voice broken with emotion verses in his honor, he said with gentle philosophy: "Speak louder, only the dead man hears you!"

To the end he protested that science, which he had so ardently cultivated to his art's damage, left him a firm believer in spirit. S. D.

NEWS FOR BIBLIOPHILES.

While not the rarest of early books on Virginia, John Smith's "Generall Historie of Virginia, New-England, and the Summer Isles," is one of the most interesting to collectors. It is a folio of 126 leaves, besides the engraved title-page and the four folding plates or maps. There was only one edition, but alterations in the title and the separately printed plates were so numerous that the exact bibliography of the book is complicated. It will be worked out in full by Wilberforce Eames in the next part of his continuation of Sabin's "Bibliotheca Americana." The book was entered in the Stationers' Register by Michael Sparke, the Puritan bookseller, July 12, 1624. It is supposed to have been printed at the expense of the Duchess of Richmond and Lenox, to whom the book is dedicated. Evidently the author or publisher, or both, wished to get the book out as soon as possible; and to hasten matters the copy was divided and sent to two different printers. The imprint of the earliest form of the title-page reads "Printed by I. D. and I. H. for Michael Sparkes." The first part, Books i to iii, was sent to one printer, who was expected to fill pages 1 to 104, signatures A to O. When the remainder was turned over to the second printer, he was instructed to begin with page 105, signature P. But Book iii. ends on page 94, leaving one leaf of signature N. Not to lose these two pages, Smith filled them with some of the commendatory verses of his friends; and there is this curious heading at the top of page 95:

Now seeing there is thus much Paper here to spare, that you should not be altogether cloyed with Prose; such Verses as my worthy Friends bestowed upon New England, I here present you, because with honestie I can neither reiect, nor omit their courtesies.

Books iv. to vi. begin with page 105 and extend to page 248.

As originally engraved, the title states that the "Historie" of the colonies extends "from their first beginnings Anº 1584: to this present 1624." One copy only with a title-page set from types is known. According to this, the "Historie" extends "to this present 1625." There is, however, no change in the text. This copy, which appeared in the Bunbury sale at Sotheby's, July, 1896, is now in a private collection in New York. The next year, 1626, the enterprising publisher, desirous of giving buyers an impression that his book was up to date, but not wishing to incur the expense of making a new title, had the copperplate altered to read, "to this present 1626"; and the date in the imprint changed from 1624 to 1626. At the same time a crown was added to the portrait of Prince Charles (now become King), and the inscription in the scroll above was made "Carolus Rex" instead of "Carolus Princeps." In the same way new issues were prepared for 1627, 1631, and 1632. In the case of the first and second of these, the date of imprint is the only difference. In 1632 the stock seems to have changed hands, as a new bookseller's name appears: "Printed by I. D. and I. H. for Edward Blackmore Anno 1632." Still later, probably during the same year (at least there is no further change in date), the portrait of King Charles was again retouched, giving him the appearance of greater maturity. There are thus six different states of the engraved title, and, counting the 1625 printed title, there are seven distinct issues of the book, though the printed sheets of text in all are precisely alike, not merely word for word, but from the same types. Either the original edition of 1624 was large or the sale of the book was slow, leaving a considerable number unsold as late as 1632. Only a single copy of the issue of 1631 is known; and, as already stated, one copy only with the 1625 printed title seems to have survived. The issues of 1627 and 1632 are probably the most common.

The four folding copperplate maps seem to have been printed off a few at a time as required. Two of them had already been used in earlier books. The map of Virginia, made for and used first in Smith's "Map of Virginia," 1612, is found in eight distinct states, the earliest being distinguished by the absence of Smith's coat of arms in the lower right-hand corner and by the absence of the date 1606 below the scale and 1607 below the picture of Powhatan. The earliest states, of course, should not be found in the "Generall Historie." The reference "Page 41 Smith" in the lower right-hand corner appears first in the sixth state. The map of New England, made for and used first in Smith's "Description of New England," 1616, is found in at least nine states. The earliest, 1616 (of which two impressions only are known), is distinguished by the absence of Smith's coat of arms and the two names "P. Travers" and "Gerrards Ils." The fourth state is probably the earliest which should be found in any copy of the "Generall Historie." The two other maps "Ould Virginia" and "The Summer Ils" were apparently engraved especially for the "Generall Historie." Three states of each are known. The earliest in each case can be distinguished by the absence of the imprint "Printed by James Reeve." A fuller enumeration of the points of difference has been worked out by Mr. Eames.

In addition to the engraved title and the four maps some copies contain two interesting portraits, one of the Duchess of Richmond, and the other of Matoaka (Pocahontas). While their presence is extremely desirable from the collector's point of view, they were probably inserted in comparatively few copies. Owing to the rarity of these portraits, they were accurately reengraved at an early period and these copies sometimes pass as originals. In the reëngraving of the portrait of the Duchess of Richmond the "w" in "Howard" in the title is raised above the other letters; in the original it aligns perfectly.

Some copies of the book were printed on large and thick paper with a different water mark. The Beckford copy (now Robert Hoe's) brought £605; the Brinley copy (now in the Lenox Library) brought $1,800; and the Barlow copy (now J. Pierpont Morgan's) brought $1,900. It is small wonder that the book, in the words of the late Justin Winsor, "has long been the delight of the discriminating collector who hunts down varieties with the zest of a botanist in an untried field."

The Anderson Auction Company of this city under its new management has made an important change in the accustomed manner of selling. It announces that hereafter all bids must be made by the lot as described in the catalogue, as is the English custom. Heretofore in the American salesrooms books have been "sold by the volume, part or piece." The first sale of the new season was on September 23.

Correspondence.

THE SITUATION OF HISTORY IN SECONDARY SCHOOLS.

To the Editor of The Nation:

Sir: I am much interested in Professor MacDonald's communication under the above title, in your issue of September 12. It illustrates once more the curious mental jugglery, by means of which our educational apologists succeed in maintaining their complacent front: The patient is of course hopelessly ill—but under our treatment he has really improved; the operation was a success, but the man died—these are equivalent apologies from another realm.

Now what are the facts as Professor MacDonald states them? Formal use of textbooks has declined, emphasis is placed on social, economic, and international aspects, reference libraries have multiplied, illustrative material is in more common use. So much to prove the operation a success. What are the fatal symptoms still present? The libraries may be dipped into for occasional fun, but there isn't "time" (which, in my experience, is synonymous with "disposition") to use them seriously; the preparation of notebooks based on the use of

outside material is a farce; there is a striking lack of orderly and exact knowledge even of elementary matters; it is often impossible to tell whether the student knows anything or not; textbooks seem to be used just as predominantly as they were before the "epoch-making report" ordered them off the premises, etc. Isn't this a clear case of a successful operation followed by—death?

Let us drop the self-deception we have so long practised in the effort to persuade ourselves that our college education and the secondary preparation determined by it attain some sort of success. A man who dares to call a spade by its name will admit that the whole business is bankrupt; it fails. As for history, our boys are both ignorant and indifferent: they don't know it, and they don't care.

How does Professor MacDonald propose to operate next time? The Eastern nations which the "epoch-making report" had most logically stitched on to Rome and Greece must be amputated; and Charles the Great ought to be tied-off. Next, the examinations must become once more just about what they were before the "epoch-making report" made them what they are. Finally, the secondary schools must do less—though they already do less than they might do, if they were free to do anything intelligently. Meanwhile, with the situation desperately bad, well—the "methods of teaching history have undergone fundamental and praiseworthy change"!

Now, then, facing the facts without the least will to console, I submit that there are two possible ways to proceed: The first is to teach the facts by main force. In the end, the boys will know, though they probably won't care. It is the way of the German *Gymnasium*, where, year in, year out, they club a submissive youth with the precious historic lore. I do not think the method available here. It can be effectively applied only where the compelling force of public opinion is behind it. In Germany they really believe the knowledge in question matters: the schools, the universities, the professions, the government, the family—all believe this knowledge matters. And with this power behind him, the teacher can use the pressure required to attain his end. It is very different with us. We don't take the thing seriously; at heart, we don't believe it matters. And it's a mistake to think that we are going to care more some day—when, as a nation, we quiet down, get cultivated and that sort of thing. We are going, I suspect, in just the opposite direction, to care, in a word, less and less. We are gradually getting our own sense of relations and values—and it's not exactly Melanchthon's, either! It doesn't, of course, permit us to turn our back on antiquity, nor, on the other hand, does it permit us to start there. Our school insistence is therefore hollow, formal, ineffective. There is no conviction—social, scholarly, official, or family—back of it.

The other way requires us to abandon the traditional method—traditional it remains despite the trimmings recommended in the "epoch-making report"—and to abandon it, "lock, stock, and barrel." Isn't it absurd, on its face, to maintain that an American boy should be free to choose which he shall know—the history of Greece or the history of his own country, the Constitution of Kleisthenes or the Constitution of the United States? What availeth it a man to know the Licinian laws, if he be ignorant of the Emancipation Proclamation and the Fifteenth Amendment? We reject outright the pretended equality of values. I have just as little patience with the contention that to understand modern polity it must be approached via the Ancients. That may be sound philosophy, it's abominable pedagogics. In education you start from experience, thence to recede, diverge, explore, as far as you, and the child, will. Once more, let us be honest. Let us even suppose the impossible; let us suppose our boys to know their ancient history textbooks. Well, what is it that they know? Is the reconstitution of a remote and alien life, polity, spirit, so simple that it is a fit occupation for babes? Scholars realize the insuperable difficulty of grasping and interpreting institutions and ideals fundamentally different from our own. The logical outcome of this fact must be the postponement of the effort to the period of mature study. The early result, if successful, is at best a successful make-believe—a guessing game with words, names, and blank symbols.

But there is worse to come: our secondary teaching of history, like our secondary teaching of literature, seems, in the light of results, a diabolically ingenious switch for diverting the attention and interest of boys from both realms forever after. In an age when we need above all things the disposition and the ability to bite into social and political problems, we cling to a scheme of historical education that kills the possibility of either. I propose, therefore, that we cease absolutely to tinker about for a result, bound to crumble in our fingers, even should we succeed in reaching it; that the "epoch-making report" be for good and all laid on the table; that the starting point of our history study be found in the institutions in which the boy lives; that first their actual operation be observed, later their genesis, purpose, etc., be investigated. Our boys will then perhaps know what an institution is—something they will never learn from the desiccated pages of the best textbook in ancient history ever written. Thence a detached, intellectual interest running in various directions may conceivably be developed. But the backbone of a genuine and serviceable, not a merely verbal, historic knowledge and interest must be an actual experience. As to that there can be no choice, not only because it is our own history, but because without it the whole study is futile—as futile as a child's attempt to understand the phenomena of Mars without a knowledge of earthly physics, chemistry, or meteorology. The procedure I urge will be supported by the progressive complications and activities of the boy's life; by a public opinion that is likely to gain in volume and strength. In the end, scholarship itself would gain by it, though that is not one of my reasons for urging it. I see no cause to regret the pass to which we have come. The effort to put ancient history in the centre fails, and it ought to fail. Let us have the sense to try something that can succeed, and that ought to succeed. The ancients will still get their innings—but they won't be first at the bat!

ABRAHAM FLEXNER.

New York, September 18.

COLLEGIATE INSTRUCTION AT NIGHT.

TO THE EDITOR OF THE NATION:

SIR: After reading the article in the *Nation* of September 5 on University Extension, it occurs to me that you may be interested in the enclosed circular, which is exactly in the line of what you suggested. Although it has no date, it was issued about the first of September of this year.

A. LAWRENCE LOWELL.

Boston, September 17.

The circular which Professor Lowell kindly sends the *Nation* contains the following announcement:

Believing that there are many young men and women who would be glad of an opportunity to get the broad intellectual outlook to be obtained from college studies, the Lowell Institute, coöperating with Harvard University, proposes to offer to the public a few of the courses now taken at Harvard in the freshman and sophomore years. The plan is to give each year a couple of courses, to be, so far as possible, identical with those given at Harvard, taught by the same professors, and conducted in the same way, with the same tests and final examination, followed by marks on the same scale. A mark of any grade obtained in these courses will therefore be equivalent to the same mark obtained in a similar course at Harvard. The instruction will be given in the evening, in the new buildings of the Harvard Medical School, and will be free of charge. . . . The courses will begin about the first of October, and will continue until June, with vacations at Christmas and in the spring. In subsequent years, courses on other subjects will be given, the courses changing each year.

The courses will be open to men and women and a student may take either one course or both. But no persons will be allowed to attend a course unless qualified to profit by it; and for that purpose, if under twenty years of age, they must have graduated from a high school or an institution of equal grade; and if over twenty must have so graduated, or show in some other way a sufficient degree of education. . . . If a student fails to show sufficient aptitude or diligence, or to attend both lectures and sections with substantial regularity, he or she may be excluded from the course. Any one who completes the course and passes the examination satisfactorily will be given a certificate thereof.

New York University offers a considerable number of courses at night.—ED. NATION.

HOCCLEVE AND THE POEMS FROM DEGUILEVILLE.

TO THE EDITOR OF THE NATION:

SIR: The latest announcements of the Early English Text Society devote considerable space to a new edition of the prose Englishing of Deguileville's "Pilgrimage of the Soul of Man," containing "poems by Hoccleve." The editor is Dr. Hans Köstner. Since this edition will probably be a final one, an examination of Hoccleve's claim to authorship of the fourteen short poems referred to, scattered through the prose translations, is perhaps worth while.

It should be noted, first, that the Catalogue of the Harleian MSS. in the British Museum (1744, III, 126), that Miss Cust in her curiously defective edition of the work

(1859), Warton-Hazlitt (1877, III, 67), and Prof. Brandt in Paul's "Grundriss" all accept the work as Lydgate's, both prose and metre. Sidney Lee, in his article on Lydgate in the "Dictionary of National Biography," says it is "perhaps by Lydgate."

But Dr. Schick in the introduction to the "Temple of Glas," (1891, ci—ciii), declares against Lydgate's authorship, and points out the inaccuracies upon which the ascription has been based. He shows there is no external evidence in favor of Lydgate's claim, and adds: "Nothing . . . points decidedly to Lydgate as its author" (p. cii).

Now Dr. Furnivall, in 1897, says that he is satisfied that the metrical portion of the work is Hoccleve's (Early English Text Society Extra Series 72). Dr. Bock, in his "Metrische Studien zu Hoccleves Versen," 1902, accepts Dr. Furnivall's view, which is the one we find in the announcement that gives rise to this article.

What evidence does Dr. Furnivall give for his opinion? In brief, it is this: one of the fourteen poems (No. VII. the "Lamentation of the Green Tree complaynyng of the losyng of hire appill"), appears separate from the rest of the text in MS. Phillipps 8151, ascribed to Hoccleve, in the midst of other poems by him. Dr. Furnivall says:

> I cannot distinguish between the Virgin's Lamentation [the poem above named], which we know is his, and that of the other thirteen poems. In them we find his syllabic *hire* for *their*. . . his *e* before a vowel and *h*, his spelling *honure* (though not his rhyme) and his thwarted accent or stress (wrong acentuation to get words in the metre).

All these points seem to me to be true, from my slight observation of the poems. But these coincidences cannot decide the matter.

Taking up the claim of Lydgate, we may discuss it at once, on one metrical test. There is hardly anything which may be called a rhyme-tag in the whole of the 931 lines of the fourteen poems. To any one familiar with Lydgate's style (it may be examined most easily in the recent excellent edition of "Troy Book" by Dr. Henry Bergen of Yale), this test will be final in excluding Lydgate from consideration.

Turning back to Hoccleve, let us see whether these poems satisfy all metrical tests. E. Vollmer, in his study in *Anglia* xxi., 203 ("Sprache und Reime des Londoners Hoccleve"), says of Hoccleve's rhymes "—*y* und —*ie* werden streng geschieden." That is, Hoccleve, like Chaucer, never rhymed *remedyë* with *whi*, for instance, since he considered the latter word monosyllabic, the other of four syllables. In this view Dr. Bock ("Metrische Studien," p. 59) cordially concurs. My own observation of what is universally admitted as Hoccleve's poetry agrees with theirs.

But it is an interesting commentary on the slipshod methods of some recent theses, that Dr. Bock totally failed to apply this test to the fourteen poems of the "Pilgrimage of the Sowle," which he nevertheless complacently accepted as Hoccleve's, and studied in his dissertation. Had he done so, he would have found in thirteen of the poems (No. vii. being ascribed to Hoccleve elsewhere, and left out of consideration for the moment), out of twenty-four times in which a rhyme occurs with the word ending in —*i*, —*y*, or *ie*, *nine* cases contrary to Hoccleve's and Chaucer's invariable usage. These I subjoin:

Poem i. l. 9, maladyë: forwhi: remedyë.
Poem ii. l. 13, certifië (3 p. pl. pr.): folily.
Poem v. l. 13, on hy: companyë.
Poem v. l. 22, victóryë: enemy. (This is doubly impossible, as Hoccleve never rhymes this word with anything but stóryë, memóryë, glóryë, etc.)
Poem viii. l. 23, companyë: vilanyë: traytoursely.
Poem xiv. l. 90, cryë (inf.): openly.
Poem xiv. l. 184, enemy: hertely: *also:* (!)
Poem xiv. l. 268, companyë, openly, eternally.
Poem xiv. l. 296, on hy: companyë; humble.

Now it is fair to submit that when a group of poems presents 37 per cent. of cases of one rhyme, breaking the absolute rule of an author's practice, we have a right to demand further evidence that these poems are genuine. It is noteworthy that Poem vii., claimed elsewhere as Hoccleve's, does not contain any breaking of this rule, but has four cases in which it is obeyed. I have thus no objection to its acceptance as Hoccleve's; what then has happened to cause this interesting state of affairs? May I present a conjecture? I believe that the unknown translator of the prose versions of the "Pilgrimage of the Sowle" made the poetical versions also, *Poem vii.* alone excepted. This may be Hoccleve's work, and was inserted in the text, just as, thirteen years later, in translating Deguileville's "Pilgrimage of the Life of Man," Lydgate inserted Chaucer's "A. B. C. Prayer to the Virgin" in its proper place in the text, instead of making a new rendering of the same from Deguileville.

Dr. Furnivall will be the first to admit the validity of the rhyme-test I have here put forward.

HENRY NOBLE MACCRACKEN.

London, August 17.

Notes.

Longmans, Green & Co. have in press a volume of reminiscences by the late Gen. John Eaton, called "Grant, Lincoln, and the Freedmen." The book deals chiefly with the work of Gen. Eaton, when, under the directions of President Lincoln and the War Department, he took charge of the negro refugees.

The Arthur H. Clark Company of Cleveland announces a biography of Dr. John McLoughlin, by Frederick V. Holman of Portland, Oregon. Dr. McLoughlin, better known as the "Father of Oregon," was for over a quarter of a century dictator in that vast region known as the Oregon Country. The book will contain portraits and illustrative documents.

There is to be a new edition published by Smith & Elder of J. A. Symonds's "Essays Speculative and Suggestive," long out of print. The Preface is by Horatio F. Brown.

William Doxey of Baltimore announces for fall publication: "True Manhood," by Cardinal Gibbons, the basis of the volume being an address to the graduating class at Worcester University this summer; and "Rose of Old Régime," and others poems of home, love and childhood, by Folger McKinsey.

Houghton, Mifflin & Co. will publish in October the Rotch edition of Emanuel Swedenborg's Theological Works in thirty-two volumes. This is the first complete edition of Swedenborg's theological writings and the first trade edition of his works published in this country.

Clarence F. Birdseye's "Individual Training in Our Colleges" (The Macmillan Company) is a book of wider scope than the title would indicate. In a substantial volume of more than 450 pages, Mr. Birdseye relates in considerable detail the history of higher education in America, and traces the development of our universities from the early sectarian schools and colleges. He takes up the present condition of the various types of college and university, their relations with secondary and professional schools, and with the public, and the problems of athletics, of the social activities of students, of discipline, instruction, etc. His thesis, in support of which he marshals a large amount of testimony, is that our colleges generally fail in the matter of training the individual, both in mind and character. He discusses the several remedies which have been proposed, but he specially urges that Greek-letter fraternities, through the influence of the alumni, be made a more powerful instrument for maintaining high ideals of scholarship and conduct. The book is too long-drawn out, and in parts is repetitious; but it contains much important material in the form of documents and reports, as well as of the author's own observations.

"The Truth About the Congo," by Frederick Starr (Chicago: Forbes & Co.), is a reprint of a series of articles which appeared in the Chicago *Tribune* between January 20 and February 3 of the present year. It may be sufficient to say that they are frankly and unqualifiedly a defence of existing conditions in the Congo, based on a trip of several months' duration. If a person desires to maintain that floggings, chain-gangs, and prisons are unobjectionable in Central Africa because we have them also in the United States, that the British are no better than the Belgians in the matter of punishments and mutilations, and that the Congo natives are not very susceptible to pain, anybow, there is little chance, or need, for argument.

The article upon Bolivia by its minister to this country, Señor Y. Calderon, is the most prominent feature, barring the illustrations, of the *National Geographic Magazine* for September. A sketch of Bolivia's early history is followed by suggestive facts in regard to its material resources, commerce, and future prospects. Treating of the need of better communication with the coast he says that nearly one thousand miles of railway are being constructed by an American syndicate which will open to commerce the most thickly populated section of the country. As regards the future, he ventures the hope that "a confederation of Peru, Bolivia, Chile, Argentina, Uruguay, and Paraguay as the United States of South America, will be established, and that Ecuador, Venezuela, and Colombia, reunited, and Brazil will form a trinity of nations that, with their sisters of the North, will be the beacon light of the world, shining with the undimmed brightness of human rights, peace, and happiness." L. A. Bauer describes the work in

the Pacific Ocean of the magnetic survey yacht Galilee, under the direction of W. J. Peters, the funds being supplied by the Carnegie Institution of Washington. He concludes with a plea for the construction of an entirely non-magnetic specially built vessel, which would not only greatly facilitate the acquirement of the magnetic data and reduce the running expenses, but would add materially to the safety of those on board.

A remarkably vivid characterization of the Arabs and Kurds of northern Mesopotamia is to be found in the account given by Mark Sykes of his recent journeys in that country in the *Geographical Journal* for September. His portraiture of them enables one to understand why the region, once teeming with inhabitants, is now practically a desert, though its wonderful fertility is shown by the fact "that the hillsides are splashed with yellow, blue, and purple, while on the riversides our horses could hardly force their way through the snowy banks of daisies and cowslips." Especially interesting is his description of the elaborate form of sport among the Arabs, which is at the same time the serious business of their lives, that is "the regular and endless warfare in which they are continually engaged with one another." Among the rules of war, which are strictly and decently observed, are the following:

To kill an enemy in battle is discreditable and savage; to wound slightly is what is aimed at, and to wound a man slightly with a bamboo lance twenty feet long is no small feat of skill. To surrender is not discreditable; flight is as justifiable as attack; to carry on warfare at night would be scandalous and shameful.

Ellsworth Huntington, the well-known American traveller, gives some of the results of his explorations in the basin of Turfan in Chinese Turkestan, which is of "peculiar interest, because, though situated in the very heart of Asia, its lowest portion lies 300 feet below sea level." Its climate is characterized by extremes.

"A Text-Book of Irish Literature," part i., by Eleanor Hull (London: Nutt), was written primarily as a text-book to meet the growing demands of Irish intermediate schools for works on the national literature, but it will be found equally convenient by the general reader who wishes a brief introduction to the subject. With a few reservations, we can commend it cordially for both these uses. Our chief criticism of it would be that Miss Hull accepts too freely the traditional dates and ascriptions of early Irish writings, or, at least, fails to distinguish clearly between dates which are merely traditional and those which are historically assured. She is familiar, to be sure, with the methods of critical scholarship and makes frequent use of its results, even in the matters to which we now have reference. She shows a prudent skepticism about the works of pre-Christian poets like Amergin and Ferceirtne (page 203); and she recognizes that the hymn attributed to St. Fiacc must be considerably later than the date of its reputed author (page 150). But, for the most part, she speaks of the poems assigned to the fifth, sixth, seventh, and eighth centuries as if their authorship were definitely proved, whereas, in many cases, it is doubtful, and some of the pieces are now believed, for good reasons, to be of a later age. The splendid "Song of the Sea," for example, said on page 230 to have been composed by Ruman Mac Colmain, who died in 747, is held by Dr. Kuno Meyer, on linguistic grounds, to be as late as the eleventh century. On the whole, the defects of the work are such as might be easily corrected in a revision. Its excellences, on the other hand, are more organic and important. The materials are well chosen to illustrate all the important phases of early Irish literature; the style is clear and agreeable, and the arrangement effective. The literary judgments expressed are sound and independent; not lacking in enthusiasm, but free from the extravagances of praise in which perfervid Celts are wont to indulge. We would commend particularly what the author has to say (on page 99) of an "element of fine and healthy optimism which is strangely at variance with the modern popular conception of the prevailing melancholy of Irish literature." It is a satisfaction to have a text-book which will not perpetuate a misapprehension of Celtic literature which has been almost ineradicable since the time of Macpherson.

"The Apology and Crito of Plato" have been edited by Isaac Flagg (The American Book Co.) primarily in order to present an edition of these two dialogues, which would contribute to the mastery of the text as so much Greek. The commentary, which is at the bottom of the page, lays especial stress upon the linguistic side, the grammar and syntax, and upon what English teachers of to-day call the rhetorical analysis of the text. Professor Flagg's long experience as a teacher renders this part of the work eminently practical and thorough. Other matters such as geographical allusions, biographical details, technical terms of Attic legal procedure, as well as the elusive twists and turns of meaning which are characteristic of Plato's style are explained in later pages. It seems unfortunate that the main commentary on these immortal dialogues should be grammatical, and yet they are usually read early in the college course, when the important matter is that the student should learn Greek. The introduction is devoted to a sympathetic discussion of Socrates as the great dialectician, and to dialectic itself. It is admirably written. Its very value, however, will render it difficult to teach; it can hardly be assigned in regular lessons. But a judicious teacher can probably find a way to make his students read it so as to touch the emotion as well as the mind—and that is doubtless all that the writer could reasonably expect.

Prof. William F. Giese of Wisconsin has edited Renan's "Ma Sœur Henriette" (Henry Holt & Co.), a delightful bit of biography, appealing to a taste for delicate intellectual pleasure, made more serviceable by the annotations of an experienced teacher.

The same firm has issued Edmond About's "Le Roi des Montagnes," with notes, exercises, and vocabulary by Otto Patzer of the University of Wisconsin. About is a satirist too little known in America, and "Le Roi des Montagnes," a yarn about the capture of a young German and two English women by a Greek bandit, is sure to interest the advanced high school student or freshman.

The new quarterly review *Menschheitsziele* (Humanity's Aims), edited by Dr. Molinaar of Munich, and published by Otto Wigand, in Leipzig, is an important addition to German periodical literature. The three numbers which have already appeared show that every effort is made to secure the best contributors, who treat a variety of artistic, literary and scientific topics in an interesting and instructive manner, and with an independent and liberal spirit.

A new edition of the fun-poking "Faust: der Tragödie Dritter Teil," by Deutobold Symbolizetti Allegoriowitsch Mystifizinsky, otherwise Friedrich Theodor Vischer, author of "Aesthetik oder Wissenschaft des Schönen," and "Auch Einer," has just made its appearance, to commemorate the centenary of the author's birth in 1807. Tübingen: Laupp'sche Buchhandlung.

"Streifzüge durch die Welt der Grossstadtkinder," (New York: G. E. Stechert & Co.) is the title of an attractive pedagogical help in the form of "excursions" undertaken by the Bremen schoolmaster, F. Gansberg, who seems to know city youngsters well and just what is likely to interest them. Little Hans and his comrades have all sorts of adventures in the streets, the markets, the warehouses, the parks and the suburbs, and with saucer-like eyes learn a deal about the big and noisy world, as well as something of its quiet corners. The book deals with German life, of course, but wide-awake American teachers reading German and believing in *Anschauungsunterricht* should find the work suggestive. Profuse pen and ink drawings by C. Windels adorn the volume and make it practical.

It used to be the fashion for several of the illustrated English journals to issue their Christmas numbers so early in the season that the dazed bookstall visitor wondered whether it was autumn, winter or spring. Now come the German *Kalender* for 1908. First there is the "Historische Kalender des Lahrer Hinkenden Boten," which, in its course of one hundred and eight years, has proved to thousands of German families as welcome as the old-fashioned "Farmer's Almanac" was to our fathers. Latin names of saints, heroes of German tradition, reproductions of old-time woodcuts, peasant love-stories, and a review of President Roosevelt's performances and other strange manifestations of nature in the New World are jumbled together in black and red ink. The "Fliegende Blätter Kalender" is perhaps the next best known, maintaining its reputation for quiet humor and tender pathos, much of the text being well illustrated. The "Münchener Kalender" is the quaintest of all, got up in old German letter, with mediæval drawings suggesting both monastery and *Rathskeller*, and printed in black, red, and blue. The "Daheim Kalender" is a modern affair, neatly bound in cloth, with an illustrated necrology, original poems and stories, and much up-to-date statistics of value to all who are interested in the German Empire. All these annuals are imported by G. E. Stechert & Co., New York.

Rütten & Loenig's Literarische Anstalt in Frankfort publishes, as the latest number of Die Gesellschaft, edited by Martin Buber, "Die Sprache," by Fritz Mauthner, designed as an introduction to the discussion of the

relation of language to custom and morality, religion and training, politics and law, people and social intercourse. Other recent publications in this series are: "Der Handel," by Richard Calwer; "Der Architekt," by Karl Scheffler; "Die geistigen Epidemien," by Willy Hellpach; and "Das Warenbaus," by Paul Göbre. Twelve numbers in all have thus far appeared. It is characteristic of the changes being daily wrought in scientific and commercial Germany that books of this sort should be issued in highly ornamented text—colored initials and fancy titles.

Not merely love of travel, but the stimulation of patriotism and an increase of interest in local history, are evidenced in the constantly increasing numbers of special works, well prepared and well printed, dealing with German towns and localities. Paul Ernst has just written up "Der Harz," and Wilhelm Schäfer "Der Niederrbein und das bergische Land" (New York: G. E. Stechert & Co.) Each volume contains eight full-page illustrations, some from recent photographs, some from modern paintings, and some—would that authors and publishers more often appreciated the value of this class—from old engravings, giving us the Harz and the Rbine not only as Ludwig Richter, Heine, and other Germans saw it, but as it was viewed long ago by our early American travellers. In the same series with the Harz is a volume "Wien," by Hermann Babr (somewhat celebrated because its sale has already been prohibited there); "Münchben," by Joseph Ruederer; and "Der Bodensee," by Wilbelm von Scholz. Such books, and not Baedeker alone, should be studied carefully by those Americans who go abroad, know their route beforehand, and yet are too negligent of their preliminary reading to get the most from their journey.

Prof. Philip Schuyler Allen has edited for Ginn & Co. Goetbe's "Iphigenie auf Tauris", with 42 pages of introduction, 47 of notes, over 450 questions in German, and a vocabulary. These last two features differentiate the edition from others that have preceded it. Professor Allen defends tbe use of a specially prepared vocabulary by declaring that Flügel, Muret-Sanders, and Tbieme all fail at times to give adequate English for Goethe's "Ipbigenie."

Viktor Blütbgen's "Das Peterle von Nürnberg" has been edited by Dr. Wilhelm Bernhardt for D. C. Heath & Co. Blütbgen is a contemporary author, who still lives in Freienwalde, near Berlin. By this romance, old Nuremberg, with its ramparts and battlements, is brought again to view, and to make it still more realistic, the editor has added a picture of Dürer's *Haus* and another of the *Markt*, accompanying them with quotations from Longfellow's well-known poem on Nuremberg.

Tbe extent to which the historic conception of the origin and early development of Christianity has taken the place of tbe traditional dogmatical interpretations of its beginnings is apparent from the fact that two new works on tbe history of tbe New Testament age, as the historical background in wbich the New Testament teacbings live and move, have just appeared, wbile two old and important works on the same subject have been published in a thoroughly revised form, and still another is to appear in its fifth edition—all the work of German scholars. Tbe last mentioned is the standard work of Prof. Emil Schürer of Göttingen, wbose "Neutestamentliche Zeitgeschichte" is forthcoming in a new edition from the press of Hinrichs in Leipzig. Of W. Bousset's work, "Die Religion des Judentums im neutestamentlichen Zeitalter," a second and greatly improved edition has just been issued by Reuther & Reichard of Berlin. This work, as might be expected from the author of "Jesus," in the Religionsgescbichtlicbe Volksbücher, regards tbis wbole period from the modern point of view of tbe historical school, seeing in the teachings of Cbristianity to a large extent a syncresis of the current religious ideas and ideals. Dr. Oskar Holtzmann's "Neutestamentlicbe Zeitgescbichte," has also now appeared in a second edition from the press of Mohr, in Tübingen, and in its new form is an excellent handbook for students, a *Studentenbuch;* but Holtzmann confines himself strictly to the Jewisb world of tbought. In a more popular form and under the same title, Dr. W. Staerk publishes, in two booklets, an outline of tbe civilization and culture that formed tbe background of Christianity (Leipzig: Goeschen); while in Wendland's "Die hellenistiscb-römische Kultur in ihren Beziehungen zu Judentum und Christentum" (Tübingen: Mobr), which constitutes one of the series called Handbücher zum Neuen Testament, edited by H. Lietzmann, we bave a refreshing novelty in the shape of a discussion of this absorbing topic, not by a theologian, but by a classical philologian.

Those interested in the details of Palestine archæological investigation will welcome the new annual reports of the German Evangelical Institute in Jerusalem, which has now published two issues of its "Palestina Jahrbücber," edited by tbe leader of this school in Jerusalem, Prof. Gustav Dalman of the University of Leipzig. This Archæological Institute is entirely independent of the German Palestine Association and its *Journal*, having been founded by tbe representatives of the different German state churcbes as these meet biennially in the Eisenach Conference. The institute is modelled after the classical schools in Rome and Athens, the purpose being largely to equip young university graduates for an academic career in the Biblical departments at home. These two volumes contain reports of researches made by the members of the Institute in different parts of Palestine. Most of tbese papers are geographical, topographical, and archæological. The publishers are Siegfried Mittler und Sohn, in Berlin.

The death of Eugene Lee-Hamilton is reported from Bagni di Lucca. He was born in London in 1845, and was a half-brotber of Miss Violet Paget (Vernon Lee). After studying at Oxford, as well as in France and Germany, he entered the diplomatic service and was successively stationed at Paris and Lisbon. He published a number of volumes of verse, and was particularly successful in the sonnet form. Among his books are: "Poems and Transcripts," 1878; "Gods, Saints, and Men," 1880; "Tbe New Medusa," 1882; "Apollo and Marsyas," 1884; "Imaginary Sonnets," 1888; "The Fountain of Youtb," 1891; "Sonnets of the Wingless Hours," 1894; Translation of Dante's "Inferno," 1898; "Forest Notes" (with Mrs. Lee-Hamilton) 1899; and "The Lord of the Dark Red Star," 1903. He married Miss Annie E. Holdswortb, the novelist.

THE SEIGNIORIAL SYSTEM.

The Seigniorial System in Canada: A Study in French Colonial Policy. By W. B. Munro. New York: Longmans, Green & Co. $2 net.

This is a volume which belongs to the borderland between history and law; or, rather, it is such a study of institutions as would illustrate, if there were further need, the indebtedness of law to the historical method. The subject of seigniorial tenure in Canada has already been approached by able minds. Canadians, indeed, may well doubt whether any question arising from the life of their country has been debated with equal acumen. Tbe Seigniorial Court of 1855 embraced an array of legal talent which did high credit to British North America, and would have deserved to attract attention anywhere. Among the fifteen judges were Lafontaine and Mondelet, Caron, Day, and Morin. Among the counsel were Angers, Barnard, and, above all others, Christopher Dunkin. But, despite great natural ability and exhaustive researches, these men were unable to say the last word upon seigniorial tenure. It has been reserved for Professor Munro not only to coördinate materials which were brought togetber fifty years ago with those which have been accumulated by his own efforts, but to supply the proper perspective, enliven obscure details by critical insight, and set forth the seigniorial system as an organic whole.

We must point out tbat the significance of tbe subject is more than local. For Canadians the seigniorial régime connotes the whole social order as it was in the days of Champlain and Talon, of Frontenac and Vaudreuil. But tbis is not all. D'Iberville and Bienville, François Hertel and Hertel de Rouville, have a part in the annals of New England which represents, besides personal heroism, a sharp conflict of ideals, a divergence in national evolution that takes one back to the France of St. Louis and the England of Simon de Montfort. The strife for political mastery in North America loses mucb of its meaning if the reader has neglected to learn wbat lay behind the raids upon Pemaquid and Deerfield. Nor can there be any due apprehension of the course followed by this unequal struggle without previous knowledge of French colonization and the militia system of New France as these were bound up with the relation of Seignior and *censitaire*. Finally, tbe present work should make its appeal to scholars who, caring little for the episodes of American history, are yet interested in the forms assumed by a belated feudalism wben divorced from the land of its origin.

We may expect, then, that Professor Munro will command a wider audience than is claimed by most writers on legal and institutional subjects. But while his book is likely to be read with much interest in the United States, England, and France, it sbould find its warmest welcome among Canadians. Limiting still further one's range of statement, it is clear that this

study belongs chiefly to those who inhabit the Province of Quebec. On the banks of the St. Lawrence from île Perrot to the Gulf was the home of the seigniorial system, and here there linger curious survivals of it which cannot fail to catch the attention even of summer tourists. Nor is it in an academic or antiquarian spirit alone that Canadians approach a system of land tenure which long since lost its social importance. On July 12 the Orangeman of Ontario still delights to think of the French Canadian as a base sort of person, descended from a serf who suffered his wheat to be ground at the master's mill and confessed servility by dancing around the manorial Maypole. After all, when A. G. Bradley can call the habitant of the Old Régime "a slave," it is not so strange that Canadian Protestants who love to proclaim the Protestantism of the Protestant religion, should find a handle for taunt or argument in the subjection of the *censitaire*.

Apart from wilful prejudice, most of the misapprehension that has arisen regarding the nature of the seigniorial relation may be said to spring from one of two causes. There are, of course, many in whose habitual talk about feudalism, vassal and serf are synonymous terms. A second source of error is the failure to allow for great changes in the spirit and practice of feudalism under conditions which were imposed upon French colonists and the French Crown by the New World. Of one special blunder historical writers seem to be guilty no less often than the man in the street, or the general reader. Neither *ex hypothesi* nor as a rule was the seignior of New France a noble and therefore endowed with the privileges attaching to membership in the Second Estate. The typical seigniors of the Laurentian valley were men like Louis Hébert, who had been an apothecary in Paris, Charles Lemoyne, whose father was an inn keeper of Dieppe, and Jacques Le Ber, who, having made money from his shop in Montreal, purchased the estate of Senneville. A few genuine nobles made their way to Canada and occasionally a colonist was ennobled for distinguished service. In New France one never finds a noble who is not also a seignior, but the *bona fide* aristocrat with letters patent appears but seldom in Canadian society. As for the *lods et ventes* and the banalities, the habitant was far from being a serf in the European sense of the word. For example, *lods et ventes*, which in France constituted a considerable tax, were in Canada but a slight encumbrance, while in the important case of the banal mill Professor Munro is able to prove that the Crown compelled the seignior to maintain it for the benefit of his dependents, though frequently at a loss to himself.

It is a matter of practical moment that the English Canadian should realize the exact position of the habitant under the Old Régime, and full data for forming such a judgment are supplied by Professor Munro. In our opinion this whole question assumes greater dimensions when viewed from the standpoint of the *censitaire* than from the standpoint of the *seigneur*. The seigniorial system has practically vanished, and among titles of honor the barony of Longueil is only a picturesque survival. But the habitant remains and feels a pride in his antecedents which will not be lessened if ever Mr. Bourassa becomes premier of Quebec. We therefore believe that Professor Munro renders a genuine service to public life in Canada by giving a learned, impartial, and discriminating account of this institution under which the destinies of the French Canadians received their first direction. M. Sulte points out how prone the English Canadian is to harp upon feudalism and serfdom whenever he has a chance to mention seigniorial tenure. Henceforth there will be no excuse for loose talk upon this subject since we have before us a work which distinguishes with perfect clearness between the French noble and the Canadian seignior, between the French *roturier* and the Canadian habitant.

Having thus emphasized what seems to us the chief utilitarian aspect of Professor Munro's monograph, we must say a few words regarding its structure. Each of the twelve chapters is an essay on some salient aspect of the central theme. Professor Munro first fills in the European background of the seigniorial régime, dealing chiefly with the *coutumes* and the establishment of the *Coutume de Paris* as the basis of law in New France. After this come two chapters on seigniorial grants, early and later, the line of division being made to fall at 1666. Chronology thus placated, the body of the work comprises eight studies which display the seigniorial system in full working order. "The Seignior and his Superiors," "The Seignior and his Dependents," "The Seigniorial Noblesse," "The Seigniorial System in the Church" are titles which reflect several leading features of the inquiry, while many details relating to privilege and status are swept together under the head of "The Banalities," "The Corvée, and Other Exactions," and "Seigniorial Justice." Nor does Professor Munro close with the surrender of Lévis to Amherst. The volume finds a fitting termination in two chapters which supply the sequel—the "Seigniorial System under British Administration" and "The Abolition of the Seigniorial System."

We have given the foregoing abstract of contents because it will show more clearly than much comment the range of this work and the elaboration of its analysis. Obviously it is impossible that we should give even in epitome an account of the rights which the seignior possessed over his dependents or of the obligations by which he was bound to the crown. Following out, however, what has been said before, we must repeat that for us the chief interest of the volume resides in what it shows forth concerning the fortunes and character of the habitant as affected by seigniorialism. Hence we are led to scrutinize most closely the account which Professor Munro gives of the rights possessed by the seignior as these do or do not imply servility on the part of the *censitaire*. In other words, we turn to the chapters on the banalities and the *corvée* for the most important information which the investigator is likely to furnish.

Under the head of banalities the *censitaire* of New France was subject to two obligations, and two only, whereas the French peasant was burdened by a large number. As Professor Munro says:

> In various parts of France the seigniorial banalities included the right to build and operate grist-mills, cork-factories, hemp-factories, saw-mills, bake-ovens, wine-presses, cider-mills, slaughter-houses etc.: but the nature and extent of the rights varied very greatly in different provinces. Out of the long list of privileges only two were ever claimed in Canada, the grist-mill and bake-oven banalities; and of these only the former was ever enforced to any extent.

How little the *droit de four* weighed upon the habitant may be inferred from the fact that at most only three or four seigniorial ovens were ever erected in Canada. If it be urged that the seigniorial mill could not be escaped, the answer is that, on the whole, the lord was the loser by the bargain. "The banal mill," says the Intendant Randot in 1708, "is always to the advantage of the inhabitants, who have not the means of erecting mills themselves."

In writing upon the subject of *corvée* labor Professor Munro brings out one fact which is not unlikely to cause surprise, and may be cited as showing how wide an interval separates the *corvée* of feudalism from the *corvée* of the seigniorial régime in New France. It is actually a fact that the seigniors were able to increase their demands upon the time of their dependents after the conquest of Canada by the British. Here is a statement worth recommending to the notice of A. G. Bradley, who flatly calls the habitant a slave to the *corvée*. Any slavery there may have been was greater from 1760 to 1843 than under French rule. "Very rarely," says Professor Munro, when speaking of the conditions which prevailed from Champlain to Vaudreuil, "did the seignior demand more than six days in all"—or less than two per cent. of the time. In 1716 the crown had intervened to restrict the operation of the *corvée*. After 1760, however, the seigniors, in the absence of special check, widened their claims upon the time of the habitant whenever they had a chance to execute new deeds. As a result the seigniorial system during its last years was attacked with more bitterness on the ground of the *corvée* than on any other. But it should be remembered that the amount of *corvée* service referred to in the report of the Commission of 1843 meant a distinct enhancement on the demands which had been made for a generation before the Cession.

We shall not tabulate at length the other exactions that were legalized by the seigniorial system, for upon analysis they appear of no great scope. Parkman would have us see in the *droit de pêche* an important burden, whereas, says Professor Munro, with fuller knowledge, "it appears to have been insisted upon quite infrequently, and never to have been regarded by the seigniors as of much account." The *droit de chasse* was even more trivial, nor can one see a severe source of oppression in the seignior's right to collect toll for the use of his ferry. The final judgment which Professor Munro has formed after an exhaustive study of the whole evidence is expressed in the following words:

> Taken as a whole, the burdens imposed upon the habitant by the seignior of the old system in Canada were far from onerous. To declare that they were "more nominal than real," seems scarcely justifiable, in view of the general poverty of the class upon which they were imposed; they certainly were not so regarded by the habitants themselves. Still, the Ca-

nadian habitant was, in this respect, much better off than his prototype, the French *censitaire*. In all cases his obligations were fixed with, at least, some degree of definiteness, and the method of exaction was never harsh or cruel. From the most odious incidents of the seigniorial system in France he was almost entirely free. He was protected, moreover, not alone by the letter and the spirit of the law, but by the administrative jurisdiction of the intendant, to whom he might appeal, with little expense, and with reasonable hope of success, whenever a seigniorial exaction, though legal, seemed unjust or contrary to public policy.

Next to the interest which Professor Munro awakens by his discussion of the contact between seignior and habitant we would place that which springs from his account of "The Seigniorial System and the Church." In French Canada the race owes much more to the Church than the Church owes to the race. In other words, it is the Church which has preserved the race rather than the reverse. Knowing this, as every one must who has the slightest familiarity with the Province of Quebec, the chapter on the relations of curé and seignior at once comes into the front rank. Examples of ecclesiastical influence and control in New France need hardly be emphasized. But it may be worth while to point out one limitation upon the powers of the French Canadian clergy. Unlike the bishops and abbots of the mother country, the upper clergy in Canada did not seek to supplant the customary law of the domain by canonical jurisprudence. Professor Munro brings out the point we have in mind when he says:

Had the hierarchy of New France assumed its feudal judicial power, it would have been interesting to note how far it would have departed from the custom of Paris in favor of that system of jurisprudence with which it was more familiar; but the various clerical officials and orders manifested no desire to exercise judicial authority. Indeed, when the royal court was established at Montreal, the Sulpitians petitioned that their seigniorial judicial powers might be revoked, and secured an ordinance effecting this revocation.

In seeking to accentuate certain features of this admirable study that must modify the harsher judgments which have been passed on the seigniorial system, we must not give much positive praise to the form of land tenure established in New France during the days of its infancy. M. Sulte contends that the seigniors did much for colonization. Up to a certain point he may be right, but once established, seigniorial tenure helped to depress agriculture and check private enterprise. On the whole, we are inclined to give judgment in some such terms as these: Transferred under a belated form to the New World, French feudalism was softened by the wilderness, but never became well adapted to colonial needs. It furnished a scheme of civil society which was neither ignoble nor oppressive, but which did little to expand human faculty. It did not make the habitant a slave, but it failed to make him a prosperous, enlightened citizen.

CURRENT FICTION.

The Secret Agent: A Simple Tale. By Joseph Conrad. New York: Harper & Bros.

Mr. Conrad (Joseph Conrad Korzeniowski) has disappointed some of his early admirers. On the strength of his first stories, he was hailed as the coming novelist, a man whose writing possessed both substance and style. English was not his mother tongue, but he had mastered it completely, and wrote with astonishing power. Some of his descriptions, especially in his tales of the sea, stood comparison with the work of Stevenson and Kipling. But "Nostromo" was rather a heavy dose—prolix and in construction suggesting Browning's "The Ring and the Book." When you finally got through it, you felt that you had read an impressive novel, but in many passages attention flagged.

"The Secret Agent" is still less of a story. Mr. Conrad is fluent, almost too fluent. He is a master of striking phrase and of mechanically admirable sentences. He offers us some brilliant bits of description, but the narrative as a whole does not move. It tells us of a secret agent employed by the Russian Embassy in London, and of his relations with his employers, with the police, the anarchists on whom he spies, and the members of his own family. The incidents are bomb-throwing, murder, and suicide—the raw stuff of a shilling shocker. But the events are so overlaid with description, analysis, and the study of the psychological side of the characters that the book is hard to read. The characters stand forth clearly enough, but you cannot get interested in them till you have gone through the first half of the volume. This is too heavy a draft on the faith of a reader.

A Lost Leader. By E. Phillips Oppenheim. Boston: Little, Brown & Co.

The prolific Mr. Oppenheim has again brought forth a mouse. As usual, his plot is ingenious, and his narrative moves with facility. There are even moments when we seem to be approaching a real significance of characterization or incident; but the thing never quite comes off. The truth is, Mr. Oppenheim's manner is a bit too candidly professional. He has done the trick many times, and is confident of doing it many times more; one may imagine him blandly aware of the fact that it is not much of a trick after all.

Glance at the substance of the present story. You would think from the cover it was a golfing romance, and from the opening chapter it was a political novel. In fact, it merely chronicles the silly love affairs of a he-puppet. Mannering is supposed to be a statesman who on the eve of supreme success steps out of politics and retires to a cottage by the North Sea. Here he is pursued by the heavy villain, a sneering and worldly-practical politician of a villain, who adjures him in the sacred name of the party to return to his proper task, and says he may easily be Premier if he will be good. Mannering says no; he has found Nature, and proposes to stay with her. Exit the villain, disgruntled on two counts; for, besides failing in his mission, he has discovered that Mannering is hand in glove with the woman he himself intends to marry. She is a duchess, a widow, one of those lady Britons who, fiction informs us, have an important finger in the political pie of our thicker-than-water cousins. Under an alias and in the name of the party, she has followed Mannering to his retreat, with the intention of winning him back to the party ranks. By the time the villain arrives, however, the two are upon philandering terms. It is an excellent situation. Unfortunately, little or nothing is made of it; the subsequent evolutions through which the personæ are put are of a purely mechanical order. As for the reality of the characters, it should suffice to say that Mannering deliberately proposes marriage to two women at once; and that the duchess pursues him with vulgar overtures after his marriage to the other woman. He is a cad and she is a cat, but apparently Mr. Oppenheim does not notice it. Perhaps he merely takes it for granted that his audience will not notice it.

Who Killed Lady Poynder? By Richard Marsh. New York: D. Appleton & Co.

Prof. Brander Matthews, who, in a recent magazine article, discussed Poe in his capacity as the father of the short detective story, gave scant attention to the paternity of the long detective story. Possibly Wilkie Collins was its father. At all events, the difference between these two forms of sensational fiction is not merely one of length. Detective stories have a way of being very long or very short. The purely intellectual problems of the short variety are likely to be replaced in the long by a lavishness of plot that is sometimes a superabundance.

"Who Killed Lady Poynder?" is a story of nearly 130,000 words, constructed on the principle which has produced so many rattling stories in the past, that of supplying really damning evidence against every person, male or female, who has any connection with the plot at all. Lady Poynder was shot in her own house in London. The author's ingenuity is expended in showing how many persons had or might have had both opportunity and motive for the murder. As one after another is taken up, accused, and then proved innocent, one thinks of Gilbert's ballad of Pacha Bailey Ben:

> But why should I encumber you
> With histories of Matthew Coo?
> Let Matthew Coo at once take wing
> 'Tis not of him I'm going to sing.

Granting one tremendous coincidence—a coincidence of coincidences, in fact—the reasoning is plausible and the tale entertaining enough. But in respect to method it is a horrible example of the effect of trying to put a novel of mystery and a novel of manners between the same covers. Those who do this sort of writing best are content to kill one bird at a time.

Human Affairs. By Vincent O'Sullivan. London: David Nutt.

Mr. O'Sullivan is an art-for-art's-sake man, so he naturally has several manners, none of which is determinably his own. From the evidence of this collection of tales one might construct for him an amazing trinity of masters composed of Carlyle, Henry James, and Maupassant. He is ready to be sardonic with the first, drily cunctatory with the second, and grimly pictorial with the third. He can turn you off a *conte*, a psychological study, or a pungent satire. It is all amusing, above the average in contents and workmanship, but not quite (alas that we are driven to the word) convincing. The style is not the man. Almost any one of these tales, satires, sketches, would be more effective read by itself.

"Verschoyle's House," the longest of them (it takes up half the book), is a parabolic narrative of not a little grim power. The action is set in Cromwell's time. A girl in love is married to a wicked old man, whose malignity is rendered more sinister by certain reputed dealings in the occult. Presently, out of sheer wantonness, he puts the young wife and her lover under the strain of a long temptation. At a moment when the lovers, still innocent, have almost forgotten his existence, the old man lodges false political information against the young one, who eventually becomes his executioner. The lovers are married, but the old man's curse is upon them. Something forces the young man to haunt the grave of his enemy. A subtle change begins in him, so that while he remains himself in other ways, he gradually takes on the bodily aspect of the dead man. The wife shrinks from him increasingly, dies half-maddened by the horror at her side, and leaves the wretched monster to linger out the rest of his piteous days alone. "Notices of the Life of Mrs. Fladd" is a rather bitter satire upon popular idols, in the elaborately casual manner of our psychological humorists. There are one or two briefer satirical bits; the sketches which remain are comparatively slight. One of them, "At the Revue," sounds like a close translation from the French.

The Burning Torch. By F. F. Montrésor. New York: E. P. Dutton & Co.

With its young girl fortuitously returned from the colonies, and thrown upon the mercy of relatives at "home," this story at first glance seems to belong to a popular type of English novel. The heroine, however, is not a pauper, to start with, and she does not marry a lord, to end with; and in the interim she is not merely the tender miss who waiteth for the bridegroom of attested eligibility. In fact, it is only fair to warn gentle readers that though "The Burning Torch" has certain of the earmarks of the pretty story, affairs are not managed at all according to code. The heroine not only does not marry, she is killed in a railway collision. This, being a kind of domestic Cassandra, she has foreseen, as, helpless to prevent or to convince, she has foreseen all the other catastrophes which have befallen her circle—the suicide of her father, the almost patricide of her favorite cousin, the violent death in the desert of the man she loves. The fatal gift of second sight has descended to her from a remote Highland ancestor. Yet she keeps her girlish sweetness and faith to the end; and is, indeed, a really lovely and lovable figure of womanly steadfastness and loving-kindness.

William Blake. By Arthur Symons. New York: E. P. Dutton & Co. $3 net.

Blake begins to rival Browning as a corpus for exegetes, and it must be admitted that some of the recent publications have been profitable even for the rational reader. John Sampson's edition of the Poetical Works (1905) not only gives, for the first time, a correct text of the lyrics, but by its ample notes shows how the poems grew to their final form. "The Letters of William Blake; together with a Life by Frederick Tatham," edited by A. G. B. Russell (1906), gives in print two of the early sources of information. Practically everything of value both in the Letters and in Tatham's Life had been used by Gilchrist, but it was well enough to have the material complete and separate. Then in 1906 came E. J. Ellis's "Poetical Works of William Blake," the only edition containing the Prophetic Books, and, in 1907, the highly desirable reprint in a single volume of Gilchrist's standard Life, with a number of reproductions of Blake's pictures. Nor do these titles exhaust the list. It will be seen, therefore, that any new book on Blake must justify its appearance by extraordinary merit, and it cannot be said that Mr. Symons's work quite stands the test.

Any such qualification of praise, however, can hardly be applied to the second part of the volume. Mr. Symons has here gathered together and reprinted from the MSS., where possible, all the records of Blake's life from contemporary sources, down to the publication of Gilchrist's Life in 1863, but excluding the Letters and Tatham's Life, which were made easily available last year. Among other things we have here a complete and exact transcription of the parts of Crabb Robinson's Diary and Reminiscences alluding to Blake. To be sure, only one correction of the vulgate edition of Robinson is of special importance, but that is a passage, hitherto unprinted, which throws a curious light on Blake's ethical ideas—morals would scarcely be the word:

> 13th June (1826).—I saw him again in June. He was as wild as ever, says my journal; but he was led to-day to make assertions more palpably mischievous and capable of influencing other minds, and immoral, supposing them to express the will of a responsible agent, than anything he had said before. As, for instance, that he had learned from the Bible that wives should be in common. And when I objected that Marriage was a Divine institution he referred to the Bible, "that from the beginning it was not so." He affirmed that he had committed many murders, and repeated his doctrine, that reason is the only Sin, and that careless, gay people are better than those who think, etc., etc.

Mr. Symons uses the passage as evidence that Blake's reputed project of adding "a concubine to his establishment in the Old Testament manner" may have been something more than a whim of the imagination, but he makes haste to add that Blake "was of all people least impelled to go and do a thing because he considered the thing a permissible one to do."

It is of the first half of the volume, containing Mr. Symons's own contribution to the Blake literature, that we are somewhat doubtful. As a biography the work is readable and sufficiently brief. It also clears up one or two minute errors, such as the names of Blake's brothers and sisters, the dates of their births, and the date of his wife's birth. It explodes, so far as negative evidence can do so, the fiction that the family—like that of every genius, if one accepts current biography—was of Celtic origin. But even Blake enthusiasts will scarcely make a stir over these discoveries, whereas we fear that certain of them will make too much of a stir over the critical parts of the work. There is to-day a class of hungry souls who, having graduated from Dante, Shelley, Whitman, and a succession of other gospels, have at last fixed their intellectual teeth on Blake. You will meet little circles of them here and there in the country, sad-eyed women and feline-looking men, who find in the Prophetic Books the last word of spiritual truth. Now, Mr. Symons is too well-trained a writer to fall into the jargon of these unfed spiritual Searchers, but his work does show the complete blindness to everything outside of the field of extreme romanticism, which makes the pabulum of such coteries. "To define the poetry of Blake," he says, "one must find new definitions for poetry; but, these definitions once found, he will seem to be the only poet who is a poet in essence"; and again, he "is the only poet who sees all temporal things under the form of eternity." There is a sense in which such sentences may be true; they are entirely misleading as they stand in Mr. Symons's pages, and give the impression that he places Blake above all the hierarchy of poets and sages—side by side with Nietzsche! In truth, Blake often, as Mr. Symons insists, has the uncorrupted wisdom of childhood, the pure vision untroubled by the dust and passions of the world; his abhorrence of the experience of life and his contempt for education were, as he meant them, often signs of an aerial spirituality. His two famous dicta:

> Bacon, Locke, and Newton are the three great teachers of Atheism or of Satan's doctrine.
>
> Everything is Atheism which assumes the reality of the natural and unspiritual world—

come from a region of inspiration closed and double-barred to almost every other mind of the eighteenth century. All this is true; but it is also true that a good deal of Blake is mere childishness, and that be paid a heavy penalty in merely stuttering mysticism for repudiating the forms of thought of his age. Mr. Symons has his reservations when he comes to the more unintelligible of the Prophetic Books, but his criticism, as a whole, has the ring of a thin and belated romanticism. The best of his paragraphs are those which pass from criticism into the lyrical manner of Swinburne, such as this impression of the Prophetic Books:

> The drama is the division, death, and resurrection, in an eternal circle, of the powers of man and of the powers in whose midst he fights and struggles. Of this incommensurable action we are told only in broken hints, as of a chorus crying outside doors where deeds are being done in darkness. Images pass before us, make their gesture, and are gone; the words spoken are ambiguous, and seem to have an under meaning which it is essential for us to apprehend. We see motions of building and of destruction, higher than the topmost towers of the world, and deeper than the abyss of the sea; souls pass through furnaces and are remade by Time's hammer on the anvil of space; there are obscure crucifixions, and Last Judgments return and are reënacted.

That is excellent in its kind.

Of Blake's art, Mr. Symons is, we think, a firmer critic than of his poetry, though here he suggests, but does not develop, the essential idea of the decorative nature of the drawings, just as, in the poetry, he suggested, but did not draw out at length, Blake's relation to Swedenborg. The gist of his criticism is in a remark of Rodin's:

> I was once showing Rodin some facsimiles of Blake's drawings, and telling him about Blake, I said: "He used to literally

see those figures; they are not mere inventions." "Yes," said Rodin, "He saw them once; he should have seen them three or four times." There, it seems to me, is the fundamental truth about the art of Blake: it is a record of vision which has not been thoroughly mastered even as vision.

And we may add that there, too, is the truth about the poetry of Blake. So much Mr. Symons might agree to, but he would not admit that this involuntary subjection of the poet to his own fleeting vision, however radiant the vision may be, is the last condemnation of the ultra-romanticism of which Blake was so noble an example, and of which he himself is a dwindling disciple.

Science.

Denatured or Industrial Alcohol. A Treatise on the History, Manufacture, Composition, Uses, and Possibilities of Industrial Alcohol and the Laws and Regulations Governing the Same. By Rufus Frost Herrick. New York: John Wiley & Sons. $4.

Alcohol occupies a peculiar position in the industrial world. It is useful in many manufacturing processes and indispensable in some, yet its use in the various alcoholic beverages of all degrees of strength is so much more extensive as to quite overshadow its industrial aspects. Considered as a luxury, and to a large extent a harmful one, it is seized upon by all governments as an important source of revenue and forced to bear a tax of several times its cost. In the United States, for example, each proof gallon of distilled spirits is taxed by the Government $1.10, about ten times its cost of production, and then additional burdens are imposed in the form of national and local licenses on manufacturers and dealers. European countries have solved the question by releasing from taxation alcohol to which some liquid has been added making it undrinkable, and we have now followed their example.

Mr. Herrick, one of the leaders in the fight for "free alcohol" before the last Congress, has brought together practically all the available information on the manufacture, regulation, and uses of denatured alcohol, and has produced a needed and timely book. That it is deficient in some of the information that we most want is not his fault. What is the sphere of usefulness of industrial alcohol in this country cannot be told until we know how much it is going to cost and this will have to be settled by competition or agreement between the gentlemen most concerned. The popular expectation that, when the free alcohol bill was passed, every farmer could set up a still and run his churn, cradle, and automobile with the by-product of his corn cobs and rotten potatoes is doomed to disappointment. Mr. Herrick takes a sane and conservative view of the subject based upon such data as are available. The first use to be made of denatured alcohol by the general public will probably be in lamps with the Welsbach mantle and in small heaters and motors. Even though it cannot at present compete with gasolene in automobiles and engines, the fact that we have in alcohol a fuel almost as cheap that cannot be exhausted or monopolized will keep down the petroleum products to reasonable prices.

This is an age of specialization, and yet in "Elements of Biology," by George William Hunter (American Book Company), the subjects of botany, zoölogy, and human physiology have been correlated and homologized into a single course. The volume is intended for a general course in biology for first-year students in the high school. On the whole, this rather daring attempt has been successful, and the three enormous fields have been covered in a well-balanced way, and as thoroughly as is possible within the compass of four hundred pages. It would have been better, perhaps, to allow more space to the mammals and less to such comparatively unfamiliar groups as the coelenterates. One of the most valuable features of the book is the number of experiments defined and illustrated, the author rightly holding that a fact or theory is made far more memorable when it can be demonstrated to the pupil. The more important part of the text has been printed in large type, while facts of less moment, directions for field work, etc., are in fine type. In the section on human physiology an interesting innovation is the frequent comparison with corresponding tissues and organs in the common frog, the dissection of which animal, supplemented by a summary of the points of difference, gives the pupil a vivid idea of his own physiology. The illustrations are numerous and generally excellent, and the subject matter is terse, well-chosen, and adapted to the class for which it is intended.

The International Congress of Hygiene and Demography opened in Berlin Monday. Twenty-three countries are represented, including delegates from every continent. Their reports will deal with methods of combating tuberculosis and all forms of contagious diseases; with disinfection, inoculation, and the most recent discoveries concerning the hygienic care of children, working people, soldiers, and sailors; the control of schools, dwellings, barracks; ships, railroads, and other public conveyances; food inspection, water supplies, the disposal of sewage, baths, emigration, the surveillance of ports, birth and death rates, midwifery, and sanitaria. Among the papers presented by American delegates are the following: Dr. Harvey W. Wiley, chief of the Bureau of Chemistry at Washington, "Legislation Concerning Foodstuffs"; Dr. Stephen E. Baruch of New York, "Public and Factory Baths"; Dr. Herman M. Biggs of New York, "Conquering Tuberculosis, and the Care of Consumptives"; Dr. Richard Pearson Strong, director of the Government Biological Laboratory at Manila, Philippine Islands, "Preventive Inoculation against Plague and Cholera"; Col. William C. Gorgas, chief of the Sanitary Department of the Panama Canal Zone, "Campaign against Yellow Fever"; and Dr. R. G. Freeman of New York, "Milk Control."

Prof. Wilbur Olin Atwater, head of the department of chemistry at Wesleyan University, and widely known on account of his experiments with the calorimeter, died September 22 at Middletown, Conn., after an illness of two years. He was born at Johnstown, N. Y., in 1844, and was graduated from Wesleyan in 1865. He received his doctor's degree from Yale in 1869, and afterward studied at Leipzig and Berlin. He was professor of chemistry at East Tennessee University, and at the Maine State College before he came to Wesleyan. in 1873. While occupying his position at Wesleyan, he was director of the Connecticut Agricultural Experiment Station, 1875-1877; director of the Storrs (Conn.) Experiment Station, 1887-1902; he did considerable work for the United States Department of Agriculture, and from 1903 was chief of the nutrition investigations for that department. With Prof. Edward Bennett Rosa of the Bureau of Weights and Measures, he invented the Atwater-Rosa calorimeter, for experiments on the metaholic changes going on in the human body. His work along this line excited wide interest and comment. Dr. Atwater was the author of numerous articles on physiological and agricultural chemistry, notably (with F. G. Benedict) "An Experimental Inquiry Regarding the Nutritive Value of Alcohol," vol. viii., National Academy of Sciences. He was a member of several foreign scientific societies.

Elmer Robert Reynolds died at Washington on September 18. Born in Danville, N. Y., in 1848, he served in the Union army while still a mere lad. After the war he became a teacher and then an examiner of pensions. Early in his career he began to devote all his leisure to the exploration and study of aboriginal remains in the valleys of the Potomac, Piscataway, Wicomico, Shenandoah, and other rivers. His researches included the mortuary mounds, shell banks, mines, burial places, ancient camps, and earthworks. On the subjects of his investigations he published many monographs, including "Aboriginal Soapstone Quarries in the District of Columbia," "Cemeteries of the Piscataway Indians at Kittamaquindi, Md.," "Aboriginal Shell-Fields of the Potomac and Wicomico Rivers," and "The Shell Mounds, Antiquities, and Domestic Arts of the Choptank Indians of Maryland." He was a founder of the Washington branch of the American Anthropological Society, and its secretary from 1879 to 1881. He was knighted by King Humbert of Italy in 1887, and in 1899 he received a bronze medal from the Royal Portuguese Society of Archæology.

Drama.

Dramatic Traditions of the Dark Ages. By Joseph S. Tunison. Pp. xi., 350. The University of Chicago Press. $1.25 net.

Some years ago Mr. Tunison wrote an interesting book on Master Virgil—Virgil in his mediæval career as prophet and magician. This treatise made no pretence of rivalling Comparetti's well-known work on this subject, yet it told the story clearly and offered an important corrective of Comparetti's fundamental point of view. In the present volume Mr. Tunison returns to the Middle Ages, with distinctly less success. His main purpose is to popularize the investigations of the learned, cumbrous, and eccentric Sathas, who sought to show that whatever dramatic tendencies

appeared in Western Europe during the Middle Ages were directly inspired by Byzantium. There is certainly a place for an intelligent epitome of Sathas, for though his theories have not been approved by the foremost authorities on Byzantine literature, his material is both important and, in its present shape, well-nigh inaccessible. But the present work will gain no adherents to his cause. In view of the author's modest disclaimers, both here and in his former work, it would be ungracious to cavil at his lack of philological training, his whimsical selection of inferior authorities, his slipshod methods of citation; these things might do no harm if he could keep his fancy within bounds.

It is true enough that an intelligent interest in the stage was cultivated in Byzantium, that scenic exhibitions were given, and that the liturgy of the Eastern Church included dramatic elements. Further, the direct influence of the ancient Greek drama persisted longer in the East than in the West during the closing centuries of the Roman empire. But Byzantium had its own dark ages—from the middle of the seventh to the middle of the ninth century—when no glimmer of interest in the genuine drama is observable. The West had emerged, meanwhile, in the revival of letters under Charlemagne, and from that moment on, it took few lessons from the East. Occasional breaths of influence came in throughout the Middle Ages, but the great mediæval movements, such as scholastic philosophy and the liturgical drama, though building on the past like any movement, were none the less individual creations, and owed nothing to Byzantium. The Byzantine renaissance of the eleventh and succeeding centuries anticipated in its renewed enthusiasm for ancient ideals the Italian humanism of the fourteenth and fifteenth centuries, but it created no vital movement in the drama, and nothing great in any kind of literature. The revival of the secular drama in the Italian renaissance was inspired in the first instance by Seneca, Plautus, Terence, and other Latin poets. New inspiration came in with the rediscovery and the gradually deepening appreciation of the Greek dramatists; this came of course by way of Byzantium, but there is no significant evidence of direct influences from the Byzantine popular stage.

It would profit little to enumerate here the unfortunate errors and absurd inferences which disfigure this work. We will cite one passage only as a specimen of the author's method. He has stated that the marriage of Otto II. and the Byzantine Princess Theophano "seems to have much to do with the curious literary episode of Roswitha's dramas" (p. 161). We may grant that Roswitha may indeed have picked up a bit of Byzantine Greek, but the immediate model for the structure of her dramas is, as she states in her preface, Terence. Then, speaking of her poetical legends, Mr. Tunison continues (p. 164):

> But Roswitha took an unusual step for her time when she turned for materials to the synaxaries of the Greek Church. The life of St. Pelagius, the histories of St. Proterius, St. Blasius, and St. Dionysius, the martyrdom of St. Agnes, the conversion of St. Theophilus were for the most part material quite fresh in her time. The Theophilus, in particular, was not only new, but was almost the first experiment, so far as the West is concerned, in an endless series dealing with a complicated problem of religion, philosophy, and literature.

The first sentence seems to imply that Roswitha's sources were Byzantine. But where did her materials actually come from? St. Pelagius was a boy martyr of Spain, put to death a few years before Roswitha was born. The calendar knows no St. Proterius; the legend, accessible in Latin translations since the ninth century, is of the slave Proterius, who was converted by St. Basil. St. Blasius is not in Roswitha's list at all; Mr. Tunison or one of his authorities has confused the name with Basilius of the preceding title. Dionysius is the great French saint, who had long since absorbed the career of his Greek predecessor; his life by Hilduin is the acknowledged source of Roswitha's poem. St. Agnes was a favorite in the West from the days of St. Ambrose and Prudentius. The story of Theophilus, that Interesting precursor of Faust, Roswitha knew in the ninth century translation by Paulus Diaconus (of Naples). It is surprising, in view of Mr. Tunison's statement here, to find him referring to this translation later (p. 182). Here, then, is a patent case where facts are adjusted by main force to the author's theory.

In this easy fashion all evidences or probabilities or suspicions of a mediæval interest in the drama are scooped by the author into his Byzantine drag-net. The results are valueless for scholarship, and dangerous for seekers of information. This is a pity, as Mr. Tunison has read widely in many fields, and when his obsession is not on him, can write entertainingly and convincingly—as in his remarks on Seneca and Mussato. But it is hard to sift the wheat from the chaff. The author commands plain facts enough to make up a useful popular history of dramatic tendencies in Byzantium and the Western empire, but owing to his vitiated method, he merely gives the impression of being widely misinformed.

The "Three Plays with Happy Endings," by St. John Hankin (New York: Samuel French & Co.), furnish some capital light reading, and each of them has won a measure of success upon the London stage. They are "The Prodigal's Return," "The Charity That Began at Home," and "The Cassilis Engagement." The first and the third were produced under the enlightened management of Granville Barker, a fact which in itself affords some presumption of their superior quality. This they undoubtedly exhibit, but their merits are neither so rare nor so substantial as to justify all the eulogy bestowed upon them by some prominent English critics. In many of the essentials of really vital drama, in sincerity of purpose, in solid as opposed to superficial observation of life, in inventiveness, and in human interest, they are almost totally deficient. They have no plots, present no conflicts of character, and are practically destitute of dramatic action. Moreover, the types which they employ are, in the main, conventional. On the other hand, they are written very cleverly, with plentiful flashes of genuine wit. Familiar as most of the personages are in the world of the footlights—the rich and vulgar parvenu, the complacent parson, the self-excusing wastrel, the East Indian military bore, the quack, the music hall siren, her mother, and their rich young dupe—they are sketched with such happy dexterity and vivacity that they assume a certain semblance of freshness and reality. Mr. Hankin's sentimental enthusiasts in "The Charity That Began at Home" are in a more original vein, but amusing as are their misadventures, the cynical spirit that animates the comedy is not altogether agreeable, while the story itself, what there is of it, is spoiled by manifest extravagance. "The Return of the Prodigal" also, in spite of its many amusing features, leaves a somewhat unpleasant after-flavor, as well as a conviction of its utter improbability. It is only "The Cassilis Engagement" that has a really sound and useful idea at bottom, and in this piece the dramatic workmanship is defective. As a dramatist Mr. Hankin has a good deal to learn, but there ought to be a future for a man who can see the humorous side of things so clearly. But he must not try to imitate Bernard Shaw, as he seems inclined to do now and then. He could scarcely choose a worse model.

"Das Ibsenbuch: Ibsen in seinen Werken, Briefen, Reden und Aufsätzen" (New York: G. E. Stechert & Co.) presents, under the experienced editing of Hans Landsberg, a series of extracts, in prose and poetry, suggesting the dramatist in his varied moods. In the introduction the editor maintains that, since Shakespeare, no foreign poet has exerted an influence on the intellectual life of Germany equal to Ibsen's. There are portraits of Ibsen in his thirtieth, fortieth, fiftieth, sixtieth, and seventieth years, and reproductions from his manuscript. The selections treat of the poet's life, the wisdom of living, reflections on the state and *Kultur*, art, literature, and the theatre, and give parts of his dramas.

Equally attractive typographically are two other volumes of the same sort (Stechert & Co.) dealing with another great dramatist, whose diary and letters are of perennial attraction. "Alles um Liebe" is a collection of Goethe's letters, written in the first half of his life, put together in biographical form, with notes by Ernst Hartung, and a tasteful border and other ornamentation by Käte Vesper-Waentig. Fair Frau von Stein and the dear mother Aja, as well as his sister, Cornelie, Kätchen Schönkopf, and Friederike Brion, are all presented to posterity again as the fortunate recipients of the young poet's missives. "Vom tätigen Leben" is the title of the group of letters written by Goethe later in life, and edited and illustrated by the same persons. Whatever one may think of Goethe and his life, as a whole, or in phases, almost every letter that came from his hand is full of interest.

Although Ibsen's "The Master Builder" has been played in this city, it never had a fairly adequate representation before it was produced in the Bijou Theatre, on Monday evening. It has been pronounced the masterpiece of the author, by some of his most enthusiastic admirers, but from this verdict future critics will be likely to dissent. Undoubtedly, considered in the light of a study in dramatic form of the effect of motives upon character, it is

a remarkable example of technical skill. It may even be granted that some of the stages of the spiritual conflict create suspense and interest. But as a whole, the drama is tedious, owing to the prevailing drab of its atmosphere, the mean and sordid nature of its principal characters, its prolix discussions, and its general lack of sympathetic quality. As for the symbolism with which it is supposed to be charged, that is so misty, when any attempt is made to extract a consistent meaning from it, that discussion of it would be profitless. The interest in the present performance centred in the Hilda Wangel of Madame Nazimova, an extraordinarily vital and characteristic bit of portraiture. Except in the matters of facial resemblance and verbal accent, it was entirely distinct from either her Hedda or her Norah. The conception was that of a young girl, frank, arch, impulsive, passionate, romantic, and unscrupulous in the pursuit of her ideal. She could be just, tender, or affectionate, upon occasion, as in her dealings with Ragnar, Kaia, and Mrs. Solness, but, at any crisis in her fortunes, promptly demonstrated her possession of the "robust conscience" which she recommended to others. This part Madame Nazimova acted with charming vivacity, strange fascination, and perfect realism. Her by-play was delicate, varied, eloquent, and incessant, her facial expression brilliant, her outbreaks of passion intense and spontaneous. She is undoubtedly an actress of a high order and of rare versatility, but she has yet to undergo the test of the best poetic drama.

Henry Arthur Jones's latest play, "The Galilean's Victory," is to be presented in the Knickerbocker Theatre, New York, on September 30. The cast includes a number of favorite performers.

Signor Ermete Novelli will set sail for this country on October 18. He will open his season in this city with one of his last year's successes, "Papa Lebonnard."

Beerbohm Tree has decided to give his first performance of "The Beloved Vagabond" in Dublin, on October 10. This is the four-act play which William J. Locke has made from his own novel of the same name. Mr. Tree, of course, will be Paragot. Soon afterward he will begin rehearsals of Comyns Carr's "Mystery of Edwin Drood." Both these plays will be features of the London season at His Majesty's Theatre.

Music.

A Collection of Sixty-two Songs by Robert Franz. New York: G. Schirmer.

"Fidelio." By Beethoven. G. Schirmer.

Time was when an American edition or reprint of foreign musical works meant poor type, bad paper, careless editing and proofreading, and usurious prices. We have changed all that. To-day there are in the market several series of publications that have few equals abroad. One of these is Schirmer's Golden Treasury of Music, which aims at covering both the vocal and instrumental masterworks. It is pleasant to record that one of the first dozen collections in this series is devoted to Robert Franz, comprising sixty-two of his best songs. They are issued in two volumes containing the same songs, one for high voice, the other for low voice. Such a procedure would not have met with the approval of Franz himself, who used to say that all his songs were written for mezzo-soprano, and who would not allow a transposition to other keys: "It may be possible," he said, "to transpose songs the accompaniments of which are only harmonic stuffing; not mine." Now, while it is true that there are cases where a change of key results in difficult or ugly details, these are of little consequence compared with the disadvantage of having these songs confined to those only whose voice comes within their range. Franz was unpractical, and that is one reason why he had to wait so long for recognition. It must always be a matter of pride to Americans that one of the four greatest of all song writers was really appreciated in full in this country before he was in Germany. H. E. Krehbiel, who has furnished an introduction to the collection, does not refer to that fact; but he has gathered together from Franz's "Boswell" (Dr. Waldmann) and other sources a number of illuminative facts regarding Franz and the songs here presented, which much enhance the value of the volume to singers and students. When these songs were issued by the composer, Wagner and Liszt were among their first and most ardent admirers, and it was natural that they should have been labelled as music of the future. To thousands of amateurs they are still such, the more's the pity.

An introductory essay by Mr. Krehbiel is also included in the latest edition of Beethoven's "Fidelio." The title-page further contains the names of Theodore Baker, who made the English version; the librettist, Josef Sonnleithner; the revisers of the text, Stephan von Breuning and Friedrich Treitschke; the reviser of the vocal score, Gustav F. Kogel; and the composer. "Fidelio" remained his only opera, and if any one wonders why, the story of its fate, which is interestingly told by the editor, provides a full explanation. In speaking of the climax of the opera—the trumpet signal which tells of the approach of the rescuing Minister of Justice—Mr. Krehbiel remarks:

> The device adopted by the late Theodore Thomas and some other conductors, of having this call sounded louder the second time than the first, is without justification either from the dynamic markings of the composer or the dramatic situation from which it is borrowed. The trumpeter is supposed to be stationed on the ramparts of the prison, and there remains; he does not come nearer to the scene of action with the Minister of Justice, of whose approach he was instructed to give warning.

We suspect that conductors will nevertheless continue in their way of doing, which undoubtedly makes the climax more thrilling.

Paderewski will make his only appearance with an orchestra in New York this season with that of the Boston Symphony Society. Among the other soloists are Anton Van Rooy, Theresa Careño, Fritz Kreisler, and Carl Wendling. The subscription sale will open at Carnegie Hall, October 14.

Mme. Nordica, Miss Alice Nielsen, and Señor Contantino will again head the San Carlo Opera Company in this country under the management of Henry Russell. Wagner's operas will be sung in German, and to the operas previously in the repertory "Aïda" and "Martha" are to be added. The orchestra will be under Mr. Conti.

Before Felix Weingartner begins his duties as director of the Imperial Opera, in Vienna, he will make a tour of England and Scotland, playing the piano in a series of programmes devoted entirely to his own chamber music.

Art.

French Furniture. By André Saglio. New York: Charles Scribner's Sons. $2.50 net.

The key-note of Mr. Saglio's book on French furniture is struck in the first page of the Introduction. We are told there that "a history of furniture in such a country as France is very different from a technical review of archæology or art." It is in the attempt to make it something different that the author of such a book often spoils his work—trying to make it a history of tendencies and influences, a philosophical inquiry, to the exclusion of the obvious and necessary facts. The author is often so much in dread of being thought a mere accumulator of detached scraps of information, he is so desirous of showing the consecutive and logical sequence which he has established, that the book runs to metaphysics rather than to narration or art criticism. That is in part the fault of the book before us. The author has a great familiarity with decorative art, as found in the French national collections, and he is familiar with the evolution of French art; but he has wished perhaps to make a thoughtful and a readable book. The result is that we are presented with an essay upon the decorative art of many periods of French history, without being enabled to grasp firmly the manufacture and the design of any one period.

The first chapter deals with the Gallo-Roman epoch and the early middle ages. Here there are no illustrations; and it is admitted that furniture in the usual sense does not exist for our investigation: we have to deal with the stalls of church choirs, and with two or three presses in sacristies. The main purpose of the text is, however, to explain the moral development of early French society. The second chapter pursues this subject; it is a general essay on the ages of Gothic art and of the Crusades, and here again there are no illustrations. It is not till the third chapter that a definite epoch is reached and definite designs come before the reader. Plate 1 is an admirable chest in the Cluny museum, which, though stated to be of the fifteenth century, is late in style—a piece of the early neo-classic rather than of the lingering florid-Gothic. It is hard to see how that piece can be dated so early, while the text opposite, p. 36, dates the choir-furnishing of Amiens as of 1508 and the Church of Brou at Bourg-en-Bresse as of 1522. Plate 3, p. 46, is more frankly Gothic in character, and this also is put down as of the fifteenth century. It must be repeated that the interesting thing in such a case is a nearer approximation to accuracy in dating. If Mr.

Saglio, with the great authorities which he has at hand in Paris, really thinks that the chest at the Cluny Museum is earlier than the carved stalls of Amiens, or that one given in Plate 3, it would be a great help to us to have the reasons for that opinion, and a close approximation to its date.

An attempted analysis of Gothic art and the social condition which led to it, and an attempted explanation of the classical renaissance brought from Italy into France, occupy the fourth chapter. And here it must be said that the illustrations are extremely well chosen and that they are all half-tones printed as separate plates and all from important originals in the best collections of France. The museums of the Louvre, of the city of Paris at the Hôtel Carnavalet, of the Garde-Meuble, and of the city of Nancy; the national palaces of Compiègne, Fontainebleau, Le Trianon, l'Élysée, and the Préfecture of Indre-et-Loire; the abbey church of St. Denis and famous private collections, have all been called upon for contributions. It is the later period of the fully organized classical renaissance which is drawn upon for illustration, from and including Plate 4 until the close of the work. With this no possible fault can be found. It is the art of this period which the student expects to find in a treatise on French furniture. The reader asks only for a little more candor, and for a confession that the art of the Middle Ages is talked about, only in a general way, while the examples furnished, from which precise lessons are to be learned, date from 1520, or thereabout, and the established classical style.

Chapters viii. and ix., dealing with the Regency, and the periods of Louis XV. and Louis XVI., form naturally the most adequate part of the book, which is one more of Newnes's Library of Applied Art, a series of which we have had occasion to review previous numbers in the *Nation*.

H. M. Caldwell Company has secured the American rights for the little volumes in the Great Galleries of Europe Series, each book containing sixty or more reproductions of the famous pictures in each of the principal galleries of Europe. Four volumes, "The National Gallery," "The Tate Gallery," "The Louvre," and "The Luxembourg," have already been published, and others are in preparation. Concise notes on the pictures or the artists are appended to each reproduction, and the several volumes are prefaced with an historical account of the gallery represented.

It has seemed sometimes that the "modern painter," who writes in the *Burlington Magazine* the articles on "The Case for Modern Painting," would have been more accurate had he called them "The Case of Modern Painting." The instalment in the September number, which deals with the "Ideals of Modern Germany," might, indeed, be called "The Case Against Modern Painting," so much more salutary than laudatory are his remarks. His complaint that modern painters, far from being too much occupied with technique, have much more intelligence than technical power, in which "they are immeasurably inferior to the most unknown and in some respects even contemptible painters of the past" has a great deal too much foundation for our comfort. There is little else of great interest in the letter-press of this number, but the plates, including a color-reproduction of Reynolds's Nelly O'Brien, and a magnificent landscape drawing by Rembrandt, are of the usual high standard. "Art in America" deals with Turner's Fishing Boats Entering Calais Harbor, Corot's Le Lac, and Rousseau's Village of Becquigny, recent additions to the Frick collection; and with the recent growth in this country of interest in our native art as shown, particularly, in the gifts of Charles L. Freer and Mr. Evans to the Smithsonian Institution, and of George A. Hearn to the Metropolitan Museum, and in the purchase of American pictures by the Corcoran Gallery and the St. Louis Museum.

Recent discoveries by the Italian expedition to Crete are described by Luigi Pernier in the *Bollettino d'Arte* for August. The site of a primitive palace has been uncovered at Pheastos. At Prinià has been unearthed a temple of archaic type, with a rude frieze of horsemen. Bits of the sculptured throne of the goddess have also been recovered. The figures include lions and stags of a noble naturalism which seems to have relations both with Mycenæan and Etruscan work. The dates of these extremely archaic reliefs remain problematical. The longest article of the number treats the decorations of the Monastery of the Tor de' Specchi, Rome. These paintings consist chiefly of twenty-six frescoes treating the life of Santa Francesca, comprising twice as many incidents of the legend. These stories are impressive from the point of view of illustration, and seem to be the work of a late fifteenth century Umbrian painter, almost equally inspired by Gozzoli and Bonfigli. They attest the popularity of that Umbro-Roman school which has only recently become the subject of investigation. In the long-neglected Villa Pandolfini, near Florence, whence Andrea Castagno's series of heroes was taken, to be finally deposited in the museum of S. Apollonia, fragments of the incidental decoration, cupids bearing garlands, have been rediscovered. Prof. Cesare Ancona, the proprietor of the villa, has generously presented these fragments to the state. They will be detached from the walls and reunited to the major compositions. With a similar generosity Comm. Vittorio Avondo has given to the state the historic castle of Issogne in Piedmont. It was built towards 1480 for the famous Challant family, has never been greatly marred by restoration, and contains, besides some of the original furniture, an unusual series of frescoes, genre subjects, by artists of the Basle school of the sixteenth century.

The discovery of an important work by Masaccio is announced by Bernhard Berenson in the *Rassegna d'Arte* for August. The panel, which represents the Madonna enthroned with two angels, is in the collection of the Rev. A. F. Sutton at Brant Broughton, England. It appears to belong to the early years of the master, having stylistic similarities with the Madonna with St. Anne of the Accademia, Florence. A fuller study with a reproduction is promised for the near future. Other articles of interest in the number are a partial reconstruction of the work of Girolamo di Giovanni of Camerino, by Mr. Berenson. This painter derived chiefly from the Muranese school, and since he was active before the middle of the fifteenth century, must be regarded as a precursor of Crivelli in the Marches. His only dated piece (1473) is at Monte San Martino. His other works at Camerino, Milan, London, and the current Perugian exhibition, have been variously attributed. By no means a great painter, his work has much charm. Two fine male portraits by Titian, in the city gallery at Verona, and in the Ambrosiana, Milan, are discussed by Dr. Gronau. Although quite in Titian's best manner, they have been neglected by general writers on the subject. Two interesting pen sketches by Carpaccio, studies for the St. Jerome in St. Giorgio degli Schiavoni, Venice, are reported and reproduced by Victor Golubeff from the Dolgoroukoff collection, Moscow. A single number of an art magazine is seldom so well freighted with new and important matter.

The latest addition to the useful picture books on Italian art collections—Raccolte d'Arte—published by the Istituto Italiano d'Arti Grafiche, Bergamo, is "La Galleria dell' Accademia Carrara in Bergamo," by Dr. Gustavo Frizzoni. Dr. Frizzoni's publishers have supplied nearly two hundred half-tone illustrations of quarto size and good quality; and since the Bergamo Gallery abounds in the eclectic painters who chiefly occupy modern connoisseurship this book will be useful to students as a means of quick reference. Cariani, Catena, Becaruzzi, Padovanino, Previtali, and others of their stamp are prominently represented. For what public Dr. Frizzoni's rather perfunctory text is intended is not quite apparent. He not infrequently neglects to give the dates of dated pictures, and then he communicates a recondite bit of criticism from the manuscript remains of Giovanni Morelli. He reproduces Morelli's St. Jerome, ascribed to Fiorenzo di Lorenzo, without giving any hint that it is an old and indifferent copy, the splendid original of which is in the Jarves collection at New Haven. He describes the early Raphael, a St. Sebastian, in the Lochis Gallery, without mentioning the contemporary version in the Boston Museum. This was plausibly attributed to Raphael's studio mate, Lo Spagna, by Berenson, and is one of the strongest bits of circumstantial evidence for the authenticity of the Bergamo example. In short the essay gives habitually either too much or too little. Not quite slight enough to be ignored, it falls far short of scientific thoroughness. One frequently wishes that such books might be published without text, or, better, with a kind of *catalogue raisonné*. But these books are bought for their pictures, and from that point of view the present volume is excellent value at the price of six and a half lire.

Charles Scribner's Sons have issued the third and fourth volumes of the beautifully printed edition of "Don Quixote," Shelton's translation, illustrated by the late Daniel Vierge. When the first two volumes came out, we noticed them at length in our issue of May 9. Concerning these volumes, nothing need be said except that they fully maintain the standard and furnish added proof that Vierge is the ideal illustrator of "Don Quixote." Royal Cortissoz supplies an adequate introduction, in which he discusses the art of Vierge.

The Autobiography which Augustus Saint-Gaudens wrote shortly before his death is now in the hands of his son, Homer Saint-Gaudens, who will enlarge it with biographical notes upon his father's reminiscences, and with such of Augustus Saint-Gaudens's letters as may be collected. Homer Saint-Gaudens will be grateful to those who will send such letters to him at Windsor, Vt. The letters will be copied, and the originals returned without delay.

Finance.

CASE OF THE SPECULATING MILLIONAIRES.

It was pointed out in this column, several months ago, that the troubles in the financial markets of 1903 were largely due to the fact that enormously rich capitalists had gone into speculation beyond their depth. Facts which have come to light this past week, prove what had long been suspected, that the disorder in the markets of the present year sprang from similar causes.

In 1903 the group of capitalists who suffered most severely were those who had promoted the United States Steel Corporation, the Shipping Trust, and half a dozen other undertakings, whose total capital ran into the thousands of millions. Confident that the public would promptly take all the shares off their hands, they had signed agreements guaranteeing sale, expecting to derive such commissions as the $50,000,000 cash paid for the first "Steel Trust underwriting." While doing this, they indulged extensively in the purchase of other stocks, which also they expected to sell at large profits in the open market. The public would not buy; and when 1903 arrived, the underwriters were compelled to make good their engagements by paying for the new stock out of their own pockets. They were unable to do so except through the sale of extraordinary amounts of their own reserves of high grade securities. The outcome of this forced liquidation was the 'rich men's panic" of 1903.

The news of this past week shows that another and probably even wealthier group of financiers had within the past eighteen months got into almost exactly the same scrape. The reader will recall that as far back as the autumn of 1905, signs of a severe strain on American money markets were plainly visible. It was at the close of that year that the Wall Street rate for demand loans rose to 125 per cent.; it was in the following April, 1906, that the New York bank reserves fell below the minimum allowed by law, the first spring deficit since 1882. Conservative bankers recognized these events as danger signals. Yet it was immediately after these warnings that speculation on an enormous scale was suddenly started. Wall Street, whose information on such points is rarely mistaken, ascribed the whole undertaking to the so-called "Standard Oil group."

These men either dominated or actually controlled, in addition to the great oil monopoly, several large railways, among them the Union Pacific; and several industrial companies, among them the Amalgamated Copper. The "inside" speculation in stocks which began in August, 1906, was accompanied by such an increase in dividends of the Union Pacific and other railways as startled and scandalized conservative financiers; it was also accompanied by a rise in the price of copper to the highest figure reached since paper-money days. Every effort was made to create an impression that prosperity was unlimited, and thus stimulate the public to rush in and buy at rising prices the stock of these millionaire speculators. But the public as a whole refused to follow the lead of "high finance." With the American money market and American bank reserves in the condition which existed a year ago, it was flatly impossible to obtain in this country the resources requisite to continue the buying of stocks by the group of millionaires. As a consequence, capital was raised from the foreign markets on a scale which, if the testimony of foreign bankers is to be trusted, has had few precedents in international borrowing.

As events developed, these European borrowings, said at the time to have run into the hundreds of millions, turned out to be insufficient to do more than merely sustain the position of the speculating millionaires. They endeavored to borrow more abroad, but were checkmated by the Bank of England, and from that time on, the door of foreign relief to the already hard-pressed American millionaires was shut.

In an affair of this sort, a retreat of the defeated party is conducted with such secrecy that it is never easy to say precisely how it was effected or in what position the men concerned were left. In this case, events have so fallen out that the facts are now obtainable with unusual clearness. Last March—probably at the time when many of the large foreign loans fell due and had to be paid off—selling of high-grade securities in enormous quantities broke the back of the stock market. At that time it was familiar comment that only from powerful capitalists could such liquidation have proceeded, on a declining market, without actual insolvency. In May another spasm of liquidation seized the market, undoubtedly due to the efforts of these same persons to extricate themselves. In August, a month when demoralized Stock Exchange markets are rare, came another sacrifice of stocks, even greater in volume than that of March or May.

The precise cause of this midsummer collapse is now disclosed—the straits in which one of the wealthiest members of this group had run through almost incredible recklessness in his personal ventures. Not content with the rash and ill-timed speculation on the Stock Exchange, in which he and his associates had engaged, he had undertaken, chiefly in reliance on his private resources, construction of a railway involving $40,000,000 capital. Before the railway had approached within sight of profit-earning, $10,000,000 cash had been required. This requirement came at the very time, last spring, when old and well-known railways in the highest credit were issuing short-term notes, at 6 per cent. interest or higher, to raise urgently-needed capital. An enterprise such as has just been described, naturally found little welcome in such a market; to raise the $10,000,000 the capitalist in question had to assume as a personal liability the notes put out, at a rate amounting to nearly 8 per cent. Nor was even this accommodation permanent; the notes soon matured. Apparently, they could not be renewed, and it was sales of the unlucky endorser's personal investment securities at an extraordinary sacrifice, to secure the money, which crushed the stock market last August.

The result of this whole episode, which began thirteen months ago with the Union Pacific's increased dividend, has been to impair the fortunes of three or four of the richest men in the United States, almost as heavily as it has impaired their prestige. On the financial markets, the disclosures have been received with mingled feelings; relief that the process has at last been completed is perhaps the prevailing sentiment. Presumably the explicit disclosures would not have been made at all, until after the forced liquidation had run its course, and the embarrassment of its victim was at an end. What will be the longer sequel is a matter of conjecture. The one sure inference is, that a lesson has been taught to the speculating millionaires which they are not likely to forget in the present generation.

BOOKS OF THE WEEK.

Abrahams, Israel. Short History of Jewish Literature. Scribners.
American Jewish Year Book. Edited by Henrietta Szold. Philadelphia: Jewish Publication Society of America.
Aston, W. G. Shinto, the Ancient Religion of Japan. London: Archibald Constable & Co.
Bailey, Temple. Judy. Boston: Little, Brown & Co. $1.50.
Battle, Kemp P. History of the University of North Carolina. Vol. I. Raleigh, N. C.: Edwards and Broughton Printing Co.
Beale, Harriet S. B. Stories from the Old Testament for Children. Duffield & Co. $2.
Beveridge, Albert J. The Bible as Good Reading. Philadelphia: Henry Altemus Co. 50 cents.
Bonds and Investment Securities. The Annals of the American Academy of Political and Social Science. Philadelphia.
Bruce, Philip Alexander. Economic History of Virginia in the Seventeenth Century. 2 vols. Macmillan Co. $5 net.
Buchanan, Alfred. The Real Australia. Philadelphia: George W. Jacobs & Co. $1.50 net.

The Itinerary of Benjamin of Tudela

Critical Text. Translation and Commentary by Marcus Nathan Adler, M.A. With Facsimiles of the MSS. and Maps. 8vo, cloth, 5s. net.

Benjamin of Tudela, author, lived in the twelfth century, 100 years before Marco Polo. He gives detailed descriptions of Rome, Constantinople, Palestine, Bagdad, and Cairo in the time of the Crusades, and furnishes particulars of the numerous Hebrew communities which he visited. His information respecting Prester John and the Mongols, David Alroy the pseudo-Messiah, as well as the accounts which he gives of India and China, of the Druses and the fanatical sect of the Hashishim, will be found of interest.

The Nation.

NEW YORK, THURSDAY, OCTOBER 3, 1907.

The Week.

Secretary Taft lived up to his newly acquired title of Secretary of Peace in his address at the banquet in Tokio on Monday. Nothing could have been franker or more truthful than his emphatic assertion that war between Japan and the United States would be a "crime against civilization," and that neither nation desired it. In his treatment of the relations of the two countries, there was no palavering and no dealing in glittering generalities; nothing but an emphatic denunciation of the "infamous suggestion" of war between the two countries, which have not a single real cause for hostility. For this timely speech Secretary Taft deserves high praise, as does his chief, President Roosevelt, with whose authority Mr. Taft must have spoken. This is the kind of American statesmanship of which all Americans can and should be proud; and it must go far towards stopping the malicious talk about impending hostilities between the two nations. Go far towards stopping talk of war, we say. But so long as the dispatch of our entire battleship fleet to the Pacific is insisted upon, the danger of friction with Japan remains. Mr. Taft may make a dozen such admirable addresses; they could not hide the fact that the proposed cruise of the fleet is everywhere taken as a threat against Japan. So it is considered throughout Europe. The German press has declared it to be an anti-Japanese act; a naval writer in the *Contemporary* speaks of it as explicable only because the Administration regards itself in danger on the Asiatic side. By the yellow journals of this country, and some that have hitherto been counted as conservative, it has similarly been accepted as a reply to Japan's "hectoring diplomacy." No well-informed person anywhere believes that the cruise is in the interest of the navy's efficiency. Even from the Imperialistic and Jingo point of view, the cruise is folly, for the fleet is nearly as unprepared as the Russian, and as little drilled in battle tactics. The cruise may impress the unthinking part of the American public; prove effective with the next Republican Convention; help Secretary Metcalf to get into the Senate from California; induce Congress to vote more battleships and build more navy yards on the Pacific; but scare the Japanese it will not. They know as well as our own officers the defects of our fleet—that it has practically no torpedoes, or torpedo-tubes, or reserve ammunition, or, on many ships, proper range-finders. In short, so long as this mischievous cruise is adhered to without any public announcement as to its real reason, the statesmanship of Mr. Taft remains sadly embarrassed.

President Roosevelt's offer to pay Americans 50 per cent. more than foreigners for coal for the Pacific cruise is described as "generous," but is it? It seems to us a case where the Administration should be just before it is generous. Some of the tariff duties are 200 per cent. How, then, can our struggling coal-transports expect to do anything but founder with only 50 per cent.? Besides, as the spokesmen for our shipping interests (and their own pockets) eloquently pointed out to the President, the terror of our fleet to foreign nations will be much impaired if they see us carrying coal for the battleships in anything but American bottoms. Whereas, if the foreigners merely see the Government held up by its own citizens, and compelled to pay two prices, they will be filled with dread and, very likely, amazement. However this may be, we hope that a Republican President is not going to admit that any price can be too high for Americans to pay, provided they pay it to Americans, in American money, for American goods, and in order to make Americans appear like fools.

In advising his party to press the issue of States' rights in its new form, Mr. Bryan is unquestionably supported by a much stronger sentiment among other leaders than he could command for any of the various policies he has recently put forward. The Democrat who reads that Bryan, Parker, John A. Johnson, Tom L. Johnson, Hearst, and Folk are substantially agreed on a certain line of policy, experiences a sensation as agreeable as it is novel. The Nebraska Democratic platform, which Mr. Bryan himself is supposed to have drafted, expresses the issue felicitously:

> While we favor the exercise by the general government of all its constitutional authority for the prevention of monopoly and for the regulation of interstate commerce, we insist that Federal remedies shall be added to, and not substituted for, State remedies.

Neither parties nor individuals have taken sides on this question consistently, yet the relations of State and Federal functions have really been fundamental to most of the political activity of the present Presidential term. That it will be the issue of chief popular interest in the canvass of next year we are not prepared to say, but if it is, there is already a large amount of material on hand for its discussion.

It is impossible to take seriously the assertion that the Independence League is to stay in politics as a third party without nominating Mr. Hearst for the Presidency. In the name of all that is radical, whom else can it nominate? The other men who sit in its councils are unknown to the country, or owe such fame as they have in chief part to their association with Hearst. The League's founder has been explicit and apparently earnest in his denial of any intention again to seek office. But the question of his nomination is logically settled in the decision for a "third party" policy. The wisdom of that decision is another matter. It is customary to speak of an independent association like this as a "third" party, though, as a mere matter of mathematics, there are at least six other parties ahead of it in the field. One election in our history, that of Polk, is generally thought to have been determined by a seceding element which held the balance of power, and by putting up a ticket of its own defeated the candidate of the party to which most of its members formerly belonged. But it may be doubted if Mr. Hearst can possibly make as much trouble outside the Democratic party as he has inside.

Another clash between State and Federal courts seems threatened, this time in Minnesota. A county judge has issued a writ of mandamus to compel the Northern Pacific to obey a law which a Federal judge had declared to be null and void. The matter will, we presume, be amicably adjusted before October 5, when the writ is returnable, just as the two jurisdictions were recently kept from conflict in North Carolina and Alabama. But the incident will give fresh point to the revived discussion of the proper limits of the power of the national Government applied within the territory of the States. In a recent issue of the New York *Independent*, Judge Walter Clark of the North Carolina Supreme Court writes (or rails) about the whole system of appointive judges. He goes so far as to argue that there is no warrant in the Constitution for the Supreme Court of the United States to hold an act of Congress void because unconstitutional. The practice of pronouncing upon the validity of laws enacted by Congress, Judge Clark regards as pure usurpation. He admits, however, that this "illegal grasping" of power has been "too long acquiesced in to be questioned." This makes his argument seem rather academic for a man who is so stout an advocate of doing practical things for the people's welfare that Mr. Bryan has named him as fit for the Presidency.

The really vital and sober political issue in Massachusetts this year is the tariff. Henry M. Whitney is making it the burden of all his speeches. He argues forcibly in behalf of the hampered merchants of Massachusetts, not forgetting the consumers. Following up the line of reasoning on which Gov. Douglas was elected, and on the strength of which Mr. Whitney himself received so large a vote for Lieutenant-Governor in 1905, he is waging war upon the selfish and stolid protectionists, and demanding lower duties, with reciprocity, as the economic necessity of Massachusetts. The universal expectation is that on that issue he will get the vote of thousands of Republicans. If so, he can be defeated only by Democratic disaffection. Gov. Guild's famous letter to President Roosevelt declared that the Republicans could not have carried the State unless they had promised immediate tariff revision. Unable to make even that delusive promise this year, they cannot be entering the contest without apprehension.

The more the refusal of Sir Thomas Lipton's challenge is studied, the less satisfactory appears the action of the New York Yacht Club. In the first place, Sir Thomas challenged, not with a 68-footer, but with a 68-rater, which would have meant a water-line length of about 75 feet, or only 15 feet less than a 90-footer. But if one turns back to the Thistle and Genesta and the Vigilant, it appears that the proposed racer would only be from eight to ten feet shorter than these famous boats. Yet no one would think of contending that these racers were too small to preserve the "dignity" of the America's Cup. Since the New York Yacht Club maintains that 75 feet is beneath that dignity, it would be interesting to know just where it begins to be offended. Is it at 79, or 80, or 81 feet? Meanwhile, Mr. Fife is absolutely justified in refusing to design a racer for Sir Thomas under the old rules. Why should he? They were always vicious, and we ourselves have gladly discarded them for a more sensible set. Now the question is whether the New York Yacht Club will insist that Sir Thomas shall build under rules that we have abandoned as detrimental to the sport. If the club maintains this attitude, it assumes an indefensible position which will expose it to severe and justified criticism. We prefer to believe that it will revise its action. If it does not, people will assume that it does not want any race—for no Englishman will build hereafter under the old rules—or else that, for reasons personal to himself, it is trying to crowd Sir Thomas out.

The death on September 24 of Miss Anna T. Jeanes of Philadelphia, before the trustees of her million-dollar fund for the benefit of negro schools in the rural South have been able to organize their great work, removes another of the many modest public benefactors with which this country is richly blessed. Certainly, one can never guess from what quiet home, or what out-of-the way corner will come some notable philanthropic undertaking. True, in the tremendous field it must cover, Miss Jeanes's gift is merely a drop in the bucket; yet if wisely administered, as it is certain to be, it may induce other contributions and stimulate, we hope, recreant communities to realize that ignorance is a cure for nothing, but a positive detriment to the region where it exists—whether that be a farm district of Alabama or the most densely populated block in New York.

Last year Swarthmore College defeated the University of Pennsylvania 4 to 0 in football. To-day the college is in a position to add the estimated sum of $1,000,000 to its endowment if it will abandon "all participation in intercollegiate sports and games." In these two sentences we have a problem presented, compared with which the conflicts of every dramatist from Æschylus down to Clyde Fitch pale into insignificance. Honor versus glory, love against duty, filial affection against country and flag—what are they as compared with the open choice of becoming a college of the first class or beating Pennsylvania? We do not envy the Swarthmore trustees the task of coming to a decision, so complex are the factors involved, and so lacking in precedent the situation. To accept the donation would be to sell Swarthmore's birthright for a generous mess of pottage. If games were wrong before, why were they continued in a Quaker institution? If they are right, would not any board of trustees that dared to abolish them be fit subjects for their own contempt as well as public execration? It is bad enough to omit courses in sociology or economics that might be obnoxious to a generous benefactor, but omit football!

That there should be Cubans enough of any class with sufficient temerity to make an uprising against the present provisional government is astounding. The last insurrection had for its object the overthrow of the Palma Government through American intervention. The intrigues and agitations that have followed the establishment of the provisional government have also started out with the presupposition that where the favor of the United States went, there would go power and offices. That armed filibustering will pay is possibly the hope which agitates certain Cuban breasts, but it is, of course, a baseless hope. We must take into account, however, the ardent southern temperament, which does not reason by the ordinary rules of logic, mathematics, or prudence. The minute topographical map of the island prepared by the War Department, we were told, has made Cuban guerrilla warfare impossible. But the trouble here is the same what occurred in the case of the man who preferred to climb a tree when assailed by a bulldog, though he was convinced that the human eye can subdue the fiercest raging beast. "You know the fact and I know the fact," he explained to a friend, "but the dog, he doesn't know it."

Sharp action by the British government has made impossible any further bickerings over the Newfoundland fisheries, till the question is finally disposed of by the Hague Tribunal. Once arbitration had been agreed upon, it seemed mere gratuitous borrowing of trouble for Premier Bond to rail against the terms of the temporary *modus vivendi*, and to threaten the enforcement of the colony's anti-American laws in spite of it. This is the view taken by a majority of the colonists themselves who have protested in mass meeting against the Premier's contemplated action; by the body of press opinion in Great Britain; and, of course, by the British government itself, which, in compliance with obligations assumed when it agreed to refer the case for arbitration, has now issued an order suspending the Newfoundland laws directed against American fishing vessels and prohibiting the initiation of legal prosecutions under such laws. Premier Bond, desiring to avoid a conflict with the Imperial authorities in which he could come off only second best, has announced his intention to suspend the enforcement of restrictive legislation until the question has been adjudicated at The Hague. The British government has been compelled so frequently of late to see the interests of the Empire as a whole antagonized by the refractory conduct of its subjects in Australia, South Africa, and, only the other day, in British Columbia, that it has probably relished the opportunity to vindicate its authority against Newfoundland.

Publication in England of the new Australian tariff has produced a most disagreeable impression. True, there was the promised "preference" for British goods, but first the duties had been marked up to such a height that, even with abatement in favor of British imports, the rates remained highly protective and, in some cases, prohibitory. But this discovery, unpleasant as it is to the Colonial preference champions, is only what might have been expected. Lord George Hamilton, one of the Conserva-

tive leaders who refused to bow the knee to Chamberlain, has a trenchant letter in the London *Times* in which he sets forth the exact truth. As he says, "the spirit of unbending protection" is absolutely inconsistent with any movement for the freer exchange of products between nations. Australia is at present dominated by the protectionist idea, and so long as she remains so, she will give no real "preference" except upon articles which cannot, even in part, be supplied at home. "If the imposed duty, minus the preference, is insufficient to prevent the successful competition of British goods with native productions, it is raised until it has effected that purpose." Lord George asks with much pertinence what would have been thought of the British government if it had assented to food taxes in order to get Australian preference of this barren variety.

The questions raised by the Anglo-Russian agreement with regard to Western and Central Asia are numerous. At one stroke we have the solution of three problems, each of which has been important enough to threaten war. Afghanistan, Persia, and Tibet will no longer exercise a preponderant influence in determining the relations between Russia and Great Britain, not only in Asia, but in Europe as well. On the face of things, Great Britain has obtained the better of the bargain. In Afghanistan she has secured confirmation of her asserted rights, through formal recognition by Russia of the British government as the sole intermediary of the Ameer in political negotiations. Great Britain is to refrain from interfering in the internal administration, but her present influence, based partly on an annual subsidy to the Ameer, is sufficient for her purpose—the defence of India. In Tibet both Powers agree to keep their hands off; no representatives are to be sent to Lhassa, and Chinese suzerainty is recognized. But here, too, Great Britain holds the advantage she secured as a result of the Younghusband campaign in Tibet a few years ago; for it is provided that direct relations between British commercial agents and Tibetan authorities shall be permitted on the basis of conventions concluded in 1904 and 1906. In other words, the British government retains rights in Tibet which it refuses Russia in Afghanistan. It is when we turn to the provisions regarding Persia that we touch the most interesting, if not, perhaps, the most vital, feature of the agreement. It is the fashion to speak of reform and parliamentarism as the only means that can save China from disappearance or partition; yet Persia's Parliament and manful attempts at reform have not saved her from partition, for that practically is what the Anglo-Russian convention contemplates. The long-discussed delimitation of interests has become a fact. To Russia has been assigned a sphere of influence in the north comprising more than one-third of the entire empire. Within this region, in which lies the capital Teheran, with Tabriz, Ispahan, and other important towns, Great Britain resigns the pursuit of commercial and political concessions, and agrees not to oppose Russian activity in a similar direction. Reciprocal obligations are assumed by Russia in respect to a smaller but still vast quadrilateral in the southeast. An extensive middle zone, including the ancient ruins of Persepolis, is left unprovided for. In the case of failure on the part of the government to pay interest on its foreign loans, the two Powers may assume control of the sources of revenue in their respective spheres.

The adoption by the Spanish government of a strong anti-emigration policy is in line with the current discussion of measures for restricting emigration in Italy and Hungary. The lack of agricultural labor has become a problem of pressing importance for the land-owners, to a point where there has even been talk of importing Chinese coolies. The drift to the towns so marked at present in Italy, which is passing through a period of feverish industrialism, is almost as serious a drain on the rural districts as actual emigration. Spain has been sending colonists to South America and the French possessions in North Africa, and the emigration has often been *en masse*. The immediate drain against which the Spanish government wishes to contend is the recruiting of labor for the Panama Canal; and the means it intends to employ are a rigorous enforcement of the laws of military service and the enactment of severe shipping regulations. It is difficult to believe, however, that measures savoring of the mediæval Statute of Laborers can prove efficacious nowadays. At the present moment parts of Spain are suffering from disastrous floods, which are reported to have rendered many thousands homeless. Such a calamity supplies an impulse to emigration that restrictive laws can scarcely check.

Concerning the French separation question, a Catholic writer in a recently published volume on the subject advanced the ingenious statement that Mohammedanism is at present the official religion of France. His argument was that, with the disestablishment of all other creeds, Islam, which in Algeria enjoys state protection, became *ipso facto* the only recognized faith. The defect in the argument is that, as a matter of fact, the Separation Law of December 9, 1905, was not made effective in Algeria until a few days ago, when an administrative decree set the date for the separation of the churches from the state at January 1, 1908. As in France, the chief Christian denomination affected is the Catholic Church, which has in Algeria an archbishop and two bishops, with nearly 400 priests. There is no reason to suppose that the attitude of the Catholic Church in Africa will be different from what it is in the mother country. But chief interest attaches to the Mohammedans, who are now deprived of the support guaranteed them by the French Government after the conquest, when the mosques, with their attached properties, were sequestrated. Moslems, like others, must now organize into *associations cultuelles*, in order to receive legal possession of their ecclesiastical establishments. Inasmuch as the French government has always used the Mohammedan religious institutions as one of its most efficient instruments for controlling the native population, the emancipation of the Mohammedan clergy from government control, if real, will be an important factor in the future relations between Europeans and the followers of Islam in North Africa.

In connection with the thickening shadows of approaching constitutionalism in China, it is of interest to note the results of the studies undertaken by the Imperial Commission under the presidency of Viceroy Tuan Fang, which in 1905-06 made a journey of investigation around the world. The report of the commission has been published under the title, "Epitome of Politics," and deals, in 133 chapters, with the subjects of constitutional government, official organization, local government, education, naval organization, commerce, industries, finance, justice, and religion. The work is for the greater part a translation of important political documents. The Constitutions treated are those of Italy, Prussia, the United States, and Austria, with briefer reference to France, Belgium, and Great Britain. It is remarkable that in the matter of organic principles of government, as well as in administration and local government, Italy is accepted as the model to which all other nations only approach. Full treatment is given to our own State governments, of which those of New York and Massachusetts are taken as types. Under the head of Law, Italy again takes the most prominent place with a translation of part of the civil code. Of American law a summary is given. Instead of being a body of conclusions and of direct counsel towards political action, the report is, therefore, mainly a collection of original sources which, in the meagre state of China's knowledge of modern government, is expected to prove of value.

TEMPERATURE OF STATESMEN.

Several influential Western newspapers, in discussing the extraordinary way in which the Governor of New York is coming to be talked of for the Presidency, have dwelt upon the fact that Mr. Hughes is a "cold" man. Says the Portland *Oregonian:*

> There was a time, which we can all remember, when the epithet of "icy," justly earned, sealed a statesman's doom, no matter what qualities of the intellect he might possess, no matter how unbending his integrity.

Yet the remarkable fact is that Gov. Hughes, though "all that we used to think a politician must not be," has surpassed all recent politicians in the strides he has made towards the highest office in so brief a time. Similarly, the Indianapolis *News* remarks that Mr. Hughes is "not impulsive or magnetic," and is said to have "no popular qualities"; yet that he is, "almost against his will, one of the leading candidates for the Republican nomination for the Presidency."

This warming up of the West to an icy man shows that, possibly, the temperature of a statesman is not so important as some political oracles would have us believe. So much depends upon the conditions to which the ice is to be applied. For example, the old jokes about the awful chill which surrounded the Adams family were supposed to be not only highly amusing, but indicative of the popular dislike of such austere severity in a public man. Yet when the Adams ice was so effectively used to lower British heat—when Charles Francis Adams, as American Minister to England, turned his cold douche upon Lord Palmerston, or wrote icily to Lord John Russell: "It is superfluous for me to point out to your Lordship that this means war"—there was no lack of popular appreciation of the service. In times of fevered politics it may be that even an impatient democracy would not be averse to warding off inflammation of the brain with a cooling and grateful ice-bag.

Indeed, a large reading of our political annals would reveal the truth that the cold men have a way of going further than your gentlemen all aglow. Washington did not slap his Secretaries on the back, or call any of them "old man." As for familiarities with the Father of his Country, a contemporary would as soon have thought of attempting them with Mont Blanc. Even the great democrat, Jefferson, was not an effusive man. The story-telling Lincoln knew how to preserve, in public, the dignity of his office. Grover Cleveland was as cold-blooded as the fish he loved to catch, yet somehow he was twice elected President. On the other hand, the famous gushers among politicians, the men all heart, and that heart worn on the sleeve, have generally failed of their ambitions. There was no suggestion of ice about Henry Clay—except as it may have been an ingredient in a favorite drink of his. He was regarded with more personal affection than any public man of his time; but he could not reach the Presidency. What happened to the magnetic Blaine—"the greatest combination of heart and brain ever seen on this continent"—was surely not of a sort to encourage the high-temperature school of statesmanship.

The perfervid men have their uses. They can stir an agitation; they can arouse enthusiasm. But even their own following has doubts, when it comes to putting a man of warm impulses into a great executive office where cool judgment is requisite. Stephen A. Douglas was a man capable of generating a terrific amount of heat. Living men who have heard him speak, tell in an awed sort of way of the impression of almost appalling energy which he made. Yet there was ever in his case the little less and what worlds away. The heat was without a harness for useful public ends. People will listen to such burning orators gladly. A North Carolina mountaineer was heard to say of Gov. Glenn: "I like to hear that man make a speech. He do sweat so powerful." But fervent heat is, after all, not the first quality which the voters think of when, in time of peril or of perplexity, they look for a man to lead them. Ability and conscience, steadiness and a strong sense of justice, will then take precedence; and concerning the man who displays them, citizens will not too curiously inquire whether his temperature is above or below normal.

Falling in a period of sensationalized politics, this marked turning of people throughout the country to a man like Hughes seems to us of the happiest omen. It argues that the people are on the watch for the sterling virtues, and know how to appreciate them; and that when they find a man possessing them, it makes little difference how he looks or dresses or speaks or bears himself. "Coldness," if it be of the right kind, Americans will not only tolerate but will admire. Cold truth can yet hold its own against hot air. Of course, mere frigidity is no recommendation. An icicle adrip is loved by no one. Fairbanks is a cold man, but consider the difference between him and Hughes! It is only when the cool exterior and the austere manner go with the reason high and resolute will, that the people begin to think how comfortable it would be to pass from a tropic Executive to one of the temperate zone.

THE NEW ATTACK ON JUDGES.

That Hearst, with the incongruous aid of the Attorney-General of New York, should have taken up the cry against the judiciary, shows that he believes this course popular. Otherwise, he would not think of it. He and Attorney-General Jackson ring the changes on judges named and controlled by corporations, who upset laws intended to relieve the poor and to help organized labor. In this way Messrs. Hearst and Jackson apparently imagine that they can put themselves at the head of a large following. It is a matter for sober inquiry whether they are mistaken, or whether there is real ground for distrust of the judiciary, and what are the proper limits of criticism of judges.

With the pretence that judges are above all fault-finding, we have scant sympathy. They are public servants; and, like all others, ought to be carefully watched to see if they do their work well or ill. They are erring mortals, with their full share of human nature. There will be an occasional unjust or corrupt judge, precisely as there will be cheating lawyers, embezzling bankers, malpractitioners among physicians, and blackmailers among editors. We have had to impeach judges, now and then, in both State and nation. How could we have stripped the judicial robes from Barnard and Cardozo if the doctrine of the absolute inviolability of judges had been accepted? We are certainly not prepared to say that the judge can do no wrong.

Nor can we be blind to the fact that judges, like other public officials, are sometimes subject to undue influence. Shrewd men have always known this. John Selden remarked in his "Table Talk": "We see the pageants in Cheapside, the lions and the elephants, but we do not see the men that carry them. We see the judges look big, look like lions, but we do not see who moves them." Some judges are not above the suspicion of being swayed by personal or political motives. Political bosses have their creatures on the bench. Tweed had his; Boss Cox of Ohio had his; Murphy would have his if he could; it has been charged that the Metropolitan Street Railway had its; Hearst's nominations last year showed that he wanted his. With all these facts before us, it would be absurd to say that no criticism of a judge's character or motives should ever escape us. A democracy can have no sacrosanct officers.

Furthermore, we know that judges are not exempt from the dread of what their fellow-citizens dread—often in unmanly ways. They dislike to be unpopular; they are afraid of the yellow press; they shrink from conflict with executive power. By this last influence, to quote Selden again, "we know what judges can be made to do." He may have had in mind King Charles's ship-money, the legality of which was upheld by the courts, under scandalous pressure from without. Clarendon wrote of the "de-

served reproach and infamy that attended the judges" in consequence, and traced the later disregard of law to "the irreverence and scorn the judges were justly in."

Against the recurrence of such a state of things it behooves us all to be vigilantly on our guard. Thus much we are forced to concede. But the Hearst outcry against the judiciary goes far beyond this. He ventures to assail judges who decide cases differently from the way in which he thinks they ought to be decided. And he is bitter against the practice of the courts in setting aside statutes. Judges ought, he says, to "interpret" the laws, never to "repeal" them. Thus he would remove the last safeguard against hasty or confiscatory legislation. Any popular "craze" might write itself into the statute-book without fear of being judicially erased. There would even be an end of that common way of voting for bad bills in Congress, on the plea that no harm could be done, since the Supreme Court would be certain to disallow such unconstitutional legislation!

A timely and pat comment on the railing of Messrs. Hearst and Jackson is made by the New York State Labor Commissioner, P. Tecumseh Sherman. He speaks of the number of labor laws held invalid by the courts, and notes that they have "in certain quarters" aroused "antagonism" to the judges. This is wholly unfair, he argues, for most of the legislation thus set aside was carelessly and ignorantly drawn. It was framed in "heedless disregard for Constitutional principles." The men really to condemn are, not the judges, but the unskilled and negligent framers of the statutes. Mr. Sherman avows his belief that the Constitution does not stand in the way of the "legitimate objects" sought by the statutes that have been declared void, and that it was only because the laws in question were at once crude and too sweeping that they necessarily fell under judicial condemnation.

The real point and danger of such attacks as Hearst's upon the judiciary lie in the desire to get rid of the restraints which judges have power to impose upon a temporary mania in a democracy. It is not with Hearst a question of personnel. He is perfectly ready to nominate unfit judges. One of his nominees for the Court of Appeals is really disqualified on the ground of age. Nor is it, with impatient agitators, a question of electing rather than appointing judges, for short terms rather than long. What is wanted is the immediate right to lay a despoiling hand upon property, by means of legislation whooped through; or permission to interfere with personal rights and liberties which antedate our laws and Constitution, and which the courts are set to safeguard and enforce. No mischief is done to the commonwealth without the consent of a judge, is the old saying; and this latest attack upon judges is made for the purpose of rendering mischievous legislation easier. Understanding exactly what is intended, we ought to be able the more readily to meet and repel the assault.

TRACKING CAPITAL TO ITS LAIR.

These are troublous days for the owners of property represented by negotiable securities. In the United States, such properties are being subjected to new restrictions and limitations. In Europe, the pursuit of owners of securities is more distinctly a question of national revenue. Foreign governments care less than President Roosevelt how much money corporations make, but they feel bound to get their share of it. France has perhaps suffered more than any other country in recent years from the transfer of her corporate wealth to other jurisdictions. This is because her own taxes—imposed directly not only upon ownership, but also upon every transfer or issue—have been larger and more exacting than those of nations which have been less hard pressed to raise revenue.

So notorious has become the exportation of French wealth to Belgium and Switzerland that M. Caillaux, the present Minister of Finance, seriously proposed at the recent sitting of the Chamber to require the foreign branches of French banks, as well as foreign banks having branches in France, to report to the government the names of French depositors, including those depositing securities, with the amounts of such holdings. The project failed with the adjournment of the Chamber, but is likely to be renewed at the next sitting. M. Caillaux even went so far as to declare that deposits of French securities abroad were essentially fraudulent, and that he was already in negotiation with other governments to inaugurate a crusade to check efforts to escape taxation on securities. As one of the French journals describes the situation, it is proposed to create extradition treaties for capital like those for other criminals. It appears that a convention already exists between the governments of France and Belgium for the exchange of certain statistical information, and this M. Caillaux hopes to turn to his uses.

The project of extraditing criminal capital, however, seems likely to involve nearly as many difficulties as the effort in this country to place the strong hand of the law upon "tainted money." It does not appear that either Switzerland or Belgium has responded with enthusiasm to the suggestions of the French Minister. Both countries have profited greatly by the freedom which has prevailed on their stock exchanges and in their banking methods. Hundreds of millions of French capital are admitted to be on deposit, chiefly in the form of securities, in Swiss and Belgian banks, and large transactions are carried on by Frenchmen in the markets of Geneva and Brussels. The financial system of these countries profits by these transactions, and their governments are naturally loath to take any step to impair this benefit. Already the Swiss government has intimated in a courteous manner that, whatever the Federal Council might be willing to do, there will be difficulty in securing the consent of the twenty-five cantons to the inquisitorial statistics desired by the government of France.

The difficulty in most of these official efforts to check the movement of capital is that capital is more nimble than the government. Hunted from one lair, it seeks another. While governments may be adopting new measures or framing treaties to extradite or expel capital which has taken refuge in Belgium or Switzerland, the crafty capitalist has only to shift his holdings to some other country. The Bourse of Vienna would probably welcome transactions which might be checked in other countries, and the growing Stock Exchange of Genoa affords a convenient asylum for French capital crossing the frontier. The French nation had comparatively little difficulty in sequestrating the real estate of the religious orders when it began its crusade against the Church some years ago, but was less successful in confiscating property in other forms. Millions of dollars of securities held by the orders and the churches were thrown upon the market. The decline in the quotations for *rentes* was attributed at the time to the sales by the Church, but was probably due quite as much to the growing demand for capital. Much money formerly invested in French securities, however, went into Italian bonds, and other sums into other enterprises.

If it seems surprising that the government of a country so enlightened as that of France should take measures which tend to fetter the free movement of capital, it should be remembered that the Ministry has been for some years under the control of Radical and almost Socialistic elements. The normal hostility to capital is heightened by the fact that much of it belongs in France to those who are not cordial supporters of the republic. It will be interesting to observe whether the French government, if it continues in the hands of the Radicals, will succeed in collaring and leading back to France guilty and fleeing capital, or whether, as in so many other governmental efforts to interfere with commerce, there will be only another case of the locking of the stable door after the horse is stolen.

THE NEW SCIENCE OF EUGENICS.

"The Scope and Importance to the State of the Science of National Eugenics" is the title of the fourteenth Robert Boyle Lecture, delivered at Oxford last May by Prof. Karl Pearson, and just published by Henry Frowde. To Oxford, proud of its philosophers, Professor Pearson puts the question bluntly, "Has philosophy, as such, taught us a single law by aid of which we can understand how a nation becomes physically or mentally more vigorous?" Anticipating the answer that this is not the particular function of philosophy, he goes on, "What weight have philosophy, anthropology, or political economy at present in the field of statesmanship?" These studies, he answers, "do not, alone or combined, form a technical education in statecraft." Premising that "permanence and dominance in the world passes to or from nations, even with their rise and fall in mental and bodily fitness," and that here lies the real explanation of defeated armies and lost provinces, he maintains that "the primary purpose of statecraft is to insure that the nation as a whole shall possess sanity"; that is, shall be "sound in body and sound in mind." Thus, according to Professor Pearson's view, the training for statecraft must be the science of eugenics, which he defines as "the study of agencies under social control that may improve or impair the racial qualities of future generations, either physically or mentally."

The range of investigation is a wide one, including as it does problems of inheritance, of environment, and of nurture, of disease and health, vigor and impotence, intelligence and stupidity, sanity and insanity, conscientiousness and irresponsibility, clean living and license, of sanitation, housing, and schooling. Eugenics seems, in fine, to be a combination of sociology and medicine—or to be a branch of biology, using the term in its broadest signification. Professor Pearson claims for it a place as a true science, to be treated with the "observational caution and critical spirit" of other sciences. He asserts that it has already gone through two stages of development and reached a third. The first is the *ideological*, in which men form ideas about phenomena "on the basis of very limited experience," and spend their time and energy in discussing these ideas, without much reference to the phenomena themselves." The second stage is the *observational*—a period devoted to "observing phenomena critically, and recording and describing their sequences." The third stage is the *metrical*, in which "we proceed from observation to measurement, to accurate numerical expression of the sequences involved."

This last stage is the one on which Professor Pearson lays the strongest emphasis. He explains in some detail the work done by him and his colleagues in the Francis Galton Laboratory for National Eugenics in the University of London. There have been collected already between three and four hundred pedigrees of tuberculous stock; four hundred family histories of insanity; four hundred descriptions of parentage and home environment of mentally defective children, with as many more of normal children, the records of nearly four hundred noteworthy families and three hundred normal families, with psychical and physical descriptions and entries as to ailments and causes of death. These, he says, are but the beginnings of collections which "will one day represent large samples of the physique, the mentality, the fertility, and the disease of wide classes of the nation." These data are being ground through the mill of the matbematician in order to give us exact knowledge as to points regarding which medicine or economics or sociology has hitherto furnished only broad and often loose generalization. We need not dwell on the details—the coefficients for inheritance of eye color or of vivacity and conscientiousness; the size of families of deaf-mutes and professional men; and the death-rate from phthisis among lunatic paupers. Enough to say that if figures do not lie, these tables, averages, percentages, and coefficients—the results of what Professor Pearson calls *biometry*—contain a body of truth apparently precise enough to satisfy an astronomer.

The new science is, of course, on probation. It now boasts but one laboratory; but Professor Pearson confidently predicts that within twenty years the eugenics laboratory will be a recognized part of the equipment of every university. He may be right; to deny such a sweeping statement would be almost as rash as to make it. We may be fairly sure, however, that the science will not be accepted into the hierarchy until its field is more sharply defined, its methods perfected, and its pretensions substantiated. At present, it is, like sociology, suspect; and, for the same reasons: its boundaries are too hazy; it seems to take, as we have already noted, an easy, eclectic course through the realms of economics, anthropology, medicine, general biology, and *omne scibile*. The handicap under which such a science labors is that it attracts as votaries men who are prone to slipshod thinking and haphazard generalization. We would not say that sociologists as a class are intolerant of rigorous intellectual processes, and incapable of conforming to them; but this is the weakness of too many of that profession; and it is likely to be the weakness of eugenists—if we may coin the word. For example, one of Professor Pearson's tables gives in exact percentages for boys and girls the resemblances of "siblings" in psychical characters—namely, "vivacity," "assertiveness," "introspection," "popularity," "conscientiousness," "temper," "ability," and "handwriting." Now, these qualities are hard to define, and still harder to detect and measure in the individual with any approach to scientific precision; and the table, we make bold to say, despite the mathematical skill of the computer, is almost worthless.

The findings of this new science, the nurse of statecraft, are to be the basis both for laws and for voluntary action looking toward the improvement of racial stocks. Conceivably, eugenics will furnish important material in regard to housing, sanitation, quarantine, and the management of hospitals and schools. Along these lines we still have much to learn. We also join Professor Pearson in the pious hope that in time young men and women may marry and rear children under a strong sense of their duty to "decrease the fertility of the unfit, and emphasize that of the fit." But we fear there will be no great change from present procedure until the new science has done what hitherto no science has succeeded in doing—until it has both convinced the mind and overcome the heart.

THE LOCK-STEP AGAIN.

UPPER SANDUSKY, O., September 24.—The superintendent of the Sycamore School considered Terry Wickham, ten, so bright that he promoted him from the fifth to the seventh grade. The Board of Education refused to recognize the promotion, and today Dr. W. H. Wickham, the boy's father, brought mandamus proceedings against the board. A similar case is unknown.

The word *similar* is ambiguous. It may refer to the mandamus proceedings, to the action of the board, or to the promotion. There are, we grant, too many places where skipping a grade is unknown. The bright child is forced into the lock-step with the stupid, and there he stays through all the years of his schooling. The attitude of the Board of Education—we cannot certify to the accuracy of the dispatch—is common among old-fashioned educators. It is devotion to the system run mad. Originally, school was made for the child, but the organization tends to become so complete and rigid that pedagogues proceed upon the principle that the child is made for the school. The rules, of course, are crystallized experience; but conditions change, and the crystals formed a generation ago should often be broken. On the other hand, in administering a large system it is clearly dangerous to make exceptions; if one bright boy skips the sixth grade a dozen more boys, some bright and some not, want to skip it also. But we would have the rules so framed that skipping

grades, or else promotion by subject, is the regular thing and not the exception.

The topic is one which has lately attracted much attention among teachers. Within a year Charles S. Hartwell, chairman of the Committee on School Problems, Brooklyn Teachers' Association, has conducted an elaborate *questionnaire* on promotion. His circulars were sent to all parts of the country; and some of the answers are extremely depressing. For example:

In your school is there much flexibility and variety? Yes, 349; no, 205.

Do you promote your students by subjects or by grades? Subjects, 261; grades, 293.

Do you make a student who has failed in some of the work of the grade take all the work of the grade again? Yes, 206; no, 357.

Do your schools take care of the individual students' needs in any way? Yes, 473; no. 86.

Do you think each student should be advanced as rapidly as his ability will permit, without reference to his fellows? Yes, 473; no. 86.

The theory of our teachers is obviously better than their practice. An overwhelming majority, 530 to 60, believe in promotion as rapidly as ability will permit; but as a matter of fact, more schools promote by grades than by subjects; and 206—as against 357—make a dropped student take all the work of the grade over again. This particular set of answers we commend to the attention of Superintendent J. M. White of Carthage, Mo., who wrote to Mr. Hartwell: "A rule requiring a high school pupil to repeat *all* the subjects of a certain term or year because he failed in one or more is simply monstrous. I have never before heard of such a practice."

Monstrous is, we agree, a fair description of the rule. But in what pedagogical paradise Superintendent White has spent his time we cannot imagine; for the practice to which he objects is, as we have just seen, widely prevalent. The reasons are not far to seek. It is easier to lay out a cast-iron plan by which the whole class is held in a solid block, and like Wordsworth's cloud, "moveth altogether if it move at all." The alternative is half-a-dozen or more programmes, adapted to the cases of individual pupils in small groups, with the resultant conflicts in hours and the trouble and expense of maintaining a larger number of sections. All these irregularities vex a small mind which, instead of mastering a system, is mastered by it. It is doubtless true that absolutely unrestricted promotion would break all class lines and lead to chaos; but there must be, and in many places there is, a practicable mean between that and the rigid lock-step.

This method of freeing the individual from the clog of a grade is now approved by the most progressive educators. They are coming to see that President Eliot was right when he said that "to discriminate between pupils of different capacity, to select the competent for suitable instruction, and to advance each pupil with appropriate rapidity, will ultimately become the most important functions of the public-school administrator—those functions in which he or she will be most serviceable to families and to the state." No one can deny that promotion by grade, more especially in the high school, is terribly wasteful of a pupil's time, energy, and interest. For example, Mr. Hartwell examined the work of 163 boys in the middle of a high-school course, and found that 55 of them had been "left back" seventy-one terms of work. In few of these cases had the deficiency been in more than half the subjects. The needless repetition amounted to fully thirty terms' work, or fifteen years. If evidence of this kind were spread before parents and teachers throughout the country, the 293 schools which, according to Mr. Hartwell's report, promote by grade would be compelled to make a quick change, or else hundreds of fathers would follow Dr. Wickham's lead and resort to the mandamus.

BROWNING'S "OLD YELLOW BOOK."

Come then, all ye youths! And, careless of censure, give yourselves up to *steal* and drive the spoil from every source. . . . Often I love to play on some ancient phrase, and utter some far other thought in the same words. Nor will any wise man care to blame my self-confessing thefts, thefts open and to be praised and approved by our children's children. So far be it from me to wish to hide my stolen goods, and conceal my plunder, from any fear or the penalty of infamy.—Vida (1527), translated by Saintsbury.

This gallant proclamation of the literary road, made half a century before Shakespeare, may be regarded as expressing the working principle of the majority of the great Elizabethans. And Shakespeare's own exemplification of the right of eminent domain in letters is familiar to all students of his plays. Still further, modern European criticism has spent much of its energies in illustrating the theory and practice of literary spoliation. Yet after all, our present-day writers are a timid folk, jealous of their reputation for originality, and making their thefts as cautiously and secretly as the sneak thief. Browning was bolder. His example in the longest and most important of his poems, "The Ring and the Book," is a case in point. Many of his subjects he gathered from books, not the classic, or the well-established myth or tale, but book-stall trash. In the "Old Yellow Book," however, he met the most congenial and effective appeal ever made to him in this way.

He himself has told of the chance finding of this volume. One June day of 1860, he left the Casa Guidi home, as was his wont, to mingle in the busy life of the streets. His prize for the day's walk was a parchment-covered collection of old law records, discovered "mongst odds and ends of rav-age" in the Piazza of San Lorenzo. Nor was it by mere chance, as he felt, but rather by "predestination," that this relic of what had been the sensational tragedy of its period, fell to his hands, possibly the only hands of his century in which it would have proved more than rubbish. This treasure-trove, for which he paid "eightpence English just," was to prove one of the most important stimuli to which Robert Browning was ever subjected.

Yet familar as the mere name of the "Old Yellow Book" is to admirers of Browning, the volume itself is scarcely known to them. Any one may see it as it rests in the showcase in Balliol College library. A few of the poet's surviving friends have seen him handle the volume occasionally. Dr. F. J. Furnivall, in a recent note, says that once Browning "tossed it in the air, and twirled it round by the crumpled vellum covers." Yet not a dozen persons have had opportunity and patience to find what these covers really contain. Now, however, it is on the eve of being exhibited in a photo-reproduction by the Carnegie Institution of Washington. This will not merely show the basis in fact for "The Ring and the Book" itself, but will throw a flood of light on the creative processes, the peculiar masterfulness of Robert Browning. And still further, it will afford a new and extraordinary opportunity for studying the more general problem of the artist's relationship to his raw material.

The original writers of the volume were lawyers with but pedestrian literary skill, under the pressure of haste, and bent solely upon their professional tasks in a thrilling murder case. The sensational, brutal mass of fact was treated merely for presentation in type before a small board of judges. The arguments have not even the sort of popular appeal which the modern presentation of a case before a jury must have to prove effective. This is the crude original of the Franceschini story.

Now the drawing of material at almost first-hand from life is not uncommon with modern writers of fiction. Our important novelists have utilized such plebeian material abundantly. But the student is generally unable to watch the process of making it over; we cannot find just how much or how little the artist had for a basis of his imaginary superstructure. In the "Old Yellow Book," however, we have practically the complete data that fell into the hands of the poet, and we can trace all the changes effected by the play of imagination.

Browning's stylistic powers were practically unaided by the original; the chaos of the book offered him a more unusual problem; for most important source-books show a semblance of orderliness. The crude drama or the ineffective novel before Shakespeare had at least developed an orderly story and plot. The "Old Yellow Book," however, was made piecemeal; a bundle of confusing repetitions, and contradictions. Missing evidence has left wide gaps in our knowledge. The result is a confusion thrice confounded, an irreconcilable warring of the parts, a dismemberment and scattering of the facts. One of the most interesting features of Browning's creative mind is the executive energy, the generalship by which he brought order out of confusion. His imagination pieced together the fragments till they were once more a connected story. This generalship

has been a constant requisite for the novelist's art; and Browning has undoubtedly learned much from his abundant readings of the novels of his great contemporaries.

Perhaps the most important feature of Browning's recreative mastery is his conscientious truthfulness not merely to the larger facts of human nature, but to specific detail of this particular story. Evidently he made it a principle to use fact as he found it and to take to himself the congenial task of searching the motive behind the fact. He will supplement what is told, he will fill in the gaps, but he will not substitute a substantiated fact of the book by one that is more agreeable to his feelings. Such fidelity is doubtless a handicap to creative activity; it sets hard and fast bounds at many a point. Shakespeare had to observe the facts more or less when he dealt with English historical subjects; yet he assumed far more freedom than Browning did in retelling this utterly forgotten murder story. But apparently Browning had come to share the regard for fact which is so characteristic of the scientific nineteenth century. So "absolutely good is truth," he says, in "Fifine at the Fair." Browning's exactness may be illustrated in many ways. Thirty-three names of persons he takes directly from the book without change. Practically every locality in the progress of the story from Rome to Arezzo and back to Rome again is adopted and not invented. The minute chronology of the seventeen years of Francesca Pompilia's life is followed at all points, save in one significant detail. Incident after incident is likewise taken from the book, but they are given an iridescent coloring of motive by the poet's art. An interesting example is the comfit-throwing at the theatre. In Pompilia's affidavit in the book we read:

> While we were in a great crowd at the play one evening, Canon Conti, the brother of the husband of my sister-in-law, threw me some confetti. My husband, who was near me, took offence at it, but not against Conti, but against Caponsacchi, who was sitting beside the said Conti.

The poet tells the same fact in the words of Caponsacchi:

> Found myself at the theatre one night
> With a brother Canon, in a mood and mind
> Proper enough for the place, amused or no:
> When I saw enter, stand, and seat herself
> A lady, young, tall, strange, and sad. . . .
> I was still one stare,
> When—"Nay, I'll make her give you back your gaze"—
> Said Canon Conti; and at the word he tossed
> A paper-twist of comfits to her lap,
> And dodged and in a trice was at my back
> Nodding from over my shoulder. Then she turned,
> Looked our way, smiled the beautiful sad strange smile.
>
> —[Book VI., ll. 394-399, 406-412.

The chance moment had become a turning point in the hero's life, one of the crises which built themselves into his character. From that hour there was born in the Canon a new taste, a more serious view, a new regard for woman, and a new sense of duty to God and to the Church. In the book, there is nothing either to confirm or to controvert this spiritual significance of the incident.

Many descriptive features, especially those concerning the murder and the execution, are taken directly from the book. Here again a parallel will be of interest. In the book we read:

> The condemned were made to go down stairs and were placed upon separate carts to be drawn to the place of execution. Franceschini showed more intrepidity and composure than the others to the wonder of all. Many stands were constructed for the accommodation of those curious to see such a terrible execution and so great was the concourse of people that some windows brought as much as six dollars.

The poet throws this into blank verse:

> Palchetti were erected in the Place,
> The houses, at the edge of the Three Streets,
> Let their front windows at six dollars each. . . .
> The Count was led down, hoisted up on car,
> Last of the five, as heinousest, you know;
> Yet they allowed one whole car to each man.
> His intrepidity, nay, nonchalance,
> As up he stood and down he sat himself,
> Struck admiration into those who saw.
>
> —[Book XII., ll. 113-115, 132-137.

Browning's fidelity to his source-book is even more surprising in the monologues of the two lawyers, Books VIII. and IX. These have perhaps been the parts against which most readers of "The Ring and the Book" have protested; and even Stopford Brooke would pass by this portion. But to one who has read the book, it becomes evident that Browning was led to create these monologues by the impression the actual lawyers of the case made upon himself. The poet reproduces their professional jargon, their sophistries, their narrow and ignorant attitude; arguments, illustrations, citations of authority and precedent, and law-Latin he takes over verbatim from the source-book. The monologue of Archangeli indeed is a skilfully wrought mosaic in which the fragments from the book are laid in a new, grotesque design. This same lawyer's peroration of nearly two hundred Latin words is lifted almost bodily from the actual Archangeli's final argument.

The "Old Yellow Book" has also in all probability guided the poet in his unique and appropriate form—not straightforward narrative or architectonic drama, but the multiple-monologue which presents every phase of many-sided truth. Indeed, the book contains two semi-popular Italian narratives which distinctly suggested "Half Rome" and the "Other Half Rome."

Altogether, this old volume thrown by chance in Browning's way affords one of the most interesting opportunities for studying the transmuting power of genius. It convinces us also that fidelity to fact is not necessarily a handicap; and that the crudest of raw materials may become vital through the power of the master, and may admit of his highest and most significant expression of himself.

CHARLES W. HODELL.
The Woman's College of Baltimore.

NEWS FOR BIBLIOPHILES.

The comparative study of the types of early printers, which might count its beginning from the publication of the late Robert Proctor's Index to the Early Printed Books in the British Museum and the Bodleian Library, will presumably receive a new impetus from the organization of the Gesellschaft für Typenkunde des xv. Jahrhunderts, which was organized last year and has now sent out its first publication (Leipzig: R. Haupt). The object of the society is to present (as a companion to Professor Haebler's "Typenrepertorium der Wiegendrucke" and the catalogue which is in preparation by the Prussian Commission for the cataloguing of incunabula), a facsimile collection of characteristic pages and as far as possible complete alphabets of all the types used during the fifteenth century. There are already two such comprehensive facsimile collections, the well-known "Monumenta Germaniæ et Italiæ Typographica," edited by Konrad Burger under the auspices of the Reichsdruckerei in Berlin; and that published by the London Type Facsimile Society founded by Proctor and working on the basis of his Index. The compass of Burger's work, however, is comparatively narrow, and the English collection, though not so limited, is issued in only fifty copies at a correspondingly high price. The object of the new society, which is international in scope, is to present ultimately a complete series of the types of the printers of the fifteenth century, and there is no intention to limit the number of subscribers. The membership fee, 25 marks a year, is moderate enough. It was originally the intention to issue 100 sheets a year, but on account of the small number of subscribers, only sixty will be issued the first year; of these thirty now lie before us. Each sheet gives, in addition to a page in the size of the original and the individual letters of the alphabet, references to similar types used by other well-known or unnamed printers and to descriptions in bibliographies. Several of the sheets just published are from books connected in one way or another with the recent studies of Dr. H. O. Lange in Copenhagen, whose "Analecta Bibliographica" has already received notice in these columns and of the society's secretary, D. D. Collijn in Upsala.

While the bibliography of the first half-century after the invention of printing has been the subject of extensive research by a horde of bibliographers, the sixteenth century is as yet largely an unbroken field. Monographs like K. Schottenloher's "Buchdruckertätigkeit Georg Erlingers in Bamberg" (Leipzig: Haupt), and C. Höfer's "Beiträge zu einer Geschichte des Coburger Buchdrucks" (Coburg: Riemann) are therefore welcome not only as pioneer work, but as material for the student of the Reformation period. Erlinger began his activity in 1522, as an enthusiastic adherent of the ideas of religious and social revolution. For the spreading of these ideas he worked as printer, bookseller, and writer. But they did not gain a strong foothold in Bavaria, the Church there was too powerful; and from 1525 Erlinger printed chiefly official documents for the bishop of Bamberg. The main purpose of Schottenloher's book is, of course, typographical and bibliographical, and he is able to show, more conclusively than Höfer, the connection between Erlinger and the Coburg printer Aegidius Fellenfürst. It appears that the latter's type came into Erlinger's possession and constituted his earliest stock in trade; later he replaced them with others, presumably of his own make. His last dated work is from 1543. Höfer carries the story of printing in Coburg to the year 1564, through the careers of three printers: Fellenfürst, Hans Bern, and Cyricaus Schnauss.

PRESERVATION OF CUBAN NATIONAL ARCHIVES.

To the Editor of The Nation:

Sir: A recent publication of the Carnegie Institute, Luis M. Perez's "Guide to the Materials for American History in Cuban Archives," describes the deplorable condition in which the national archives were found when the provisional government assumed control of Cuban affairs in September last. It also recounts the measures taken by Major E. St. J. Greble, under instructions from Gov. Magoon, for shelving the rooms in which the archives are now stored and for placing the broken *legajos* where they can be sorted and preserved from further injury.

It may interest historical students to learn that in furtherance of the work of preservation the Governor issued last month an official decree prohibiting absolutely the removal of documents from the files of the archives, and ordering the return of such as have been loaned or abstracted either with or without permission. His decree further provides that hereafter a fee of five cents shall be charged for each sheet of copy issued by the keeper, and that new documents shall be forwarded for filing, properly bound or sewed together, with an inventory in duplicate duly signed by the department official responsible for sending them. Courts, government officers, public officials, or private persons who acquire access to papers or documents for reference or note-taking, must obtain a special permit from the Department of Government (Departamento de Gobernación), which permit may be refused in the case of private individuals, shall the department deem the issuance unadvisable. Persons who damage or remove without permission documents exhibited for reference shall be proceeded against under the provisions of articles 587 and 589 of the Penal Code.

OVERDONE INSTRUCTION IN ENGLISH.

To the Editor of The Nation:

Sir: Prof. F. B. Gummere, in your issue of September 19, has struck a resonant chord, and so timely that I want to strike it again if only to keep the sound a little longer in our ears. Two days before reading his article, in a letter to a teacher who asked advice about the organization of high school work, I wrote:

> I have but one conviction—that there cannot be too much good instruction in grammar and composition, and in reading aloud; but the teaching of literature would be wisely curtailed.

And two months ago, in a tract which I trust will some time get out of the printing office, I entered a protest against including prose fiction in the curriculum of the secondary schools. If we are to continue in the present drift, let us make haste to give credit for marbles and football.

It is not, of course, that literature, even in the form of the simplest fiction is unworthy. I trust I share the utmost enthusiasm of those who feel its inestimable moral and cultural value. But the lighter literature requires no teaching; its office is supplementary; it belongs in the margins of the day's work. Why, as Professor Gummere intimates, try to *teach* "Ivanhoe" when it should be read with an avidity that brooks no denial or should not be read at all? As for the deeper and finer things, so far as they are not purely intellectual and therefore of fairly general appeal, they must, for all but the most imaginative, wait upon that experience of life and sharpening of sensibility which alone will make them luminous. Moreover, the teacher who can impart their significance is nearly as rare as the pupil who is ready to grasp it. One would hesitate to trust many teachers to do anything more with, let us say, Matthew Arnold's "The Forsaken Merman" than perhaps to require his pupils to learn it by heart. Indeed, teachers in this field are sadly bewildered, and most of them would have to confess that they do not know just what they are trying to teach. Certainly the labor expended is out of all proportion to the meagre results achieved. Tens of thousands of pupils are haled through a prescribed course of English masterpieces, only to turn no less contentedly in the end to the solace of the Sunday newspaper, the scrap-bag magazine, and the "storiette."

Would I give up all attempt to teach literature? I would give up nearly all prescription of it. The history of literature may be taught, when it is desired; it is as worthy as the history of other things. And there is always plenty to do in the field of grammar and rhetoric, in the mere mastery of this English speech of ours, ennobled as it has been by so many great voices. I have just been undergoing some illuminating experience. In the attempt to wrestle with this very problem, which meets us in the colleges as well, I have undertaken to guide a class of freshmen through certain prose classics. We have begun with Bacon's Essays, and it sometimes looks as if we should not get any farther. It is no less than astonishing how little the students understand. Only one in sixty can even guess what Bacon means by saying that communion with friends will "evaporate thy affections," while they pass over as quite too simple for consideration his statement that a certain wily trick in diplomacy is "a thing of great patience, but yet of much use." They can scarcely be trusted to interpret aright a single sentence. However, the teacher's dismay in discovering this is equalled by his delight in discovering that they can be made to understand. Bacon is not too deep. It is mostly a matter of being able to construe English sentences and becoming alert to the varied and subtle meanings of words. Here is disciplinary work of the best type, and such as cannot fail to yield measurable results. Verily, so long as the mother-tongue is so little understood as to jeopard the reputation for wisdom of one of our wisest moral counsellors, there is work enough to do in English without straying down the flowery paths of fiction.

While I am on this subject, let me say a word about another abuse—the use of over-edited text-books, perhaps a natural result of the general bewilderment as to what there is in literature to teach. The maker of the text-book, having found something, or at least imagining that he has found something, kindly tells the puzzled or jaded teacher all about it. But he tells the pupil, too, and the pupil, having nothing at all to find for himself, goes uninstructed in precisely the kind of instruction that he needs most. For my freshman class in Bacon I am employing a judiciously edited text that gives scarcely three notes to an essay. I might have used a text (printed by the Cambridge University Press, too) that contains from ten to twenty-five paraphrases at the foot of every page—half-page rather! But it would have left my students absolutely nothing to think out for themselves, therefore without any mental discipline, and, I suspect, without the ability to read Bacon in the end.

As for the inner spirit of literature, which we have so long hungered and striven to teach, may it not be largely trusted to find its way? The teacher who really feels it will never be able to conceal his feeling. The radiation that reaches him will be radiated in turn, the communicable communicated to so many as are ready to share in that grace. But the less ostentatiously this is done, the better. Prescription is the sheerest folly.

A. G. Newcomer.

WORDSWORTH ON SPELLING REFORM.

To the Editor of The Nation:

Sir: During the innocuous discussion of "simplified spelling" has any one hitherto noticed the following opinion of Wordsworth, recorded in the "Memoirs" (vol. ii, p. 458) by his nephew?

> He mentioned incidentally [October, 1846] that the spelling of our language was very much fixed in the time of Charles the Second, and that the attempts which had been made since, and are being made in the present day, were not likely to succeed.

Attempts at what? And what has become of them? Lane Cooper.

Ithaca, N. Y., September 25.

MR. BURTON AND THE CLEVELAND CHARTER.

To the Editor of The Nation:

Sir: In the interest of the future historian, it may be worth noting that there is a slight inaccuracy in your reference to the charter of the city of Cleveland in the editorial article of September 12, dealing with the candidacy of Mr. Burton. Speaking of the mayoralty, you say:

> The office of Mayor has been clothed with more power. The tendency of all the new city charters is to centre responsibility in him. In that aspect Cleveland's charter is one of the most progressive, and if Mr. Burton is chosen Mayor, he will have a free hand in moulding the municipal administration.

It is just because Mr. Burton will *not* have a free hand in moulding the municipal administration that the most judicious friends of Mr. Burton grieve sorely that he has allowed himself to be inveigled into a contest that will probably not redound to his credit even though he should be successful, which is by no means assured. To an impartial observer he presents the sorry spectacle of a man of intellect, culture, and distinction lending himself on the one hand to the sordid purposes of the small-fry city politicians, and

on the other hand to the "larger" views, the higher politics, of the national administration. The one class is making desperate efforts to get "in on the inside" of the municipal trough; the other class is not oblivious to the prestige accruing from the "redemption" of the largest city in the State in the prosecution of the Taft candidacy.

But he that as it may, it is certain that Mr. Burton will find himself deceived should he be elected. Cleveland once upon a time had a progressive charter—the so-called Federal plan. Five years ago, however, at the behest, it is commonly believed, of Senator Hanna, then the Republican State leader, and with the avowed object of Mayor Johnson's political destruction, every city government in the State was overturned, and at an extraordinary session of the General Assembly in 1902 a new municipal code uniform over the State was enacted. Squinting at the incipient machine of the budding Johnson, the executive power of the Mayor was greatly curtailed, and boards galore were instituted. The powers of the municipal government were carefully decentralized. The legal powers of the Mayor's office are now small. The actual power wielded by Cleveland's present executive is due to a combination of qualities wholly foreign to Mr. Burton. Eminent as a statesman and legislator of national scope, he would need to bring to the task at the City Hall of Cleveland a rare synthesis of cajolery, demagoguery, bossism, and — a popular cause. And just because such a condition of things is the legitimate fruit of the Ohio system of municipal government, it ill becomes a Republican, as a Republican, to cry out against machine methods when the only present alternative is dilettante inefficient government. And history does not record that Mr. Burton uttered a single protest when party expediency dictated this municipal code outrage upon the people of the State.

Isn't it a pity that his fine talents should be employed in a field where they will inevitably be so tragically ineffective? Has his Nemesis come to plague him?

Elyria, O., September 23.

THE FISHERY QUESTION IN NEWFOUNDLAND.

To the Editor of The Nation:

Sir: It seems to be at last definitely settled that the interpretation of disputed questions between England and America concerning the agreement of 1818, known in diplomacy as the Convention of Ghent, is to be submitted to the newly created permanent Tribunal of International Arbitration at The Hague. As it is really the first important question submitted to this new court, the issue will be watched with great interest.

Without going into the history of this very remarkable convention, which public opinion in America is at last beginning to see in its true light as a one-sided and obsolete agreement, an intolerable burden on a British colony and entirely unsuited to modern conditions, we may note that one characteristic of the arrangement comes out very distinctly. England's sovereignty over Newfoundland is clearly defined, and the territorial privileges given to the inhabitants of the United States are very definitely limited. The reason for this strict limitation is very clear: England at the time had no fisheries rights to give away as she had already made over to the French a virtually exclusive territorial and fishery jurisdiction over the west coast. This was done to make the Bourbons more acceptable to the French and to uphold the principles of monarchy. The Americans were only allowed to buy *wood*, not fuel, and it has been decided that they have no right to purchase *coal*. They may obtain water, and enter port for shelter, and repairs, but "for no other purpose whatsoever." All this is definite and distinct. There is no room for question or ambiguity. At the Halifax Convention the American commissioners very frankly admitted that their countrymen had no right to buy bait, hire men, obtain supplies, or do any trade with the natives. The only questions to be submitted to the Hague Tribunal, therefore, concern the fishery privileges.

The fishing rights are given to inhabitants of the United States (not to ships or crews), in common with his majesty's subjects, to take fish of every kind along the coasts of part of Newfoundland, "and on the coasts, bays, harbors, and creeks" of Labrador. In Newfoundland the rights of Americans are confined to the coasts. In Labrador they are more general and extend to harbors, etc. One of the first questions, therefore, will be a definition of the term coast, and the extent of American fishery privileges on the shores of Newfoundland. Is it confined to the outer coast, or does it extend into narrow bays and harbors? The two really vital questions between the two countries are:

First, are American fishermen visiting Newfoundland, bound to obey the local revenue laws, to enter their vessels on arrival at the colonial custom house, clear when they leave, and pay light dues? Canada has always compelled them to do so, and Newfoundland claims the same right. Every civilized country has a right to adopt all reasonable precautions to prevent its revenues being robbed. Why should Newfoundland be debarred from the same exercise of authority? It is well known that the Gloucester men are notorious smugglers, and always carry a special supply of goods known as "the slop chest" to barter with the natives.

The really important question of all is the control of the fishery. It is to be carried on in common with his majesty's subjects. Who is to regulate it? It is sound international law that the sovereign power alone can exercise coercive jurisdiction within its own territory and jurisdiction. In a common fishery its regulations should be absolutely fair and reasonable. They should be framed for the clear and definite purpose of protecting the common fishery from wanton injury and destruction. Let us test the question in this way: American fishermen have lately been caught and punished for using dynamite on the coasts of Nova Scotia. Will any one for a moment contend that Newfoundland would not have the same right to punish offenders of this kind, or any one who might use a destructive engine whose general effect would cause injury, curtailment, or destruction of the common fishery?

Public opinion in America is being gradually enlightened on this question. Gloucester alone prevents the Hay-Bond treaty being ratified by the Senate, a treaty which, in return for the fullest privileges in Newfoundland waters given to Americans, allows a free entry into the United States for the fish and natural products of the colony. It is a most reasonable arrangement. The present outrageous tax of three-quarters of a cent a pound on all foreign fresh fish imported into the States is put on simply to enrich Lodge's smugglers, as they have been well called, and to compel the eighty millions of American citizens to eat dear fish while there is an unbounded supply in British North America, whose natural market is in the republic.

The question is asked by some American papers, Why does the Newfoundland government still fight against the *modus vivendi*, when the Sunday fishing, the use of purse seines, and the obligation to obey the local customs laws are all conceded? The answer is very simple. The *modus* is an illegal attempt to override the laws of a self-governing colony; it is direct contravention of the terms of the treaty and concedes rights to foreigners neither included nor intended by the convention. It is further a breach of a solemn promise made by England in 1857, that our fishery rights should never again be either lessened or given away to a foreign Power without our consent. D. W. Prowse.

St. Johns, Newfoundland, September 6.

Notes.

Duffield & Co. announce as forthcoming this month "Historic Churches of America," by Nellie Urner Wallington, with an introduction by Edward Everett Hale; "The Holy Grail and Other Fragments," by Richard Hovey; "Gypsy Verses," by Helen Hay Whitney; an illustrated edition of "Stories from the Old Testament for Children," by Harriet S. Blaine Beale; and "Childhood," by Millicent and Githa Sowerby, a volume of verses and pictures by two sisters whose work has attracted considerable attention in England.

The forthcoming double section of the "Oxford English Dictionary" has been enlarged so as to complete the letter N (Niche-Nywe) and the volume. It is the work of W. A. Craigie. Vol. vii., O-P, has already been published as far as Pargeted, and vol. viii., Q-S, as far as Ree.

An illustrated edition of "The Poems of Samuel Taylor Coleridge" will be issued by John Lane Company this autumn. Poems hitherto unpublished in book form will be included. The illustrations are from original drawings by Gerald Metcalfe. The same firm announces "The Sentimental Traveller," in which Vernon Lee takes her readers through Germany, France, and Switzerland.

From the Macmillan Company we receive a reprint of the "Economic History of Virginia in the Seventeenth Century," by

Philip Alexander Bruce. In its review of that book, May 21, 1896, the *Nation* spoke of it as "the best history of the early agricultural growth of any State in the Union."

"A Consideration of the State of Ireland in the Nineteenth Century," by G. Locker Lampson, the English edition of which was reviewed in the *Nation*, June 28, is now on the regular list of E. P. Dutton & Co.

G. G. Coulton's "From St. Francis to Dante" was first published in 1906, and that a second edition should be called for in a year shows the interesting character of the work. Mr. Coulton has added a good deal of fresh matter from Salimbene's inimitable and highly realistic chronicle, and has extended the notes and appendices. For those who wish to see the seamy side of the Middle Ages, this is the best book in English.

The coming of Christmas is heralded by attractive reprints. T. Y. Crowell & Co. are early in the field with a number of volumes on thin paper in limp leather. One group contains seven of Victor Hugo's novels in eight volumes, "Les Misérables" occupying two. Another set gives nine of Dumas's best works, including "Monte Cristo," "The Three Musketeers," "Twenty Years After," and "The Vicomte de Bragelonne." Nine other volumes are added, of a miscellaneous character.

Edward Manley of the Englewood High School, Chicago, has edited for Ginn & Co. a volume from Prosper Mérimée, "Carmen and Other Stories." The sketches, "Les Bohémiens," "Les Voleurs de Grands Chemins de l'Andalousie," and "Les Courses de Taureaux" will indicate the varied style of the novelist. A biographical outline, notes, and vocabulary complete the volume. As Mérimée's "Colomba" is one of the most popular of modern French narratives adapted to classroom use, this volume exhibiting other aspects of the author's skill will be welcome.

Notwithstanding the variety of good German grammars already on the market, Dr. Francis Kingsley Ball of the Phillips Exeter Academy has tried his hand at another, encouraged no doubt by the success of his "German Drill Book." The arrangement of the matter is topical, and the author seeks to drive home each topic within the space of a two-page lesson. The exercises are supposed to have sufficient continuity to furnish materials for conversation, but as a matter of fact the connection is not of the closest. There is a ten-page supplement with the more important facts of English grammar treated side by side with the German. D. C. Heath & Co. are the publishers.

To the growing interest of college students in foreign missions, Dr. Arthur Judson Brown's "The Foreign Missionary, an Incarnation of a World Movement" (F. H. Revell Company), is largely due. Though there are numerous histories of missions and biographies of missionaries, there has been no general work on the man himself to which the student looking forward to this field could go for information, or which could be used as a text-book in the mission study classes in our colleges and churches. To supply this need, the secretary of the Presbyterian Board of Foreign Missions has prepared this volume. It would have been difficult to find one better fitted for the task. Not only has he had for twelve years the oversight of a society which has brought him into intimate association with missionaries scattered over the heathen world, but, an extensive traveller, he has seen the missionary at work and he writes of the problems from personal experience. Beginning with a statement of the missionary motive and aim, he describes simply and clearly the essential qualifications for the work, then passes on to a detailed account of the missionary's relations to the society which sends him out, his duties to it, and its obligations to him. The principal arguments against foreign missions are briefly stated and answered, and the book closes with a striking portrayal of the modern missionary, not as a saint on a pedestal with a halo about his head, but as "preëminently a man of affairs," whose chief reward here is the conviction that he is using life to the very best advantage in laying foundations for future Christian nations. Dr. Brown has an attractive style and his book is enlivened with numerous quotations from biographies, reports, and addresses, and with an occasional humorous anecdote. We only regret, and it is our single criticism, that he has not given some information as to the way in which young English, German, and Swiss candidates are prepared for missionary work in Asia and Africa. It is with great satisfaction, however, that we note that he is an earnest advocate of the policy of not making the missionary aim at the establishment of a branch of an American church in India or in China, but at the foundation of a self-supporting and self-governing body, which, while holding the fundamental doctrines of the Christian faith, shall adopt a church organization and ritual adapted to racial characteristics and circumstances.

"Einleitung in das Neue Testament," by Prof. Theodor Zahn of the University of Erlangen, two massive volumes in large octavo, together about fourteen hundred pages, the second edition of which appeared as late as 1899, has now been published in the third edition, correctly described by the author as "vielfach berichtigte und vervollständigte Auflage" (Leipzig: Georg Boehme). The significance of this work lies in the fact that on the whole it is a bulwark of the traditional views of the origin and authenticity of the New Testament books, and yet the product of a scholar of high repute. Notwithstanding its strong conservatism, the book is critical and keenly analytic, and Zahn has independent views on not a few subjects.

An aggressive movement is in progress, chiefly in Germany, for the purpose of undermining the Wellhausen school of Old Testament criticism. The head of the new school is the Berlin Assyriologist, Professor Hugo Winckler, and the movement, known as Panbabylonism, aims not at an overthrow of the literary substructure of Wellhausen's theories, but at a reconstruction of the history of Israel's religion along the lines of natural development. Panbabylonism finds in the old religious ideas of Babylonia and the Orient in general, the evidence of a highly developed astral-mythological scheme, and traces the details of this scheme in the religion of both the Old and the New Testaments. This school has recently organized a Gesellschaft für vergleichende Mythenforschung, which has begun the publication of a series of popular works in advocacy of its views, entitled Im Kampfe um den alten Orient. Two of these have just appeared, one entitled "Die Panbabylonisten, der alte Orient und die ägyptische Religion," by Alfred Jeremias; and the other by Winckler himself, called "Die jüngsten Kämpfe wider den Panbabylonismus." The new school is remarkably prolific. Professor Peter Jensen, of Marburg, has issued a volume of one thousand pages on the Gilgamesh Epic of the Babylonians, and he finds the hero of it to be the prototype not only of many Old Testament characters, but even of Jesus himself. More recently E. Stucken has issued a work entitled "Astralmythen der Hebräer, Babylonier and Ägypter," (Leipzig: Pfeiffer); while the more theological side of the new scheme is brought out in the second edition of Jeremias's "Das alte Testament im Lichte des alten Orients" (Leipzig: Hinrichs), with 216 illustrations and two charts. Perhaps the best general guide to the literature and ideals of this new school is the work of O. Weber, "Die Literatur der Babylonier und Assyrier, ein Überblick. (Leipzig: Hinrichs.) This work we shall consider later at some length.

In the publication of the third volume of Th. Granderach's "Geschichte des Vatikanischen Konsils von seiner ersten Ankündigung bis zu seiner Vertagung," edited on the basis of authentic documents by K. Kirsch, S.J., and published by Herder of Freiburg-im-B., this virtually official record of the historic church council of 1870, that brought with it as its chief outcome the promulgation of the doctrine of papal infallibility, has reached its close. This new volume discusses the development of the council from the third public meeting down to the final adjournment. The ups and downs of the debate in word and writing are here described, with a clear report of the opposition to the doctrine of infallibility. The addresses of such anti-infallibilists as Schwarzenberg, Hauscher, Ketteler, Darboy, and others are given more or less completely, and the vote of July 13, which was encouraging to the opposition, is fully detailed. The last third of this volume describes how the dogma was received in the different states, and the means to which the Papal See resorted to compel the submission of the opposing bishops. This volume, like its two predecessors, is absorbing, notwithstanding the apologetical undercurrent that compels the reader to be discriminating. The whole work is without a doubt a leading source for the study of the history of the Vatican Council.

The literature of book-trade biographies has recently been enriched by a life of Emil Strauss, bookseller and publisher in Bonn, written by Dr. Oskar von Hase, head of Breitkopf & Härtel in Leipzig, and author of an important historical study of the old Koberger family of printers and publishers in Nürnberg. A nephew of David Friedrich Strauss, the young bookseller soon after his establishment in 1870 published the uncle's "Nachwort als Vorwort zur 4. Auflage meiner Schrift 'Der alte und neue Glaube,'" and ultimately secured from the original publishers the copyright of all Strauss's works, so that

in 1876 he could publish an edition of his collected writings. With this as a basis Strauss built up a publishing house devoted largely to works representing modern liberal thought, *e. g.*, Haeckel's "Monismus" and "Welträtsel." The last named was, indeed, the outcome of a suggestion by the publisher; Haeckel himself wrote to the author of the biography, "Without Emil Strauss the 'Riddle of the Universe' would not have been written; he prepared the way for it and pushed it through." Besides these and similar publications lying on the boundary line between religion and science, Strauss published a large number of works in pure science, such as J. Bouché's "Die insekten-fressenden Pflanzen," Heinrich Hertz's "Bezlehungen swischen Licht und Elektrizität," and not a few in history, philology, etc. His art publications were important, and in many cases were the results of his own suggestions; for instance, Ullbrich's etchings from Rome, which were originated during a journey to that city by the publisher and the artist. Strauss was also the publisher of Carmen Sylva. But he was not only publisher; this branch was long a side issue to his retail business. A direct outgrowth of the retail business was the remainder trade which Strauss developed and put in its present recognized place in Germany. Dr. Hase's book is not merely a biography of one German bookseller, it is a contribution to the history of the recent struggle within the trade, in which Strauss took a leading part.

W. Spemann of Stuttgart announces that he will publish this year the "Geschichte des niederen Volkes in Deutschland," a radical work in two volumes, whose author, under the pen name of Eccardus, will feel free to inquire into the deep mistrust and dissatisfaction on the part of the lower classes in Germany, notwithstanding the fact that their material condition has so greatly improved in late years.

"Die unsterbliche Kiste oder die 333 besten Witze der Weltliteratur," put together by Alex. Moszkowski, from the *Lustige Blätter*, is imported by G. E. Stechert & Co. Mark Twain is represented with his "Widow Stiggins"; but otherwise American humor is ignored, not even a single wonder from Chicago, such as so often proves a tempting morsel for the German journalist, being recorded.

The trustees of the E. J. W. Gibb Memorial Series have decided, very properly, to issue the late Sir J. W. Redhouse's translation of Al-Khazraji's History of the Rasulide Dynasty of Yemen, and the first part has now appeared, being vol. iii. of the series (Leyden: E. J. Brill; London: Luzac & Co). The dynasty, established as the Ayyubide was falling into decay, lasted over two hundred years (1232-1441); the history is here brought down to the year 1400. It is a faithful picture of the manners of the time, and is of special interest in view of recent events in Yemen. Redhouse's manuscript has been edited by E. G. Browne and R. A. Nicholson. These three names are a guarantee of accuracy. An Introduction gives a brief sketch of the history of Yemen from the earliest known times to the present. Volume iv. of the Gibb series contains "Umayyads and Abbasids," being the fourth part of J. Zaydan's History of Islamic Civilization, a work that has been favorably noticed by de Goeje; the translation is by Prof. D. S. Margoliouth of Oxford. The author is a Syrian, long resident in Cairo, where he edits the monthly magazine *Hilal*. His book, which consists of detached observations on the history, manners, and customs of the pre-Islamic Arabs and the various Islamic dynasties and communities, is valuable for the personal details it introduces, and is to be welcomed as the contribution of an Oriental Semite who has studied European works and learned something of a precise historical method. His references are to Arabic authorities. There is added a good index.

The last volume of the Archæologia, the tracts of the London Society of Antiquaries, does not yield to any of its predecessors in interest and variety. We notice that the Roman period is particularly well represented. Besides the reports of the Society's excavations at Caerwent and Silchester, there is an interesting account by F. Haverfield of two marble sculptures and a Mithraic relief found in London, and a contribution of some hundred pages on other discoveries, relating to the metropolis, by Philip Norman and Francis Reader. A good deal of space is also devoted to early and mediæval English history. Under this head belong Mr. Bidder's account of excavations in an Anglo-Saxon burial-ground at Mitcham Surrey, St. John Hope's paper on "The Loss of King John's Baggage in the Wellstream," that of Albert Hartshorne, "The Brass of Sir Hugh Hastings in Elsing Church, Norfolk," and Mr. Lethaby's "Palace of Westminster in the Eleventh and Twelfth Centuries." The pre-Christian period, on the other hand, does not figure so largely as usual, the only papers relating to it are Canon William Greenwell's "Early Iron Age Burials in Yorkshire," and Horace Sandars's "Pre-Roman Bronze Votive Offerings from Despeñaperros in the Sierra Morena." The volume has numerous and handsome illustrations. It is sold by the Society's agent, Bernard Quaritch.

Recent discoveries in the neighborhood of Edinburgh and as far north as the confines of Perth and Inverness shires are exciting among Scotsmen an unprecedented interest in the Roman occupation. Accumulating evidence that it took a far more solid hold than is currently supposed has stimulated the exertions of the Scottish Antiquaries and resulted in an appeal for funds to which public generosity is not slow in responding. Interest is guided and stimulated by what may truly be called the Roman Museum now open to inspection in the rooms of the Antiquaries on the ground floor of the National Portrait Gallery in Edinburgh. There may be seen the surprisingly rich bronze helmet and the remarkably beautiful iron tilting-helmet, or mask, recently unearthed at Newstead, being within a mile of Melrose Abbey. If the trips of tourists were not such cut-and-dried affairs, visitors to Abbotsford, Dryburgh, and Melrose might easily include in their purview the Roman camp and Roman baths which James Curle has there brought to light—the bath is now in process of excavation. Besides the helmets, Mr. Curle has found vases in bronze, helmets, swords, and axes, which, along with plentiful shards of "Samian" and other ware, suggest that Newstead was a very solid and firmly rooted outpost. Definite points showing evidence that there were three and probably four successive occupations here are made in detail by Mr. Curle in the *Scottish Historical Review* for July. His general drift may be summarily stated as follows: There is evidence of (1) a fort with an earthen rampart and an encircling palisade defended by a single ditch; (2) this same fort extended slightly and very considerably strengthened; (3) the same original fort reduced in size and provided with a wall parallel to its Via Quintana; and (4) a return to the area of (2), but this time with a rampart faced by a fall 7 ft. 6 in. thick and defended by triple ditches. The fort area is now restored to cultivation, and Mr. Curle has nearly completed excavation of the extensive bath immediately adjacent. Here he is finding varied and striking evidence in confirmation of the four successive occupations outlined above. In one place especially he who runs may read by inspecting the stratification of four pavements—each definitely characterized and differentiated from the two others. It is fortunate that, when all the evidence shall have been gathered by this season's excavations, the excavator will have the best of opportunities for presenting his results. He has just been appointed Rhynde lecturer for the coming season, and printed as well as oral publication is thus assured.

In a letter to the Wisconsin Library Commission, Dr. Reuben Gold Thwaites, secretary of the State Historical Society of Wisconsin, recommends that the "story hour," which is becoming such a popular feature in library work with children, be utilized in developing the interest of children in local history. Even in Wisconsin, he says, where the materials of local history and tradition are comparatively scanty, there is still enough in most communities, if properly handled, to give interest and richness to the local background, and thus to awaken in young minds a feeling of local pride and patriotic sentiment; while in the older parts of the country there is a wealth of material for such uses. An instance is cited by Dr. Thwaites of the successful carrying out of such a plan in one of the older Wisconsin towns, where a series of eleven talks and readings on the history and romance of the district were given by the librarian, with an interest and attendance greater than that accorded to similar readings on Greek or Norse mythology.

The Verein Berliner Kaufleute und Industrieller, in conjunction with the Central Executive Committee of the Berlin Business and Industrial Association, has sent to the Culture Ministry of Prussia a strong petition urging that the study of the English language be made obligatory in the classical gymnasium course. The petitioners insist that knowledge of the English language has become a *sine qua non* in the interests of German business and the spread of German commerce.

News of the death of Josefa Naprstkova comes from Prague. She was the wife of Voitja Naprstk, who had devoted his life to building up in Prague a museum to illustrate the history and ethnology of Bohemia. After his death, his wife carried on the work, and thereby won for herself the intense love of the Bohemian people.

FERRERO'S HISTORY OF ROME.

The Greatness and Decline of Rome. By Guglielmo Ferrero; translated by Alfred E. Zimmern. Volumes I. and II. Pp. vi., 328; vi., 389. New York: G. P. Putnam's Sons. $5.25 net.

It requires considerable courage in these days of specialization to borrow the title of Montesquieu's famous essay and write a treatise on the greatness and decline of Rome. Historical fashions have changed since the eighteenth century; the general essay bas disappeared before the special monograph, and students of history have been interested chiefly in the origin and development of states, leaving disquisitions upon their decline and fall to the public orator and the sociologist. In the field of Roman history this movement has cleared away a mass of legend and guesswork and greatly enlarged our knowledge of the real nature and workings of Roman institutions, but there is ground for thinking that it has also tended to emphasize unduly the period of Roman history which has the smallest general significance, and which, by reason of the paucity of trustworthy information, can never be satisfactorily known. We may, if we choose, share the ancient opinion of the virtues of early Roman days and admire the type of character which laid the foundations of Roman greatness under the early Republic; but Rome's great work for the world was done under the Empire, and in any large view of Roman history it is the Empire which must claim the principal place. There are signs that the interest in the later period is increasing, but the lack of any satisfactory general history of the Empire is still one of the great gaps in historical literature. Dean Merivale's elaborate prelude to Gibbon is hopelessly outgrown; Schiller's "Kaiserzeit" is useful, but inadequate; Mommsen's "Provinces" is only a small part of the great story and must be read by the layman with something of the self-denial with which it was written. How far Ferrero will go in his ambitious attempt to fill this gap it is as yet too soon to say, but it is an attempt that must at least be taken seriously. His work is generously planned; it rests upon a familiarity with the ancient sources of information which is quite remarkable in one whose reputation has hitherto been that of a writer on criminology and public affairs rather than on history; and it has literary quality and at times brilliancy. The three volumes which have appeared have already had considerable vogue in France, where their popularity was enhanced by the author's recent lectures at the Sorbonne—and perhaps by a preface to the French translation which proclaims Cæsar's conquest of Gaul to be the most important fact in Roman history—and it was high time for the publication of an English version.

After a preliminary sketch of five chapters Ferrero begins, like Merivale, with the death of Sulla in 78 B. C., and, under the caption "The Empire Builders," the first volume deals with the tangled and often obscure events of the succeeding twenty years, a transitional period, significant for the rise of new men and new policies, but not easy to treat in a unified and effective fashion. To Ferrero the most striking personality of this age is plainly Lucullus, whom he regards as "the strangest and most isolated figure in the whole history of Rome." Known to posterity only as a builder of villas and organizer of banquets, Lucullus here appears as the real creator of the new Imperialism which Pompey and Cæsar took up and turned to their own advantage through comprehending, as the aristocratic inflexibility of Lucullus could not, the new relations between commander and soldiers which corresponded to the changed conditions of Roman politics. This view of Lucullus is stated, indeed overstated, as follows:

During the six years which he spent in the East he had made a revolution in Roman politics which it would be impossible to over-emphasize. His part in the history of Rome is so analogous to that of Napoleon in the history of Europe that we may perhaps justly define him as the Napoleon of the last century of the Republic. He found the foreign policy of the Roman Republic in very much the same condition as that in which Napoleon found the foreign policy of Europe at the end of the eighteenth century. It was embarrassed by traditions of slackness, paralyzed by an indecision which took alarm at shadows and gave way at once before any determined opposition, and accustomed to regard intrigue and procrastination as satisfactory substitutes for rapid and resolute action. It felt an almost sacred respect for the established order, and an extreme terror of laying a finger upon its familiar workings. It habitually preferred diplomacy to war, and never understood how to make the most of a success or drive home any vigorous effort, generally accepting some compromise which settled the question for the moment along the line of least resistance, at the risk of raising new and inevitable complications in the immediate future. This policy was not without a certain sagacity of its own, but it had become stultified by the very exaggeration of its own virtues. Like Napoleon eighteen centuries later, Lucullus effected a revolution in the methods of government. He substituted war for negotiation as the usual method of solving the difficulties of Eastern policy. He replaced the interminable machinations of senatorial intrigue by the sharp and vivid impression of his swift campaigns, with their bewildering attacks and their complete and amazing victories. By the adoption of a strong and sustained policy of aggression he succeeded in becoming the arbiter of the entire East, reducing one state after another to helplessness in a series of almost foolhardy campaigns. In this he was as overwhelmingly successful as Napoleon himself; for he reëstablished the equilibrium between the obsolete policy of the Senate and the changed circumstances of the day.

In the second volume, entitled "Julius Cæsar," the great dictator naturally occupies the largest place. Ferrero, however, is no hero-worshipper, and he has succeeded to a remarkable degree in freeing himself from the influence of Mommsen, whose glorification of Cæsar and Cæsarism has had so profound an influence upon the historical writing of the past half century. To Ferrero, Cæsar is "a man of genius, not a demi-god"; "he could see no farther than the other men of his day; and he acted, like all politicians, according to the impressions and the needs of the moment." Instead of being the outcome of a well-formed plan, a continuous effort toward a supreme goal, Cæsar's career was thwarted and twisted by circumstances and accidents, and his plans were continually being modified to correspond. He was "an incomparable opportunist." Seeking the *materia triumphorum* in Gaul, he went out "without any definite ideas of policy, and with only the meagrest knowledge of the country and its inhabitants." His war against the Helvetii was an egregious blunder, from which he was saved only by great good fortune, and the story would read very differently if we had Divico's memoirs instead of Cæsar's. His Egyptian sojourn was another serious blunder. He entered upon the civil war, "not out of lust for the supreme power, but to win a secure and honorable position in the aristocratic republic"; his unexpected success, which ostensibly made him master of the Roman world, really placed him in an impossible dilemma, from which he hoped to escape by the conquest of Parthia. He failed in the great political objects for which he strove, and he accomplished no great and enduring work of constructive statesmanship. Circumstances steadily proved too strong for him. We read further:

Cæsar was a genius—a man whose powers have seldom or never been equalled in history. He was at once student, artist, and man of action; and in every sphere of his activity he left the imprint of greatness. His soaring yet intensely practical imagination, his wonderfully clear-cut and well-balanced intelligence, his untiring energy and lightning quickness of decision, his marvellous elasticity of temper and iron power of self-control, his indifference even at moments of the greatest strain to anything of the nature of sentiment or mysticism, would have made him, at any time in the world's history, one of the giants of his age. Under twentieth-century conditions he might have become a captain of industry in the United States or a great pioneer or mine-owner or empire-builder in South Africa, or a scientist or man of letters in Europe with a world-wide influence over his contemporaries. In the Rome of his day both family tradition and personal inclination forced him into politics. Political life is always perilous to the man of genius. There is no sphere of activity which is so much at the mercy of unforeseen accidents or where the effort put out is so incommensurable with the result obtained. In the field of Roman politics Cæsar succeeded in becoming a great general, a great writer, a great character. He failed to become a great statesman. . . . Cæsar was not a great statesman; but he was a great destroyer. In him were personified all the revolutionary forces, the magnificent but devastating forces, of a mercantile age in conflict with the traditions of an old-world society—its religious skepticism, its indifference to morality, its insensibility to family affection, its opportunist and undisciplined politics, its contempt for precedent and tradition, its Eastern luxury, its grasping militarism, its passion for the baser forms of commerce and speculation, its first tentative efforts toward intellectual refinement, its naïve enthusiasm for art and science. There is hardly a stranger irony in history than that the rulers of Germany and Russia should have assumed the title of this prince of revolutionaries. For we fail to grasp the true significance of Cæsar's career till we discern that, like Pompey and Crassus and the other great figures of his day, his mission was primarily destructive—to complete the disorganization and dissolution of the old world, both in Italy and the provinces, and thus make way for a stabler and juster system.

All this is a wholesome reaction from "the entire and perfect man" of Mommsen's imagination, and much of it is true. Ferrero is historically sound in bringing Cæsar down from the clouds and placing him in the every-day world of intrigue and petty rivalry which surrounded the public men of the later republic; and there is much that is suggestive in his efforts to trace the influence of varying conditions of health and environment upon Cæsar's policies and character. We come into closer touch with the man and realize better the complexity of the problems he had to face. On the whole, however, the effect is belittling, even to a greater degree than the author in-

tends, for the body of the narrative does not support the characterizations of the concluding paragraphs. Ferrero calls Cæsar a great general, but the account of his campaigns does not lead the reader to that conclusion. We are told that he was a great genius and a great character, but the story of intrigue and expedient leaves only the impression of an astute politician of the Tammany type. He who has been a rather ordinary man throughout the volume cannot suddenly be made great at the end. And whatever Cæsar was, he was not ordinary.

Cæsar's opponents, as one might expect, fare better at Ferrero's hands, and the judgments, though less noteworthy, are in the main just. There is warm appreciation of Cicero's literary talent and even a defence of his much criticised administration of Cilicia; he "was neither cruel, nor rapacious, nor insincere, . . . but there were qualities in his nature which forbade him to be powerful." It reminds one of Mommsen to find Pompey called "a *grand seigneur* who thought himself a great man," but the following summing up shows an evident desire to be fair:

Pompey was not a fool, as several modern historians in their enthusiasm for Cæsar have been pleased to call him, but a typical, and in some ways exceedingly capable, aristocrat, with all the faults and all the virtues of the old nobility, upon whom the circumstances of his time had imposed a task which was far beyond his powers. If he lacked the consuming activity and the unwearied intellectual energy of his successful rival, yet it must be remembered that he owed his fall not merely to the blunders which he himself committed, but also, and in a far greater degree, to the vices and faults of the upper classes, whose champion circumstances rather than any deliberate policy had forced him to become. Nor must we forget the very considerable part which he played in the history of Rome. He annexed to the Roman Empire the country of Christ, with results of perhaps even supremer importance than the occupation of Gaul. Moreover, by the building of his theatre, by the festivals he gave to the people, and by his indiscriminate liberality, he did more almost than any one to disseminate Eastern culture throughout Italy, to give Rome a taste for the luxury of the imperial epoch whose remains we still continue to admire and even to imitate.

The freshness and point of his characterizations show that Ferrero has a strong interest in the personal element in history, but, as the treatment of Cæsar makes clear, he is not one of those for whom the course of historical development is shaped by a few dominant personalities. Human history he conceives as "the unconscious product of an infinity of small and unnoticed efforts"; and "its work is done, spasmodically and in disorder, by single individuals or groups of individuals, acting generally from immediate motives, with results which always transcend the knowledge and intentions of contemporaries, and are but seldom revealed, darkly and for a moment, to succeeding generations. To find a clue to the immediate, accidental, and transitory motives which have pricked on the men of the past to their labors" becomes, accordingly, an important part of the historian's task. Motive-hunting, however, in spite of its fascination, is dangerous business, as the example of Tacitus shows; it easily passes beyond the available evidence into the field of conjecture and subjective interpretation and by filling in the gaps with the author's assumptions, it tends to modernize ancient characters in an unhistorical fashion. These dangers Ferrero does not succeed in avoiding. He has an acute mind, sharpened by studies in morbid psychology, and the Italian gift, so useful in this confused period of Roman politics, of following out a tangled series of intrigues, but the intrigues are sometimes of his own creation and the portrayal of motives often subjective. The account of Cleopatra, for example, though it may seem consistent enough to the author of "La Donna Delinquente," lacks sufficient support from ancient writers.

One of the best features of Ferrero's treatment of this period is the attention given to economic and social history. It is his main thesis that the Roman conquest of the ancient world was the result of "the growth of a nationalist and industrial democracy on the ruins of a federation of agricultural aristocracies"; and he traces in Italy the spread of commerce and industry, the growth of towns, the rise of the bourgeoisie, and the changes in the conditions of life throughout the peninsula. There is less on the decline of agriculture than is to be found in most works on Roman history, but there is an account of the process by which, "to match the changeless beauty of her sky and sea, Italy eagerly cast off her old barbaric trappings of corn and wood for a more smiling vesture of vine and olive"; and the introduction of the cherry tree into Italy is set down among the most important results of the campaigns of Lucullus in the East. There are also some sensible remarks on the corn trade, pointing out the necessity of state purchases and distributions under ancient conditions of commerce. The intellectual movement is likewise not neglected, although the attempts to connect literature with political events are forced and often conjectural. Indeed, Ferrero's treatment of all non-political topics suffers from a lack of continuity arising from his close adherence to the annalistic method of the ancient historians. The history of a war may quite properly be written "by summers and winters," after the model of Thucydides, but by their very nature social and economic changes generally defy exact dates, and to assign them to specific years is to sin against historical accuracy, as well as against effective presentation.

Here and there, as in the passages last quoted, it is pleasant to note the touches which reveal the Italian's feeling for the soil and sense of the continuity of history in the peninsula. Most of us are not in the habit of regarding Cæsar as an Italian, and only a fellow-countryman of Dante and Garibaldi would remark, apropos of Cæsar's sojourn in Ravenna on the eve of the Civil War, that this little town "seems predestined to be the refuge of great Italians in the stormy hours of their career." We are also glad to see that, while the bibliography is somewhat provincial in its omissions and in its abundant citations of minor Italian monographs, the work as a whole is singularly free from the spirit of hostility to foreign scholarship which appears in the writings of certain Italian students of Roman history and archæology, and sometimes degenerates into personal malignity. Such chauvinism is not needed to maintain the intellectual independence of a country which is producing such excellent, and such varied, work as that of Ferrero and Pais and many lesser writers upon ancient Rome.

CURRENT FICTION.

The Weavers. By Gilbert Parker. New York: Harper & Brothers.

Seldom since the appearance of "Peer Gynt" has a work of imagination showed a more cosmopolitan range of dramatis personæ than Sir Gilbert Parker has assembled in "The Weavers." There are English Quakers, Egyptian eunuchs, a drunken Romish chairmaker, a duchess, a stage Chicagoan, a lady of English, Celtic, American-Dutch extraction, effendis, pashas, palace intrigues, murders, and a great many dreams. All the characters talk at great length; every event is narrated at least twice, sometimes oftener; and the effect of the whole is singularly lacking in movement. Although Sir Gilbert Parker uses a civilized if somewhat heavy English, and puts his book together in practised fashion, his treatment of Egyptian troubles culminating in the siege (presumably) of Alexandria, on the whole lacks the brilliancy given to the same event by the late Archibald Clavering Gunter. It is hard to believe that "The Weavers" comes from the same hand which once gave so thoughtful and sincere a study of character as Charley in "The Right of Way."

Helena's Path. By Anthony Hope. New York: The McClure Co.

Anthony Hope Hawkins labors under the disadvantage of having written early in his career two books, each in its kind of unusual interest: "The Prisoner of Zenda," and "The Dolly Dialogues." The question commonly asked in regard to a new work from his pen is whether it is like—or as good as—either of these. In the case of "Helena's Path," the answer to both inquiries must be no. And yet the style is crisp and with frequent happy turns—as when excesses of costume are described as "that facile path to a barren eccentricity." The story, too, moves very rapidly. The theme is conceived in a vein of high fantasy—the love affair between two brilliant persons: Lord Lynborough, whose "profile stood as carved in fine ivory," and the Marchesa di San Servolo, whose profile could be compared "to nothing less than a Roman empress on an ancient silver coin." They begin with a theatre quarrel, which runs through all the stages to proposal and acceptance. Neither the characters nor their actions are of this earth, earthy; but the tale is not on that account the less vivacious and amusing.

Santa Fé's Partner. By Thomas A. Janvier. New York: Harper & Brothers.

The American cowboy and miner—Bret Harte's kind—are said to be obsolescent, but there is no sign of their passing in current fiction or drama. The magazines are full of the jargon of the plains, and the popular stage blazes with Western color. Perhaps fear accounts for our renewed enthusiasm over this theme. What a dreadful thing if our one picturesque asset should be lost! Every man to his derringer, and a bead on the first tenderfoot who ventures to hint that it is not all real!

It is noticeable that while on the stage, as is natural, the heroic West holds its own, in fiction we are lapsing to a contemplation of the humorous West. "I've been around considerable in the Western country," says Mr. Janvier's interlocutor, "and I've seen quite a little, one way and another, of the folks living there; hut I can't really and truly say I've often come up with them nature's noblemen—all the time at it doing stunts in natural nobility—the story-books make out is the chief population of them parts." Palomitas, the scene of the operations of Santa Fé and his partner, is supposed to be a place in Indian Territory "where the track got stuck"; and while the rail-laying awaits further contributions from the English stockholders of the new road, the camp remains and degenerates—a town without occupation and without laws. Santa Fé is, on the whole, the chief scalawag, a professional gambler and sharper; with his black clothes and his suavity, plus utter selfishness, a rather obvious reduction to the real of the chief outcast of Poker Flat. His partner is a very close female version of him, pleasantly known as the Sage-brush Hen; and their hilarious joint adventures are amusing in a broad way. Much the usual tenderfoot subjects are provided for their experiments—a representative of the aforesaid English stockholders, a maiden aunt from Vermont, and a preposterous sportsman from Boston. In the end resumption of work upon the railway and a rising tide of virtue exile Santa Fé and his partner, as their prototypes, Jack Hamlin et al., were exiled from Poker Flat. It is all good magazine copy, though hardly more.

Growth. By Graham Travers (Margaret Todd, M.D.). New York: Henry Holt & Co.

This seems a survival or revival of a type of story much attended to a decade or two ago, the religious novel. Robert Elsmere, however people may have felt about him, was an important figure in his day. He was talked about; his soul was a matter of moment even to the ungodly; and he had many imitators. Now it all seems a trifle out of date. "Growth" was, we should say, written primarily for Scotch Presbyterians. Edinburgh supplies the setting, and the protagonists are all persons living more or less consciously in the shadow of the kirk. The sad, dour ardors of the Covenanters' faith, the strict creed, the stricter discipline—these are matters with which the reader of this story will be much occupied. A young countryman, son of a Presbyterian minister, comes up to the University, expecting to prepare for the ministry. At first he is full of zeal for his books and the church life; but presently he begins to rebel against the narrowness of it all. He makes cheerful acquaintances, who are ready to talk on other than theological subjects. He goes to the theatre for the first time in his life, and falls in love with the leading lady. She, as it happens, is a good woman, the sister of his best friend, a young parson of much promise, for the sake of whose position the relationship is concealed. The boy discovers a relationship, but misunderstands it. Much tribulation follows, involving a perilous approach to moral disintegration on the boy's part. He comes right in the end, however, as do the other persons concerned—though not right according to kirk standards. There are two characters in the book more interesting than the nominal hero—very modern persons both, and strikingly in contrast with that rather crude and jejune youth.

The Domestic Adventurers. By Josephine Dodge Daskam. New York: Charles Scribner's Sons.

One fears Mrs. Bacon may come to be numbered among that rather large class of American story-writers who have been spoiled by an early magazine popularity. The peculiar style of workmanship involved has merits rather journalistic than literary; above all, an unhalancing premium is paid to smartness. Mrs. Bacon has scored so often by virtue of sheer hard cleverness that it is not to he wondered at if the note grows yet harder and thinner as time goes on. "The Domestic Adventurers," to be sure, is good-natured enough—a chronicle of certain typical experiences with the American servant, varied by "a spice of love interest," as the book advertisements are wont to say. Three unmarried New York ladies (perish the thought of old maids), aged respectively twenty-nine, thirty-four, and forty, after a somewhat prolonged experience of city flats, take a house in a suburb. To the thirty-four-year-old the part of housekeeper falls, since she has no stated profession, while the youngest teaches in a fashionable boarding-school, and the oldest is an editor. The housekeeper tells the story, giving an account of her contact with the servant problem, and of the supposed love affairs of the gay young schoolmistress. Eventually the supposed lovers bestow themselves somewhat unexpectedly to the persons in the hook, if not to the reader.

The House of the Vampire. By George Sylvester Viereck. New York: Moffat, Yard & Co.

The Vampire is a man of letters, living in contemporary New York, a dominating creative genius, "whose style possessed at once the chiselled chasteness of a Greek marble column and the elaborate deviltry of the late Renaissance. At times his winged words seemed to flutter down the page frantically like Baroque angels; at other times nothing could have more adequately described his manner than the timeless calm of the gaunt pyramids." Reginald Clarke attains his universality by quietly vampiring every one with whom he comes in contact, or at least any one to whose talent he takes the slightest fancy. If it be a music-hall singer with one note in her voice, he manages to appropriate the note. Thus when he reads his new play to Ernest Fielding, Fielding at once recognizes it as a child of his own imagination to which he had not yet given birth. This is not a case of common plagiarism. The Vampire works, so to speak, while his victims sleep, and next day they find their completed product (of which they have never breathed a word to any one) neatly written out in Clarke's handwriting in the drawer of his desk, which they have occasion honorably to rifle. When Ernest Fielding confronts him with these misdeeds, Clarke, so far from being abashed, appears "like a gigantic dynamo, charged with the might of ten thousand magnetic storms that shake the earth in its orbit and lash myriads of planets through infinities of space." He justifies himself by explaining:

> I carry the essence of what is cosmic . . . of what is divine. . . . I am Homer . . . Goethe . . . Shakespeare. . . . I am an embodiment of the same force of which Alexander, Cæsar, Confucius, and the Christos were also embodiments.

Of course the theme of the consuming power of greatness, from the time of Semele on, has been eternally interesting; its manifestations, whether maleficent or merely indifferent, are eternally capable of new and significant treatment. The difficulty with Mr. Viereck's treatment lies in his purely melodramatic conception of character, an utter lack of subtlety in dealing with the whole situation, and a distressing congestion of large words. It is the type of theme in which Robert Hichens excelled in the good days before he became a popular writer, and of which Oscar Wilde's "Dorian Grey" is a happy example. But Mr. Viereck's overladen prose is still at the stage where people look "mingled hate and admiration," and where the effort towards blended profundity and beauty is more apparent than convincing.

Paulus und Jesus. Von Prof. D. Adolf Jülicher. New York: Imported by G. E. Stechert & Co. 13 cents.

The time-worn question whether the Apostle Paul handed down the essential content and true spirit of the Galilean gospel, or, on the other hand, seriously misrepresented it and changed the Christian message for the worse, appears in the series of popular handbooks by liberal German divines known as the Religionsgeschichtliche Volkshücher. Two years ago there was published in the series an essay on Paul, by Professor Wrede of Breslau, which was distinguished even in its brilliant company for sharpness of generalization and lucidity of style, and which was recognized at once on all sides as a masterpiece of historical criticism. With full recognition of Paul's sincerity and devotion, his zeal as a missionary and skill as a dialectician, Wrede asserted nevertheless that Paul had supplanted the pure and gentle personal faith of the Nazarene by rabbinic dogma and ecclesiastlcism, and that the Christian religion had suffered in his hands a serious and permanent impairment of its finer qualities and principal merits. The total impression upon the reader of Wrede's monograph was not less unfavorable as concerns the character and influence of Paul than that made by a radical pulpiteer who flings his periods at the contrast between the Sermon on the Mount and the Epistle to the Romans. The man of Tarsus was made to figure as the second founder of Christianity, of greater, but less beneficent, influcnce than the Nazarene himself.

The present essay of Professor Jülicher is confessedly a critique of this unfavorable judgment upon the great Christian Apostle. It is admitted freely that Paul is not Jesus, and that the epistles fall immeasurably below the gospels in the

quietness and confidence which is the strength of religious faith. The title of the first chapter is "The Cleft Between Paul and Jesus," and here a large portion of what may be termed the theology of Paul is clearly described, with no concealment of the fact that its rabbinic framework and scholastic refinements are far removed from the parables and beatitudes. Yet even here Professor Jülicher finds that the differences are not so much between Paul and Jesus, as between the entire early company of Christians and the Teacher to whom they owed their inspiration. A good case is made for the thesis that much at which offence is taken in Paulinism is but the common heritage of the primitive Church. In the second chapter, on the agreement between Paul and his Master, the apologetic is more vigorous. Professor Jülicher asserts that as regards faith, hope, and love, which are the greatest treasures of religion, the Galilean spirit is handed down unimpaired. The vocabulary is different, as Corinth and Rome were not Capernaum and Bethsaida, but the message is essentially the same. Paul defends the gospel against Jewish aspersions in language with which his rabbinic education had equipped him, but it is the gospel he defends and not the product of his own invention. We hear Paul only from the pulpit, and largely in debate which he did not invite, but which was forced upon him; we hear Paul's Master from the fishing boat, opening the kingdom of heaven to sympathetic disciples. Paul has a right to be judged by his best, by his utterances in moods and surroundings best calculated for expression of the real Christian spirit. It is not fair to judge his Christianity by his temper in theological argument, by his conduct in the presence of the *rabies theologorum*. The author of Romans iii. and ix., the constructor of the doctrine of election, wrote also of the love without which all speech is sounding brass and a tinkling cymbal. Here is perhaps the source of difference between Professor Wrede and Professor Jülicher. The former has kept chiefly in mind the theological sections of the epistles; the latter has thought chiefly of the more human utterances. Of course both must be taken together in a complete estimate of the man, and this old-time debate illustrates the difficulty of constructing a satisfactory picture of a personality so complex as that of Paul from a few casual letters. It can scarcely be denied that it was a one-sided view of Paul which Professor Wrede presented, and that the Volksbücher series now represents more fairly and completely the consensus of judgment among historians, since Professor Jülicher has spoken for Paul the man with as much enthusiasm, learning, and freedom from dogmatic prejudice as his predecessor had spoken for Paul the rabbinic apologete.

The explanation of the differences between Jesus and Paul is in large part in the situations they severally confronted. Their problems, their tasks, and the length of their activity, were not at all the same. The founder of Christianity was a sower of seed, but the garden was left for others to till. In his eloquent conclusion Professor Jülicher describes Paul erecting a wall about the garden, which the hate of enemies threatened utterly to destroy. The bodies of the first enthusiasts were a useless defence, but the rude stones hurried to the ramparts by the man of Tarsus held back the forces of hate, and the garden is kept in its fairness to this day. Some take offence at the rude protecting stones, and in their ruin they are certainly unlovely, but the teacher of Galilee had at heart no more true and kindly friend than the Christian rabbi who preserved the faith with means we now call ugly. He never thought to put his theology in the place of the gospel, but as a citadel about it. Christianity is indebted to him for much, but its existence it owes not to him, but to his greater Master.

Such is the apology for Paul made by the Marburg teacher. Some will think the Apostle needs no defence, others will declare the apology insufficient. But it certainly is able and interesting, and a contribution to the history of the early Christian church of no small merit and importance.

The Automobilist Abroad. By Francis Miltoun; illustrated by Blanche McManus. Boston: L. C. Page & Co. $3.00 net.

Automobile touring in Europe is not new, as time is reckoned in the twentieth century, but leisurely motor-touring is still somewhat of a novelty. A few motorists, and among them Mr. Miltoun, have grasped the fact that the real charm of the automobile lies not in racing from Paris to Berlin or "scorching" from Paris to Rome, but in discovering the remote and the inaccessible. The motor-car can enter where the train cannot; this is his true merit and virtue (for the French Academy has pronounced the automobile to be masculine). Mr. Miltoun has the distinction of looking upon his machine as a means, and not an end, and his book has the distinction of being one of the first satisfactory volumes of travel written by an automobilist.

"The Automobilist Abroad" is divided into two sections: the practical and the picturesque. The first five chapters give excellent accounts of the past history and present condition of roads, information about hotels, talk concerning travel, suggestions of routes, descriptions of quaint milestones and road-signs, regulations for speed, and lists of obstructions. Concerning the difficulties of the road, Mr. Miltoun, not without a touch of humor, says:

> In La Beauce the geese and ducks are prudent, in the Nivernais the oxen are placid, and in Provence the donkeys are philosophical; but in Brittany the horses and mules and their drivers take fright immediately they suspect the coming of an automobile.

Of practical interest, and of value to all European motor-tourists, are the appendices on custom dues, lists of road books and maps, regulations of motor-car travel, particulars of road races, and much useful information in tabular form.

But the real attraction of the book lies in the lightly-drawn sketches of tours in France, Britain, Flanders, and along the Rhine. France is the paradise of auto-cars and auto-boats; and if followed along the lines of the unconventional no more fascinating field can be found. Mr. Miltoun knows his France, and whether it is in Languedoc and Old Provence, in The Pyrenees, by Rhône and Saône, or by Seine and Oise, we are filled with the desire to follow in his steps—if we have not already been before him—to have an intimate view of the land of Mistral, of Dupré and Daubigny, of Jehan de Meung, to see Martigues, "La Venise de Provence," the artists' sketching ground, to camp out with Père Chabas and eat his *bouillabaisse*, his *langouste*, and his *omelettes au rhum;* to take a run through the Valois, the country of Dumas; to cruise on the Seine in that pert *canot-automobile* the "Cà et Là." "The motor-boat is highly developed in France," writes Mr. Miltoun, "from the simple fact that you can tour on it. You can go all over France by a magnificent system of inland waterways; from the Seine to the Marne; from the Oise to the Sambre—and so to Antwerp and Ghent; from the Loire to the Rhône; and even from the Marne to the Rhine; and from the Mediterranean to the Atlantic."

Britain's roads, Britain's police, and Britain's hotels are not favorable to motoring. But the "Automobilist" braved these inconveniences for a run on the famous Bath Road, a tour on the south coast and the Isle of Wight, and a five days' trip over the classic itinerary from "Land's End to John o' Groat's," 888 miles of straight road over eight ranges of mountains, through the heart of the Scottish Highlands, and skirting along the surging waves of the North Sea. Of greater charm was the author's rather too rapid tour in Belgium, Holland, and by the Rhine. The level, straight, brick-paved roads of Holland are as good for the automobilist as the granite-block and cobble-stone roads of Belgium are bad. And beautiful, dainty Holland repays the tourist with her lovely sunken gardens, her myriad windmills, her Paul Potter cattle, her color, costumes, and canals, her sunsets and *sabots*, her dykes and Delftware.

Mr. Miltoun has an eye for the quaint and the characteristic, his style is piquant; he is not an art-critic, but history is at his tongue's end, literature is his ready ally, and he has a prodigious memory. He has the knack, in a few dashing lines, of making you see the place, and he gives an original twist to his words. The volume is liberally illustrated with good maps, numerous photographs, which are good for "kodaks," but tantalizingly small, and a number of wash drawings colored and otherwise.

Det Nittende Aarhundredes Kulturkamp; Norge. By Hjalmal Christensen. Christiania: H. Aschehong & Co.

In his Cultural History of Norway in the Nineteenth Century Dr. Christensen presents a clear and scholarly picture of the intellectual and material progress of Norway, since the regaining of independence in 1814. To the student of educational or social and political movements there can be no more interesting and instructive chapter. Although the little kingdom has only recently entered upon an era of material prosperity, no careful observer can have failed to notice that in the last fifty years, it has, in the purely intellectual domain, taken an active part in general

European movements. As is well known, Norway was for four centuries associated with Denmark in a union in which she had become financially impoverished, apparently sapped of all intellectual life and politically reduced to the virtual position of a dependency. Then in the beginning of the last century came a reawakening of the spirit which had been dormant during a "night of four hundred years"; and Norway united with Sweden on terms of equality. Thereupon followed a period of intellectual development characterized by striking achievements. In less than a hundred years this little country has produced in politics such men as Schweigaard, Stang, Sverdrup, and Mikkelson; in law, a Bernhard Getz; in science Abel, Oersted, and Sophus Lie; in historical and linguistic research, Keyser, Munch, Sars, Gustav Storm, Aasen, Sophus Bugge (who died last August), and Joh Storm; in music, a Sinding, a Kjerulf, and a Grieg; and in literature a score of great writers headed by Henrik Ibsen and Björnstjerne Björnson. And this progress, of which such names are, so to speak, the milestones, reached a kind of climax in 1905 in the severing of the political ties which had bound Norway and Sweden for ninety-one years.

The author's presentation has been made on the basis of literature in the broad sense, writings on science, politics, and law, as well as belles-lettres. The introductory chapter, "What Is Culture?" is followed by an analysis of the Norwegian character, and the relation of the Norwegian peasant and Norwegian society to the cultural movements. The bulk of the volume, pages 52-371, is devoted to a discussion of the "leaders of culture" (*Kulturförere*). The author analyzes with fine critical insight the work of such men as the national propagandist Wergeland and the conservative Welhaven, the former of whom he characterized as the pathfinder and champion of the broader humanitarianism. Then follows a chapter on the Norwegian press. The book closes with three short chapters on Pseudo-Culture (*Halvdannelse*), Enemies of Culture, and The Right of Property and Personal Liberty in Norway. The author argues that Vinje is the creator of the modern Norwegian sentence structure; and that Georg Brandes has been a powerful uplifting factor. He also maintains that while the character of the Swedish people has been modified by mixture with Finns and by the outlook upon and association with the Slavic East, and while that of the Danes has experienced a similar influence from German civilization, that of Norway forms a composite of those mental traits which distinguish the English on the one hand and the Scotch on the other.

The Future of Japan. By W. Petrie Watson. New York: E. P. Dutton & Co. $3.50.

From his first arrival in Japan, Mr. Watson has been anxious about her future, for his first book dealt with "aspects and destinies," and this second volume has for its burden implicit prophecy. Now, in the world of science, prediction is the final crown, set upon mastery of all details of knowledge; induction of facts reveals law. In the realm of spirit, profound insight of past and present reality is necessary. Has Mr. Watson the qualifications of astronomer, or seer?

It is but fair to the author to show first his work, before appraisal or final judgment. His well-arranged and indexed volume, of nearly 400 pages, treats in part i, "Conditions of the Times." He tells us much that is accurate, valuable, and thoroughly sane about leaders and people, the social order, political status, administrative conditions, education and character, superstitions, the moral systems of the past and the present "moral chaos." Part ii. deals with "The Future and Its Problems." He shows tendencies, modern philosophical conditions, the Constitution and its difficulties; and various other subjects, on which we need light, he treats both interestingly and suggestively. The final question he asks is this:

> Have we, in the sudden and formidable forthcoming of Japan, the appearance of a new idea, of a new interpretation, representing a new beginning of history, the opening of a new adventure of humanity?

To this question he gives a negative answer. Whatever Japan hopes or proposes, "she is too like the West to be to Europe a new idea; she is too like the East to be a new hope."

Mr. Watson argues that there can be no fresh "beginning" of history which has not been born from a new religion, or accompanied its propagation. Japan, so far from offering humanity a new religion, proposes to carry on history without one. Japan has no "beginning" of history, because there is in her mind no concept or interpretation of man's relation to the universal. Therefore, the strength and potency of the world remain with Europe, which holds "a concept and image of the universal that guarantees the essential permanence of the European idea against every particular type and every peculiar originality." In a word, Europe possesses the idea of concrete Personality, while Asia, including the Japanese genius, has no universal relationship or reference and no universal motive. In his chapters on Japan and Christianity, progress and individualism, and the Christ-personality, the author further argues that we need not expect from Japan any fresh surprises (such as Renan has hinted at), and this also is the burden of his seventeen-page Introduction on Japan and Europe. The difference between the mind of Japan and that of Europe is, in his view, the absence or the presence of a "dogmatic sense." He would not only say that the Japanese are destitute of the mental trait which has made Europe, but he asserts that she intends to pursue her career without religion, or "the great divine fact at the heart of that European civilization in which she [Japan] seeks completely to habit herself." In Mr. Watson's eyes Japan has risen to a place among the leading states by challenging every precedent, political, social, religious, in the moral fabric of Western civilization. The apparition of this child of the world's old age seems to shrivel up that which we have deemed essential and fundamental to the merely incidental.

Those who love zealous discussion of a vital and increasingly interesting theme, will find in this volume both enjoyment and profit. Those who rigidly require high qualifications for prophecy from the point of view either of America or of critical scholarship, will be disappointed. Saturated with Anglicism and knowing European development apparently only in the traditional way, the author has certainly not the spirit or the outlook of the cis-Atlantic man, who has discarded so much of what is mediæval, feudal, and inherited from political ecclesiasticism, to which Europe still clings. Indeed, the general cast of thought, despite the author's interviews with Tokio statesmen, and his familiarity with review articles and measurably even with science, seems curiously mediæval. Another serious defect, which shortens the author's base line and discredits most of his measurements of the yet unseen, is that his outlook, so far as regards the origins or the real history of the islanders, is not founded on science. The Japanese are not, in the strict sense, an Oriental people, nor can they be put in the same category with the old nations of China or India. A mixed race, in which the Aryan blend is strikingly large, as archæology, linguistics, and a critical reading of their history shows beyond cavil, they are not old, for no such thing as a Japanese nation, that is, a body of fairly homogeneous people, having the same social system, religion, and government, existed until the twelfth century. Furthermore, the Japanese are not a nation in the sense that the English and French, for example, are. For centuries, a minority of armed gentry, besides terrorizing a great body of conquered, of semi-serfs, or of people only partially privileged, made "public opinion" and government. Within fifty years we have seen an oligarchy surrounding a semi-divine emperor, of whom and with whom they make mystery play, and, under the show of a constitution, compel the obedience of millions in war and peace.

Yet none the less is it true—and the apparent contradictions are only in healthy growth—that there are vast potential changes almost in sight. Mr. Watson, to be a true prophet, ought not only to have become familiar with the results of research and the facts of actual history, but he ought to have known far more than his pages would lead us to suppose he does know about the actual state of Christianity in Japan and the real mind of the leaders of the nation. The popular agglomerate of dogmatic Christianity, with all the accretions from Greek philosophy masquerading under the name of Christian theology and from Roman pragmatism and church imperialism, traditionally accepted among us, is not indeed making much progress in Japan, and organized Christianity in statistical expression shows no notable progress. But as a leavening spiritual force, the moral influence and teaching of Jesus is steadily remaking the nation. The dogmas that are silently sinking below the horizon in Europe and America have little relish to the Japanese taste. But to intimate that Japan intends to get along without a religion superior to any that she has thus far tried, is to misread the signs of the times. Furthermore, our English prophet does not seem to see, certainly not to measure in true proportions, the steadily rising Nation of Japan, before which her own fairy-tale theories of the Universe, and of the Imperial Family, and of the Throne, as well as half her world of superstition and fond belief, is to pass away.

Peers or People? The House of Lords Weighed in the Balance and Found Wanting: An Appeal to History. By William T. Stead. Pp. viii, 264. New York: A Wessels Co. $1 net.

Mr. Stead's indictment of the House of Lords was published when there was some expectation that a great popular agitation would follow the wrecking of the Education bill of 1906 by the Conservative majority in the upper house that takes its instructions through the Marquis of Lansdowne from Mr. Balfour, the leader of the minority in the House of Commons. That expectation was not realized. The movement failed to take hold with the Liberals, Radicals, and Labor men, because Free Churchmen regarded the Education bill as falling so far short of the measure necessary to set up a really national system of education—a system from which all churches should be excluded—as not to be worth a great constitutional struggle. The movement failed for another reason. Just as soon as the Campbell-Bannerman government was well established it began to pay campaign indebtedness by creating peerages for men of newly acquired wealth; for men who had absolutely no claim to be peers except that they had bestowed some of their money on the party treasury or had expended it in maintaining party newspapers. Any assault on the Lords would have been hampered by these recent creations of peers.

But the unconcealed partisan activity in the Parliamentary session of 1907 of the peers who take their commands from the leader of the minority in the Commons makes it possible that a conflict with the Lords may occur within the lifetime of the Parliament that was elected in 1906. In case of such a conflict Mr. Stead's statement of the case against the peers will have an outstanding place in the literature of the propaganda for this reform. Mr. Stead goes no farther back than 1832; for before the Grey administration took up the long overdue work of reforming the representation there had been no struggle between the Commons and the Lords which aroused popular interest. Indeed, prior to 1832 the Lords directly or indirectly controlled elections of some three-fifths of the members of the House of Commons. From 1832 onward, however, Mr. Stead gives a full narrative, adequately supported by authorities, of the action of the Lords on Parliamentary reform, land legislation, labor and factory legislation, religious equality, education, and democratic municipal government. Their opposition to these movements has been actuated by privileged interest. Even of more practical value are Mr. Stead's statements of the small part in the work of government and administration which is now within the province of the House of Lords; of the small value that can be attached to the House as now constituted, as a reviewing chamber; and of the utter neglect by three-fifths of the peers of their Parliamentary duties except when measures in which they are interested either as landlords or as Tory partisans of the Bourbon type are before Parliament.

Here and there in the 250 pages Mr. Stead's characteristic methods of handling a subject manifest themselves. But there is far less of Mr. Stead than is usual in his political or social monographs; and were all of Mr. Stead discarded, the authorities he has drawn upon—covering a wide range and extending over the whole of the period—are brought together with much skill and care; and these alone would greatly help to an understanding of the problem.

Science.

Altitude, Azimuth, and Geographical Position. By G. W. Littlehales. Philadelphia: J. B. Lippincott Co.

The history of navigation, if ever written *in extenso*, from the Phœnicians to Bowditch, will show a variety of stages, each compact in itself and definitely marked. As practised to-day, on merchantman, ocean liner, and man-of-war, it is one of the most useful of the exact sciences, tending directly to reduction of the cost of a vast variety of commoditics essential to human existence and comfort, and the safety of uncounted millions' worth of the products of man's intelligence and industry.

One of the milestones in this history was passed when, some seventy years ago, an American, Capt. Thomas Sumner, first discovered the principle underlying a precise and easy method of deriving a ship's longitude at sea, now taught every tyro in navigation, and employed every day by navigating officers the world over—known as Sumner's method. It is probably the greatest practical contribution of the nineteenth century to the progress of navigation, and is so important that much interest attaches to Capt. Sumner's account of his discovery in his own words, now quite forgotten:

> At about 10 A. M. [December 18, 1837] an altitude of the sun was observed, and chronometer time noted; but, having run so far without any observation, it was evident that the latitude by dead reckoning was liable to error and could not be entirely relied upon. However, the longitude by chronometer was determined, using the uncertain D. R. latitude, and the ship's position fixed in accordance. A second latitude was then assumed, 10′ to the north of the last, and working with this latitude a second position of the ship was obtained; and again a third position by means of a third latitude still 10′ farther north. On pricking off these three positions on the chart it was discovered that the three points were all disposed in a straight line lying east-northeast and west-southwest, and that when this line was produced in the first-named direction, it also passed through Smalls light. The conclusion arrived at was *that the observed altitude must have happened at all three points, at the Smalls light and at the ship, at the same instant of time.* The deduction followed that, though the absolute position of the ship was doubtful, yet the true bearing of Smalls light was certain, provided the chronometer was correct. The ship was therefore kept on her course, east-northeast, and in less than an hour Smalls light was made, bearing east by north one-half north, and close aboard. The latitude by D. R. turned out to be 8′ in error.

It has often been remarked that Sumner's elegant method would be most readily adaptable, if his circles of position, as given by the two observations of altitudes, could only be transferred to a perfect sphere on shipboard, of such size that the critical intersection points would give the vessel's position on a scale sufficiently large for the accuracy required. But a sphere of eight to ten feet diameter—what ship would have quarters for such a bit of apparatus? It would only prove a white elephant, though very useful if at hand to pilot one through the jungle of an archipelago.

But this happy thought has struck Mr. Littlehales—and quite possibly many others before him, though he is the first to put it into serviceable form—why not reduce a manageable sphere to simple projection on a series of lithograph plates, and bind them up in a book? This is what he has done with all the care and system essential to complete adaptability of his scheme to the needs, not only of navigators, but of practical astronomers and surveyors. In the stress of storm at sea, with the sun beclouded for days, and one's faith in dead reckoning eclipsed, what could be more gratifying than instant application of one simple rule to the chance observation, once it does come, and one's longitude found from trusty graphic plates without the intermediary of the usual and rather protracted, not to say often erroneous, logarithmic computation? Littlehales's method, the most significant improvement in the theory and practice of navigation since Bowditch and Sumner, is based on a twelve-foot globe, embodying a stereographic projection of the celestial sphere on the meridian plane of the point of observation. As this would be too extended for presentation in one continuous sheet, the four quadrants are each divided into ninety-two sections, overlapping, and all conveniently indexed; thus providing even greater facility in practical work than the continuous sheet itself would do. To be sure, the graphic tables themselves are not small, nearly fifteen inches by twenty-four; but they are by no means unmanageable in the chart-room. Only two openings of the book, half the usual calculation time saved, no trigonometry or logarithms requisite, and but a single brief rule, simple in operation, quick of application, and infallible as to result—this is what every ship's master has been on the lookout for, ever since his first command. An easy prediction is that every deep sea yachtsman and navigating officer will quickly discard the antiquated logarithmic rule, once he gets acquainted with the direct, unerring and time saving Littlehales method. And besides this, astronomer, as well as geographist and surveyor, will find these graphic charts most excellent in their adaptability to every sort of conditions wherein spheric problems are involved, whether on sea or land, wherever the sun, or only a single star, is visible.

"Laboratory Exercises in General Zoology," by Glenn W. Herrick (American Book Company), is a brief manual of directions for simple laboratory work on various common forms of life. The author has had the courage to begin with microscopic work and to proceed systematically from amœba and sponge to the English sparrow and the cotton-tail rabbit. This is certainly logical; and if the beginner does not break his microscope lens, it is an admirable method. First impressions are of the highest importance, and if the scheme of classification can be thus presented in order from the lowest to the

highest, there is no better way imaginable. Every second leaf in the book is left blank for written notes of the pupil. Though these abortive thoughts and theories usually fail to fulfil the youthful student's hope of revolutionizing science, yet the very proving of their fallacy impresses the real truths on his mind. The author has succeeded in his effort to present clear and explicit directions for laboratory observation and dissection. Suggestions for collecting and preserving specimens and a bibliography are given in an appendix.

A little pamphlet, "Beobachtungen über den Aussatz im Heiligen Lande," has been published by Dr. Einsler, who has for nearly two decades been head physician of the Jesus Hilfe Hospital for Leprosy in Jerusalem, under the management of the Moravian Brethren. This booklet has been issued by the mission publication house of the Moravians in Herrnhut, Saxony. Dr. Einsler takes issue with the specialists who, at the international leprosy congress in Berlin, in 1897, insisted that this disease is contagious, but not hereditary. The experience of the management of this hospital in the forty years of its existence has not, Dr. Einsler declares, shown a single instance of leprosy as the result of contagion, although opportunities existed in abundance. He also says that among the inhabitants of Jerusalem he has in all these years never seen a single instance of such contagion. His belief in the inheritance of leprosy, Dr. Einsler bases on the fact that in many families it has been transmitted for several generations. He, therefore, particularly deplores the fact that at the three Turkish stations for the isolation of leprosy patients, at Ramleh, Nablus, and Jerusalem, the government permits the marriage of these unfortunates, with the result of broods of leprous children. The authorities of the Jesus Hilfe Hospital have repeatedly petitioned the government to forbid the marriage of lepers, but, so far, without success. Dr. Einsler's observations have led him to the conclusion that there are two kinds of leprosy in Palestine, namely, the "knotty" (*knötchen*, or *knotenform*), and the nervous form. The former shows itself chiefly in external growths on the face, hands, arms, or legs; the latter begins usually with the destruction of the more deeply seated nerves, followed by severe rheumatic pains. According to the latest report, this Moravian asylum had in its care fifty-four lepers. The great majority, namely, forty-one, were Mohammedans.

Sven Hedin is not the only European savant who has been exploring the high lands of Tibet. In "Das Rätsel des Matschu" (Berlin: Mittler und Sohn) the German traveller, W. Filchner, gives a richly illustrated report of his expedition into this land between June 14 and November 8, 1904. The expedition was aided financially and scientifically by the Grosser Generalstab and the Topographische Anstalt of Prussia. This is really the third book on the researches of Filchner in these regions, the first being his "Ritt über den Pamir," and the second a good-sized monograph on the great Buddhistic cloister colony at Kumbum, in northeastern Tibet. The present volume is a report of progress, amid dangers and disappointments, Chinese soldiers and servants, in the region east of the upper Hoang-ho, from 5,000 to 6,000 metres above the level of the sea. The scientific gains to the present volume are chiefly geographical, but the political and social condition of the tribes with whom Filchner came into contact are also instructively portrayed. The full scientific reports, however, of the expedition are to be published in a separate volume, the time of whose appearance has not yet been announced.

Prof. L. F. Vernon Harcourt, a distinguished civil engineer, died in England on September 21. In 1882 he was appointed professor of civil engineering at University College, London; and he served as British member of the Suez Canal Work Consultative Commission. He was the author of a number of works, including "Rivers and Canals," 1882; "Harbors and Docks," 1885; "Achievements in Engineering," 1891; and "Civil Engineering as Applied to Construction," 1902.

Drama and Music.

Le Théâtre au Collège du Moyen Age à nos Jours. Le Cercle Français de l'Université Harvard. Par L. V. Gofflot. Pp. xv., 323. Paris: Librairie Honoré Champion.

The Harvard undergraduate who learns a part for the annual performance of the Cercle Français is not often aware that he is thereby continuing an ancient and important historic tradition, and, likewise, contributing his share to the growth of French influence in the United States. These matters will be clearer to him if he turns the pages of M. Gofflot's entertaining work on the academic drama. The book is dedicated to James Hazen Hyde, whose interest in strengthening the intellectual alliance between our country and France is deeply appreciated by both the author and Jules Claretie, who writes the preface.

The author takes us back to the times of Abélard—he might have begun with Ausonius and the later Roman empire both West and East—and traces the influence of academic productions on the growth of the drama. He restricts his treatment to French plays, mentioning those of England incidentally, and those of Germany not at all. His statement that the theatre of the Renaissance and of the Middle Ages "prit naissance et se développa dans les collèges" neglects, for the moment, the liturgical origins of the mediæval mysteries and their part in the development of the later drama; but he does not otherwise overestimate the importance of the school play. The members of the Pleiade owed their inspiration to a university professor, Jean Dorat, of the Collège de France, an institution which upheld the ideals of humanism against the scholastic programme of the Sorbonne. Rabelais and Montaigne thought well of school performances and of the part they had taken in them. Even the Calvinists did not altogether neglect the drama, while the Jesuits, to whom M. Gofflot devotes the longest and most valuable section of his book, cultivated the art systematically. The Jesuits could criticise the ancient stage with proper vituperation; a German authority calls them zealots and obscurantists on the subject. But this is only half the story, as the present pages show; the Jesuits banished love and alluring vice from their plays—which, therefore, have no lineal connection with the modern French novel—but the principles of the drama and its value they understood well and inculcated in their pupils for nearly two centuries. Corneille, Molière, and Voltaire owed their early dramatic training to the Jesuits; Le Sage and Descartes were also their pupils. The performances of their school plays were notable social affairs, involving large outlays for scenery and costumes and for banquets in honor of the visitors. We read among other anecdotes of a niece of the Archbishop of Paris, a lively Mlle. de Luc, who witnessed one of the spectacles from the window of an adjoining house and amused herself by throwing several pounds of toilet-powder on an assemblage of monks below her; the various garbs of Capuchins, Carmelites, and Barnabites presented a uniform appearance when the dust cleared. Nor were the convents far behind in patronizing both the drama and, later on, the ballet, a fact which the author promptly connects with developments at Radcliffe and Smith. The convent of the Dames de Saint Louis at Saint Cyr was indirectly responsible for Racine's "Esther" and "Athalie," which Mme. de Maintenon had requested for the school. With the expulsion of the order of the Jesuits in 1762 and the approach of the Revolution, the drama gave place to debates, which also form an important part of modern college life. School plays appear sporadically in the nineteenth century; an important centre is Orléans, a stronghold of humanism in the Middle Ages as well, where various Greek dramas were presented from 1855 to 1869.

M. Gofflot devotes his final chapter to theatrical performances in American colleges, especially at Harvard. There the practice was started, with no reference to the ancient tradition, by the Hasty Pudding Club in 1844. An important precursor of the French plays was the performance of the "Œdipus Tyrannus" in 1881, followed by that of the "Phormio" in 1894 and of the "Agamemnon" in 1906. What with annual German and Elizabethan plays, to say nothing of club performances, Puritan Harvard in paying almost as much attention to the theatre as did the Jesuits of old. Perhaps some day a professor of rhetoric may be obliged, as in those times, to write a tragedy in verse every year. Perhaps too, the actors may accomplish their training, as then, "sans négliger aucune des leçons ordinaires."

The book includes a satisfactory, if not altogether complete, bibliography, and a useful list of school plays in France and at Harvard. There should certainly be some account of the first drama devoted to the fate of Queen Mary, the "Stuarta Tragoedia," by Adrien de Roulers, performed at Douai in 1593.

A selected list of plays for amateurs has been compiled by Elizabeth A. McFadden and Lilian E. Davis, with an introduction by Ludella L. Peck, professor of elocution, Smith College. This bibliography consists of some three hundred and fifty titles. It is divided into a general list, a list for children, and a list of Christmas plays. It

is further supplemented by appendices giving some twenty-eight plays for outdoor presentation, and a smaller number of old English plays which are possible for amateurs. The bibliography will be published if sufficient subscribers are procured.

Octave Feuillet's "Le Village," a little play suggesting provincial pictures, is edited for Henry Holt & Co. by Dr. F. J. A. Davidson, who supplies a vocabulary.

Henry Arthur Jones's latest play, "The Evangelist," produced in the Knickerbocker Theatre on Monday evening, is notable for its outspoken treatment of social and religious problems. It does not offer much help toward a practical solution of them, but a play informed by moral purpose is welcome as a rarity. The theme of it is the impotency of the various churches, with their conflicting creeds and innumerable jealousies, to grapple with worldly and spiritual difficulties which would disappear before the spirit of the pure gospel. As might be expected, the piece is largely a bit of special pleading, in which sentiment too often becomes the substitute of fact. The hero, with his religious exaltation, his self-denial, and his persistent optimism, conquers the riotous spirit of strikers, restores the outcast to self-respect, brings an erring wife to repentance, is a help to all who have any dealings with him, and is finally sent to prison through a conspiracy of clergymen, opposed to his methods, who find that he has committed a technical offence against the law by the employment of living pictures in his revival meetings. Mr. Jones, being an enthusiast, is not entirely ingenuous in the conduct of his case. His clergymen are touched with caricature and he ignores the fact that expert opinion is doubtful, to say the least, concerning the value of revival methods. Nevertheless, his position that the spirit of religion is more than the letter, if somewhat trite, is impregnable; and some of his satire on current hypocrisies is as trenchant as it is just. The moral of it all seems to be that religion is a necessity for the poorer classes and most women, although cultivated souls may contrive to get along without it. As drama, the piece is weaker than Mr. Jones's best work. The credibility of the action is sometimes strained, almost to the breaking point, to fulfil the requirement of the moral argument; but there are some strong individual scenes and that prevailing alertness to theatrical effect in which Mr. Jones is seldom found wanting. The acting was capital, and the piece is likely to run, although it will offend almost as many as it pleases.

Laurence Housman, whose "Prunella" was highly praised by some of the best London critics, is at work upon a new three-act play. It is fantastic in character and Eastern in subject. Like "Prunella," it is an attempt to convey in whimsical allegory a serious criticism of life. The music, which will play an important part in the dramatic development, will be composed by Joseph Moorat.

At the recent Trade Union Congress in Bath, England, the stage union was represented by a delegation, whose special grievance was that actors suffered more from an abuse of the overtime system than almost anybody else. Their spokesman, Frank Gerald, said:

No delegates but myself and my colleagues, I undertake to say, represent men who work for nothing, but the actor has that experience in the shape of matinées and rehearsals. Imagine rehearsing a new play for six weeks and getting no pay, and then the play being a failure, and only running one week. That really means seven weeks' work and no pay. Is that right? Would any one here do it? I say no. Some may call our work play, but I would put it the other way about, and say our play is work, and should be regarded so. The actor has awakened to the fact that he is no more nor less than a worker and a laborer, and one who is worthy of his hire. We are workers; we are here as workers; and we recognize the fact that by taking up our share of the work in this great labor movement is the only way to work out our salvation.

No doubt there is sometimes much hardship in unrequited rehearsals, but after all the actor who has wasted his efforts on a play that proves a failure is no worse off than any other artist who has put labor and pains into a work—book or painting or sculpture—which nobody will buy. And then it is to be remembered that the reward of a successful actor is often out of all proportion to his actual deserts.

St. Petersburg will soon have three opera houses. The Imperial Opera long ago ceased to have room for all who wanted seats. A few years ago, Prince Zeretelli opened a second opera house, but this, too, was so remarkably successful that it no longer accommodates all who are eager to hear operatic music—especially those whose means are limited. Consequently, arrangements are being made for a People's Opera House, which will hold 4,000 spectators, who will pay popular prices. Several Russian capitalists have provided the funds, and a number of young artists will coöperate in an attempt to produce the masterworks in a worthy manner. The repertory is to include two operas that will be new to St. Petersburg—Wagner's "Flying Dutchman" and Goldmark's "Queen of Sheba."

Art.

The Brasses of England. By Herbert W. Macklin, President of the Monumental Brass Society; with 85 illustrations. New York: E. P. Dutton & Co. $2.50 net.

A brass means, as the term is employed by Mr. Macklin, a "plate which is engraved with inscription, figure, coat-of-arms, religious symbol, or the like, and which is also a memorial or part of a memorial to the dead." The art of engraving these memorials is no longer practised. It reached its apogee in England about 1400, when the fashion prevailed among the comfortable classes of thus perpetuating their lineaments and characteristic dress, depicted as accurately as the standards of draughtsmanship of the time would permit. The art died lingeringly in the eighteenth century. In England it had technical peculiarities which distinguished it from the brass engraving of the continental parts of northern Europe, where rectangular plates, covered with engraving after the manner of a picture, constituted the prevailing mode. Then, too, the British brasses are historically interesting. Sometimes they are works of considerable beauty; almost always they convey valuable information as to the costume and armor of the period. Concerning the seriousness with which they were projected much documentary evidence has been discovered—as in a will quoted by Mr. Macklin giving directions to make "a very faire decent and well p'portioned picture or portraiture of a gentleman representing ye said Thomas Fermor wth furniture and ornaments in armour, and about his necke a double cheyne of gold wth creste and helmette under his head and dagger by his side and a lion at his feet."

The metal was not strictly brass at all, but a tough alloy consisting of 60 parts copper, 30 of zinc, and 10 of lead and tin. It is, in fact, the "latoun" frequently mentioned in Chaucer—as of the "gentil pardoner" in the Prologue: "He hadde a crosse of latoun ful of stones." The alloy was manufactured on the continent in rectangular sheets known as Cullen plates, a name derived from the city of Cologne. Color frequently entered into the monuments through the use of enamels of the kind developed by the potters of Limoges. Broad smooth surfaces of brass would not hold the enamel, but color could be used solidly in borders, and often larger extents of the metal were cut away, leaving a slightly lowered bed, cross hatched, to which the color would adhere.

As is the case with many of the mediæval arts and crafts, comparatively little is known about the lives of the artists. Mr. Macklin shows, however, that there were undoubtedly schools of engravers in provincial centres and that it is often reasonable to conjecture that a number of very similar brasses were from the same hand. Not until the reign of Charles I., when the art was already moribund, was a brass ever signed.

Of these memorials, according to Mr. Macklin's estimate, not fewer than 150,000 were laid from first to last in British churches. Many of them were destroyed when English places of worship were ravaged under Henry VIII. Many more were sacrificed to the iconoclastic zeal of the Commonwealth's soldiery, "Cromwellii flagitiosus grex," in the phrase of Evelyn, who in 1654 wrote of Lincoln Cathedral: "The soldiers had lately knocked off most of the brasses from the gravestones; they went in with axes and hammers and shut themselves in till they had rent and torn off some barge loads of metal." A final spoliation took place, oddly enough, during the Gothic revival in the nineteenth century, when zealots not infrequently removed the brasses from the stones in which they had orlginally been set, and in which alone they had meaning, and transferred them to museums and private collections. Despite many losses of important works, enough, however, remain to give abundant scope to the activities of the Monumental Brass Society. More than 700, for example, have been catalogued in Kent, and about 1,000 in Norfolk. They are to be found usually in out-of-the-way country churches that escaped the Protestant fury.

A carefully summarized statement of the results of antiquarian research in this field appears in Mr. Macklin's book. The treatment is largely literary and historical. The sidelights thrown on the development of English Gothic, on the history of costume and heraldry, and, generally, on the life of the centuries in which the art flour-

ished, are searching and entertaining. The information imparted as to conditions in the metal working crafts of the middle ages, and as to technical processes, is scantier; because, obviously, there is less information to impart. Yet the entire book is certain to interest students of the literature and art of the centuries in which monumental brasses were produced.

"Portraits and Portrait Painting," by Estelle M. Hurll, will be issued at once by L. C. Page & Co.

The sixth annual exhibition of the Pennsylvania Society of Miniature Painters will be held at the Pennsylvania Academy of the Fine Arts, Philadelphia, October 26 to November 17. The juries of selection are made up as follows: In New York: Alice Beckington, Alice Rushmore, Emily Drayton Taylor, and Irving R. Wiles; in Philadelphia: William M. Chase, Herman Deigendesch, Elizabeth Shippen Green, and Amy Otis. The hanging committee consists of A. Margaretta Archambault, Sarah Yocum McFadden, and Amy Otis.

William Shaw Tiffany, the painter, died on September 28, in this city. He was born in Baltimore in 1825, the son of O. C. Tiffany, a pioneer merchant of the Southwest. After graduation from Harvard in 1845, he studied art in Europe. Mr. Tiffany's paintings were generally of religious subjects or illustrations of legendary poetry. Some of them were taken by the Peabody Institute in Baltimore. At the time of his death he was laboring on what he had termed his life work, a series of pencil illustrations for Milton's "Ode on the Nativity."

The death is announced of Dr. Adolf Seyboth, director of the Hohenlohe Museum of Strassburg. Born in 1848, he became an authority on the history of Strassburg. Among his writings are "Costumes Strassbourgeois," "Das alte Strassbourg," and "Strassbourg historique et pittoresque."

A STEP TOWARDS CURRENCY REFORM.

The action of the American Bankers' Association at Atlantic City last week, in regard to the currency, was of real significance in the movement to give greater flexibility to our system. The report made by the special commission appointed a year ago, with A. B. Hepburn at its head, was approved, and the commission itself was authorized to keep up the fight for legislation and to add to its numbers. This step was taken after a debate in which the opponents of change put forward their strongest advocates. It was taken, too, in the absence of any organized effort to rally the friends of the special commission, more than half of whose members were unable to be present.

This is the first official endorsement by the bankers of the country, in recent years, of the principle of a credit currency. Two or three years ago, such a declaration from a national convention of bankers could not have been obtained. Events have moved rapidly, however, since call money went to 125 per cent. in 1905. Probably money rates would have gone as high this year if liquidation had not been so severe on the New York Stock Exchange. But the prolonged scarcity of capital for permanent investment has had an effect more potent than the arguments of the most enthusiastic currency reformer. In the meantime, the ground for action in the right direction had been prepared by the long campaign of the advocates of credit currency, until a year ago they saw their doctrines approved by so conservative a body as the New York Chamber of Commerce and accepted by the special commission of the Bankers' Association.

The plan adopted at Atlantic City is far from radical. It authorizes national banks to issue notes to an amount not exceeding 25 per cent. of their capital. These notes are not to be specifically secured by deposits of bonds at Washington, but are to be generally secured by the great mass of assets in the custody of the bank. This maximum of 25 per cent. of capital is limited by several other provisions—that the new notes issued by any bank shall not be in excess of 40 per cent. of its bonds to secure the old type of circulation; that such issues shall be taxed at the rate of 2½ per cent., and part of them 5 per cent., and that against such notes reserves of lawful money shall be held in the same proportions as are required by existing law against deposits. When it is considered that the proceeds of the taxes are to constitute a guarantee-fund to redeem the notes of failed banks, and that, according to past experience, they will cover such losses twenty or thirty times over, the plan cannot be described as lacking in conservatism. The provision for reserves against the notes, which was absent from the Chamber of Commerce plan, has the merit of linking the note issues to the supply of legal tender money and preventing unwise inflation. The special commission apparently intends to bend its whole energy to the enactment of a measure of this character during the life of the Congress which meets in December.

The subject of a central bank came up incidentally at Atlantic City, but did not find much favor among the mass of delegates. Even if such a project were at any time practicable, either politically or economically, it would require many years of education to eradicate the prejudice which would be felt against it under present conditions. This is partly political—an outgrowth of the memories of the clash over the second Bank of the United States, and partly economic, upon the ground that this country is too large to permit the successful operation of such an institution, and that it might injure the local banks. Whether the project have any merit or not, the Bankers' Association decided wisely not to "swap horses" while crossing the stream, and to make a determined fight for the project of its special commission.

The fact that the bankers have been divided has always been the refuge of those politicians who were disinclined to deal with the subject. By the vote cast at Atlantic City, this excuse has been taken away from those who are afraid to legislate in favor of business interests. They may find that the pressure from home for early legislation is too strong to resist.

Pleasures of Literature

By ROBERT ARIS WILLMOTT

Crown 8vo. *$1.25 net.*

A witty man of letters has suggested that books which have any pretensions to be ranked as literature may be divided into two classes—those which are read by everybody for a little while, and thereafter read by nobody, and those which are read by somebody forever. We shall perhaps be safe in assigning the *Pleasures of Literature* to the latter class. To say all in a word, this little volume, with its fine literary and scholarly aroma, is written by a life-long lover of books for book lovers and writers.

The Nation.

NEW YORK, THURSDAY, OCTOBER 10, 1907.

The Week.

President Roosevelt is muzzled about the tariff—the one subject which he never mentions in his otherwise all-embracing speeches—but his Secretary of Commerce blurts out the truth. Mr. Straus, addressing the National Association of Cotton Manufacturers at Washington last Friday, openly preached the gospel of lower tariffs and reciprocal foreign trade. He declared that there was no hope in "high tariff walls," since they only hampered the manufacturer and provoked retaliation. The Secretary told the cotton men that they were suffering from a too high tariff, and then praised President McKinley for having so clearly seen in 1901 that we stand in need of revised duties. He discreetly left it to his hearers to say who was responsible, since 1901, for nothing having been done. When Mr. Straus entered the Cabinet there was much Republican complacence over his being a business man. Now that he evidently "means business" about the tariff, it will be interesting to see what is said.

As we had with Chili in 1891 a "good enough war" to frighten Congress into voting more battleships, so our current war with Japan is plainly to be used to enlarge the naval programme. The official Administration policy has been simply to hold the fleet at its present level of efficiency, asking for not more than one new battleship a year. But now it is announced at Washington that three, possibly four, will be demanded at the next session of Congress. And the busy advocates of the increase are saying that they hope to get it with little difficulty, by means of a diligent and skilful use of the war scare. Senator Hale, with his great power on the Naval Committee, has been their stumbling-block, but now he is expected to give in easily, since the sailing of the fleet to the Pacific will "leave the Maine coast unprotected." It is even hinted that "this circumstance was not overlooked by the President"! If our naval strategists were only as crafty in using battleships as they are in planning to get them built, we should be the terror of the seas.

Rumors that Secretaries Wilson and Metcalf and Attorney-General Bonaparte are to retire from the Cabinet are discredited at Washington. This will help James Wilson to surpass Albert Gallatin's twelve years and nine months of continuous Cabinet service. There is still another point to be mentioned. The rumored resignations would have deprived Mr. Roosevelt of the last member of the Cabinet to remain continuously in the same office that he held when Mr. Roosevelt became President. Mr. Root, of course, returned to private life before he was recalled to Washington as Secretary of State. Two Secretaries of State, two of War, and two of the Interior have sat at Roosevelt's Cabinet table; three Attorneys-General, three Secretaries of the Treasury, and three of Commerce and Labor, but there have been five Postmasters-General and five Secretaries of the Navy. There have been seventeen changes in nine departments. Grant's record of eighteen changes in seven departments still stands. But, then, Mr. Roosevelt has eighteen months of his term still to serve.

John Sharp Williams is to be a candidate, and presumably a successful candidate, once more for the Democratic leadership in the House of Representatives. He is not content, like his predecessor, Mr. Richardson, to return to the ranks, even for a single term, after having been commander. Mr. Williams may not have realized all the dazzling predictions that were made for him at the time of his accession, when the country learned of his adroitness as a parliamentarian and his grasp of issues. No one will dispute, however, his achievement in making the House minority respectable and respected—as it was not in the days of either Bailey or Richardson. The talk of a contest in the Democratic caucus will doubtless die down this year, as it did two years ago, before the speakership ballot is actually taken. Mr. Williams, who does not take his seat in the Senate till 1911, proposes to take a two years' vacation from public life after his present term expires. This gives the other aspirants their chance soon enough. It also gives the new Senator an opportunity to prepare for the transition. Mr. Williams's qualities are those characteristic of the House leaders. Many of his admirers will watch with interest to see if he can make as good a record in the upper chamber.

Lemuel E. Quigg's checks from the Metropolitan Street Railway, and what he did with them, make an interesting but not very surprising story. It was well known, in a general way, that such things had been done; all that had been lacking was documentary proof and the confessions of the active agent. Those have now been supplied. They furnish a sardonic comment upon the machinery behind the scenes, by which the puppets on the public stage are so often moved. We see a "labor uprising" brought about by the sim le expedient of paying a labor leader $500. "Impressive manifestations of public opinion" now appear to have been artfully engineered on a cash basis. The gentlemen whom the sagacious Quigg hired were what is known as "the right men." There are always certain lawyers to whom it is best to entrust important causes affected by a political interest. They alone have the knack of making "arguments" that really count. When they "appear," we know that results will also appear. Public opinion may have seemed very slow in crystallizing before, but let several of the "right men" be retained, and it will not be long till you see the people rising in their wrath. This, too, is an old story. To get things done for you at one of the departments at Washington, you have to go to the "right" legal firm to present your case. Some one having the ear of a great man, it is better to approach than it is to seek out the great man himself. It was influential hangers-on of Lord Bacon, not the Chancellor himself, who took the bribes to secure favorable decisions. We are not sure that these go-betweens were not known, in their day, as "eminent counsel." The cynicism of Mr. Quigg may prove to have added a word to our political vocabulary. He described his costly efforts as designed to "accelerate" public opinion. This is an advance over the definition which the press agent of the Panama Canal gave of his functions—namely, to keep public opinion "normal." But that was far too slow for the Metropolitan. To suit it, public opinion had to hit up the pace, and, of course, it is money which makes that mare go. Just at present, however, all talk of "accelerating" speed in connection with the Metropolitan's affairs will inevitably suggest, by association of ideas, the Rake's Progress, or the rushing of the Gadarene swine down a steep place into the sea.

If Massachusetts Democrats would only fight their opponents with a tithe of the enthusiasm with which they fight each other, they might hope to carry the State occasionally. It is needless to say that their bitter factional quarrels, if unhealed, will make a present of Massachusetts to the Republicans—this, too, in a year when the Democratic outlook was peculiarly flattering. Both Bartlett and Whitney are now posing as the Democratic nominee for Governor. Into the rights of the unseemly wrangle at the State Convention in Springfield we cannot pretend at this distance to enter. The action taken by the Bartlett delegates may have been "regular," under

the rules of desperate party gamesters; it may yet be held lawful, but it was certainly high-handed and outrageous. When over 200 of the regularly accredited delegates to a party convention make affidavit that they were forcibly kept from entering the hall, to call the proceedings fair would be farcical. It is now asserted that twenty-five of the Bartlett delegates disclaim and repudiate his nomination, while John R. Thayer, named with him for Lieutenant-Governor, indignantly refuses to go upon the ticket, which he thinks fraudulent. Moreover, C. Z. E. Charest, nominated for Attorney-General on both tickets, has withdrawn from Bartlett's. It certain seems to be a situation where a reasonable compromise is called for. Passion has run high. Against both Gen. Bartlett and Mr. Whitney resentful feeling has been stirred. Why cannot an adjustment now be sought whereby both would withdraw in favor of another candidate? If ex-Gov. Douglas could be persuaded to stand, there would be hope of his election. And the issue of tariff reform could be made as vital and successful in his hands as in those of Mr. Whitney himself.

The "retirements" of George B. Cox from Ohio politics have been about as numerous as the "last appearances" of certain favorites of the opera. It was supposed that he would stay retired after Secretary Taft had "done sent him in his resignation," like the negro preacher's dissatisfied congregation. Judges Ferris and Hosea, however, of the Superior Court of Cincinnati have made the fatal mistake of taking his retirement seriously, going even so far as to appoint a trustee of the Cincinnati Southern Railroad without first slipping round to his place of seclusion to ask permission. As a result, both have learned that they are not to be candidates for renomination. Both have been efficient and popular judges, but what does that amount to if the man by whose gracious permission they donned the ermine at the start is not to have the privilege of saying who are to manage so fine a bit of public property as the Cincinnati Southern? Here is a good test of Secretary Taft's mettle as a reformer. Will he again hit the foul head of the despicable boss who has so soon risen from the former blow and dares openly to display his control of the Cincinnati courts? Cox evidently does not believe that the Secretary, as a candidate for the Presidency, will have the courage to speak the word which would again hurl him to the ground. We shall wait with interest to learn if this is one of the things which can best be considered after the Presidential election.

Profound modifications in the common law are to be looked for when Anson on Contracts, or Pollock on Contracts, or Langdell on Contracts shall have been completely superseded by the Walking Delegate on Contracts. The labor-union view of that elementary relation of economic life is that it must be unilateral, incapable of enforcement when repudiated by the union. Under such circumstances, we doubt whether even the use of the injunction, resorted to by the president of the Typothetæ against the threatened pressmen and feeders' strike on the basis of an agreement signed last January, can do much good. When the members of a union are simply determined to pursue what they regard as their best interests for the passing moment, in defiance of the rules of fair play or rational consistency, it is impossible to get money satisfaction; and it is quite as impossible to enforce specific performance when the men are determined not to work. It is astonishing that labor unions should persist in this manner in alienating public sympathy, in spite of repeated proof that without public support their cause is usually a hopeless one. Such wanton disregard of assumed obligations might be comprehensible in extreme labor circles, where the theory of "class war" is a main article of faith, and all tactics are considered fair. But our "conservative" unionists who seek to bind down the employer with contracts evidently believe that an armistice is an agreement which compels the enemy to sit still while you fire.

It is an eternal paradox of our world of letters that the books which enjoy the largest sale are barely recognized as existing by the guardians of literary tradition. Mrs. Mary Jane Holmes, who died on Sunday at Brockport, N. Y., wrote thirty-nine novels with aggregate sales, it is said, of more than two million copies, and yet she had not even a paragraph devoted to her life and works in the histories of American literature. Year in and year out her books have held their own. "Tempest and Sunshine," Mrs. Holmes's first book, which appeared in 1854, a year after "Bleak House," and the same year as "The Newcomes," could, doubtless, make a respectable showing in point of American sales with these "standards." What is the quality which has enabled it to survive so many other books incomparably more worthy if the tests applied by the critic mean anything? Barrie observes of the first successful book of his hero, Thomas Sandys, that it should have been entitled "Passages cut out of a story because they prevented it from marching." The twentieth-century reader of Mrs. Holmes is tempted to describe her books as made up of phrases rejected by other novelists because they were crude and hackneyed. Her characters "little dream" of the events that are about to befall them, "an unseen hand seals their lips" at critical moments, every hero "lights his Havana," every heroine "reclines on soft cushions," sounds "grate harshly." Those who sneer at the hackneyed phrase too often forget that the phrase became hackneyed principally because it was so good that writers overworked it. Given a public which has not read other books, and all those rag-bag phrases and situations still make their primitive appeal. We smile at Dora Deane's vow, "I would rather die than marry a man I did not love because of his gold." Yet there is certainly nothing ridiculous in the sentiment; it is one of the noblest known to womankind. Erase all remembrance of the fact that it has been standard coin in the melodrama of two hundred years, and who would not thrill at it? Indeed, Mrs. Holmes's books make their strongest appeal because their moral tone is as unimpeachable as that of the popular drama. It is a common fallacy that any writer of facility could turn out books like these. In rare instances, doubtless, the trick has been done by men and women who have sneered at the finished product. But the simplicity and sincerity of an author like Mrs. Holmes can hardly be imitated. That, after all, is what makes her books live.

Austria's railways are in danger of a strike carried on in accordance with the principles of "passive resistance." This is the same method employed recently with such great success on the Italian railways. It consists in the observance by the employees of every minute regulation affecting themselves and the public, with resulting congestion of traffic and serious delays. Totally aside from the merits of the question at issue, the strike by "passive resistance" deserves attention as part of a movement, in which we in this country are particularly interested, directed against regulations which are not intended to regulate, or books of instruction to employees which are handed out by their superiors with a wink. When a railway disaster results from the error of an overworked employee, the manager points to the rules, which allow only so many hours' continuous duty. That employees refusing to work beyond the stated hours have been dismissed is, of course, purely accidental. Thus Jersey City passes an ordinance compelling the traction companies to give a seat for every five-cent fare, not with the hope of abolishing strap-hanging, but of merely mitigating the intolerable conditions. What wonder if the layman's conception of law in general is of something in the nature of a wholesaler's price-list, from which it is always possible to get 60, 25, and 20 off?

Above all motives of pure sportsman-

ship, the Swedish challengers for the America's Cup are actuated by the desire to turn the proposed contest to national profit. This is frankly, almost naïvely, avowed:

> Our chief motive in making an attempt to capture the cup is, if we are successful, to get American yachtsmen to come to Sweden and try to win it back, so as to create intimate relations between the two countries.

International sport appears destined to become the favorite method for promoting international flirtations—especially among Columbia's suitors. The most prominent aspirant in this direction found this out some time ago. Gifts of books to Harvard and of statues of Frederick the Great and the exchange of professors have been supplemented by Sonderklasse races for a Kaiser's cup in this country, and by annual German-American love feasts at Kiel. What is especially striking in the statement we have quoted is the implicit recognition of the fact that it is better to meet in contest on the chance of becoming good friends than not to meet at all. That Sweden should be desirous of entering into closer relations with this country is illustrative of the degree to which the break-up of the union with Norway, in 1905, has served as a stimulus to Swedish national energy and patriotism. It is simply another case of the salutary effect of tribulation that was exemplified in Spain after the war with this country, in Great Britain after the mischances of the Boer war, and in Russia after her defeat by Japan. Sweden as a partner in an incompatible union held the world's attention less, on the whole, than she does now. She has set her face towards progress by entering on the real democratization of her institutions, including the introduction of universal manhood suffrage, and has attempted to find compensation for the economic losses involved in the separation from Norway by contracting closer relations abroad.

Premier Clemenceau's plea for the maintenance of the patriotic ideal in opposition to the propaganda of the anti-militarists shows, of course, that whatever be his personal inclinations, the head of a state is bound to reckon with facts. But, like other noted rulers and chief magistrates, the French Premier has found it necessary to base his defence of militarism on the ground of its utility to a high spiritual cause. The Kaiser stands for arms and the Fatherland's mission to civilization; the President believes in arms for righteousness; M. Clemenceau, true to the national bias, conjoins arms with idealism. Greece, he argued, like modern France, stood for the realization of lofty ideals, but because of her lack of patriotism "she succumbed, and with her the marvellous efflorescence of intelligence which could only endure by the protection of arms." For this reason he would protest against the "ferocious idealism" which in carrying such theories as international peace to the extreme works only for its own destruction. Yet M. Hervé and the other anti-militarists might argue that the fall of Greece did not prevent, if it actually did not further, the dissemination of that Hellenic culture of which M. Clemenceau claims for France the proud inheritance. What is the use, they might argue, of developing a "high intelligence" and keeping it locked up at home within the squares of a standing army? In any case, when men plead for justice and war, or righteousness and war, or culture and war, the natural tendency is for the variable factors in the different combinations to disappear and the one thing that persists is the common, positive element—war.

The disruption of the French Parliamentary *bloc* seems on the eve of becoming an accomplished fact. Opposition orators have for some time been applying to the historic coalition the sad phrase from Sully-Prudhomme's "Broken Vase," *N'y touchez pas, c'est brisé*, but it was the recent Socialist congress at Nancy, with its adoption of a frankly anti-militarist programme, that precipitated the crisis. The Radicals can no longer march with the Socialists, whose economic theories they might attempt to palliate or in their hearts deny; but they could not show even tolerance for their anti-patriotic views without bringing about their own destruction, and possibly the fall of the republic. Organized by Waldeck-Rousseau in 1899 in the heat of the Dreyfus agitation, the *bloc* has brought about during its existence of eight years far-reaching changes in the internal and external position of France. The great trend has been towards Radicalism, and the country in repeated elections has never faltered in its support of the Radical programme. The readjustment of political groups in the Chamber that must follow is too complicated and uncertain a topic for brief comment. It may only be pointed out that the *bloc*, up to the present, has counted a membership of nearly 400 in the Chamber, consisting of Radicals, Socialist-Radicals, and Socialists, as against about 180 anti-republicans of various kinds and republican conservatives. The transference of some 55 Socialist votes to the Opposition should still leave the Government a comfortable majority, but not a safe one, as majorities come and go in France.

If repeated disenchantment had not taught the world to regard with suspicion the Czar bearing gifts, there might be cause for some measure of hope in the recent reports from Russia. From time to time we learn that the process of endowing the peasants with land, and incidentally breaking up the communal village system, is progressing rapidly with the aid of the rural banks, established as part of Premier Stolypin's policy. The other day it was reported that Gen. Kaulbars, governor-general of Odessa, and a notorious Jew-baiter, who has been proved responsible for the excesses of the Black Hundred, has been dismissed from his post. After that came the news that the Minister of Education had decided to remove "the restrictions hitherto in operation against admitting more than a small percentage of Jewish students to the higher schools of learning." Before the accession of Nicholas II. the ratio of Jewish to Christian students in the universities and gymnasia had been fixed at a maximum of 4 per cent. That full equality should at once be granted seems incredible. During the brief dawn of Russian freedom in the summer and fall of 1905, this was actually done. But the rush of Jewish students to the universities and high schools was so great as to alarm the authorities, and they seized upon the political tumults of the following months as an excuse for rescinding the action. That the present reform, if true, will be lasting we have not the slightest guarantee. Czarism at its best may be palliative; it cannot cure radically.

Menander muck-raked is no unjust description of the process to which that great star of Athens' New Comedy must now become subjected as a result of the discovery of considerable fragments of his plays. The plays of Menander, like the poems of Sappho and Alcæus and Agatho's "Flower," are among the products of the Greek genius whose loss classical scholars have particularly deplored. That loss has not prevented these scholars from assigning to Menander and to Sappho a place in the leading rank of Greek writers, on the authority of old report and traditions. Now it would appear that the discovered papyri containing fragments of Menander reflect little glory on a man who has been placed next to Aristophanes. His plots are perfunctory, and his characters lack animation—serious charges against a dramatist. We are, of course, still at liberty to believe in his incomparable knowledge of contemporary life, his wit, his faultless style—because the material now turned up is scarcely sufficient to condradict what the old historians of literature have said on the subject. On the whole, perhaps, Sappho's reputation has suffered no harm from the destructive criticism of the early Christians and the Goths.

ON "HURTING BUSINESS."

The President was splendid in his speech at Keokuk in scorning the appeal to stop his anti-corporation movement, on the ground that "it may hurt business." As for him, if there was a conflict between righteousness and business, "then the latter must go to the wall." So long as he is President, there will be no change in the policy of "enforcing the law against certain wrongdoers of great wealth." Stocks may fall, bank clearings drop by millions, industry be chilled, but none of these things will move a righteous President bent on doing justice.

It must be said of this, however, that it is magnificent, but it is not Republicanism. For at least twenty years the Republican party has lived and moved and had its being in the one great rule of doing nothing to hurt business. It has boasted of nothing so much as of the prosperity it has secured, the new wealth it has created. Year after year it has gone to the voters with both hands full of bribes—the bribes of promises to make everybody rich. And whenever it has had a chance, as in 1896, to assert that another party in power had been bad for business, it has exalted material prosperity as the be-all and end-all of national existence, and pledged itself to remove everything that could interfere with it. It has bound itself to see to it that fires were lighted in the black mills, and that every laborer should have a chicken in the pot. Thus it is a time-honored Republican principle that was invoked when eminent members of the party went to the President and urged him to call a halt, since his course was injuring business. It was a perfectly legitimate plea, from their point of view, and the party's; and they were justified in being indignant at Mr. Roosevelt, as a good Republican, for denying its rightfulness. Judged by Republican history and avowed standards, he had thereby denied the faith and become worse than an infidel.

The further question needs to be asked: Has President Roosevelt, in fact, always been so loftily contemptuous towards the demand that he do nothing to hurt business? Five years ago he began to make speeches about tariff-revision. It was then a toss-up whether he should come out as a great tariff-reformer or a corporation-baiter. What led to his decision to throw over the reform of the tariff? Who was it that went to him in 1904, after he had been reëlected, and after he had written in the first draft of his message to Congress, "I shall address you later on the tariff," and induced him to maintain the clam-like silence on that subject which he has ever since observed? What argument did these people use? Everybody knows. It was precisely the argument, the appeal, which he now repels with such fine anger. He was told that if he meddled with the iniquities of the tariff, business would be disturbed, the party would lose elections, his own popularity would be cut into; and the proud soul of the President, who can brook no sordid reasoning, allowed the standpatters to have their way without a murmur. Indeed, he and his successor-designate, Secretary Taft, have admitted to the full the argument that business must in no way be hurt by tariff revision. For that reason they have agreed that nothing must be done to right that gross injustice until after the next Presidential election—which means never, so far as their party is concerned. They concede the grievous wrong. They acknowledge that it ought to be remedied immediately; but to attempt to do so would "stir things up," and therefore they cannot think of it. But we say that it is not only inconsistent, it is absolutely indecent, for men who have lain down under that sort of base remonstrance all these years, suddenly to assume that they are determined to do right even if business goes to smash. Of a man capable of living in dread of the tariff beneficiaries, and then posing as one who never allows a business consideration to stand in the way of what he believes to be wise and just, we can almost say: "Upon his brow shame is ashamed to sit."

In stating the antithesis between righteousness and business energetically as he does, the President betrays again his fondness for general moral terms. He will do anything to help business, or to aid labor, "except what is wrong." But he leaves, and will leave, this "wrong" wholly undefined. In the end, it comes down with him to a personal conviction, in each individual case. "Righteousness" is the particular course he elects to follow. It is righteous to prosecute the Standard Oil for rebating; it was also righteous to extol Paul Morton for rebating. To Mr. Roosevelt, there is not the slightest inconsistency in this. His desires and decisions become at once to him the embodiment of the moral law—great principles to be fought for to the death. So much the keener is our regret that he did not happen to identify tariff reform with "righteousness," so that, in its behalf, he might have despised the servile argument that to do justice would hurt business!

THE NEW STATES' RIGHTS ISSUE.

It was nearly twenty years ago that Mr. Bryce wrote in "The American Commonwealth" that, while a Democrat always admitted frankly that his cherished doctrine of States' rights had no bearing "on any presently debated issue," he still insisted that, "should any issue involving the rights of the States arise, his party will be, as always, the guardian of American freedom." The point is worth recalling, now that this historic tenet of the Democratic party is being put forward as a possible major issue next year. There was not a word about States' rights in either of the party platforms of 1904. Can it be that in less than three years the matter has unexpectedly arisen as a factor in party alignment?

That Democrats of all schools do take an interest in this issue is indisputable. While Mr. Bryan in Nebraska was drafting a platform demanding that "Federal remedies shall be added to and not substituted for State remedies," Judge Parker at Jamestown was asking "by what process of reasoning the Executive has reached the conclusion that for the various departments of the Federal government to seize power not granted by the States and the people is 'to protect and defend the Constitution.'" Even Republicans show some concern over the subject. There were more Republicans than Democrats among the State attorneys-general who, in convention last week, asked Congress to prevent the interference of the inferior Federal courts with the progress of test cases through the State courts. Congressman McCall, who recently drew attention to the fivefold increase since 1897 in the sum spent annually for various branches of Federal inspection, is likewise a Republican, though of an "undesirable" sort.

To recapitulate the acts and measures which have given present meaning to the shibboleths of a past generation is unnecessary. The Federal authorities have been doing and talking of doing a great many things which, whether done or neglected in practice, had always been classed among the duties allotted to the States. The reaction was unexpected. Instead of consenting to have their work done for them, the States began to busy themselves. Some State or other now asserts that it has shown the Federal government the way in nearly every one of these recent activities. All the States are making new assertions of purpose and efficiency. From a parcel of anæmic, undecided, futile damsels, the States have come to be regarded as a sisterhood of Valkyries, compared with whom the central government is a kindly grandmother, to whose lap menaced corporations gladly run to be cuddled.

The extension of the field of Federal activity has generally proceeded on the theory that a practical people did not care much about abstract notions of governmental functions when the question was whether important work should be done or neglected. This view was supported by many facts. Some States even, as in the matter of interstate liquor shipments, insisted that their own laws were being nullified unless the Federal government lent a helping hand in enforcement. But the past months have

shown that, even as a practical question purely, there are two sides to this issue of State functions. The States differ in their ideas to a greater extent, we imagine, than most of us supposed. With the "Jim Crow car" movement we have little enough sympathy, yet it must be reckoned with as a powerful force against a thoroughly centralized railway policy, still more against government ownership.

Nor is it necessary to take extreme cases like Delaware's whipping post, South Dakota's divorce courts, and New Jersey's corporation offices for evidence that the States have minds of their own, even though, like the minds of individuals, not always entitled to admiration. There is hardly a department of public activity in which there is not some movement to secure uniformity of legislation. Influential men attend conventions devoted to these objects. A complete outfit of "model laws" is at the disposal of every State legislature free of charge. Justice, neighborliness, convenience, and efficiency are all to be promoted by uniform laws. Such laws do make considerable progress in certain departments, yet at some point they come to grief on local crotchets or convictions. The passage of an imaginary line can change the status of a man or thing in ways that are magical. Yet not all of the local differences that excite so much mirth are mere products of chance or indifference. Like so many human beings, the States go on liking their own ways best. The other day, for example, a Montana newspaper argued that Montana had worked out for herself a system of cattle-control based on the registration of brands, and that the government sought to wipe this out entirely. The system may not have been better, but the claim is made that it suited local conditions. As Federal activity spreads still further it is bound to interfere in the same way with other solutions of local problems.

The States' rights sentiment of to-day has little in common with its ante-bellum namesake. That it can take first, or even second place, as a campaign issue next year, is much to be doubted. But the States are sensitive, and interference with their local affairs is irritating. And from the Democratic point of view the issue has a peculiar piquancy from the fact that most of the State officials who have resented the friction are themselves Republicans.

REGULATING THE AUTOMOBILE.

For some weeks past the London *Times* has been printing letters in regard to the evils of automobiling which might readily have been written in this country. There is the same disposition to hold the "road hog" and the reckless or drunken chauffeur responsible for the most flagrant outrages, and there is also general agreement that thus far there has been no satisfactory regulation of automobiling. The dust and the destruction of the roads are in the foreground of the complaints, but there is also much testimony in regard to fast driving, the terrorizing of the timid who used to go out in pony-carts or family carriages, and the overwhelming of the pedestrian with grime and dirt. Altogether, as the *Spectator* puts it, the *Times* letters are proof of the well-reasoned dissatisfaction over the scant progress made in dealing with the problem. And repeatedly there is a note of anger and exasperation, which shows that some people's nerves have been tried to the point where endurance seems no longer possible.

Something of this same feeling is reported from Long Island, where the motor-plague in this neighborhood is at its worst. We hear of roads made impossible for anything besides automobiles, of homes rendered uninhabitable because of dust and noise, and of roads destroyed with such rapidity as to put undue burdens upon the local taxpayers. *Intolerable* is the word generally used to describe conditions there. If one goes north into the rural districts, say, beyond Albany, there is scarcely less dissatisfaction. The farmers' wives have given up their jaunts to town or village for fear of the touring-car that swings suddenly around corners without a note of warning, and the farmers complain of considerable property damage. The tourist who flits at thirty miles an hour through a village that he never expects to see again is generally indifferent to the harm he may do in passing.

Signs that "in this village the speed-laws are strictly enforced" are met on every hand. Often they call for the ridiculously low speed of eight miles an hour, and frequently the warning is merely an empty threat. Local regulation may be called a dead failure, because it is only spasmodically enforced, and because it is frequently used to make money for villages that wish to pile up the fines, if only to meet the extra bills for constables. The latter frequently err in their readiness to provide their own salaries. In one case we know of, the justice of the peace who imposed a fine subsequently admitted its injustice and asked the town board to remit it. But the board wanted the money, and kept it. Frequently, special efforts are made to arrest people when there is a particular attraction, like a football game. Then towns that molest no one on the other 364 days of the year reap a harvest, and the mulcted motorist cannot be blamed for driving away with a feeling of injury and disgust. Intermittent enforcement in city or country avails little.

What, then, are to be the remedies? The police powers of the great countries are surely not to remain impotent in the face of this new and valuable mode of locomotion; but, so far, it must be admitted there are singularly few constructive suggestions offered anywhere. Many of the London *Times's* correspondents have come to the conclusion that special motor roads must be constructed, whatever the cost. There is a general agreement that, if the automobile is to use the general highways, they must be completely rebuilt with much heavier foundations, and that oil or some special preparation must be used to prevent the sucking-up of the surfacing. Few automobilists would object, we think, to an annual State tax—which would be trifling compared to the cost of a single tire—imposed for the purpose of repairing the highways, because the automobilists would themselves profit by the improved roads. Moreover, decent automobilists everywhere are anxious to have the drunken chauffeur or the deliberately reckless driver severely punished. The Automobile Club of America has proved this by its ready coöperation with the police of this city. This phase of the evil is likely to grow less as time passes.

But when all is said and done, the vital question of controlling the speed still remains, and on this point contributors to the discussion seem much at sea. The *Spectator* itself can give no practical advice; it merely reminds its readers that the difficulty of controlling the pace is due to the fact that in a run of, say, twenty miles or so, three or four different speeds may be allowable as perfectly safe, and may be desirable as causing the minimum of discomfort to all who use the road. The man who can suggest a means of regulating these varying speeds is certain of international fame. People are looking for him as eagerly in Germany and Italy as here in the United States or in England. And yet, as our friends from Long Island remind us, something must be done. In that place, at least, there should be a special public automobile highway to which the motors should be confined, precisely as in New England the trolley car is more and more being compelled to buy its own right of way through the fields. And if the Legislature might well discuss the building of an experimental highway north of this city, towns and counties ought to coöperate in establishing patrols, which shall control the roads, not one or two Sundays in the year, but all the time. Finally, exemplary punishments must more than ever be invoked where there is flagrant misbehavior.

SULLY-PRUDHOMME AND POETRY OF REFLECTION.

The recent death of Sully-Prudhomme has provoked the usual critical articles

dealing with his career, with the usual *obiter dicta* regarding poetry. "The man," says our own Paris correspondent, "was France's greatest living poet"; and yet, after all, he was only a poet of reflection, a philosopher, with but few readers. In similar vein a writer in the London *Times* laments that Sully-Prudhomme's verses "lacked the music (as of a confused rushing of wings), the something surging mysteriously from the unconscious foundations of the soul, which vibrates in such poems as Shelley's 'Life of Life,' or some of Victor Hugo's momentous outbursts. Sully was never carried away, never transported by the fierce energy of the Muse." This manner of dismissing Sully-Prudhomme conveys the impression that poets of reflection rather than of passion are merely *dii minores*. Without arguing the case of Sully-Prudhomme himself—time will fix his place—we may remind our readers of the commonplace we are so prone to forget, that the vast bulk of our good verse is this very poetry of reflection of which we often speak so lightly.

The amount of poetry to which we can strictly apply Milton's definition, "simple, sensuous, and passionate," is relatively small. To that high level only the great poets attain, and they can remain in the rarefied atmosphere for but brief periods. The phrase "transported by the fierce energy of the Muse" calls up in our minds such passages as the apostrophe to Helen in Marlowe's "Faustus":

> Was this the face that launched a thousand ships,
> And burnt the topless towers of Illum?
> Sweet Helen, make me immortal with a kiss.

It calls up a few of Shakespeare's sonnets, parts of his plays, and the best of Milton, Byron, Shelley, Keats, Coleridge, Tennyson, Browning, and Swinburne. This list is not, however, even for our English tongue, exhaustive; for the minor poets have now and then in a few lines or stanzas reached the summit. To cite examples from other literatures—say from Dante—would carry us too far afield. But we believe that were all the English poetry that is inspired by "the fierce energy of the Muse" gathered into a single anthology, it would make a book not half so large as Palgrave's "Golden Treasury." Indeed, these few jewels might easily be carried in the memory. The great body of our noble verse is, as we have said, reflective. The reflection is suffused with feeling, but not with strong passion. In the most popular of Latin poets, Horace, the prevalent mood is the reflective. And so too in Virgil, and above all in Lucretius, for whom Sully-Prudhomme had such admiration. A list of our English reflective poets would include, of those already mentioned, Shakespeare, Milton, Byron, Coleridge, Tennyson, and Browning; and we should be compelled to add Dryden, Pope, Gray, Cowper, Wordsworth, and Arnold. This is certainly a roll of august names. And the poetry itself—such pieces as Hamlet's Soliloquy, "Il Penseroso," "The Elegy in a Country Churchyard," Byron's Sonnet on Chillon, or the stanzas beginning, "Oh Rome! my country! city of my soul!" in "Childe Harold," Wordsworth's "Ode on Intimations of Immortality," Tennyson's "In Memoriam," and Arnold's "Dover Beach"—this poetry, though it may not be passion, is nevertheless in the grand style.

This larger volume of the poetry of meditation is, after all, inevitable from the constitution of the human mind. One cannot be always young or dominated by the fitful fevers of youth; the Mænads cannot reel in their dance forever. Even Swinburne wrote but one "Laus Veneris." The moments of transport, the spring floods, leave their high mark here and there; but, for the most part, summer, autumn, and winter, the current must subside into its worn channel—a current swift, it may be, and deep, but not raging. Out of the total production of Shelley and Keats, to be sure, an extraordinary proportion glows at white heat; but their souls were unusually fervent, even for poets; and both of them died early.

And the temper of the poet is the temper, too, of his readers. Were he all compact of fire he must make some concession to the coolness of common clay. An epic, even a single book of "Paradise Lost," pitched throughout in the key of Satan's tremendous speech, would be as intolerable as a symphony played *fortissimo* from beginning to close. Poetry must, like nature, speak a various language; and most of us are in the humor for reading high passion even less often than the poet is in the mood for writing it. If poetry is to solace and sustain us through life instead of merely quickening our blood in youth, it must make its longest and steadiest appeal to maturity and age. This was Lowell's feeling when he penned the motto for his last volume of verse, "Hearstsease and Rue":

> Along the wayside where we pass bloom few
> Gay plants of heartsease, more of saddening rue;
> So life is mingled; so should poems be
> That speak a conscious word to you and me.

And the word we long for when we have passed the grand climacteric, or when grave illness has brought home the incredible truth that we are mortal, is the word of sober reflection.

PHILIP FRENEAU.

It is a somewhat disturbing thought that the laborious publications most prized by scholars are just those which are likely to deprive an author of a real public. To take recent examples, there is Mrs. Paget Toynbee's superb Walpole in sixteen volumes, the Hazlitt in twelve, the Thoreau in twenty. How many of those who stand between the haphazard and the professional reader, thinking they must have the best, will, if they can afford it, buy the bulky Hazlitt, will scan its pages, packed with ephemeral salvage, place it on a shelf, and never again take it down? They would actually read the old Bohn edition, in its seven comfortable volumes. And this new Freneau* will, I fear, suffer the same fate, with the additional drawback that no popular selection of his works is available.

I.

It has been pointed out more than once that Freneau was a half-hearted pioneer in that "misty mid region of Weir," from which Poe, later on, was to bring back such astounding reports. An idle fancy might even look for a parallel in the circumstances of their frustrated ambitions, and might stop to compare the death of Poe with that of the older poet who wandered one night into a bog on his way home and was found the next day dying of exposure—intoxicated, it was rumored, although that ugly tradition is denied. Freneau, it need not be said, suffered from no such disabilities of the flesh as Poe, and the only point of the comparison would lie in the tragedy of their genius hemmed in on every side by prosaic surroundings. The later poet, at least, "amid wreck and sorrow," knew the solace of perfect expression, whereas the continual complaint of Freneau is that his faculty of song has been baffled by lack of sympathy. If there is anything real in the years that follow a man's death, Freneau's was the harder fate. Not a little of his best prose and verse was contributed to the *United States Magazine*, a monthly of Philadelphia, which ran through the year 1779 and then, like so many of the periodicals on which Poe lavished his powers, came to a full stop. A large class of Americans, said the editor in his valedictory, "inhabit the region of stupidity, and cannot bear to have the tranquillity of their repose disturbed by the villainous shock of a book. Reading is to them the worst of all torments, and I remember very well that at the commencement of the work it was their language, 'Art thou come to torment us before the time?' We will now say to them, 'Sleep on and take your rest.'" And Freneau himself in his verse never misses an opportunity of girding at the unimaginative age and people into which he was born.

"Before the time" might be taken as the text of Freneau's life. His family was of Huguenot descent, his grandfather having emigrated to New York in 1707. When Philip was born, in 1752, they were prosperous merchants in this city, with something of an estate in New Jersey. In his sixteenth year he went to Princeton, then under the able management of President Witherspoon. In the same class with him was James Madison, whose friendship he retained through life, while just below him were William Bradford and Aaron Burr. Poetry and politics were in the air, and Freneau got his first taste of satire in the rhyming contests between the Whig and Cliosophic societies, which were founded in his sophomore and junior years. Miniature epics, too, such as "The History of the Prophet Jonah," and solemn dialogues, such as "The Pyramids of Egypt," with the

*The Poems of Philip Freneau, Poet of the American Revolution. Edited for the Princeton Historical Association by Fred Lewis Pattee. 3 vols. Princeton: The University Library. 1902-7.

Horatian *Debemur morti, nos nostraque* duly inscribed above, were not beyond his aspiration in those years, and were printed in the later collections of his works. They are really not so dull as might be supposed. We may smile at the old-fashioned manner of such verses as these, perhaps the earliest of his that have been preserved:

In ages past, when smit with warmth sublime,
Their bards foretold the dark events of time,
And piercing forward through the mystic shade,
Kings yet to come, and chiefs unborn survey'd,
Amittai's son perceiv'd, among the rest,
The mighty flame usurp his laboring breast. . . .

but in the work of how many sophomores, aged sixteen, would you find to-day this note of intellectual self-respect? After leaving college he taught school for a while, first at Flatbush, L. I., and then under H. H. Brackenridge, at Princess Anne, Md. In 1775 he is back in New York, writing political pamphlets and poems. He was launched in his career: hatred of the English and to the American Tories was his never-falling theme down to his death in 1832. It is not necessary here to recall the vicissitudes of his fortune; the various papers he edited, his political animosities, his alternations of literary work with cruising the seas and with farming. "The old hag Necessity has got such a prodigious gripe of me!" he wrote to Madison in 1772, and he never for long shook her off. Those who care to follow the adventures of a poet in the troubled days of "this bard-baiting clime"—and the story is well worth reading—may turn to Professor Pattee's admirable Life in the present edition.

II.

Of two periods in his career, however, a word must be said. In November of 1775 he sailed for Santa Cruz with a West Indian gentleman, who owned large estates on the island. During the voyage the mate of the vessel died, and Freneau was put in the place. A good deal of his life thereafter was passed on shipboard as mate and master, so that he is one of the few poets who write of the sea with complete knowledge of the trade. It was no land-lubber who made the odes, "On the Death of Captain Biddle," on "Captain Jones's Invitation," and "On the Memorable Victory." Nor was his experience of the tropics without influence. The three long poems, "Santa Cruz," "The House of Night," and "The Jamaica Funeral," composed during his visit of two years to the island, are distinctly different in tone from the rest of his work. There is more color in them, more warmth of imagination. In the midst of much description of the ordinary amateurish sort, one comes upon a perfect image in a single line:

Fair Santa Cruz, arising, laves her waist;

or upon a stanza marred only by his inveterate taste for adjectives in "y":

Among the shades of yonder whispering grove
The green palmettoes mingle, tall and fair,
That ever murmur, and forever move,
Fanning with wavy bough the ambient air;—

or upon a whole passage of haunting, if imperfect, beauty, ending with a reflection that foreshadows, so to speak, the most famous line he was afterwards to write:

Along the shore a wondrous flower is seen,
Where rocky ponds receive the surging wave;
Some drest in yellow, some array'd in green,
Beneath the water their gay branches lave.

This mystic plant, with its bewitching charms,
Too surely springs from some enchanted bower;
Fearful it is, and dreads impending harms,
And *Animal* the natives call the flower.

From the smooth rock its little branches rise,
The objects of thy view, and that alone;
Feast on its beauties with thy ravish'd eyes,
But aim to touch it, and—the flower is gone.

Nay, if thy shade but intercept the beam
That gilds their boughs beneath the briny lake,
Swift they retire, like a deluding dream,
And even a shadow for destruction take.

Something more than southern warmth enters into the stanzas of "The House of Night." It is the fury of the sudden tropic storm that he tries to express in such lines as these:

Lights in the air like burning stars were hurl'd,
Dogs howl'd, heaven murmur'd, and the tempest blew,
The red half-moon peep'd from behind a cloud
As if in dread the amazing scene to view.

Poe himself never imagined anything more grotesquely weird than this account of the death and burial of Death, nor ever composed lines of more sombre magnificence than a few of those scattered through Freneau's poem; the pity of it is that so much power of imagination should have wasted through the poet's provincial training. The genre has its risks for the most wary hand, and how should Freneau escape without a fall? We hardly know whether to smile or shudder when he writes:

Each horrid face a grizly mask conceal'd,
Their busy eyes shot terror to my soul
As now and then, by the pale lanthorn's glare,
I saw them for their parted friend condole;

there is, unfortunately, less room for hesitation when he concludes this grewsome burial of Death:

That done, they placed the carcase in the tomb,
To dust and dull oblivion now resign'd,
Then turn'd the chariot tow'rd the House of Night,
Which soon flew off, and left no trace behind.

These poems were written during the first years of the Revolution, and far away from the scenes of battle; but Freneau was to learn the meaning of war at closer range. On one of his voyages to Santa Cruz, in 1780, his vessel was captured by a British frigate, and crew and passengers were carried to New York. Here for a while he was confined in the horrible prison ships, and immediately on being released by exchange he set himself to describe his experience in rhyme.

III.

The descriptive verse and satires that resulted from his travels were the strongest and most telling he ever wrote; as much cannot be said for the product of another period of his life. In August, 1791, he was appointed clerk for foreign languages by Jefferson, then Secretary of State, and went to Philadelphia to live. Two months later he issued the first number of the *National Gazette*, a semi-weekly paper devoted to the party of Jefferson against that of Hamilton, not without side thrusts at Washington, and to the favoring of French revolutionary democracy against British monarchy. That was not a day when political writers disguised their feelings, and between the *National Gazette* and *Fenno's Gazette of the United States* there arose as pretty a war of words as one might wish to hear. Freneau swore that neither the *"Gazette* nor the editor thereof, was ever directed, controlled, or attempted to be influenced, in any manner, either by the Secretary of State, or any of his friends"; and Jefferson in a letter to Washington made practically the same protestation. Professor Pattee inclines to defend Freneau through this whole episode, and certainly his virulent abuse can be matched, almost if not quite, by the diatribes of his enemies. On the other hand, it is not easy to defend him against Hamilton's charge, however indirect his relations with Jefferson may have been. His reputation in the end suffers as does that of all barkers at the heels of those who are trying in perilous times to establish order: to Washington he was "that rascal Freneau," to President Dwight he seemed "a mere incendiary, or rather as a despicable tool of bigger incendiaries"; he did not belong to what the Greeks in their days of faction used to call the *agathoi*, the good.

IV.

As for Freneau, the writer, those who expect to find in him anything more than a frustrated poet, a poet of hints and anticipations, will be disappointed; but to those who approach him in the right spirit, he will afford a genuine interest. There is a certain charm, a melancholy charm, if you will, in catching the slender tones of his lyric moods here and there through the noise and bustle of his political writings. And often in these notes one detects strange presage of the future. Sometimes these presages take a very definite form, as in that verse of "The Indian Burying Ground"—the most famous he wrote—which Campbell appropriated bodily: "The hunter and the deer a shade," and which Hazlitt, in his "Table Talk," misquoting as "a hunter of shadows, himself a shade," attributed to Homer's account of Orion. Another line of our poet's, "They took the spear—but left the shield," was, with the change of "took" to "snatched," borrowed by Scott, who knew Freneau's work well enough to call "Eutaw Springs" "as fine a thing as there is of the kind in the language." And a poetess of Britain went so far as to dignify the whole of one of his poems with her name. But the real anticipations of Freneau were rather his own outreachings after the romanticism that was preparing in England. "On Amanda's Singing Bird," for instance, sounds almost like a coarsened echo of Blake. Other poems point to the future. A set of verses on "The Power of Fancy," written as early as 1770, has a distinct suggestion of Keats's "Ever let the Fancy roam," which dates at least forty-eight years later. Another poem, "The Wild Honey Suckle," perhaps the most nearly flawless he ever wrote, combines in its rather pallid beauty something of Wordsworth's moralizing love of the less honored flowers with Keats's relish of fragility. It is brief enough to quote entire:

Fair flower, that dost so comely grow,
Hid in this silent, dull retreat,
Untouched thy honied blossoms blow,
Unseen thy little branches greet:
No roving foot shall crush thee here,
No busy hand provoke a tear.

By Nature's self in white arrayed,
She bade thee shun the vulgar eye,
And planted here the guardian shade,
And sent soft waters murmuring by;
Thus quietly thy summer goes,
Thy days declining to repose.

Smit with those charms that must decay,
I grieve to see your future doom;
They died—nor were those flowers more gay,
The flowers that did in Eden bloom;
Unpitying frosts, and Autumn's power
Shall leave no vestige of this flower.

From morning suns and evening dews
At first thy little being came:
If nothing once, you nothing lose,
For when you die you are the same;
The space between is but an hour,
The frail duration of a flower.

Not flawless, for even a clever journeyman's hand could alter a word here and there for the better; not great in the sense that Wordsworth's and Keats's best work is great; colorless as a whole, yet with a clear, unearthly loveliness of its own. And the last stanza, despite the false "thy" in the second line and the slightly imperfect rhymes, would do honor to any poet of the past century. It has the slender brittleness of a costly vase, marred in the burning.

But Freneau's chief affiliations in the future are undoubtedly with Poe. No one could overlook that quality in such a poem as "The House of Night"; it is no less unmistakable in separate verses and stanzas scattered throughout his works. When he bids farewell to Columbus, in his poem of 1774, he dismisses the discoverer

To shadowy forms, and ghosts, and sleepy things.

In an earlier poem he writes, in somewhat boyish fashion:

Now, tho' late, returning home,
Lead me to Belinda's tomb;
Let me glide as well as you
Through the shroud and coffin too,
And behold, a moment, there,
All that once was good and fair—
Who doth here so soundly sleep?
Shall we break this prison deep?

Is not this in the very taste of "The Sleeper," although without Poe's power to touch the reluctant nerve of awe? To follow this vein of frustrated romanticism through his writings is as if we should meet with a Poe who had been snatched into the turmoil of abolitionism and the civil war, and all his music set ajangle by hate.

V.

It is true that a certain inclination toward satire showed itself from the beginning in Freneau's mind, side by side with his lyrical moods, and needed only the impulse of circumstances to develop. Naturally, however, this satirical strain was of the more humane sort, which sends us to the future for comparisons rather than to the past. Thus, the earliest of these poems, "The Adventures of Simon Swaugum, a Village Merchant," would require only a little more avoirdupois in the rhythm, a little more of psychological antithesis, to take its place among Crabbe's "Tales"; it contains, in fact, bits of genre painting which might be passed upon any but the most knowing as actually Crabbe's. Where he differs from the English humorist he tends to forestall the lighter, swifter manner of Lowell and Holmes. Now "Swaugum" was written in 1768 and printed in 1792; "The Library," Crabbe's first important publication, appeared in 1781, and the "Tales" not until 1812. To appreciate Freneau's originality it must also be remembered that in 1782 John Trumbull, in his "M'Fingal," was still trying to reproduce the form and wit of Butler's "Hudibras," tinctured, perhaps, with the more contemporary spirit of Churchill. "Swaugum," with two or three other genre tales, notably "The Expedition of Timothy Taurus, Astrologer," and "Slender's Journey," creates a regret that Freneau did not leave a complete picture of American society in this humorous-satiric vein. For, after all, it is not the poet of purest aspiration, nor the harsh denouncer of crime, that hands down his age to us as a breathing human reality; not Virgil or Juvenal, but Horace. It is by his foibles man lives for posterity; his greater virtues and vices make of him an example, not a companion.

But this kindlier satire was swallowed up in the passions of the Revolution, and Freneau produced a long series of dialogues, declamations, and caustic stanzas against poor King George and his servants. Occasionally there is a grudging humor in the ridicule; oftener mere blank invective. Far the strongest of these poems is the lurid account of his detention on "The British Prison Ship," already mentioned. Of all his ills the doctor's poison seems to have been the hardest to bear:

He on his charge the healing work begun
With antimonial mixtures, by the tun,
Ten minutes was the time he deign'd to stay,
The time of grace allotted once a day—
He drencht us well with bitter draughts, 'tis true,
Nostrums from hell, and cortex from Pern—
Some with his pills he sent to Pluto's reign,
And some he blister'd with his flies of Spain;
His cream of Tartar walk'd its deadly round,
Till the lean patient at the potion frown'd,
And swore that hemlock, death, or what you will,
Were nonsense to the drugs that stuff'd his hill.—
On those refusing he bestow'd a kick,
Or menaced vengeance with his walking-stick;
Here uncontroll'd he exercised his trade,
And grew experienced by the deaths he made;
By frequent blows we from his cane endured
He killed at least as many as he cured;
On our lost comrades built his future fame,
And scatter'd fate, where'er his footsteps came.

That is legitimate and effective satire; the indignation of the poet is fitted to the abject offensiveness of his theme. But too often he falls into mere shrewish vituperation:

Said Jove with a smile—
"Columbia shall never be ruled by an isle. . . .
Then cease your endeavors, ye vermin of Britain."
(And here, in derision, their island he spit on) . . .

There is more of the kind, which I shame to repeat, as Freneau himself was confessedly half-ashamed to write. And indeed these explosions of poetic rage have a sad way of losing their force with time, and degenerating into mere ill temper; for what is George III. to you and me that we should understand this hatred? It needs genius to be a good hater in literature. And if we turn with weariness from this scolding of the English, we are affected with something akin to distress at his railing against his own compatriots, Tory and Federalist:

What is a Tory? Heavens and earth reveal!
What strange blind monster does that name conceal?
There! there he stands—for Augury prepare,
Come lay his heart and inmost entrails bare,
I, by the forelock, seize the Stygian hound;
You bind his arms and bind the dragon down.
Surgeon, attend with thy dissecting knife,
Aim well the stroke that damps the springs of life,
Extract his fangs, dislodge his teeth of prey,
Clap in your plucers, and then tear away.—
Soldier, stand by, the monster may resist,
You draw your back-sword, and I'll draw my fist.
Lo! mixt with air his worthless ghost has fled;
Surgeon, his paleness speaks the monster dead;
Part, part the sutures of his brazen skull,
Hard as a rock, impenetrably dull.
Hold out his brain, and let his brethren see
That tortoise brain, no larger than a pea——
Come, rake his entrails, whet thy knife again,
Let's see what evils threat the next campaign.

In that slough of civil discord were sunk all his raptures of liberty and his visions of "The Rising Glory of America." For not the least of his anticipations was his prophecy of America's empire, and the conscious assumption within himself of so many of the traits of the practical calculating American mind, side by side with its thin mysticism; as if the temperaments of Poe and Franklin were united in one person. Here you shall read lines in glorification of commerce and science, such as our national poet to-day, if such existed, might write; here you shall see the past disparaged in the classics, and that self-flattering absorption in the present which has sapped the very roots of the New World's imagination. And here too is the fullest expression of that spirit of rebellion and mutual distrust in which the country was unfortunately, if necessarily, founded, and which has clung to it like an inherited taint in the blood, marring the harmony of its development and suffering a partial explation in the calamities of the civil war. There is a lesson for us to-day, and, in more ways than one, a little of humiliation, in the career of our first poet.

VI.

But let us rather take leave of Freneau in a different frame of mind. In 1798 he gave up active participation in editing, and retired to the family estate at Mount Pleasant, N. J., where he passed the remaining thirty-four years of his life. Politics were not entirely forgotten, and for a while he contributed to the Philadelphia *Aurora* and other papers a series of amusing letters which were afterwards brought out in book form—the best of his prose writings. But for the most part his time was given to farming in a half-hearted way, and to composing verses under the shelter of a grove that had been started by his father. Professor Pattee gives a happy picture of the poet in his declining age, from the account of Dr. John W. Francis in Duyckinck's "Cyclopædia of American Literature":

He was somewhat below the ordinary height; in person thin, yet muscular, with a firm step, though a little inclined to stoop; his countenance wore traces of care, yet lightened with intelligence as he spoke; he was mild in enunciation, neither rapid nor slow, but clear, distinct, and emphatic. His forehead was rather beyond the medium elevation, his eyes a dark gray, occupying a socket deeper than common; his hair must have once been beautiful, it was now thinned and of an iron gray. He was free of all ambitious displays; his habitual expression was pensive. His dress might have passed for that of a farmer. New York, the city of his birth, was his most interesting theme; his collegiate career with Madison, next. His story of many of his occasional poems was quite romantic. As he had at command types and a printing press, when an incident of moment in the Revolution occurred, he would retire for composition, or find shelter under the shade of some tree, indite his lyrics, repair to the press, set up his types, and issue his productions. There was no difficulty in versification with him. I told him what I had heard Jeffrey, the Scotch Reviewer, say of his writings, that the time would arrive when his poetry, like that of Hudibras, would command a commentator like Gray.

That learned commentator has not yet appeared, and is scarcely needed; but it is agreeable to think of the old poet, in his not ignoble retirement from the world, hearing such dearly-earned praise and finding in the future a compensation for the harsh treatment of the past. Princeton has done well to honor one of the most dis-

tinguished of her sons by publishing his principal poems in substantial form.

P. E. M.

NEWS FOR BIBLIOPHILES.

Volume XXI. of "Book-Prices Current," covering the English auctions from October, 1906, to July, 1907, just issued by Elliot Stock, records 7,167 lots, selected from about 31,800. The total payment for them was nearly £134,000, or an average of £4 4s. 2d. per lot, the highest average since the record has been kept. J. H. Slater, the editor, says that only printed books and manuscripts of a literary character have been included in his total, mediæval illuminated manuscripts, some of which have brought large sums, being excluded. These manuscripts are, however, described. He says that at present competition is confined chiefly to the "early editions of the English classics, important manuscripts, books containing inscriptions, and Americana"; and that, "speaking generally, all others are, if anything, cheaper than they were seven or eight years ago." The enhanced values of such books and manuscripts as are most sought for he ascribes largely to American competition. The indexes to the recent volumes are much fuller than those of the earlier volumes. Here the index fills a hundred pages, in double columns of small type. Besides the description of the book, the price paid, and the buyer's name, Mr. Slater has, as heretofore, added to some of the more important lots bibliographical notes, either his own or quoted from the sales catalogues. In describing Churchyard's "Prayse and Reporte of Maister Martyne Froboishers Voyage to Meta Incognita," London, 1578, he follows the auctioneer's catalogue in describing it as "the first edition in English of Frobisher's first voyage." In our own notes in this column of the sale, which took place March 15 and 16, we fell into the same error; for the book had never been reprinted and no copy was then known in America. Later, however, in examining the book itself, which is now owned by a private collector in New York, we discovered that the narrative indubitably referred, not to Frobisher's first voyage of 1576, but to the second of 1577, of which another and more authentic account by Dionyse Settle had been already printed. The earliest printed account of the voyage of 1576 is in George Beste's "Three Voyages for the Discoverie of a Passage to Cathaya by the Northwest." To Mr. Slater's record of the sale of the rare "Relation of Maryland," 1635, for £400 on the same date, Mr. Slater adds: "The last copy (complete with the rare map) sold by auction, realized £76. That was at the Simon sale, December, 1893; and the copy, then the property of Mr. Lefferts, was afterwards destroyed in a fire at Riviere's bindery in London. There was, however, a perfect copy of the book among the choice Americana sold by Lord Ashburton at Sotheby's, November, 1900. That copy, which brought £165, also came to America.

Almost simultaneously with the "Book-Prices Current" we receive Part IV. of its competitor, "Book-Auction Records," which, in some respects, deserves notice first. "Book-Prices Current" is arranged chronologically by sales, and a reference to the index is absolutely necessary to find any particular record. The newer "Book-Auction Records," which is edited by Frank Karslake, is published quarterly, the lots in each number are arranged alphabetically by authors, and an index to the entire volume is given with the fourth part. "Book-Auction Records" is a less pretentious publication. The transcripts of titles are more condensed, the book is printed in smaller type on poorer paper, and is offered at a lower price (£1 1s., against £1 7s. 6d.); its records are, however, much fuller. The volume just completed (the fourth) contains 15,131 records, more than twice as many as the older. As all such publications are primarily consulted for prices, Mr. Karslake's record should recommend itself more generally to booksellers and collectors. Each number of "Book-Auction Records" contains also, in addition to alphabetical record of sales, some prefatory matter of interest. This present No. 4 contains a sketch of the libraries and book trade of Dublin by Michael J. Ryan (with a half-tone of Trinity College Library), a reproduction, in colors, of a portrait of Benjamin Disraeli, from the *London Magazine* of 1840, and a series of notes, more or less bibliographical, by the editor.

It cannot be said that the late Levi Z. Leiter was possessed by the book collecting zeal, but he followed good advice when he did buy, and obtained excellent examples of early Americana and English literature. His library has been catalogued by Hugh A. Morrison, and one hundred copies printed for private distribution. The descriptions are full and accurate, drawn from many sources, and the volume is of bibliographical value. Mr. Leiter purchased in 1879 the manuscripts of David Hartley, but made no other important venture in that direction. Nearly one-fifth of the catalogue is taken up with the issues made in the Confederate States, 1861-1865. Worthy of special mention are the early Pennsylvania issues (Bradford and Keimer), tracts by Keith and Eliot, the material on the persecution of the Quakers in Massachusetts, and Jefferson's own copy of the London issue of the "Notes on Virginia." It is the judicious notes and collations of Mr. Morrison that confer value on this handsomely printed catalogue.

Charles A. Flagg of the Library of Congress, has compiled a "Guide to Massachusetts Local History," which is intended to give by counties the more important publications on local history. A map of each county, with the cities and towns, is prefixed to its section, making reference simple. Naturally such a list could be accomplished with success only by excluding some classes of material, and the specialist might complain at some omissions. But the inclusion of manuscript material, magazine and newspaper articles, and even of volumes in preparation, will compensate for these omissions. To the genealogist, this guide will be useful, while its merits to the historian may be tested by consulting the article "Salem Witchcraft." Even the bibliographer will find help—as in the editions of Mary Rowlandson. It is issued by the Salem Press Co.

The Anderson Auction Company of this city sells on Wednesday and Thursday afternoon, October 16 and 17, a collection, including thirty lots on tobacco, some old plays by Beaumont and Fletcher, Congreve, John Dennis, Shadwell, and others: and first editions of Emerson, Holmes, and Thoreau, etc.

"One Hundred Years of Book Auctions: Being a Brief Record of the Firm of Hodgson & Co.," is a book issued from the Chiswick Press, for private circulation, giving the history of the hundred years of this London house.

Correspondence.

HISTORY IN SECONDARY SCHOOLS.

To the Editor of The Nation:

Sir: I have read with much interest the communications which have appeared in the recent numbers of the *Nation* on history teaching. Mr. Abraham Flexner's vigorous letter in your issue of September 26, appears on the surface at least to be an attack on the report of the Committee of Seven; unfortunately, it is based on imperfect knowledge: "The epoch-making report" did not order text-books off the premises; neither did it advocate that an American boy should be free to choose between the Constitution of Kleisthenes and the Constitution of the United States. It did not propose to make ancient history the centre. In fact the whole tenor, temper, and content of that report is different from what Mr. Flexner appears to consider it. It is true it recommends that, if a four-year course in history is given in a high-school, ancient history should be offered in the first year; but this recommendation is based in part on the fact that pupils generally spend some years on American history and civics before entering the high-school. Personally I agree with what I think Mr. Flexner advocates; if I had only one year to give to history, I should not spend it on ancient or mediæval history, but on American history and institutions. Personally I deplore the old-fashioned practice still maintained in a good many schools of insistence on ancient history, and above all of requiring ancient history from students of the classics who have the most appalling need of American history. But nothing in the "epoch-making report" makes against this emphasis of American history; in fact, quite the contrary, was it not a decided breaking away from the old system to recommend that modern fields of history be accepted by the colleges? Personally—and I here appear to differ with your correspondent, however—I have no patience with this idea, which may be good psychology, but is bad common sense, that you must begin with the familiar, the uninteresting, the near, the unappetizing, and gradually lead the unwary pupil far afield. I find my own children much more interested in Moses and Daniel than in Patrick Henry or E. H. Harriman, and the more unreal the fairy story, the easier is it digested. My boy of eight studies mediæval armor and attacks feudal castles, with unremitting zeal, and takes no particular interest in the very actual terrors of the purlieus of Hyde Park. But if Mr. Flexner's experience has been different, nothing in the report of the Committee of Seven need give him pause. However much we differ in our pedagogical psychology, I am one with him in the ad-

vocacy of American history. If the report has been epoch-making, it is in part because it proposes a wider freedom and more room for the tastes and desires of the individual teacher and school.

Prof. William MacDonald, in your issue of September 12, calls attention to the dissatisfaction of teachers with the extended limits of the ancient field as marked out in the report. I don't know how to say forcibly and yet with courtesy and good humor how trivial this matter appears to be. Are not these precise limits supremely unimportant in light of the fact there are so many serious difficulties in the way of making history an effective study in the schools? If any teacher wishes to begin with Thermopylæ and stop with Actium, would any hardened theorist forbid him? And how little difference any limits will make, if he teaches with enthusiasm, zeal, and—knowledge! The report of the Committee of Seven was written ten years ago, at a time when in a majority of schools, and especially in the West, general history covering the whole field of man was taught in one year. From students of the classics, whose studies in other lines were accentuating their ignorance of modern life, ancient history was commonly required, and it was treated as something apart from the general progress of the world, a detached bit. If ancient history could be so extended as to have attachments, it appeared desirable to make the change. Moreover, the real difficulty was to suggest a plan for covering mediæval and modern history in one year, a field tremendously complex and difficult in comparison with ancient history. I do not think any one on the committee supposed that, when schools were commonly devoting but one year to general history, there would be an outcry against the possibility of getting as far along in the subject as 800 A. D. in the same length of time. But how unimportant this matter is! Surely no college in its senses is going to demand a strict adherence to any such limits, if a teacher can get better results with work in a smaller field.

Professor MacDonald's remarks on the vagueness of the misinformation generally elicited by a history examination are too well founded. What are we going to do? I do not think that history is the only offender. Is it not true that in all subjects, with the possible exception of Latin and moribund Greek, the pupils are allowed to indulge in inaccuracies and to familiarize themselves with inexactness? Do not students who come to college without any history disclose the same repugnance to precise learning as do those that have been led into the pleasant paths of dalliance by some new method of teaching history? The trouble lies a good deal deeper than in any method of teaching history. It is altogether unlikely that the recommendations of the "epoch-making report" caused these conditions. Without insisting that history is only in bed with a lot of other miserable companions, we are entitled to emphasize the fact that here is the great problem for us. If we cannot get clear-headed accuracy about either Kleisthenes or Patrick Henry, it does not make much difference what field of history is selected for the amusement of the pupil.

In an effort to escape our difficulty, must we return to the old-fashioned text-book method and beat blocks of well-chiselled history into our children's heads? Probably it would be better to stop teaching history altogether or to stop going through the entertaining motions. At the bottom the trouble—in so far as it is not due to a prevailing air of laxity, weak-kneed good-humor, and a dread of stern insistence on thoroughness—rests in the supreme difficulty of teaching history well and in the lack of preparation of the teacher. As long as it is thought that any one can teach history, even if he has not studied it, and as long as time is not given for the teacher thoroughly to prepare himself for each day's task, so long will history occupy a distinguished position among the diseducational subjects. Latin and Greek have gradually in the course of centuries been shaped into nearly perfect educational tools. Those of us who are teaching history must approach our novel task with patience and courage. But to surrender the ground gained and hurry back to the unencumbered text—what would we think of the teacher of science if he turned the key in the laboratory? Perhaps all the new methods are frantic efforts to reach the impossible, and I believe in many instances teachers without suitable apparatus attempt too much, and would succeed better by adhering more closely to a text. But on the whole the trouble is, not that we have gone too far, but that we have not gone far enough. In poorly equipped classrooms, with overworked teachers, without time and patience and materials, we are seeking to attain the ideal. Even such a course as that recommended by Mr. Flexner would not be a great success without books and a place to use them, or without a live, inspiriting, widely read teacher.

A. C. McLAUGHLIN.

University of Chicago, October 1.

To the Editor of The Nation:

Sir: Probably the failure of the "epoch-making" system of teaching history, referred to in issues of the *Nation* for September 12 and 26, may be attributed to the fact that due allowance was not made for the immaturity of the students. This is one of the commonest and most grievous faults of modern pedagogy. Courses of study are generally laid out by people of mature mind who forget one essential factor of the problem—that a child is a child, and that a youth is an immature person mentally and physically. A method of teaching which may be suitable for the senior year of college or for a post-graduate course, is decidedly not suitable for the high school.

The ordinary high school teacher is also rather too immature, at least to teach history well. It is said that almost any one who knows the subject and is enthusiastic can teach high school mathematics fairly well, without knowing much else of the world. But history, properly taught, overlaps sociology, economics, psychology, and anthropology almost imperceptibly. Not that the sixteen-year-old student should make a formal study of these subjects; but the perhaps forty-year-old teacher should be familiar with the cardinal principles of such overlapping subjects, and use them to explain and illuminate facts under consideration in the classroom. It hardly needs to be added that under political, social, and economic conditions in America to-day such ideals of the teaching force are generally impossible of realization.

The public school man and the preparatory school man have to do their own thinking and fight their own battles. The university professor and specialist in pedagogy and educational psychology can render slight, if any, aid. The latter are too prone to build air castles based on false assumptions. Assuming ample equipments, abundance of available time, lack of other attractions, and maturity of teacher and student, it is easy to spin theories and to elaborate courses of study. The fallacy lies in the premises, which in almost every case are false. The marvel is that the secondary school people were ever fatuous enough to try the experiment. The conviction is gradually growing that, in history teaching in secondary schools, under conditions as they actually are, about all that can be done and done well is frankly to use the one best available text book on the subject. In a book on history for the immature the chief art consists in leaving out things that can be omitted, and in laying emphasis on important facts. Perhaps the relation of each fact cannot be referred to a preceding fact as a cause; but enough can be correlated to give the youthful student a fair idea of the purpose of historical study—even at the age of sixteen. At least there ought to be no difficulty in enabling him to form a picture, approximately correct, even if lacking in details, of the conditions of human life in the period studied, the mental equipment of people, their modes of reasoning, their views of their rights and duties, their acquaintance with, or more probably ignorance of, the experiences of the human race in other times and under different conditions. But probably no longer shall we see a youth of sixteen, who is traversing the path of history for the first time, turned loose on original documents and controversial works. Like the Irishman, he can't see the forest for the trees.

E. L. C. MORSE.

Chicago, September 28.

Notes.

A memorial volume containing essays and letters by the late Wendell Phillips Garrison will be published as soon as the material can be collected and arranged. Many characteristic letters are doubtless in the possession of contributors to the *Nation*, and of the late editor's friends, who will confer a favor by selecting such as they deem suitable and sending them to Philip McKim Garrison, Llewellyn Park, Orange, New Jersey. Such letters will be carefully preserved and returned as soon as possible to their owners.

The Clarendon Press announces the following books as forthcoming: "The Life of Christ in Recent Research," by Dr. William Sanday; "The Psalter with Annotations," by J. M. Thompson; "The Mirror of the Blessed Lyf of Jesu Christ," translated from the Latin by Nicholas Love, edited by Lawrence F. Powell; an annotated edition of Coleridge's "Biographia Literaria," in two volumes, by John Shawcross; "The Writing of English," by P. J. Hartog, with the assistance of Mrs. A. H. Langdon; "Se-

lect Passages of English Prose," collected and put into phonetic transcription by Daniel Jones; "Rob Roy," edited by R. S. Rait; "Legend of Montrose," edited by G. S. Gordon; "Woodstock," edited by J. S. C. Bridge; the third volume of "The Oxford Treasury of English Literature," by G. E. and W. H. Hadow; Sidney's "Apologie for Poetrie," edited by J. Churton Collins; Aeschylus's "Prometheus," translated by R. Whitelaw; Aeschylus's "Agamemnon," translated by J. Conington; "Ancient Britain and the Invasions of Julius Cæsar," by T. Rice Holmes; "English Society in the Eleventh Century: Essays in English Mediæval History," by Poul Vinogradoff; "Anglo-Chinese Commerce and Diplomacy: Mainly in the Nineteenth Century," by A. J. Sargent; "Court Minutes of the East India Company, 1635-1639," edited by W. Foster; "Life and Letters of Sir Henry Wotton," by Logan Pearsall Smith; "History of the Peninsular War," vol III., by Prof. C. W. C. Oman; "The Rise of the Greek Epic," by Gilbert Murray; and the third edition of A. E. Haigh's "Attic Theatre," revised and in part rewritten by A. W. Pickard-Cambridge. The following additions will be made to the various series issued by the Clarendon Press: Oxford Poets: Thomas Campbell, edited by J. Logie Robertson; Tudor and Stuart Library: Shakespeare's "Sonnets and Lover's Complaint," with an introduction by W. H. Hadow; and Minor Poems of Drayton, chosen and edited by Cyril Brett; Oxford Library of Prose and Poetry: Coleridge's Literary Criticism; Poems of William Collins; and Selections from the Poems of William Clare, with an introduction by Arthur Symons; Oxford Classical Texts: Cicero's Speeches against Verres, edited by W. Peterson; Oxford Library of Translation; Hesiod, by A. W. Mair; and Heine's "Buch der Lieder," by J. Todhunter; Oxford Modern French Series: "Voyage aux mers polaires," by Lieut. René Bellot, edited by H. J. Chaytor; "Servitude et grandeur militaires," by Alfred de Vigny, edited by C. L. Freeman; and "Le Roman d'un jeune homme pauvre," by Octave Feuillet, edited by J. Laffite; Oxford Higher French Series: "Iambes et poèmes," by Auguste Barbier, edited by Ch. M. Garnier; "Contes et nouvelles," by Prosper Mérimée, edited by J. E. Micheli; and "La Légende des siècles," by Victor Hugo, edited by G. F. Bridge.

The McClure Co.—as McClure, Philips & Co., is henceforth to be called—announces for immediate publication two new volumes in the Temple edition of Molière: "Les Femmes savantes" and "Les Jalousies de Barbouille." The same house has begun a series of monographs "to present authoritative studies, in brief compass, of principal personalities and topics in contemporary literature and art." The series is edited by Georg Brandes, three volumes being now ready: "Richard Wagner as Poet," "Maxim Gorki," and "Aristotle."

Twenty-four new titles will be added this year to the World's Great Classics edited by Henry Morley and published in this country by A. Wessels Co. Sterne, Browning, Dickens, Goldsmith, Tennyson, and Poe are among the authors represented.

E. P. Dutton & Co. are publishing this week "A Year in Russia," by Maurice Baring; "English Church Furniture," by J. Charles Cox and Alfred Harvey; and "The Care of the Body," by Francis Cavanaugh. To their New Universal Library they are adding Newman's "Apologia Pro Vita Sua," and Macaulay's "History of England."

Henry Holt & Co will publish soon a volume of essays on "The Greater English Poets of the Nineteenth Century," by William Morton Payne. The book contains studies of Keats, Shelley, Byron, Coleridge, Wordsworth, Landor, Browning, Tennyson, Arnold, Rossetti, Morris, and Swinburne.

George III. and his court have been the subject chosen by Lewis Melville for two volumes of historic reminiscences and anecdotes. They will be published by Brentano's as "Farmer George."

The Franciscan Fathers at St. Michaels, Arizona, propose to publish the Dictionary of the Navajo Language, upon which they have been engaged for the past ten years. The dictionary will contain a series of articles on Navajo religion, ceremonies, arts, and industries, each to be followed by a list of the Navajo terms employed, with more or less detailed explanation. This descriptive text will comprise articles on the industries, weaving, dyeing, silver working, basket-making, etc.; also lists of Navajo names of persons and places, star names, and names of plants and animals. The work may be best described as an ethnologic dictionary. It is proposed to print it at St. Michaels, Ariz. The edition will be limited to not more than 200 numbered copies, of which only 180 will be sold, at a price of $5 per copy. Stewart Culin of the Brooklyn Institute Museum has undertaken to bring the enterprise to the attention of scholars, and he will receive subscriptions.

Prof. Richard Holbrook of Bryn Mawr has discovered in Italy two unedited letters of Byron, one of them containing a mention of Allegra. He intends to publish them soon.

Frederick Law Olmsted's books on the ante-bellum South being long out of print, and copies hard to come by, the Putnams do well to go on with their reissue. They now add "A Journey in the Back Country," in two volumes. The late E. L. Godkin maintained that these travels of Olmsted deserved to rank higher than Arthur Young's in France. Certainly their minute observation, combined with wide range and sustained interest, strike one afresh on every re-reading.

"The Grandissimes," by George W. Cable, has been issued in a handsome illustrated edition for the holidays by Charles Scribner's Sons. The pictures are photogravure reproductions of drawings by Albert Herter. There are a dozen full-page and eight more smaller photogravures in the text.

"Great Golfers in the Making," edited by Henry Leach (Philadelphia: George W. Jacobs & Co.), consists of slight autobiographical sketches by thirty-four exponents of the game, both professional and amateur. All but three of them are British. The stories are nearly all on one plan: Where I was born; when I got my first club; how I learned the game; where I won my first championship. Almost no direct instruction is given; but the theory of the book appears to be that golf fulfills the Arabian proverb that the fig-tree, looking on the fig-tree, becometh fruitful.

"Afield with the Seasons," by James Buckham (T. Y. Crowell & Co.), consists of brief essays on the most familiar sights and sounds of nature near home. The book would make much more enjoyable reading were it less heavily burdened with flowery and sentimental comparisons. It is disappointing to turn from such virile work as that of Thoreau, Sharpe, and Burroughs in his earlier days, to such desultory, shallow observations as these. Here and there an apt phrase occurs, as where the note of the cuckoo is likened to "a little muffled French clock striking twelve over and over again among the leaves"; but reiterated descriptions and forced similes in regard to the notes of song sparrows, robins, and bluebirds make but poor literature. The text is hardly worthy the title and decorative cover of the book.

Despite the fact that the life of the late Postmaster-General Henry C. Payne, which has been compiled by his friend William W. Wight and printed in Milwaukee for private distribution, is frankly eulogistic, it is an interesting and in many respects a valuable book. Mr. Payne was one of the cleverest and most astute politicians which this country has produced in the last quarter of a century. And he was rather a political manager than a political "boss." His strength lay more in his adroitness as a campaign organizer than in building up a machine based on patronage. His machine was the "Republican machine," not the "Payne machine." His long and successful career in business and politics was rounded out with his service as Postmaster-General in President Roosevelt's Cabinet. Here he was looked upon as the politician of the Cabinet, but he also proved to be the business man. He tried to administer his great department in a thoroughly business-like fashion. It was during his term that the widespread scandals were unearthed and punished. Mr. Payne made the mistake of discrediting the charges at first, and of believing that whatever evils existed could be quietly wiped out without undue publicity. But he came to see that such a course was impossible with offences so grievous, and he then proceeded to clean house with all the thoroughness of which he was capable. The account of the discovery and prosecution of these offenders has probably never been more fully or more fairly told than by Mr. Wight.

New light on the founding of America's great cities is always a matter of more than local interest. It is for this reason that Edward S. Mack's paper on "The Founding of Milwaukee" in the Proceedings of the Forty-fourth Annual Meeting of the Wisconsin State Historical Society (Madison, 1907) is worthy of notice. Hitherto the French trader Solomon Juneau, who established himself on the site of Milwaukee in 1818, and in 1846 became its first mayor, has been generally accepted as the principal founder of the town. Mr. Mack's investigations, substantiated by recently discovered documents, go to show that the project for building a town at this point originated with Morgan L. Martin of Green Bay, a pioneer judge and Congressman, who suggested the plan to Juneau, and became the controlling partner in the enterprise. Other articles in the same volume worthy of mention are P. V. Lawson's "Habitat of the Winnebago, 1632-1832," and

V. S. Pease's sketch of Agoston Haraszthy, a Hungarian nobleman who, driven from his native land for political reasons, became a pioneer of Wisconsin in its Territorial days.

The third volume of the "Report on the American Manuscripts in the Royal Institution of Great Britain," issued by the English Historical Manuscripts Commission, includes the papers from July, 1782, to March, 1783. It was a time of comparative quiet, when conditions were foreshadowing peace, and all parties were preparing to settle the many little questions that would follow an actual agreement. Hostilities had ceased, and the British were concentrating their forces in the places most convenient for a final withdrawal. Some prisoners of war were being exchanged, an event which for years political considerations had prevented, and Congress even now was clogging; and the formal interchange of notes gave opportunity for the expression of courteous and even friendly wishes. "I have the pleasure to inform your Excy." wrote Sir Guy Carleton to Rochambeau, in August, 1782, "that I learn by the last pacquet from England that conferences are opened at Paris for a general pacification, an event which instead of these cold intercourses, may give me the happiness and honour of embracing your Excellency in peace." The Loyalists, though still embodied in corps, were turning towards Nova Scotia, where inducements to settle provided against disagreeable meetings with their former friends in the States. Some of the papers relate to the trial of Lippincott and the Asgill affair; but the larger part refer to claims, payments, and details, which are not of a warlike character. Light is thrown on the removal of the negroes, the relations with the Indians, and the efforts to force or entice the Hessians from the King's service. Nor should the few letters of Arnold escape notice, indicating a part of the price he paid for his treachery. The calendar has been carefully prepared by Henry J. Brown.

The second edition of "Rudolf Eucken's Philosophy of Life," by W. R. Boyce Gibson (The Macmillan Co.)—an excellent statement of Eucken's practical philosophy—differs from the first in that it contains an appendix dealing with the Jena professor's doctrine of "Activism." Activism is a form of Pragmatism, but the difference between the two theories is thus explained by Eucken:

> The Pragmatism which has lately made so much headway, especially among English-speaking peoples, is more inclined to shape the world and life in accordance with human conditions and human needs, than to invest spiritual activity with an independence in relation to these, and apply its standards to the testing and sifting of the whole content of our human life.

But Eucken's Activism is especially opposed to the "prevailing Æstheticism of today," which found its ablest representative in the late Eduard von Hartmann. Activism has in view the happiness of the common people, while Æstheticism is esoteric—the philosophy of an élite. The nature of Activism is best exhibited in its application to religion. According to the Activists, Christianity is in its essence "the truest type of religion, since it best answers the question, What can religion do for life?" This view has been made, in more than one country, the foundation of a new Christian apologetic.

Rudolf Eisler's "Geschichte der Wissenschaften" (Leipzig: Weber) is an attempt to present within the compass of one volume, and not a very large one, the most salient facts in the development of scientific endeavor. On the whole, the author has succeeded well and has produced an admirable guide, not merely for ready reference. The sections dealing with modern times might seem somewhat overloaded with names, at times surnames only, which has led to some confusion; for instance, in the case of the two Swedish writers, the historian C. G. Malmström, and the literary historian B. E. Malmström. The chapter on History, which includes literary history, may be taken as an example to point a few cases which should be rectified in a new edition. Among Swedish historians we miss such names as H. Hjärne and O. Alin; among literary historians the most important of all, P. D. A. Atterbom, G. Ljunggren, and H. Schück; we find J. Tickner among American historians, but Ticknor, the historian of Spanish literature, seems to be unknown to the author. H. Hettner is given as author of "Literaturgeschichte des 18. Jahrhunderts," and again under English literature, where we look in vain, however, for the name of J. Scherr. H. Hallam's "Constitutional History of England" is given by title, but not his "Middle Ages"; and while a great number of German works on *Methodik* are enumerated, that by V. Langlois and C. Seignobos, which perhaps is more valuable than all the others, is not mentioned. On the whole, it might be said that *Hilfswissenschaften*, such as bibliography and methodology, have been slighted all through the book. The list of histories of the various sciences at the end of the volume is a useful addition, but the index, as only too often in places where such a tool would be of value, is a rather weak point.

A further indication of recent conservative tendencies in New Testament research is seen in the work of Prof. H. Lietzmann of Jena, entitled "Wie wurden die Bücher des Neuen Testaments heilige Schriften?" (Tübingen: Mohr) constituting No. 21 of the Lebensfragen edited by Prof. H. Weinel. Lietzmann, himself a protagonist of advanced theology, declares that it has now become evident that the old contention of the critics assigning the Fourth Gospel to the middle of the second century, because of the recognized influence of Gnosticism in this as in other writings of John, is groundless; and that the Fourth Gospel could easily have been written as early as the year 80 A. D., although for other reasons he prefers to assign it to about 110 A. D. This change in the attitude of criticism is owing to the fact that Gnosticism became a factor in Christian thought, not about 150, as has been generally maintained, but that the movement began before Christ and from the outset accompanied the development of Christianity in the Greek world. Accordingly, the passages in Ignatius and Justin the Martyr, which represented early church tradition, but which were weakened in their interpretation to harmonize with the older critical view, are now accepted at their face value.

The house of Hinrichs in Leipzig has begun, under the general title of Vorderasiatische Bibliothek, to issue a series of transliterated and translated texts from the literatures of western Asia that promises to furnish the student of history, theology, and literature with rich material from the ancient Orient. These texts are accompanied chiefly by explanations of their historical importance, the philological data being subordinate. The whole series is to fill perhaps three hundred sections, octavo, each of sixteen pages, to cost fifty pfennige; and each year to bring about twenty-five sections. As elaborated so far, the work will furnish inscriptions under six heads, viz.: Old Babylonian Kings, Assyrian Kings, Neo-Babylonian, The Achaemenides and Later Rulers, South Arabian, and North Semitic. There will also be Chronicles, Leases and Other Property Documents, Letters, including those of Tel-el-Amarna, Legal Texts, and Mythological Texts. Most of the material naturally is more or less old, but unpublished texts are also promised. The first volume of the series has appeared as a volume of 275 pages, entitled, "Die sumerischen und akkadischen Königsinschriften," edited by Fr. Thureau-Dangin. These inscriptions are arranged under twenty-one heads, evidently chronologically. An appendix follows, together with lists of abbreviations, signs, and proper names. A second volume is to follow in the near future, "Die Amarna Tafeln," in eleven monthly instalments. The series is not intended exclusively for specialists, but for scholars in general anxious to get as near as possible to primary sources.

The second of Putnam's French Classics for English Readers is Montaigne, edited by Prof. Adolphe Cohn. With the aim of this series we are sufficiently in sympathy, although it may seem unfortunate that the two first authors chosen, Rabelais and Montaigne, should necessarily be presented in so imperfect a form, Rabelais *pudoris*, and Montaigne *brevitatis causa*. Professor Cohn was wise in using Florio's translation, with its flavor of contemporaneity, rather than the more accurate version of Cotton. And no doubt it was well in general to select those essays which could be reproduced in full. But the result of applying this rule rigidly has been to make Montaigne look a little too regular and pointed, too much, in a word, like Bacon. And it has brought about one omission of a serious nature. The long essay called the "Apologie de Raimond de Sebonde" could not well be given complete in any book of selections; it would in fact leave no room for anything else in a volume of the size at Professor Cohn's disposal; but it would be perfectly easy, by omitting the long-winded excursions and irrelevancies, to reduce the "Apologie" to moderate compass, and Montaigne, without at least the heart of that essay, is simply not Montaigne. We must add that Professor Cohn's Introduction leaves much to be desired. No one expects or demands a profound disquisition at the beginning of a work professedly popular, but in view of the part played by Montaigne in French thought through Pascal and through innumerable other disciples, in view, too, of his important influence on English literature, a little more criticism and philosophy might certainly have been vouchsafed than Professor Cohn has deemed necessary, and, it may be added, in rather better English.

The Beilage of the Munich *Allgemeine Zeitung*, No. 35, contains an instructive ar-

ticle on the secondary schools of Austria, and their proposed reform, from the pen of Dr. Hans Kleinpeter of Gmünden. While Germany has three kinds of secondary schools leading up to the university, each with a nine-year course, Austria has but two: the classical *gymnasium* with an eight-year course, and the scientific *realschule* with a curriculum of seven years. The former leads up to all the departments of the university, but its graduates are not admitted to the technological institutes; the latter does not admit to the theological, law, or medical departments of the university. One of the reforms in view is to equalize these schools in this respect as Germany has done with her three classes. A serious difficulty in Austria is the growing neglect of the languages as the basis of a humanistic preparation for the university, and the scientific studies are slowly crowding the classical into the background. As a result a Verein zur Erhaltung der klassischen Gymnasien has been organized for the purpose of contending against this innovation.

Following the examples of the Swiss, the Belgians, and the French, the Italians also have during the present season maintained so called summer universities, with special courses for foreigners. In Florence, particularly, an Associazione per la Difesa di Firenze moderna, with the assistance of the city authorities, is conducting such a summer institute during August, September, and October. The courses cover the study of the Italian language and literature, the history of Florence and of its arts, the interpretation of Dante's Divine Comedy, and kindred subjects.

David Masson, Historiographer Royal for Scotland, died at Edinburgh, October 7. He was born in 1822 in Aberdeen, and was educated at Marischal College, in that city, and at the University of Edinburgh. At the age of nineteen he began his literary activities in journalism in Aberdeen, but after two years of this work he went to Edinburgh, where he contributed to the magazines and engaged in other writing. In 1847 he settled in London. From 1853 until 1865 he was professor of English literature in University College, London; and from 1858 to 1865 he was editor of *Macmillan's Magazine*. At the conclusion of this period, he returned to Edinburgh, where he became professor of English literature and rhetoric. This post he held till 1895; in 1893 he was made Historiographer Royal for Scotland. He was also honorary professor of ancient history at the Royal Scottish Academy. As a writer, Professor Masson was known chiefly for his books on literary themes. His "Essays, Chiefly on English Poets," which appeared in 1856, is still one of his best-known works. It was reprinted in three volumes with additions in 1874. The first volume of his "Life of John Milton, Narrated in Connection with the Political, Ecclesiastical, and Literary History of His Time," appeared in 1859, and by 1880 all six volumes of this monumental biography were in print; "British Novelists and Their Styles: a Critical Sketch of the History of British Prose Fiction," appeared in 1859; "Recent British Philosophy," 1865; a biography, "Drummond of Hawthornden," 1873; "The Three Devils: Luther's, Milton's, and Goethe's," 1874; "De Quincey" in the English Men of Letters Series," 1885; "Carlyle Personally and in His Writings," 1885; "Edinburgh Sketches and Memories," 1892. As an editor, Professor Masson was one of the most industrious men of his time. He prepared a library edition of Milton's poetical works, in three volumes, with introduction and notes. He also edited two smaller editions of the same poet. He was the editor of De Quincey's collected works in fourteen volumes. Between 1880 and 1889 he prepared for publication the Register of the Privy Council of Scotland, volumes III.-XV. (1578-1627), for which he wrote introductions. He was also the author of many magazine articles, and a contributor to the "Encyclopædia Britannica."

Dr. Ludwig Busse, professor of philosophy at Halle and President of the Kant Society, has just died at the age of forty-five. Among his publications are: "Beiträge zur Entwickelungsgeschichte Spinozas," and "Streifzüge durch die japanisch-ethische Literatur der Gegenwart."

THE CAMBRIDGE MODERN HISTORY.

The Cambridge Modern History. Planned by the late Lord Acton; edited by A. W. Ward, G. W. Prothero, and Stanley Leathes. Volume X. The Restoration. New York: The Macmillan Co. $4 net.

As this great work, now beginning to near completion, goes steadily on its way, it gathers in each successive volume fresh contributors. Some of them are comparatively new to us, and probably to most readers, but all are pervaded by the same spirit of thoroughness and business-like attention to careful statement which characterized their predecessors in earlier volumes. The present volume contains chapters by seventeen authors. Four of these belong to Continental Europe. Émile Bourgeois, professor in the University of Paris, writes two chapters on French history, which deal with the reigns of Charles X. and Louis Philippe; Carlo Segrè, professor in the University of Rome, treats of Italy from 1815 down to the Calabrian rising in 1848; Rafael Altamira, professor in the University of Oviedo, describes the course of events in Spain during the same period; while to Russia and Poland are devoted two chapters from the pen of Dr. Szymon Askenazy, professor in the University of Lemberg. Among the English writers, Lady Blennerhasset; F. A. Kirkpatrick of Trinity College, Cambridge; Professor I. G. Robertson, H. W. C. Davis, E. A. Berrians, Prof. J. H. Clapham, Prof. Shield Nicholson of Edinburgh and W. J. Courthope (the eminent author of an elaborate history of English literature), appear for the first time in this work.

The volume carries us into times which lie within the memory of men still living. It omits the United States, already handled in vol. VII., but it carries the story of the rest of the world so far down as to leave only two more volumes to complete it. The nearer the history gets to our own time, the greater becomes the difficulty of handling the enormous mass of material and of finding room for elucidations and reflections, as well as for the narrative of events. The writers and editors have thought that narrative is more important than comment; and some of the chapters are little more than a highly condensed chronicle of happenings, which leaves no space for sketches of personalities or for summings up of the general character of a period, or the general causes operative on it. Of this we are not prepared to complain. The narrative can hardly be made so interesting when it becomes a dry chronicle of occurrences; but, after all, an exact record of facts is the main thing. Such a record is really more needed the nearer we approach the days within our own memory, for most of us know least about those days, and it is hardest to find really good histories dealing with them.

The present volume has brought forcibly home to us the value of such an undertaking as "The Cambridge Modern History," because it gives within the covers of one volume, in the compass of eight hundred pages, a comprehensive account of all the chief events in Europe and Spanish America during the momentous years which lay between the fall of the Napoleonic empire and the beginning of those new political movements which date in England from 1832 and in the European Continent from 1846-48. The parallelism of political development among the great countries of central and western Europe during that period is remarkable. So is the parallelism in their literary tendencies. This makes it all the more needful to study each country in its relations to the others, and with the others in view. The plan of the book renders such a study much easier and more helpful than it could otherwise be.

Volume X. is entitled "The Restoration." Everywhere in Continental Europe, a restoration was inevitable when the flood of Napoleonic invasion had subsided; but it took different forms in each country; and the reaction against revolutionary ideas and methods which each country witnessed bore in each a character peculiar to itself. Sooner in some countries, later in others, the movement of reaction against the Revolution spent itself, and was followed by a new counter movement in a revolutionary direction. There were unusually few wars, for every state came more or less exhausted out of the struggle between Napoleonic France and the rest of Europe. But in every state there were intestine struggles and disorders. The Greeks rose against the Turks. There was fighting in Spain and in Portugal. France expelled the elder branch of the Bourbons in 1830, and gave an unquiet life to the Orleans monarchy, which crashed to the ground in 1848. Italy was kept in constant unrest by conspiracies which occasionally broke out in revolts. Germany, with less open disturbance and fewer plots, suffered from the repressive methods of her sovereigns, and saw all the more patriotic and enlightened spirits struggling against those methods, till discontent flamed forth in the revolutionary movements which immediately followed the period here described. England, having got over her revolutionary epoch in the seventeenth century, suffered comparatively little from the reaction against France and Napoleon; and when the time came for her to popularize further her government, she did it without bloodshed in 1832. The interest and importance of this period for the European Continent lie in the fact that it was the seed time for the great changes which followed between 1840 and 1871, and

which altered the whole map of Europe, creating national monarchies in Italy and Germany; dividing Austria, and establishing a constitutional monarchy in Hungary; setting up a democratic republic in France, and also narrowing her limits; reducing the area of Denmark, besides rendering the governments in nearly all the countries of Europe more constitutional than they had been before, and extinguishing the temporal power of the Pope.

One of the most instructive and best written chapters in the volume is that from the pen of Lady Biennerhassett, which traces the history of the Papacy and the Papal States from the restoration of Pius the Seventh to the election of Pius the Ninth. Advocates of the temporal power will find little to support their case in the description here given of the administration of this part of Italy, even under so good a man as Pius VII. and so capable and honest a statesman as Consalvi. Such a chapter as we find here is particularly useful, because this important branch of European history is hardly touched on in most of the current compendia, and seldom fairly dealt with even by those who have taken Italian history for their subject. Few phases of recent thought are more curious than the revival of Papalism as a doctrine, almost a philosophy, by Joseph de Maistre and Gioberti. Whether the theories these writers put forward had much practical effect or not upon the world—a point which neither Lady Biennerhassett nor M. Bourgeois discusses—they fell in with the current of opinion flowing at the time, an opinion which needed some foundation on which to establish ecclesiastical power as a bulwark against revolution; and they supplied principles to those who could not think out the principles which their own prejudices or emotions called for.

There were indeed many cross currents of opinion then running, and a chapter might well have been dedicated to an examination of them as they appeared in the several countries of Europe. Although the scheme of the history discountenances anything which approaches speculative treatment, a description of the various intellectual tendencies which were floating about in Europe and some of which were actually influencing politics, while others were forming the minds of the generation then coming to manhood and thereby determining the character of the epoch which began in 1848, would be of great value.

The introduction of chapters dealing with literary and scientific movements has been from the first one of the excellences of this series. In the present volume we find three such, all very well executed. Prof. Shield Nicholson writes upon the English economists from Adam Smith down to MacCullough, and in a terse manner indicates the contributions of each to the science which Smith may almost be said to have created. He does proper justice to the merits of Malthus, whom it is now the fashion to disparage. He brings out forcibly the fact that while the so-called orthodox economics were in full swing in the days of Malthus, James Mill, and Ricardo, there was also in existence another stream of opinion represented by the protests of Godwin against the existing structure of society, and by the attempts at collectivism which we associate with Robert Owen. He indicates that the fundamental notions that appear in the scientific socialism of Karl Marx had been already, some more, some less explicitly, given to the world by earlier English thinkers.

The other two chapters deal respectively with German and with English literature. Both are interesting; and the latter, by Mr. Courthope, has the qualities which readers of his remarkable book on the subject expect to find in all his work—fine taste, wide knowledge, and a graceful style. It is unfortunate that the plan of the book, placing America in a separate volume, has not permitted the literary movements of the United States to be treated in their connection with those of Europe. Mr. Courthope has, however, in a passage worth reading, sought to account for the powerful influence exercised by Byron in France, Italy, and Germany, as compared with the slight impression made there by four contemporary poets whom most people would now deem Byron's superiors, viz., Wordsworth, Coleridge, Shelley, and Keats. Mr. Courthope's view of the so-called Romantic movement deserves to be set beside that given by Mr. Robertson in the account of German Romanticism which we find in chapter xii. The difference and agreement between the developments of the new literary tendency in the two countries are thus brought more sharply into view. Both English and German Romanticism passed away; nor has any movement of equal force arisen to replace them. It is worth noting that German writers have exerted a comparatively feeble influence upon English. Walter Scott owed something to Goethe and to some of Goethe's contemporaries, such as Bürger and Tieck. Thomas Carlyle owed something to Goethe and to Richter. But those who wrote in English were less touched by German or French writers than both Germany and France were affected by Byron and by Walter Scott. On the other hand, Wordsworth, who left so deep an impression upon English poetry, scarcely moved the European continent at all.

In the period covered by this volume there is, of course, no single figure of what may be called European magnitude comparable to Napoleon. Neither, indeed, is the period, if we pass in review the several states of Europe, an age of great men. Royer-Collard, Villèle, Guizot, and Thiers in France; Canning, Castlereagh, Lambton (Lord Durham), and O'Connell in England, were remarkable men, but hardly as interesting as Bolivar, the hero of South American independence, or such representatives of intellectual movements as Chateaubriand and Jeremy Bentham. If the previous age is described as that of the soldiers, for round Napoleon and Wellington there were many brilliant military figures, this post-Revolutionary age may be called that of the diplomatists. The great Powers of Europe, having undertaken to deal collectively with the difficulties which the Napoleonic *bouleversement* of Europe had created, were constantly in communication with one another, and their leading spirits in each state were bent on exerting their influence on their neighbors. Even after the Holy Alliance had ceased to exist the ideas embodied in it held their ground at the Courts of Vienna, St. Petersburg, and Berlin. Thus one may say that the most conspicuous figures of the time, and certainly the most remarkable international figures, were Metternich and Consalvi. The next generation saw the emergence of new types in statesmanship, men who either leaned upon the people, like Cavour and Gladstone, or at least knew how to use and profit by popular sentiment, like Bismarck. What gives to the period from 1815 to 1848 its permanent historical importance is that the doctrines of nationality and popular sovereignty, which were destined to work such mighty changes, were being quietly prepared, and were imperceptibly making way during a time when reaction still reigned, and Metternich guided the policy of half the European Continent.

CURRENT FICTION.

Major Vigoureux. By A. T. Quiller-Couch. New York: Charles Scribner's Sons.

"Q," who is as capable of realism as the next man, maintains as a rule a genial preference for romance. He is apparently satisfied, as Stevenson was, with his rôle of master-entertainer. The character of Major Vigoureux might easily have been made the subject of a sterner treatment, but he is handled very lightly, and the whole story kept upon the romantic comedy plane. The major is commandant of a dismantled and half-forgotten naval post on certain inconsequent islands off the English coast. The garrison has dwindled to two, and their duties are simply to wait upon the commandant. He has lost his authority in the islands, and what with shame and apathy is in a fair way to lose all interest in life. He still receives his full pay, but fancies it must be continued through oversight; yet, for not ungenerous reasons, he lets the matter drift on. To the islands, under most picturesque conditions, comes an extraordinary person. She is a native of the islands who has left them as a girl to prepare for a public career, and after a great success as a singer, returns by a homing instinct to the little lonely isles of her birth. She is, in truth, a somewhat fantastic figure, dealing much in mystification and subterfuge, the uses of which do not always appear. However, she is the *deus ex machina* by whom all things are made straight. The tale is a most agreeable literary confection.

Three Weeks. By Elinor Glyn. New York: Duffield & Co.

About eight years ago, judging by "The Visits of Elizabeth," Elinor Glyn rightly impressed the world as fairly modern. In her present book she seems to have withdrawn into the early manner of—let us suggest E. Marlitt; every i is dotted, every t crossed, every event carefully, not to say obviously, prearranged. It would not so much matter that the plot is a perfect farrago of nonsense—of faithful Balkan servitors, kings in the offing (and the very queerest little baby of all the queerly fathered babies in fiction)—if the book were in the least amusing. But the sprightly wit of Elizabeth has vanished. The attempt at sentimental love making is positively disconcerting. The whole leaves a bewildering doubt—has Elinor Glyn become perfectly indifferent to her reputation or, by any

mischance, is she beginning to take herself seriously? Unfortunately, several reputable libraries have tabooed this production on the score of immorality. If it had been for dulness and silliness, the cause of virtue would have been better served than by lending such rubbish the alluring glamour of impropriety.

The Car of Destiny. By C. N. and A. M. Williamson. New York: The McClure Co.

There is no reason why Mr. and Mrs. Williamson should not write fifty more novels on the same plan as this. For variety they could change the setting, the names of the persons, and the incidents. That would be enough. This is a description of several of the more interesting Spanish cities, strung on the thin threads of an automobile trip and a love story. The hero and the heroine fall in love—of course at first sight—at Biarritz. The heroine and her mother are whisked off through Spain in an automobile by the wicked Spanish duke whom this scheming mother wishes the daughter to marry. The hero follows in his automobile. The account of the roads, the country, and the towns is broken by the incidents of the chase—some of them highly melodramatic. The characters are equally theatric—mere lath and pasteboard. At the end the treacherous duke gets his deserts and the hero gets the lady; but so unconvincing is the characterization, that marriage as well as misadventure leaves the reader cold.

The Discoveries in Crete, and their Bearing on the History of Ancient Civilization. By Ronald M. Burrows. Pp. xvi., 244. New York: E. P. Dutton & Co. $2.

Scholars have looked to Crete for the solution of several important archæological problems; and since the withdrawal of the Turkish forces and the erection of a stable government made explorations practicable on that island, these excavations have been conducted with energy and have been followed with unusual interest by the general public. To uncover palaces and cities three or four or five thousand years old, and to find these unexpectedly modern in some of their appointments and comforts, with the arts highly developed, is a fascinating enterprise. The most extensive and exciting of these excavations have been conducted on the site of the ancient palace of Minos at Cnosus, or Knossos; and of this work, its leader, Dr. Arthur Evans, has rendered very prompt and satisfactory accounts, chiefly in the Annual of the British School of Athens, while the readers of the *Nation* have had excellent summary reports from time to time in letters from Oxford. But these excavations have continued for six years, and comparatively few American scholars have been able to combine and correlate the reports of the work of Dr. Evans at Cnosus, of the Italians at Phæstus (published not very promptly, and chiefly in the Monuments of the Lincei), of the work of our countrywoman, Miss Harriet Boyd (now Mrs. C. H. Hawes) at Gournia and Kavusi, of the excavations of the British at Palæokastro, of the discoveries of Mr. Myers in the cave at Kamáres, and of Mr. Hogarth in the Dictæan Cave—the fabled birthplace of Zeus—few scholars, we say, have been able to group all this material so as to secure a definite and harmonious picture which could be brought into comparison with the Mycenæan remains in Europe and with the discoveries of the British at Phylacopi on Melos. A general survey of the field was much desired, even though it must be tentative and preliminary, and leave many questions unsolved. For such a survey, our author seems well fitted. Evidently he has not only seen the excavations and the museum at Candia, and learned the last dates assigned in the Ashmolean Museum at Oxford; he is in close relations with the excavators, and he has command of a large mass of publications—what is known as the "literature" of the subject.

The book, however, is not a handbook of discoveries in Crete, from which the reader may gain definite information with regard to every part of the field. The author avoids everything that might look like statistics, and prefers to give information discursively and indirectly. The reader would look in vain if he desired to learn when or how long the Italians were engaged in their excavations at Phæstus, or anything about the discovery of the Gortyna inscription with the famous code of laws. The statement with regard to Miss Boyd's work occupies only half a page, and is entirely inadequate. Doubtless much more would have been said about this, if her recent beautiful publication had been made earlier. Only the first two of the twelve chapters are devoted to anything like an exact account of the discoveries. After that the author seems to be writing for those who know what he means when he speaks of "The linear writing of Class A" (nowhere in this book made more definite), and who have open before them several volumes of the Annual of the British School of Athens, and of the Journal of the Hellenic Society—which, as he truly says, ought to be in every public library. The book has no ordinary cuts—but four plates, all good: a ground plan of the palace at Cnosus, a sketch-map of Crete, marking the sites of archæological interest, a strata section of one part of the excavations at Cnosus, and two vases from Agia Triada, near Phæstus. The first of these is particularly good and welcome, but little reference is made to it in the book itself. More illustrations would have been acceptable, but the author's descriptions are generally simple and intelligible, and he conveys a large amount of information incidentally.

The greater part of the book, chapters iii.-xii., is given to the discussions indicated in the second part of the title—the bearing of the Cretan discoveries on the history of ancient civilization. The author admits no doubt that Cnosus was the centre of the development of this culture, and so does not discuss this question. Between the neolithic age and the age of geometric ornament of pottery, Dr. Evans distinguishes nine periods, in an easily remembered scheme—Early Minoan, Middle Minoan, and Late Minoan, each in three divisions. Early Minoan I. is thought to correspond to the first four dynasties of Egypt. Dr. Evans takes a mean between the 3315 B. C. of Eduard Meyer and the 5510 B. C. of Mr. Petrie and assigns it indefinitely to the fourth millennium B. C. Middle Minoan begins about 3000 B. C. and extends to 1800 B. C. Late Minoan II., closing with the sack of Cnosus and Phæstus, begins about 1600 B. C., and ends before 1400 B. C., according to Dr. Evans. Professor Dörpfeld sees no objection to setting the destruction of the great Cretan palaces nearer the time of the fall of Troy and the sack of Mycenæ, or about 1200 B. C. Since the most important arguments for the Cretan dates are the connexions with Egyptian history, and Cretan periods are equated with Egyptian periods, the Cretan dates must be accepted as provisional, subject to the determination of vexed questions in Egyptian chronology. Late Minoan III. follows the destruction of the palaces, and is made to correspond to what is ordinarily known as Mycenæan. Says the author (p. 100):

> The great lesson that Cretan discoveries have taught us is that the art of what we used to call the good or mature Mycenæan type, is not on the upward grade, soon to be arrested by a catastrophe, but on the downward grade, with its catastrophe well behind it.

Criticisms on the term Minoan, as applying to the whole long period the name of a king who lived near its close, are acknowledged to be just. The terms Ægean or Cycladic are thought possible—but not Carian or Mycenæan, though the Minoans were probably akin to the Carians, and on the catastrophe in Crete, many of the survivors may have found refuge with their kin in Asia Minor.

The Minoans, according to our author, were not of Greek blood, and did not speak the Greek language, but belonged to that dark Mediterranean race, "the most gifted in the world," to which the artistic impulses in Greece, Italy, and Spain have been due. The Indo-Europeans, he says, "were not the men who created the mid-European culture; they were rather the men who destroyed it" (p. 196). They did not come to Crete early enough vitally to affect the Minoan civilization. The real glory of Greece and Rome, according to this view, does not belong to our kinsfolk who came down from the North, and held sway for a time in the South. The language of the invader prevailed, but the blood of the pre-Aryan was more persistent. This question was argued at greater length by Professor Ridgeway half a dozen years ago.

In spite of his not allowing the Minoans to be Greeks, and though the Minoan civilization died out gradually, our author thinks the Minoan religion had very great influence on later times. "The supremacy of the woman," *i. e.*, of the nature-goddess, "still survived where the old population was the stronger, or where its cult was rooted in the traditions of some local sanctuary"; and Professor Burrows finds her as Aphrodite in Paphos or Eryx, as "intellectualized into Athena" in Attica, and as Hera, "the goddess of power," at Argos, while she held on at Cnosus as Rhea, the mother of Zeus, and even has her influence to-day in the pilgrimages to shrines of the Blessed Virgin. In the sanctuary of a snake-goddess in the palace of Cnosus a single square equal-limbed marble cross was found, which some archæologists think to have been simply decorative, but our author holds that this "suggests the reason

why the Greek world has always preferred that shape for the Christian symbol, as opposed to the Western 'Latin' cross, with its longer upright." All this is entirely fanciful, and cannot seriously be maintained.

Two criticisms may fairly be made upon the book. The English expression is often careless, and the tone in which the author refers to views with which he disagrees is unpleasant; what might pass in a familiar lecture is out of place here. The following sentence is a specimen of cryptic style which might be used as an example of what used to be called *enallage* (p. 78): [Mr. Evans's dates] "are not earlier than Berlin by nearly so many centuries as they are later than Sinai." The reader who opens the book here could hardly guess that this means simply: Mr. Evans's dates, it is true, are earlier than those proposed by Professor Meyer of Berlin, but they are much later than those maintained by Professor Petrie in his book on Sinai. The author ignores the fact that Professor Dörpfeld is still our highest authority on ancient architecture and all things pertaining to archæological excavations in Greek lands, and actually says that Dr Dörpfeld's architectural observations, with which he disagrees, were made in "seeking support" for a theory about the Carian civilization (p. 78); and Mr. Burrows uses with regard to Professor Dörpfeld the proverb *Quem deus vult perdere*. The views to which Mr. Burrows objects, according to his own statement, were based largely upon the report of Dr. Evans's paper, presented at the Archæological Congress at Athens in 1905, as published in the official *Comptes Rendus*. Surely, under these circumstances, gentle language toward Dr. Dörpfeld would be in place. if he were only the peer of the author. And, even if he were less distinguished than he is, he would deserve special consideration in view of the unusual courtesy and openness of mind which he has shown in archæological discussions.

The last chapter of the book has an interesting title, "Crete and the Homeric Poems," but most of the matter is an irrelevant argument against the unity of the poems. The author does not discuss the relation of the Achæan to the Minoan civilization, but says rightly, "the most important contribution that Crete has made to the Homeric Problem is that it has emphasized for us the greatness of the art whose memories are preserved in the 'Iliad' and the 'Odyssey.'" In obvious oblivion of the Homeric description of the Phæacian city, however, the author thinks that this was Cnosus, which was not fortified, nor on a promontory and accessible only by a narrow isthmus.

The Dawn of Modern Geography, Vol. III.: A History of Exploration and Geographical Science from the Middle of the Thirteenth to the Early Years of the Fifteenth Century (c. A. D. 1260-1420). By C. Raymond Beazley. New York: Henry Frowde. $6.50.

In the completion of his great work Mr. Beazley has done and more than done for the Middle Ages what Bunbury did for ancient times in his "Ancient Geography." We now possess in English a complete history of exploration and of geographical ideas from Homer to Prince Henry the Navigator. Mr. Beazley's work is indispensable both to students of the discoveries and of mediæval culture. We are somewhat disposed, however, to quarrel with his title and to think that "History of Geography in the Middle Ages" would have been more apt. The date where he stops, 1420, is more strictly that of the "Dawn of Modern Geography." From that date geographical knowledge is continuously and systematically extended and its conceptions revolutionized; such changes more properly denote the dawn than a long period which includes the decay, the standstill, and the beginnings of a revival of knowledge.

Going over Mr. Beazley's pages, one cannot fail to be struck with the great activity in exploration and travel exhibited in the century and a half before Prince Henry, by merchants, pilgrims, and missionaries. The narratives of these journeys Mr. Beazley has summarized, and in each case he has indicated the specific addition to knowledge. His first appendix enumerates the leading manuscripts extant of the texts of the authors reviewed in Vols. II. and III. and marks by an asterisk those which he has personally examined. The number of manuscripts of a writer and explorer is an interesting index of the relative diffusion and popularity of his work. Thus of Odoric de Pordenone (1286-1331), one of the most noted of the missionary travellers, there are seventy-three manuscripts in Latin, Italian, and French; of Marco Polo (1254-1324), the Venetian merchant, the greatest of the Christian travellers of the Middle Ages, there are eighty-five manuscripts in the same three languages; while of the fictitious travels of Sir John Mandeville there have come down to us 202 manuscripts in Latin, English, and French. By this comparison it will be seen that Mandeville had nearly three times the circulation of Polo. The printed editions tell about the same story.

The "Book of Sir John Mandeville," believed by Samuel Purchas to be the genuine record of the "greatest Asian traveller (after Polo) that ever the world had," is now known to be the ingenious, if unscrupulous, compilation of a physician of Liège, which was first issued between 1357 and 1371. As indicated by the number of manuscripts, its popularity far exceeded that of his principal genuine sources, Odoric de Pordenone and William of Boldensel. Indeed, the English version became a classic. A copy of the "Book of Sir John Mandeville" was in the possession of Columbus, and its notions reappear in his writings. Mr. Beazley, in a note, gives in brief the sources of the various sections. Of Marco Polo, the most interesting manuscript copy was the one presented by the Signory of Venice about 1428 to Prince Pedro of Portugal, a brother of Prince Henry the Navigator. Of the printed editions none compare in interest with the Latin one, translated by Friar Pipino, which was owned and abundantly annotated by Columbus and is still extant in the Colombina at Seville. That the great sailor based his explorations equally on data supplied by the real traveller and the ingenious compiler, need not surprise us to-day. In the first place, the materials of literary criticism did not exist; but second and more important, those facts in regard to the Pacific coast of Asia, in which Columbus was particularly interested, are treated by Polo in almost as fabulous a manner as by the author of "The Book of Sir John Mandeville."

Among the minor topics which Mr. Beazley discusses and on which his conclusions are given, are the Doria-Vivaldi voyage down the west coast of Africa in 1291, a two-century anticipation in its purpose of Columbus; the alleged Dieppese voyages to the west coast of Africa; and the colony of La Mine, 1364-1410, the genuineness of which he rightly denies. The tale of the discovery of Madeira by the romantic runaway lovers, Robert Machin and Ana de Arfet. Mr. Beazley characterizes as "a matter of no great importance," for, if genuine, it was "neither a true discovery nor likely to have had a determining effect upon Prince Henry, a careful student of older and better sources," relating to the Madeiras. The Zeni voyages to Frisland, Estotiland, and Drogio, so speciously defended by the late John Fiske in his "Discovery of America," are, in accordance with the researches of Storm and Lucas, rejected as legendary and fictitious.

Mr. Beazley considers in considerable detail the development of map-making, and reproduces by photographic process both maps and sailing manuals (*portulani*). Less fully than in the earlier volumes, the work of the non-Christian geographers is surveyed, but interesting and adequate summaries are given of the work of Edrisi and Ibn Batuta. Taken all in all, Mr. Beazley's third volume fitly crowns his work.

Die Literatur der Babylonier und Assyrer. Von Otto Weber. Leipzig: Hinrichs. 5 marks.

Dr. Weber's work is to be recommended as a safe guide to those who wish to obtain a general survey of the literary productions that accompanied the remarkable civilization of the Euphrates Valley thousands of years ago. Naturally a greater part of these productions are not literature in any modern sense of the term, such as the business documents, the school texts, the official letters, the astrological reports, medical works, and the collections of omens, but they are properly included in a volume such as Dr. Weber's; for such texts, even more than the literature proper, illustrate the intellectual activity of ancient Babylonia and Assyria. That activity was largely directed into practical channels. Such sciences as flourished—notably medicine and astronomy—were cultivated because of their relationship to the life and the fate of individuals. Dr. Weber has, in the case of each of the many subdivisions of his theme, given a general survey followed by carefully chosen specimens; while the copious bibliographical references are of value to the special student as well as to the general reader in directing him to the sources for a fuller study of the subject. The literary division in the proper sense is represented by the prayers and hymns, the numerous myths, folk-tales, and more particularly by the famous Gilgamesh Epic.

Naturally, in order to bring the volume within reasonable proportions, Dr. Weber had to restrict somewhat the number and length of the specimens and extracts furnished, but in all cases the translations are sufficient to convey a fair view of the character of each sub-

division. His treatment of the school texts, which are exceedingly interesting because of the light that they throw on the pedagogical methods developed at a very early period, might have been somewhat fuller. Education, to be sure, was restricted chiefly to one class—to the priests and to those in training for the priesthood—but this limitation recognized, the provision made to secure a handing down of the knowledge and traditions of the past from one generation to the other was truly remarkable. Writing lessons, drills in grammar, mathematical exercises, commentaries on texts, examples of methods pursued in legal procedures and in divining the future, are abundantly illustrated in the texts that have in one form or another come down to us from the temple schools of Babylonia and Assyria. The chief source of our knowledge of this intellectual activity is still the royal library at Nineveh, discovered by Layard about fifty years ago and now stored, so far as recovered, in the British Museum. Though much of this material has been published, a considerable proportion yet remains to be studied.

It should be added that Dr. Weber's translations are made in all cases from a renewed study of the texts, and since he has in addition conscientiously consulted the studies made by other scholars, we can be certain to find in his renditions the reflection of the present-day knowledge. In a growing subject such as Assyriology this is important. Renditions ten years old become antiquated because of the steady progress in our knowledge of the language spoken in Babylonia, and it is necessary therefore from time to time to study the texts anew and embody the results of increased knowledge. Dr. Weber has done this for hundreds of texts, and for this service also merits the gratitude of all students of ancient culture.

The Growth of Christianity. By Percy Gardner. New York: The Macmillan Company. $1.75.

Dr. Gardner will be remembered favorably as the author of "Exploratio Evangelica," one of the most able and useful productions of Broad Church Anglicans. The theme of the present volume, which is in the form of ten popular lectures, is the relations of Christianity with the various forms of culture and thought with which it has come into contact. The germ of Christianity is found in the Lord's prayer, and specifically in the petition, "Thy will be done," and its essential spirit is defined accordingly as a passionate devotion to the will of God as operative in the world. This vital plant of pure spiritual religion, which flourished in such simple beauty in the life of Jesus and his Apostles, has been obliged to maintain and increase itself in the most diverse environments and amid surroundings of all degrees of favor and untowardness. In Dr. Gardner's opinion the plant has preserved its essential character and virtue. Historic Christianity, despite degeneracy and corruption, is Christianity still. But as the Galilean faith was brought in contact with the great civilizations of the ancient world, it was compelled to absorb into itself many of their attributes, and to modify its outward forms accordingly. Dr. Gardner contends that such absorption of what is necessary for its growth is an inherent right of a living faith, and the modifications of Christianity under the influence of Greek thought, Asian mysticism, and Roman life, he describes as the "Baptism of Hellas," the "Baptism of Asia," the "Baptism of Rome." He contends that "ideas, thoughts, and beliefs, no less than persons, can be raised from a lower to a higher plane, can be changed in character, translated from the language of the ordinary and sensual life, or from the language of superstition, to that of the true life of the spirit." His lectures are therefore an essay in apologetics, defending the right of Christianity to include beliefs and practices which did not come within the vision of its Founder, but asserting at the same time an inner principle and essential characteristic which marks the bounds of possible assimilation, and excludes much which has been baptized into the name of Christ, though not into his spirit.

Dr. Gardner has surveyed the growth and progress of the Christian faith from a very interesting point of view. The reconciliation of a spiritual religion, existent in the forms of an outward culture, with the life and thought of a larger day, is always a difficult problem for those who are engaged in it, and a profitable object of study for those who can contemplate it as accomplished. The passion for the discovery of the essence of Christianity has led some to careless condemnation of all that was not in Galilee, and the bulb has been lost in the convolutions which have been discarded. Dr. Gardner discerns the essential spirit as clearly as any man, but does not make the fatuous blunder of regarding all that has transpired since the days of Paul as apostasy and sin. In contrast with Cardinal Newman, whose "Development of Christian Doctrine" he lauds perhaps too highly, he does not argue that Christianity grew by making explicit, by logical processes, what was implicit in its earlier teaching, but rather that it "expanded very largely by accepting what was in no way involved in its earlier teaching, in accepting and baptizing the results of the working of divine ideas in other fields than those of Judaism and Christianity." His view that the contributions of the nations to the Christian faith have been truly "baptized," transformed, and spiritualized, in many cases at least, may awaken new interest in the discussion as to the essence of Christianity which was begun by Harnack and Loisy.

The Theory of Good and Evil: A Treatise on Moral Philosophy. By Hastings Rashdall. 2 vols. New York: Henry Frowde.

This is the most considerable philosophical work yet undertaken by the well-known author of "The Universities of Europe in the Middle Ages." While written primarily for the undergraduate, it nevertheless exceeds contemporary text books such as Muirhead's "Elements of Ethics," and Mackenzie's "Introduction to Ethics," in both range and thoroughness. As the author admits at the outset, there is nothing very original in his solution of the problems of moral philosophy. His aim is to elucidate, correct, and harmonize the older and truer ideas rather than to advance new theories. Yet we regret his laborious rehearsal of ancient controversies. Why should it be necessary again to argue the old charges against Kant's rigorism and Mill's qualitative hedonism, unless on the ground of a fresh examination of fundamental conceptions? Not only is the present book tedious by its superfluous historical discussions, but the constructive part is confused by the continual criticism of contemporary writers. Thus the author's account of "Vocation," though admirable in design, is merged into a gratuitous criticism of Martineau. Discussions of the problem of evil are appended to the study of Mr. Bradley; and there are lengthy criticisms of opinions which Professor Taylor once held but has recently retracted. It is to be regretted that Mr. Rashdall did not proceed directly to investigate the problems of ethics in the light of experience and of reason. As it is, his statement of his own view is too thin and intermittent to be effective.

In the first volume, Mr. Rashdall deals with the fundamental conceptions of ethics. His general theory may be stated in his own words:

> I have sought to show that the way to find out whether an action is right or wrong, when we are forced to consider such a question for ourselves without reference to some established rule, is to consider whether it will tend to produce for society in general a well-being or Εὐδαιμονία or good, which includes many elements possessing different values, which values are intuitively discerned and compared with one another by the moral or practical Reason. . . . This view of Ethics which combines the utilitarian principle that Ethics must be teleological with a non-hedonistic view of the ethical end, I propose to call Ideal Utilitarianism.

The elements of the good to which our attention is mainly directed are pleasure and virtue. According to Ideal Utilitarianism, virtue is the dominant element in the good, but pleasure and other elements have also intrinsic values of their own. Without criticising this theory at length, we may at least notice a fundamental difficulty. While, on the one hand, we are repeatedly told elsewhere that ethics should be teleological, on the other hand the author contends that virtue must be regarded as an element and as the dominant element in the good. These two ideas when united produce obscurity and confusion as the following passage shows:

> The view that we have arrived at is that the morality of our actions is to be determined ultimately by its tendency to promote a universal end, which end itself consists of many ends, and in particular two—Morality and pleasure.

It is certain that Mr. Rashdall has not sufficiently matured his doctrine to make it logically intelligible. The reader is left in doubt whether morality is valid because it is rationally deduced from a conception of the ultimate good, or because it is intuitively apprehended as a constituent part of the ultimate good. It is impossible to reconcile these alternatives or to adopt either of them without fundamental revision. If morality, or the life of duty, is to be established as the principle which is conducive to the supremely worthy end, it is necessary to define that end and then make it the foundation of the whole system. Only in direct relation to a single universal end is it possible to establish the universal validity of morals. For if there is no conception of a supreme end, if the good is but a collection, then, on teleological grounds, morality is a mere means to some particular end, and the mor-

al is the expedient. To avoid this conclusion, Mr. Rashdall shifts his ground and seeks to show that the supremacy of morality as an end is intuitively apprehended. This, it is evident, contradicts the explicit statement that the value of morality lies in its conduciveness to some end other than itself. But if we forsake the teleological principle utterly, the situation is equally unsatisfactory. Unlike thorough-going intuitionists, Mr. Rashdall does not affirm the exclusive, but only the supreme value of virtue. Yet by making virtue interchangeable with other values, such as pleasure and beauty, he plays into the hands of the hedonist.

In the second volume the author examines what he regards as the metaphysical implications of ethics, but he hardly proves the propriety of introducing such a discussion into a treatise on moral philosophy. He is doubtless right in contending that ethical principles are incomplete without some general philosophical foundation, but he does not show that this is true of ethics more than of other sciences. Ethics may assume a "continuous self," but it is equally true that physics assumes an identical material object. For critical definitions of both of these concepts, it is necessary to resort to metaphysics developed independently and with reference to the whole system of sciences. But Mr. Rashdall's ethical metaphysics is inevitably one-sided and unconvincing.

The discussion is generally sympathetic—often entertaining, and in attention to details the author has been industrious and thorough. Yet the final impression left upon the reader is that of logical looseness and structural weakness.

His Grace the Steward, and the Trial of Peers: A Novel Inquiry into a Special Branch of Constitutional Government. By L. W. Vernon Harcourt. Pp. xii., 500. New York: Longmans, Green & Co. $5 net.

This lengthy and erudite work falls into two divisions. The first describes the evolution of the Lord High Steward of England up to the reign of Henry VIII., and the second treats of the gradual working out of the principle that peers shall be judged only by their peers. In both sections it is Mr. Harcourt's delight to show the fraudulent basis of what have been honored as historic English institutions. His Grace the Steward of England had, for his original, simply the dapifer of the King's household, whose duties were little more honorable than those of milady's butler, and who had no prescriptive right to preside over any court whatever, or any right to bequeath to his son a dignity which he did not possess.

The second and more weighty half of Mr. Harcourt's book deals with the right of the peers of England to be judged in all cases of homicide, treason, and misprision of treason only by their peers. This peculiar right dates from 1400, when an act, supposedly based on the great English palladium of liberty, Magna Charta, was passed abolishing appeals in Parliament. Mr. Harcourt sets out to prove that in Magna Charta there is absolutely nothing which could justly be held to secure this right. He goes further, and shows that had Magna Charta been always correctly understood and accepted in its literal significance, it would have been no palladium of English liberty whatever—a conclusion in which Mr. Harcourt is in substantial agreement with Mr. McKechnie and other recent historians. As both Mr. McKechnie and Mr. Harcourt point out, however, it mattered little to the development of the English nation that Magna Charta was for centuries misunderstood. Into it were read the liberties which the people demanded. Its very name was a shield and a standard; and under its ægis Englishmen gained the rights which they only imagined that it was intended to confer upon them. It was not what it said, but what men thought it said, that gave it its influence in English political and social life.

It is not with Magna Charta as a whole, however, that Mr. Harcourt is concerned, but with chapter xxxix., on which the peers base their claim to peculiar privilege, and on which every Englishman used to believe that the sacred right of trial by jury was founded. In this chapter, King John pledged himself not to imprison, disseize, outlaw, exile, or otherwise destroy any freeman "except by the lawful judgment of his peers or the law of the land." It has long been evident to historians that this clause contains no mention of trial by jury. Nor, as Mr. Harcourt points out, does it establish for peers a right to a verdict from fellow peers. English sovereigns from Henry IV. to Henry VIII. felt that they fully conformed to the requirements, if they associated with themselves or with the presiding justice, some peers in the pronouncement of judgment. The formation of the Court of the High Steward for the trial of peers is traced by Mr. Harcourt not to the Great Charter or to 1400, the date assigned by Bishop Stubbs, and by Mr. Pike, author of the standard history of the House of Lords, but to the necessities and tyrannies of Henry VII. It was King Henry's determination to rid himself of the Earl of Warwick which brought about the institution of the Court of High Steward; and it was a similar necessity on the part of Henry VIII., when he thought his power threatened by the Duke of Buckingham, that secured its perpetuation. A fairly good precedent for such a court was to be found in 1415, when the Earl of Cambridge and Lord Scrope were condemned to death for treason by a court of peers presided over by the Duke of Clarence, brother of Henry V.; but the precedent on which Henry VII. relied, dated 1400, was a complete forgery whose true date was probably not earlier than 1499. This forged precedent, strengthened by the true precedent of 1415, was sufficient to give an appearance of validity to the trial of the Earl of Warwick, and to avert the outcry that would have arisen over an illegal execution of that great noble. "This court," writes Mr. Harcourt, in summing up the results of his researches, "was a fraudulent device for the degradation of the nobility generally." "On these grounds," he concludes, "I think we are justified in asserting that the Lord High Steward's Court has an origin which is neither ancient, nor obscure, nor creditable."

Mr. Harcourt's book is scarcely intended for general reading. Almost half the volume is taken up with long quotations, in mediæval Latin or Norman French, from patent rolls, charters, year-hooks, and letters patent. Besides full footnotes, Mr. Harcourt adds to each of the twelve chapters an appendix of these extracts running sometimes to over twenty-five pages.

Red Russia. By John Foster Fraser. New York: The John Lane Co. $1.75 net.

Russia and Reform. By Bernard Pares. New York: E. P. Dutton & Co. $3 net.

Mr. Fraser's book calls for little serious attention. It is a journalistic piece of work, and that not of the highest kind. The pathetic, the dramatic, and the melodramatic are laid on with a heavy brush to the comparative exclusion of important fact or systematic presentation. Ample reason though there may be for comparing the present upheaval in Russia with the great Revolution of 1789 in France, there are writers who, in attempting to depict conditions in St. Petersburg cannot keep from dropping into the tone of Dickens's "Tale of Two Cities," with its wicked marquises galloping over the prostrate bodies of the *canaille* and lurid flames of Jacquerie lighting up the night. The present volume is an instance in point. It would have had far greater value if the text had been brought to equal in merit the large number of really excellent photographic illustrations.

In Mr. Pares's "Russia and Reform," we have to deal with a book of far different character. From one or two chance remarks in the course of its 568 large and closely printed pages, it would appear that the able correspondent of the London *Spectator* had set himself the task of producing a work that should rank with Mackenzie Wallace's classic volume on Russia; and on the whole, it may be said that he has succeeded in gaining a place close to Wallace and to Leroy-Beaulieu's "Empire des Tsars." In its range, method, and adequacy of knowledge and insight, it is certainly the best account that the Russian liberation movement which began in 1904, has brought forth. Its possible inferiority to the two standard works we have mentioned, in the matter of precision of analysis, may be due in considerable measure to the fact that Wallace and Leroy-Beaulieu were writing of an empire in its ordinary temper and condition, whereas our author has to deal with that empire in the turmoil of change and revolution. If certain parts, like the chapters on the Church or education, show a want of thorough, systematic, and complete treatment, they offer, on the whole, sufficient assistance towards the chief aim in mind, the comprehension of the forces now at work in the Czar's empire. On the other hand, the psychology of the Russian people, as important a factor as any that must be kept in mind by the student of Russian affairs, is portrayed with admirable insight, sympathy, and reserve. The chapter on the Lives of the Intelligents leaves little to be desired as a commentary on the character and ideals of men who are now remaking the history of Russia.

Mr. Pares is more successful in dealing with the present conditions than in treat-

ing of origins. The opening chapter, in which he sketches Russian history from the earliest times, suffers from a certain turgidity of style. He presumes a general acquaintance with the prominent facts of that history, and, in consequence, it is to be feared that the average reader will be insufficiently prepared for accepting the writer's broad conclusions concerning the nature of Russia's development, which, in the main, are sound enough, and certainly illuminating. When the narrative comes down to what is practically our own times, that is, the reign of Alexander III., it becomes at once more direct and more serviceable. In the same way, the long chapter on the Press and the Censorship, running back, as it does, into the eighteenth century, in an attempt at completeness of treatment, fails, in spite of its minuteness, to carry forward the story appreciably. On the other hand, the chapters on Law and the Administration, the Zemstvos and Town Councils, and the Progress of the Peasants, offer a satisfactory discussion of facts essential to a correct knowledge of present conditions.

To write of present events in Russia without a fairly definite point of view, would be extremely difficult. Mr. Pares's standpoint is that of the progressive conservative of English politics. His sympathies go out most readily to the group of moderate men, who, as Conservative Reformers, Octobrists, etc., have played a conspicuous, but on the whole not very effective, part in the history of the last three years. The more radical reformers, best represented by the Constitutional Democratic party, he is inclined to think well of, while deploring their alliance with the elements that stood for violence. The extreme revolutionaries are to the author a mistaken, though quite comprehensible, folk. His own standpoint does not betray Mr. Pares into partiality anywhere but in the last chapter, which gives a useful summary of the liberation movement since 1904. We find his account of the general strike of October, 1905, and of the events immediately following unsatisfactory. The impression is there conveyed that the strike was merely an interjected event, which did not greatly alter the general progress of the liberation movement, whereas, in reality, the historic days before and after October 30, 1905, witnessed the birth of a Constitutional Russia.

In Wildest Africa. By C. G. Schillings. Translated by Frederic Whyte. With over 300 photographic studies and other illustrations. New York: Harper & Bros. $5 net.

This new work by the author of "With Flashlight and Rifle" consists mainly of nature studies in that part of the world where animal life is most abundant and man least evident, East Africa. Experiences and impressions of this life in its wonderfully varied forms, gained during long hours of watching by day and by night from a hill top, the branch of a tree, or the tent door, are here recorded, and the result is a book which is unique. As one reads of the stillness of the forest being broken by the rush of an elephant, a rhinoceros, or a herd of gazelles into the open, a photograph on the opposite page makes one realize the scene with extraordinary vividness. Not only the sights but the voices of the wilderness are described, from the songs of the birds, including larks and nightingales, to the laugh of the hyena and the roar of the lion. Among the most thrilling of these noises is the music of the gall-nuts, which have been perforated by ants, and, when the wind blows, fill the air with a melody like that of an Æolian harp. There are also detailed accounts of hunting expeditions after the big game of the region, often, it should be noted, to obtain pictures of them, not to slay them. Mr. Schillings, in fact, never loses an opportunity to plead for the preservation of this animal life, now threatened in German East Africa with extinction through indiscriminate slaughter. He devotes an entire chapter to an account of its needless destruction in South Africa in the last century, and of the measures adopted for its preservation, especially in the United States, by the establishment of reservations and "sanctuaries." The advocacy of this "great and noble task," which he urges upon all European travellers in the "wide hunting grounds of foreign lands," is one of the two main objects which he had in view in publishing his book.

The other was to give to the world another collection of his photographs—nature documents, as they have been aptly termed. These include almost every living creature of that region, from flamingos, pelicans, and storks to elephants, lions, and giraffes. Among the most interesting pictures are those of a hyena visible in the foreground and only the gleaming eyes of two others hidden in the bush, and of two bull-elephants with snow-white shining tusks. There are also numerous representations of camp life, one of which is a really charming group of a baboon and a little naked African child. With a view to help other travellers to secure trustworthy photographs of the rare species of beasts and birds that are dying out, he describes his methods of work, especially at night, his difficulties and failures as well as his successes.

Naturally, in Mr. Schillings's book, being largely a record of impressions—from the opening chapter to the end the reader is under the spell of an ardent lover of nature—there is much that is dreamy and obscure. There is an occasional trace of humor, however, as, for instance, when he says that from the sudden onset of a rhinoceros "you experience the same kind of sensation as when you are knocked over by a motor-car." Mr. Whyte's part in the preparation of this volume is admirably done. So easy is his style and so free from the traces of a foreign language that one hardly realizes that the writing is a translation. It is scarcely necessary to add that the make-up of the book is most attractive.

Corolla Numismatica: Numismatic Essays in honor of Barclay V. Head. With a portrait and eighteen plates. New York: Henry Frowde. $12.

The object of this volume, issued on the occasion of B. V. Head's retirement (June 30, 1906), from the Keepership of Coins in the British Museum, was to make some unofficial recognition of the services rendered by that great scholar to the study of numismatics. For this purpose a number of distinguished numismatists have contributed articles dealing especially with those questions on which Mr. Head's own researches have thrown light. The result is a collection of essays which, besides fulfilling their immediate purpose of honoring Mr. Head, testify to the singular importance of the study of numismatics in the field of archæology. For it is not only on problems of ancient history and commerce that a close study of coins can throw light; almost every department of archæology is more or less indebted to numismatic researches. Thus P. Gardner, in his article "Copies of Statues on Coins," emphasizes the fact that many existing statues have been identified as copies of noted works of sculpture on numismatic evidence; at the same time he points out that the testimony of such coins can only form a safe guide when we recognize fully the various conventions which the die-sinker accepts. Adrien Blanchet, by the help of some bronze coins of Massalia, shows us the type of the tutelary deity Minerva worshipped in a temple on the acropolis of that city. Heinrich Dressel, in his essay "Der Matidiatempel auf einem Medaillon des Hadrianus," proves that even topographical questions can be settled by the help of coins, and shows that the temple of Matidia, the exact location of which has long been a point of dispute, was indeed between the basilicas of Matidia and Marciana on a site about half-way between the Pantheon and the basilica of Neptune.

It would carry us too far to record, however briefly, the points raised in each of the thirty articles—in English, German, French, Italian, and Greek—which make up this volume. We shall only mention a few, so as to give an idea of the variety of subjects discussed and the importance of some of the conclusions or theories set forth. In an interesting essay on Minoan Weights and Mediums of Currency from Crete, Mycenæ, and Cyprus, Arthur J. Evans shows that the metric systems in use in Egypt exercised a predominant influence in the Minoan world, and thus adds one more to the many points of intimate contact between these two civilizations. He furthermore makes an important suggestion, namely, that the "dumps," or drops of precious metal, of which three were found at Cyprus and one at Cnosus, and which date back at least to the twelfth century B. C., formed the immediate antecedent stage to coined money. Between these "dumps" and the earliest known coins there would be a gap of about four centuries, which we must hope that perhaps future discoveries will bridge over. E. Babelon publishes an Athenian obol, unique in that it bears the name of Hippias, tyrant of Athens. No tyrant's name had as yet been found on Athenian coinage. A monograph, "The Chronological Sequence of the Coins of Corinth, B. C. 450-390," by C. Oman, and an essay, "The Study of Byzantine Numismatics," by Warwick Wroth, give valuable facts about these two important, though somewhat neglected, series of coins. The coinage of Pergamon, of Persia, of Luceria, and of some Græco-Indian sovereigns is treated in other articles, and several rare and hitherto unknown coins are here published for the first time.

The book is, of course, principally for

numismatists. The highly technical nature of most of the essays places them outside the interest of the general public. But even the casual reader will be impressed by the patient research and scientific handling evinced in the treatment of each subject. We could not have better proof than this collection of essays of the scientific methods of modern archæology.

Science.

BOOKS BY AND ABOUT LINNÆUS.

The various publications of the two institutions with which Linnæus was most closely connected, the Academy of Sciences in Stockholm and the University of Upsala, on the occasion of the celebration this spring, are veritable testimonials to the manysidedness of the man. This manysidedness is most forcibly brought out in the printed writings of Linnæus, as well as in the *Festskrift* issued by the Academy in Stockholm: "Carl von Linnés betydelse såson naturforskare och läkare." Linnæus's activities as a physician and a medical writer are the subjects of a monograph by Otto E. A. Hjelt, professor emeritus in Helsingfors, who in 1877 published a study with similar title. The remainder of this volume shows us Linnæus as a zoölogist, botanist, geologist, and mineralogist, in studies written by the representatives of these subjects on the staff of the Academy. To Dr. Hjelt's work is appended a reissue of Linnæus's "Clavis medicinæ," while one of his lecture notebooks, "Lachesis naturalis quæ tradit dictum diætam naturalem," is now published for the first time (from a manuscript belonging to the Linnæan Society in London) under the auspices of the Faculty of Medicine in Upsala. With this is issued, after manuscript notes from some of his students, his "Collegium diæteticum eller Academiska föreläsningar öfver dieten." A comparison between these two gives a clear idea of the relation between the notebook and the lectures as delivered from the platform, of the conciseness and clearness of his notes, and of the fluent and lively delivery, full of digressions into all sides of human life.

Linnæus early became interested in ornithology, and among his manuscripts was found a small manuscript volume entitled "Methodus avium Sveticarum," dated January 1, 1731. Originally consisting of thirty-seven leaves, it bas been swelled by numerous interpolations; Linnæus seems to have carried it with him on his travels and used it as a sort of ornithological notebook. It has now been published as the special contribution of the Faculty of Philosophy. The Faculty of Law published his "Pluto Svecicus," from a manuscript in Upsala University Library; also his lectures on geology, "Beskrifnig öfver stenriket," from notes made by his students. The contribution of the Theological Faculty is a monograph, by the Rev. S. J. Enander, on "Salices i Linnés herbarium." The invitation of the Rector Magnificus Schück to the festivities of the university is accompanied by Linnæus's "Vorlesungen über die Cultur der Pflantzen," after a manuscript by one of his students, found in the Botanical Museum of the Imperial Academy of St. Petersburg. The editor of this volume, Dr. M. B. Svederus, who was also charged with the laborious task of preparing the "Lachesis" for print, is author of a study of Linnæus as a horticulturist, published in the University's Arskrift. A facsimile of the first edition of "Systema Naturæ" has been issued by the Stockholm Academy.

Besides these various single-volume publications, the university has published the first instalment of Linnæus's voluminous correspondence, under the editorship of Prof. Th. M. Fries; and the Academy of Science has begun the publication of a complete edition of his more formal writings, of which three volumes are already issued, namely, "Flora Lapponica," "Classes Plantarum," and a collection of shorter dissertations and papers on general scientific subjects, most of them originally written in Latin, but now translated into Swedish by Professor Fries. Attention might also be called to Professor Fries's two-volume biography of Linnæus (1903), which is now being published in a new edition.

Of great interest is Prof. Tycho Tullberg's "Linnéporträtt," a quarto of 187 pages, with 37 illustrations in the text, and 21 plates. It is a descriptive iconography of the known portraits of Linnæus, 515 in all, paintings and sculptures, originals and reproductions, authentic and fanciful. In the historical introduction, which occupies much the larger part of the volume, the author presents a survey of the likenesses made during Linnæus's life, with the view of establishing an authoritative opinion as to Linnæus's appearance at various periods of his life; later portraits and reproductions of originals are also described.

"Bibliographia Linnæana. Matériaux pour servir à une bibliographie Linnéenne, recueillis par J. M. Hulth," is the title of the publication which the Kungl. Vetenskars Societeten in Upsala contributes to the celebration. The author of the work is the society's librarian. The first part of the first volume, the only one to appear at the time of the festivities at Upsala, contains a chronological list of Linnæus's printed works, giving under the date of the first edition of each the full entries of all subsequent editions, including translations, extracts, etc., which afterwards are merely mentioned under their own years of publication. This method has the great advantage over a strict chronological arrangement under imprint dates, that one can read at a glance the bibliographical history of each work. Dr. Hulth's notes are of particular interest in this respect. References to book reviews are given under each edition or issue. The very first entry is an interesting item in the biography of Linnæus. It is a dissertation presented to the University of Upsala for the degree of doctor of philosophy by another man, J. O. Rudbeck. An original manuscript of it in Linnæus's hand is preserved in the university library; it has the following inscription, also by Linnæus: "J'ai composé cette dissertation en un jour, au prix convenue de '20 daler kopparmynt.' Un autre en a l'honneur." The bibliography, which will contain a full record of all Linnæus's writings, whether printed or not, and a list of all biographies of him, and books and articles about him and his work, will occupy three volumes; it will be completed during the year 1908. Dr. Hulth is also responsible for the reissue in a limited edition (150 copies) of the first—and only—number of "Linnéska Institutets Skrifter," published in Upsala 100 years ago.

A. G. S. J.

In science the Oxford University Press announces the following: "Index Kewensis," Supplement III., bringing the names down to 1905; "Floral Mechanisms," by A. H. Church; "Studies in the Anatomy of Ancient India. Part I., Ætiology of the Bones of the Human Body," by A. F. Rudolf Hoernle; and "Lectures on Evolution," by E. B. Poulton.

"The Sense of Touch in Mammals and Birds," by Dr. Walter Kidd (The Macmillan Co.), is based upon a paper presented before the Zoölogical Society of London. It is divided into macroscopical treatment, or detailed description of the papillary ridges of hands and feet; and microscopical, illustrated with microphotographs of sections of the skin. Eighty-six types of mammals and eleven birds, representing all the principal orders, are described. Among these, seven distinct forms of epidermic modification are distinguished: smooth and corrugated epidermis, scales, nodules, hair, rods, and papillary ridges, the latter group reaching its full development in the primates. One of the most important results of the investigation is the demonstration that remarkable and complex patterns are formed of the papillary ridges, the complexity increasing with the higher organization of the animals in question. Sensory spots of four kinds are differentiated—spots of touch, cold, warmth, and pain, the difference depending on the distribution of the five or six kinds of end-organs of the skin. The papillary ridges are preëminently organs of touch; and an important function of the tactile sense is that by which it supplies to the cerebellum knowledge of the position of the body in space. This reflex equilibration or orientation is especially pronounced in nocturnal arboreal animals, such as lemurs, and it is also highly developed in perching birds. In the hand of man we have discriminative sensibility as the principal tactile use, while the foot exercises maintenance of equilibrium.

Drama.

Bernard Shaw. By Holbrook Jackson. Philadelphia: G. W. Jacobs & Co.

This little book will afford great satisfaction to the admirers of Bernard Shaw; for the author is an enthusiastic disciple of that brilliant but erratic propagandist. The book is also likely to prove interesting to connoisseurs in human intellectual vagaries, not only because it is cleverly written, in a way that often reflects what the faithful call the Shavian attitude and manner, but because it gives an apparently authoritative summary of Mr. Shaw's various theories, social, political, and the like, and furnishes some significant facts which may help to account for a good many of them. All that need be stated here is that owing to circumstances for which he was not responsible, he had practically no

educational guidance during the most important formative period of his youth, which was passed amid influences much more favorable to hasty and revolutionary theorizing than to the habit of solid thought. How quick his agile, impulsive, unregulated, and disputatious brain has ever been to adopt any idea that savored of revolt against established order, in art, science, politics, or theology, and how unreasonable he could be in the pursuit of these ideas have been demonstrated amply in his career as a socialistic agitator, a critic of music, of painting and the drama, as a playwright, and as a contributor to the daily press.

Mr. Jackson discusses him in the fourfold aspect of man, Fabian, playwright, and philosopher, and proves to his own satisfaction that Mr. Shaw is the incarnation of all that is best in modern thought. Against an opinion of this sort it is scarcely worth while to argue, but it may be noted that Mr. Jackson is careful to explain that the object of his reverence is not the whimsical, paradoxical, exasperating, brilliant, but often exceedingly shallow, *poseur*, so often in the public ear and eye, but the potential Shaw, the profound moralist and zealous missioner who has created "an intellectual conception of himself that holds a greater place in the contemporary mind than the reality." The motive of his disguise, apparently, was to attract attention to his true philosophy, which otherwise might have been doomed to obscurity. Mr. Shaw's main dogma, it seems, is the right, nay duty, of every man to do what he wants to do, and thus free himself from the thrall of the spontaneous, universal, energetic, but altogether unintelligent "life-force," of which he is at once the product and victim. Having once broken loose from this paralyzing influence, and such crippling entanglements as order, tradition, duty, conventional morality, and so forth, man will be able to enter into his proper sphere of superman. His problem, in homely phrase, is to raise himself by his bootstraps. On the whole, the real Shaw seems to be rather more incomprehensible than the fictitious, and infinitely less amusing. But Mr. Jackson has written a very entertaining book.

Sarah Bernhardt will begin another London season on October 21 appearing in Sardou's "La Sorcière." Later she will be seen in Hervieu's "Le Réveil."

Music.

Ernest Walker's "History of English Music" is announced by the Oxford University Press for this autumn.

The season of the New York Symphony Society will begin on November 2 at Carnegie Hall. The two events of general interest will be the first production in America of Tchaikovsky's opera, "Eugen Onegin," which will be given in concert form with soloists and chorus, and a Beethoven Cycle. This performance will be the first in this country of any Tchaikovsky opera; and inasmuch as the great Russian had much more musical than dramatic genius, the work will probably not lose very much by being transplanted to the concert stage. The Beethoven Cycle will occur during the last six Sunday afternoon concerts, and will include all the symphonies and other important vocal and instrumental works of this master, in chronological order. Three symphonies new to New York are also announced. Mahler's Symphony No. 7 will be conducted by the composer, if the society's plans do not miscarry. Walter Damrosch, the conductor of the Symphony Society, will give D'Indy's symphony, "A Summer Day on the Mountain," its first performance in America. The other score new to this city is Chadwick's Symphony No. 3. Among the better known works announced are: "Symphonie Fantastique," Berlioz; Symphony No. 3, Brahms; Symphony "From the New World," Dvorák; Symphony in D-minor, Franck; Petite Symphonie for Wind Instruments, Gounod; "Faust Symphony," Liszt; "Ocean Symphony," Rubinstein; Symphony No. 4, Schumann; Irish Symphony, Stanford; "Sinfonia Domestica," Strauss; Symphony No. 4 and "Hamlet," Tchaikovsky. A number of notable soloists will give their assistance to the orchestra. Mme. Eames makes her only appearance in concert on November 23. Mme. Schumann-Heink, soloist last winter also, will sing again. Mme. Teresa Carreno will make her reappearance in this city after a long absence. First reappearances in New York are announced by the society likewise for Fritz Kreisler, Mme. Bloomfield-Zeisler, and Harold Bauer. Josef Hoffman will be the soloist in a Liszt programme, and Emillo De Gogorza will sing in "Eugen Onegin."

The regular chamber-music concerts of the Kneisel Quartet will be given in Mendelssohn Hall on the following Tuesday evenings: December 3, January 7, February 10, March 10, April 7 and 14. The constitution of the Quartet this year will be Franz Kneisel, first violin; Julius Roentgen, second violin; Louis Svecenski, viola; and Willem Willeke, 'cello. Assisting soloists will be Mme. Olga Samaroff, Miss Katherine Goodson, Harold Bauer, Rudolph Ganz, Sigismund Stojowski, Arthur Whiting, and others. The works to be produced include Beethoven, Quartet in F major, op. 18; Quartet in F major, op. 59; Quartet in C sharp minor, op. 131; Trio in B flat major, op. 97; Hadyn, Quartet in G minor; Mozart, Quartet in D minor; Schumann, Quartet in A minor, op. 41; Quartet in E flat major; Mendelssohn, Quartet in D major, op. 44, No. 1; Brahms, Quintet in G major; Quartet in A major; Trio in C minor; Dvorák, Quintet in E flat major; Strauss, Sonata in F major for violoncello and piano; César Franck, Quartet in D major; Charles M. Loeffler, Quintet for three violins, viola and violoncello; Smetana, Quartet in E minor ("Aus meinem Leben"); Léon Boellmann, Quartet in F minor, op. 10, for piano, violin, viola, and violoncello.

Arrangements have been completed by R. E. Johnson by which Gerardy, the 'cellist, and Safonoff, conductor of the Philharmonic Society, will collaborate in six recitals in New York, Boston, Philadelphia, Washington, Baltimore, and Chicago. The first will be at Carnegie Hall in December.

The Adele Margulies trio—Miss Adele Margulies, pianist; Leopold Lichtenberg, violinist; Leo Schulz, 'cellist—announce three chamber-music concerts, to be given at Mendelssohn Hall, on the following Tuesday evenings: November 19, January 14, and February 11, 1908.

November will see the first production in New York of "Tom Jones," by a well-known English composer, Edward German. It will be sung by Henry W. Savage's company, and Robert Courtneidge is coming over from England to stage it.

Art.

Le Origini della Pittura Veneziana, 1300-1500. By Lionello Venturi. Venice: Instituto Veneto di Arti Grafiche. Pp. 427; 120 plates. 30 lire.

In this ambitious but sober work a young scholar shows himself his father's son. But it recalls less the Adolfo Venturi of to-day, somewhat befogged in encyclopædics, than him of twenty years ago at the time of those admirable researches in the Ferrarese school. A similar cautious and methodical quality is displayed in this useful treatise. It has received a prize from the Royal Venetian Institution of Sciences, Letters, and Arts, and it deserved the distinction, for it is a model of a well-conducted investigation. It is timely also, for our knowledge of the early Venetian school has been notably increased within recent years. Berenson has ascertained the importance of Alvise Vivarini as a *caposcuola*, Ludwig and Molmenti have explained the artistic origins of Carpaccio, Cailler has substituted the facts for the Vasarian legend of Antonello da Messina. Meanwhile scores of paintings of consequence have been discovered. It was the hour for a comprehensive summary of these results, and Signor Venturi's book is a criticism as well.

For reference it is very conveniently arranged. Each school has its chapter. The article upon each artist begins with a table of all the documentary evidence in his case; the footnotes cover the literature of the subject quite exhaustively. In general purely æsthetic issues are ignored, but when the author's sympathy is fully aroused, as in the case of Cima, the connoisseurship readily passes over into genuine appreciation. Although in the main a compilation, the book deals independently with attributions, rejecting, for example, and we believe rightly, the three Gentile Bellinis of the National Gallery, and subjecting the work of the greater Giovanni to a more drastic sifting than it has yet received.

On main issues the author confirms most of his recent predecessors. He agrees with Berenson as to the importance of Alvise Vivarini, accepts Kristeller's theory that Jacopo Bellini and not Squarcione was the real master of Mantegna, and admits with Ludwig and Molmenti that the feeble Lazzaro Bastiani was the teacher of Carpaccio. We prefer to believe that here is merely a case of parallel development. Everywhere Signor Venturi has preferred being right to being original, a virtue not so

often illustrated by débutants in the art-critical profession. Naturally so exhaustive a work will provoke dissent at many points. Here is not the place to register exceptions at large, and we will only say that the attempt to derive Carlo Crivelli from Antonio da Negroponte seems to us far fetched. Antonio was a reactionary and barely touched by the Paduan reform, whereas Crivelli, even in his earliest works, is steeped in the Squarcionesque teaching. The development of Crivelli is in so many respects analogous to that of Bartolommeo Vivarini that there is no need to suppose an intermediary influence.

An inevitable defect in the book is the incompleteness of the lists. In part this is due to simple bad luck—for example, the miniature by Gentile Bellini discovered at Constantinople last year, and the Mantegnesque Madonna by Giovanni Bellini, in the Johnson collection, Philadelphia, were published in the *Burlington Magazine* last year just too late for use. In part it may be due to a prudent reluctance to list pictures on hearsay. But the Dead Christ by Antonio Veneziano, in the Jarves collection, New Haven, has been published; the fine Pietà by Giambono in the Metropolitan Museum has been described in its Bulletin; a Magdalen by Bartolommeo Vivarini, in the Shaw collection, Boston, has been signalized by Berenson. An Ancona, signed, of the school has for years been exhibited in the Boston Art Museum. The same gallery has a fine Pietà by Carlo Crivelli, works by the same artist or his school are in the Metropolitan Museum, the Wilstach collection, Philadelphia; and the Walters collection, Baltimore. Mr. Johnson's fine Carpaccio, at Philadelphia, has surely been described by F. Mason Perkins in the *Rassegna d'Arte*. These omissions, a few among many more, emphasize the great need of an authoritative work on old masters in America. The sumptuous volumes edited by Messrs. La Farge and Jaccacl can meet that need only in part. We want something that includes public as well as private galleries, and at a price possible for students. It has been hinted that such a compilation is in progress and in the most competent hands. If so, 'twere well 'twere done quickly.

We can take no serious exception either to the taste or scholarship of this excellent book, but we regret a little the failure to go more thoroughly into the school of Giovanni Bellini. To be sure, this would have swelled the volume, while these painters fall beyond the term Signor Venturi has set for himself. Yet artistically they belong after all to the Quattrocento, and, presumably, no one was in a better position to handle them than our author. Moreover, the problem of some of these school pieces is that of the master himself, since they bear his signature and represent his invention. The case of the charming nude, A Lady at her Toilette—versions at Bienna, in the Widener collection, Philadelphia, and elsewhere—is crucial. We may suppose that the actual painting is by Bissolo, but whose is the invention? It is signed as Bellini's and dated in 1515, the last year of his life. Are we to believe it a casual inspiration of Bissolo's that the master fathered merely as a studio product? Or are we to regard it as an ultimate tribute to the manes of the greater disciple Giorgione? The question is interesting enough to deserve an answer from so careful a critic as our author.

This scholarly history, which includes not merely the extant works, but full accounts of destroyed or scattered decorative series in the Ducal Palace and the schools, may be cordially recommended to all students. For them it is specifically intended, but it will also be available for all whose concern with Venetian art has passed the elementary stage.

The sixth and concluding part of Sidney Colvin's "Oxford Drawings" will be issued by Henry Frowde this autumn.

Among the recent purchases of the Metropolitan Museum of Art are a small Last Supper, by Tintoretto, and an altar piece by Cima, representing in stately attitudes St. Anthony, St. Roch, and St. Lucy. The altar piece is from the collection of the Duke of Leuchtenberg of St. Petersburg, while the Last Supper was formerly in the possession of Lord Methuen. The most important loan made to the museum for several months is that of the Barberini tapestries lent by the Cathedral of St. John the Divine. Twelve pieces constitute the set, which bears the general title The Mysteries of the Life and Death of Christ. The set was woven at the pontifical tapestry works at Rome, under the auspices of Cardinal Barberini, for the chapel of Urban VIII. about 1642. The cartoons are still preserved in the palace of the Barberini in Rome. The style is of the late Renaissance and somewhat florid. Much space is devoted in the *Museum Bulletin* of this month to the work of excavating the pyramid temple of Amenemhat I., at Lisht, in Egypt. Nearly one hundred tombs have been opened, but few interesting things were found, until the grave of a woman named Senbtes was opened. This contained a considerable amount of gold jewelry, some specimens of fine textiles, and small pieces of pottery.

The death is announced of Friedrich K. W. Schneider, canon of the Cathedral of Mainz, in his seventy-second year. Dr. Schneider wrote much on art and antiquities, and it was through his efforts that the Roman remains at Saalburg were preserved. Among his works are "Baugeschichte des Mainzer Domes," "Mittelalterliche Ordensbauten in Mainz," and "Schatzverzeichnisse Mainzer Klöster."

Finance.

THE TIGHTENING MONEY MARKET.

The month of September, greatly as it had been feared on the money market, passed with an unruffled calm which caused as much surprise in Wall Street as did the unseasonable disturbances of August. Though rates for demand loans on the New York Stock Exchange had touched 40 per cent. in September, 1906, 25 per cent. in 1902, 10 per cent. in 1901, and 20 per cent. in 1899, the highest rate last month was 6 per cent., and even this reflected a few exceptional operations such as the New York city loan, rather than the general condition of the market. Reserves of the New York Associated Banks, indeed, which last year fell from $2,800,000 at the end of August to a deficit of $6,500,000 on September 8, and which rose to a surplus of only $3,500,000 in the ensuing week, were well maintained this September. The month began with a surplus of $8,700,000, which fell to $6,900,000 in the middle of September, and returned to $8,400,000 the third week. As a result of this maintenance of reserves, not only did call money grow actually easy—the rate went to 1 per cent. for a day in the last week of the month—but loans on time, which were quoted at 6½ per cent. in the later weeks of August, had declined to 5½ before September was over.

Those who look below the surface inferred that the unusual strain of August was in a sense the explanation of the unusual ease of September. In the ordinary course of events, forced sales on the Stock Exchange, with the consequent crash in prices, would have followed an actual stringency of September; but this year circumstances brought on this liquidation a month earlier, thus anticipating, and, in the Wall Street phrase, "discounting in advance," the effects of the usual autumn stringency.

But this is only part of the explanation. Shipments of currency from New York to the harvest States, the usual cause of autumn stringency, were smaller during September than during any corresponding month for nearly a decade. On exchange of currency with outside domestic points, the New York banks lost $15,000,000 in September, 1904, $7,000,000 in 1905, and $12,000,000 in 1906; but their net loss last month was less than $4,000,000, and even of this, practically all occurred in the closing week. People who had watched the crops this year were not at loss to understand the change. The abnormal delay in arrival of summer weather at planting time, made the great crops fully three weeks late.

This explanation was borne out by the magnitude of later currency shipments. In the closing week of September upwards of three million dollars were sent; last week the outflow was equally large. As a result, the surplus reserves of the New York Associated Banks fell by last Saturday to the smallest figure for that date in all but two of the past fifteen years. Those two years, 1902 and 1899, saw a serious deficit later. Last Saturday's surplus over the 25 per cent. requirement against deposits, was only $2,628,000, whereas a year before the figure was $9,423,000, and in 1905 was $4 286,000. In other words, on the face of things the position of the banks is weaker than in either of the past two years. Responding to this low reserve, rates for demand loans on the Stock Exchange rose a week ago to 10 per cent.—a higher rate than in the opening week of October in any year since 1902. It was evident, last Saturday, that unless loans and liabilities of the banks should be much reduced, continuance of this outward flow of currency threatened another deficit in reserves.

There are several events which might alter the situation. In ordinary years, when reserves have been drawn down by excessive Stock Exchange speculation, the calling of loans in Wall Street, with the resultant forced sale of stocks and fall in prices, has been the quickest avenue of relief. But the general opinion to-day is, that the stock market is no longer primarily responsible for the burden on the

banks. One and two years ago, a similar difficulty was evaded by heavy borrowings from inland banks. These institutions, attracted by the high rate offered for temporary loans in Wall Street, sent their balances for use here. Such help from interior banks is hardly to be expected now, because these banks are themselves carrying heavy burdens, incurred through local activity in trade and speculation. Recent returns from the country's 6,544 national banks showed that loans for the whole United States had increased $379,000,000 over a year ago, and that, of this increase, $369,000,000 had occurred outside of New York city—clear evidence as to how these outside lenders stand.

Last year, relief to the New York banks came through extensive loans by Europe. Attracted, as were our own interior banks, by the high rate for money in Wall Street, London institutions advanced to New York borrowers such sums that not only were New York's own bank loans much reduced, but cash reserves were increased by import of $40,000,000 gold. Exact repetition of this expedient is probably impossible, for the London banks have changed their attitude toward New York, and are as timid now as they were overconfident a year ago. Nevertheless, two interesting facts, which arise in this connection, are that London, at least, is better able to grant assistance of the sort than at this time in several years, and that our power to draw legitimately on Europe's capital may perhaps be very great. The Bank of England, whose comparatively weak position a year ago was one cause for the 6 per cent. discount rate established later, reported last week a gold reserve greater by $27,000,000 than in the same week of 1906, and a ratio of reserve to liability larger than any touched at the opening of October since 1896. While this is the condition as concerns the power to lend, exports of wheat from the United States are rising to figures unparalleled in recent years. That Europe must buy all the wheat the United States will have to spare, and must buy it at prices higher than last year's—the export price is 35 per cent. above the same date in 1906—is now an admitted fact.

Finally, there remains the attitude of the United States Treasury. Secretary Cortelyou up to the present date has acted with great sagacity. Unlike his predecessors, he has refused to listen to the demands of Wall Street, based on a day of stringency in the Stock Exchange, and has released the surplus funds in the government's hands only as fast as the real commercial needs of a given community gave, in his judgment, legitimate ground for deposits in their banks. The result of his prudent policy is that while public deposits with the banks increased only $12,000,000 in September—of which increase less than $4,000,000 came to New York—he has in hand to-day the greater part of the fund available for relief a month ago. He should be able, therefore, to intervene effectively in case of a real emergency.

LONGMANS, GREEN, & CO., New York

THE COMPLETE THEOLOGICAL WORKS OF

SWEDENBORG

1907 Rotch Edition

This is the only complete and uniform edition of the theological writings published by Swedenborg now on the market.

Swedenborg's mission was to disclose the true nature of the Bible, showing it to be in every true sense the Word of God and explaining its essential holiness as true to the fact that in every sentence, word and syllable, it possesses a holy, internal sense, treating solely of God, man, and their relations to each other in life and death.

These volumes are of the utmost importance to present-day theologians and should be found in every library.

OPINIONS CONCERNING SWEDENBORG

Ralph Waldo Emerson.—"The truths passing out of Swedenborg's system into general circulation are now met with every day, qualifying the views and creeds of all churches, and of men of no church."

Thomas Carlyle.—"A man of great and indisputable cultivation, strong mathematical intellect, and the most pious seraphic turn of mind."

John Greenleaf Whittier.—"There is one grand and beautiful idea underlying all his revelations or speculations about the future life."

Samuel Taylor Coleridge.—"As a moralist, Swedenborg is above all praise; and as a naturalist, psychologist, and theologian, he has strong and varied claims on the gratitude and admiration of the professional and philosophical student."

Special Subscription Issue of 1907

Printed on a specially made all-rag paper of the highest grade, and bound in the best style of the Riverside Press, these books surpass in these respects all other editions.

Sold only in Sets. *32 volumes, 12mo, in imported blue linen buckram, gilt top, $35.00 net, per set; in half morocco, full gilt, $75.00 net, per set. Carriage extra.*

[Also the same on Oxford India Bible paper, in 11 volumes, bound in full levant, limp, full gilt, $150.00 net, per set. Carriage extra.]

The pamphlet "Who was Swedenborg?" sent FREE

The Nation.

NEW YORK, THURSDAY, OCTOBER 17, 1907.

The Week.

Secretary Root spoke with much force, at his reception by the Academy of Jurisprudence in Mexico, on the need of developing international private law. International public law has been pretty clearly defined; but as the era of wars and conquests is passing away, and the day has arrived of peaceful invasion of all countries by the citizens of others, it is municipal law, as applicable to foreigners, and as adapted to the new principles of human liberty and the equality of men, that the jurists and statesmen of the world should now endeavor to codify and enforce. It is a fine conception of friendly intercourse and international brotherhood which pervades Mr. Root's speech. There are to be no more hermit nations. Barriers between one land and another are to be more and more broken down. We are to learn of other nations; they are to come and take of our best. There is in constant process, said the Secretary, between the leading peoples of the world, a free and "peaceful interchange of the products of intellect." What a pity that Mr. Root limited it to the intellect! But he had to do so, as a Republican, a protectionist and a member of a stand-pat Administration. Free trade in ideas, in education, in charity, happily cannot be extinguished by any Dingley; but how much higher might Secretary Root's note have risen could he have represented the different countries as freely admitting all products of industry and invention. Yet such an idea could not be urged on Mexico by a member of the Administration which decides that the tariff cannot be touched.

Rumors of the abandonment of various features of the Federal railroad crusade are coincident with criticisms of the Interstate Commerce Commission's whole career, uttered by the State Railroad Commissioners in session at Washington. According to the report adopted last Friday,

> There have been many general rate reductions in different States, followed by reductions on interstate traffic, and, as far as we know, these have all been brought about by affirmative action of the State authorities. So far as we are advised, we know of no general reduction due to any action by the Federal authorities.

This is not a new charge, yet the Federal authorities will have to find some new answer to it, because for a year past the excuse of lack of sufficient power in the Interstate Commerce Commission has been invalid. The State Commissioners, however, speak as disparagingly of the mighty Federal body of to-day as they did in the days when it was annually complaining that its arm was palsied by a Supreme Court decision. Of course, rate reduction is by no means the be-all and end-all of official regulation, though gradual reduction is normally one of its consequences. Yet there is not the slightest indication that either in this or in other matters the Federal Commission is taking the lead in establishing a general policy. If unity is coming, it is through conferences like that recently ended and agreements between the States, not through mere imitation of the policy at Washington.

Although the Sixtieth Congress will not assemble for nearly two months, speculation is already beginning in regard to the committee and other places which are vacant. That Senator Frye will again be president pro tempore of the Senate, Mr. Cannon, Speaker of the House, and Mr. Williams, minority leader, is, of course, settled. Yet it so happens that most of the vacancies caused by defeats and withdrawals occur this year in committees which deal with questions in controversy. The ship-subsidy committee of the House (that on Merchant Marine and Fisheries) has lost four Republicans and two Democrats; the food and meat inspection committee, Agriculture, lost three Republicans and three Democrats; and the tariff committee, Ways and Means, five Republicans and one Democrat. If it were possible to emphasize any further the responsibility of the Speaker for the course of legislation, this situation would do it. The custom of retaining members on their committees year after year modifies, to some extent, the Speaker's absolute power of assignment. He can now put on each of these three committees a clear third of the members, of whatever way of thinking he prefers. He could turn over the Ways and Means Committee to the revisionists. Of course, he will not do so.

The Navy Department solemnly announces that it might be worth while to detail a couple of officers to make a voyage on the Lusitania, to observe the workings of her turbines. After years of hesitation, the Department has finally decided on a few turbine boats, and is thus true to its habit of following—well behind—the lead of other nations. *Nulli Tertius* was, according to *Punch*, an Irishman's name for a proposed Irish war balloon to rival the British *Nulli Secundus*. It ought to be the Navy Department's motto as well. The most recent explanation as to why our latest destroyers, for which the contracts have just been awarded, are to have a speed of only 24 knots, is that these boats are meant to have this speed in all weathers —rain or shine—while, so it is intimated, the foreign boats that are making 33 knots are doing so only on their trial trips. As a matter of fact, it is our American craft which rarely come up to trial-trip speed. Not long ago there was a race of some of our destroyers from New York to Norfolk. One of them broke down, and not one was able to make its alleged speed—only one going as high as 21 knots. The lack of skilled engineers is one reason for the poor showing. But there is obviously no guarantee whatever that the 24-knot boats will be able to make their speed after a year's service, and they would not be able to catch the Lusitania at any time.

Count Okuma has cruelly betrayed the cause of American naval aggrandizement and our ferocious war press, by declaring that the Progressive party, of which he is leader, will not join issue with the Japanese Government because of its pacific attitude on the immigration question. It is Count Okuma who, according to our Jingoes, has been threatening this country with a yellow invasion, and California with conquest; who has been going to seize the Philippines, bombard Vancouver, and make himself master of the Pacific before the Panama Canal was completed. But, like the Frenchman who was astonished to find that he had been speaking prose all his life, the Japanese political leader is "astounded" to learn that he has been preaching war all these months. "Reports of the possibility of war," he said, "had always emanated from the United States, and naturally were copied by the newspapers of Japan."

The bulletin on our imports of farm and forest products is so discouraging, from the protectionist point of view, that we have felt it our duty to look with special care for mitigating circumstances. It is true that the value of farm products imported during the year was larger than ever before, while forest products have been imported in just twice the quantity of ten years ago. But we have positively turned the cloud inside out to look for its silver lining, and we have found a number of commodities which have been imported lately in gratifyingly decreasing quantities. Such are Mexican and Santo Domingan beeswax, German eggs, Belgian cheeses, crude feathers from Argentina, Hongkong, and Japan, sorted, bunched, or prepared

bristles from the United Kingdom, German prune juice, walnuts from Chili, goatskins from Ecuador, beans and dried peas from Austria-Hungary, and lemons from all the world. Increases in articles like wool and lumber scarcely begin to offset these. Moreover, hidden away between the gray covers of the present bulletin, like a pearl within an unpromising oyster, we have come upon a perfect model for our import trade as the stand-patter would have it. Broom corn is the commodity fortunate enough to provide this object lesson. Imports were six tons in 1904, three tons in 1. and one ton in 1906. So perish all the products of foreign labor.

In New York County the Republicans and the Hearst forces have formed an alliance. Herbert Parsons, president of the Republican County Committee, is now the political partner of that William R. Hearst whom last October he denounced as a man who "does not know what fair play is." We congratulate Mr. Hearst upon this sorely-needed certificate of character, this public admission that Republican estimates of him only a year ago were pure calumnies. If in any one of his future campaigns a Cabinet member should leave Washington to denounce him, in the President's name, he has in Mr. Parsons's league with him an unanswerable reply. One thing is certain: whatever the outcome of the election, and whatever the future may bring forth, Mr. Parsons can never again be heard on the stump in denunciation of the journalist whom last year he described as using "the influences at his command to destroy characters and malign men at will." This surrender to Hearst is nauseating, a deliberate sacrifice of all principles for the sake of procuring a few offices.

Instead of two Democratic parties, the double convention in Massachusetts may have resulted in no Democratic party at all. It is within the possibilities that the Ballot Law Commission may declare void the nominations by both factions, in which event Whitney and Bartlett alike would have to get their names on the ballot by petition, there would be no recognized Democratic State ticket, and all the rights dependent on the party's casting a certain percentage of the State vote would terminate automatically. The question of "regularity," which in a State with our party-column ballot would be likely to overtop most other issues, is of minor importance in a State where there is no premium on the "straight ticket." Whatever may be the decision on the technical point, Bartlett's title must remain under a cloud. Two of his associates on the ticket have already withdrawn because of disgust at the method of the choice. Yet in the comment of the State press personalities have but small part. The Boston *Globe* declares that "perhaps no heavier burden ever has been laid upon [the Massachusetts Democracy] than in this unhappy instance"; and the *Transcript* adds regarding the Bartlett managers that "the methods which they took to enforce their wishes afford sufficient evidence that they were in the minority." Altogether aside from Gen. Bartlett's reputation or personal qualities, it is hardly possible to conceive of his making now a canvass either respectable or successful.

The ousting of Gen. Charles R. Brayton from the Rhode Island State House must be what is known as a "test case." At all events, Gov. Higgins is being congratulated as warmly on the removal of the blind boss's desk from the sheriff's office, as if it signalized the complete redemption of the State from the old sinister influences. It is indeed a victory for sound public sentiment, since Gen. Brayton, who has been all last year conducting business at his office, "often at considerable inconvenience to myself"—in order to spite the reformers—has now given up voluntarily because of the feeling among Republicans "that my continued presence in the sheriff's office endangers the success of the party in the approaching election." We fail to find in his letter of withdrawal, however, any intimation that he will abandon what he calls "legislative or political business." Not to mention other States and cities which have been ruled by bosses not domiciled in public buildings, we have heard tales which indicate that Gen. Brayton has by no means lacked the qualities of leadership outside the sacred edifice. Political dominion may be exercised, as we know, from the corners of hotel lobbies, or barrooms, or even bootblack stands. Cicero would not have so exulted in the expulsion of Catiline had he lived in the days of rapid transit, the telegraph, and the telephone.

Reports that Gov. Hughes may appoint a special prosecutor to try cases growing out of the Metropolitan Street Railway disclosures, are sorrowful reading for the friends of District Attorney Jerome. Such a step, however explained away, could not but be taken as a serious reflection upon him. No one whose opinion is worth anything charges Mr. Jerome with having discovered evidence incriminating the Metropolitan rogues and then deliberately shielding them from prosecution. The complaint is, rather, that he did not himself push investigation home. With every facility, with all the machinery of his powerful office, and after an explicit pledge to the people to follow the Metropolitan trail no matter where it led, he did not vigorously take charge, but confided the work to subordinates who, we now see, were either incompetent or untrustworthy. It was a great opportunity, but it was missed, never to return.

Gov. Hughes in his speech at Jamestown last week attacked one of the most sacred doctrines of modern finance. He boldly denied that the owner of 51 per cent. of the stock of a corporation can do what he pleases in the management of its affairs. The iconoclastic Governor went so far as to maintain that the policy adopted by even the majority in control must be "consistent with good faith and fair dealing with all." If this were true, we ask, what would be the use in fighting and intriguing to get command of the 51 per cent.? Mr. Hughes would plainly cut the nerve of financial enterprise, if he were to insist that the one share over a majority has not a vested right to bond the concern for twice what it is worth, or can pay. We cannot, without regret, observe so conservative a man as Gov Hughes advancing the revolutionary theory that the owners of 51 per cent. of any corporation's stock must not steal the rest.

The Union Pacific Railway's order for close retrenchment need not have been surprising, and hardly deserved the despondency with which the stock market greeted it. The case is simply this—that the railways, from the beginning of the recent "boom" up to this time, have been drawing enormous sums from the money market to pay for new construction and equipment, but have now reached a time when capital is not forthcoming. In former periods similar to that which now exists, such conditions have compelled railway promoters to abandon construction of new lines competing with the old. To-day, the principal difference lies in the fact that competitive building has for years been discouraged, the capital formerly devoted to such purposes being used for increase of track and equipment of existing lines. But for this later process just as much capital has been necessary as for that of the eighties and the seventies; it has been obtained through sale of new railway securities. When capital could not thus be secured, it was an obvious duty to curtail plans for new expenditure. This forced retrenchment is by no means an unmixed evil. Purchases of enormous quantities of material by the railways, at highly inflated prices, have contributed largely, not only to the strain on credit, but to the abnormal condition of the market for commodities. To all far-seeing observers it has been evident for some time past that the feverish demand for all sorts of manufactured goods was leading to unwholesome conditions throughout the

commercial world. Abnormal activity in railway building, as in other branches of construction, was absorbing capital at the moment when the unusually active manufacture created by such demands, was itself compelled to bid for pretty much all of the capital available. The movement in this dangerous circle could not go on forever. Railway men, and indeed the manufacturers themselves, understood some months ago that unless the pace were prudently slackened, an actual break-down of credit might easily be ahead. James J. Hill's rather gloomy forecast of continued increase in the demands of trade on transportation facilities—an increase for which the railways, with a retrenchment policy, could not provide—will probably be answered by a movement of trade to adjust itself to the new situation of the railways. The reasons for conservative retrenchment are as great in the one direction as in the other.

If the aim of the telegraphers was to make their union ridiculous, their strike must be voted a great success. From their course up to date, these principles of unionism are clearly to be deduced: (1) Anybody can call a strike. In this case, it was some unknown man or boy who blew a whistle, and the operators obediently walked out. But (2) the responsible officers of the union cannot call a strike off. When the president of the national association attempts to do so, he is "suspended from his office," and the announcement sent forth that the strike will be hereafter conducted by "men who have red blood." Not even the authors of these heroics can be deceived by them. When a public and official statement has been made that the strikers have not a ghost of a chance of winning, and that their funds are exhausted, nothing is left but for every man to go and get his job back if he can.

A unique course of public lectures began yesterday afternoon at Columbia University. It is the first of a series to be given, one a week, by some twenty-two Columbia professors. They will describe in non-technical language the achievements of modern research and scholarship in their various subjects, with a forecast of future progress. Thus it will be a sort of "congress of the sciences"—using that phrase in its widest meaning—held in a single university, and manned by its own professors. The course, on paper, looks somewhat formidable. It begins with the physical sciences—physics, chemistry, astronomy, and geology. Then follow biology, physiology, and botany. After this survey of the natural sciences, comes the group of social sciences—anthropology, archæology, history, economics, politics, jurisprudence, and sociology. Next comes an opening lecture upon philosophy in general, then one on psychology, metaphysics, and ethics, respectively. Two lectures on philology, as the basis for thought and its expression, and on literature, bring the course to a close. The circular announcing these lectures notes that the subdivision of the domain of knowledge has been carried so far "that few university men are able to keep themselves informed of the movements in neighboring fields, or to obtain even a general view of the remoter fields in which the majority of their colleagues are working." This ignorance, as well as that of the general public, this course of lectures aims to dissipate.

In Russia, where things are different from everywhere else, it would appear that water can rise higher than its source. In the *Berliner Tageblatt*, Josef Hessen, one of the leaders of the Constitutional Democrats and editor of the official organ of that party, declares that, in spite of the Government's tampering with the electoral laws for the avowed purpose of insuring the return of a Conservative Duma, it is by no means confident of victory. He points out that in the elections for the second Duma the same tactics were pursued without appreciable effect. Every provincial electoral college has been so reconstructed as to insure a landlord majority, every obstacle has been placed in the way of the Liberal parties, and yet Mr. Hessen predicts that a reactionary majority will not be chosen. The second stage in the process of choosing the Duma shows, as elected out of a total of 1,903 electors, 516 of the Opposition, 1,131 Moderates, Octobrists, and members of the Right, and 256 without party affiliations. If it be remembered that in the preceding elections the official figures have always greatly underestimated the strength of the Opposition, and that a large number of candidates who call themselves Moderates, to avoid police interference, are in reality anti-governmental, it is apparent that the expected conservative Duma is not very secure. Why an apparently conservative electorate should choose liberal representatives is, after all, not so difficult a question to answer in Russia. Even the most confirmed reactionaries cannot but choose a deputy of some intelligence. And once a man is endowed with that gift in Russia, he is sure to perceive that to landlord, peasant, workman, or professional man the present system is a dead weight and a danger.

The interview between Sultan Abd-el-Aziz and the French Minister to Morocco at Rabat, last week, marked the end of only the first episode in the Moroccan drama. Alarums and excursions are over, for some time to come at least, and diplomatic dialogue is henceforth to carry the plot along. The French representative is said to have insisted on the strict enforcement of the terms of the Act of Algeciras, and the Sultan extended his promise to that effect. But in reality both parties to the interview must have been aware that it is now impossible to return to the *status quo ante* Casablanca. The interest has shifted for the moment to the rebellious brother of the Sultan, whom Abd-el-Aziz and the French government must both take into account. Should it come to actual war between the rival rulers, with whom will the French government side? If it lends its aid to the present *de facto* Sultan, France must thereby acquire a degree of influence at Fez such as she had scarcely hoped for within so brief a period after Algeciras. That French arms should be turned against Abd-el-Aziz is, at present, incredible. That the French should remain neutral is scarcely more possible, in view of the fact that a prolonged civil war would again postpone the execution of the reforms on which France has been insisting and give her repeated opportunities for intervention. After the interview, the French Minister conferred on the Sultan the cross of the Legion of Honor. Presumably, this is to replace the Moroccan crown jewels which are now being pawned in Paris.

The looting of church treasures is a form of anti-clericalism which even the most hardened Jacobin could scarcely countenance. While the French authorities are proceeding with the apprehension and punishment of the criminals concerned in the pillaging of the Church of Ambazac, near Limoges, the Italian government, yielding to a long-existing demand, has decided to make an inventory of ecclesiastical art property, with a view to determining the losses that have already been incurred. In the absence of actual evidence, it is surprising to find a newspaper like the Paris *Temps* bring forward such broad charges against this country, as when it declares its belief in the existence of an international syndicate of art-dealers which encounters no difficulty in disposing of stolen treasures in England and America, "especially in the latter country, where collectors are not particular about their origin. Once their authenticity is established, they care little how the seller procured them." The *Temps* must have been misled by our notorious habit of "collecting" souvenirs. As a matter of fact, the incident of the cope of Ascoli should be a standing refutation of the charge. Not that the accusation fails to bring with it a certain thrill of pride. Once upon a time the American collector's demands were satisfied by having rare old treasures of various kinds made expressly for him. Now he stoutly insists upon the original thing.

TEMPTATIONS OF FINANCIERS.

There is a shrewd saying that "an established character for honesty is too great a temptation for any man." This is the theme of one of Victor Hugo's novels. When the romances and dramas of Metropolitan finance come to be written, we may discover what was the too powerful temptation of the men responsible for the tangled web which Mr. Ivins, counsel of the Public Service Commission, is now *unweaving*. They certainly had an established character, if not exactly for scrupulous honesty, at least for great business skill, very large resources, and unfettered power. The total was too much for them. Instead of spelling responsibility, it spelled to them opportunity; and having unlimited command of vast properties and huge sums of money, they were doubtless astonished at their own moderation.

From their various activities, as now partially revealed, we see corporations acquiring uses undreamed of by the writers of text-books. Personal bills would soon cease to have their terrors, if the Metropolitan practice of paying them out of corporate funds were only extended. And the support of charities and of scientific investigations by the Civic Federation would be comparatively simple, if chargeable to a "construction account."

The corporation furnishes also a new way to pay old debts. For example, Anthony N. Brady testified that he had picked up, in 1898, the title to an undertaking known as the Wall and Cortland Street Ferries Railway Company. This concern neither then nor since has possessed a track, a car, a horse, or an electrical equipment. It had, however, a franchise, and for this Mr. Brady paid $200,000. In 1902, the Metropolitan Securities Company bought Mr. Brady's paper railway. He had agreed to sell for the $200,000 which he himself had paid, plus $50,000 interest. This sale had been personally made through the late William C. Whitney. When the company's lawyers came to pay Mr. Brady, they handed him a check, not for $250,000, but for $965,607.19, and with it "a memorandum" instructing Brady to distribute this unexpected $715,600, through personal checks of his own, to William C. Whitney, Thomas F. Ryan, Thomas Dolan, William L. Elkins, P. A. B. Widener, and the Stock Exchange house of Moore & Schley. The first five names on this memorandum make up the list of the "Metropolitan ring," as all Wall Street knew them. Of the five beneficiaries outside of the broker firm, three—Messrs. Dolan, Elkins, and Widener—were at the time directors of the Metropolitan Street Railway, whose assets had just passed into possession of the holding company which drew the check to Brady. Widener had figured, three months before, as chairman of the street railway shareholders' meeting, where he had suppressed the protests of minority owners, bidding them to vote for the lease which delivered their assets to the Securities Company and discuss it afterward. Whitney and Ryan, though neither was at the time a director in either company, were both well known to be the guiding spirits in the street railway company's financial management. Later Messrs. Dolan, Widener, and Elkins explained that these checks for $111,652.78 had each to do with a "loan matter," as every one of those gentlemen had lent $100,000 to Mr. Whitney two years previously. It would appear, then, that Mr. Ryan made exactly the same loan, on the same day, as his check was also precisely $111,652.78. Furthermore, it follows that Mr. Whitney likewise lent himself the same sum on the same day, since one of the Brady checks was to his order, and was the same to a penny, $111,652.78.

Seriously, these shameful disclosures, of which it is well understood that the worst are yet to come, point one old corporate moral with fresh and conclusive force. No one man, no executive committee, can be trusted with unlimited power. No president of a corporation should have the right to pay out $100,000 or more, and have it carried along on the books year after year, as a "suspense account." It matters not what the financial genius of a chairman of an executive committee may be; for the directors to place all power in his hands, is not only to be false to their own duty, but to subject him to the strain of a temptation too great for any man to bear. In this light, the wording of the Harriman proxies at the annual meeting of the Union Pacific is amazing—

> Including specifically the approval and ratification of all action of the board of directors and of the executive committee since the last annual meeting of the stockholders, hereby ratifying and confirming all that any of the said attorneys or the substitutes may lawfully do at said meeting in the name, place, and stead of the undersigned.

This is not only abdication by the stockholders, it is leading Harriman into temptation. It practically places a blank check in his hands for him to do with what he will.

The doctrine of circumscribed power is everywhere recognized in our political life. Till recently, it had been in our financial life. Directors made at least a pretence of directing, and stockholders would insist upon having the facts before voting. But the tendency has been, of late, to concentrate financial control. By means of voting trusts and small executive committees, the practical disposal of great corporate properties has been put into the hands of a few men, sometimes of one man. Now, human nature is one thing. It is the same in the financier that it is in the politician. If the latter cannot endure too great power, neither can the former. And if we hedge our rulers about with limitations and jealous scrutiny, the need of the same thing in the case of great corporation managers is obvious. We ought not to confide even to the ablest and most upright president or chairman powers which we know would be dangerous in the hands of an unscrupulous man. Against the latter, the general system of accountability should protect us; and the former should have it as a protection against himself.

The argument for publicity of corporation accounts is powerfully reinforced by these Metropolitan revelations. Entry after entry on the books could not bear the light. They would never have been placed there if all were open all the time to public inspection. Doctored, secret, and misleading accounts are another temptation from which great financiers should devoutly pray to be delivered. It should not be left to an occasional investigation to tear away the veils; the constant rule should be entire publicity. That would be hard on the Quiggs and other "accelerators" of public opinion, for no company would dare publish the payments of money to them; but it is better that Quigg should suffer than that Ryan should be tempted beyond the resisting point.

INTEREST RATES AND IMPERIALISM.

The present high rates for money throughout the world have a direct connection with Imperialism. When the Philippines were acquired in 1899, the most serious economic argument advanced for that step was the necessity of new outlets for capital. Interest rates had been declining all over the world, because the older civilized countries had become fully equipped with the machinery of production. The railway network of Europe and America, it was said, was practically complete; old cotton mills, woollen mills, and iron mills were constantly being abandoned because unable to compete with the improved and newer establishments; hence profitable employment of capital for the creation of new enterprises would be found in the exploitation of the undeveloped countries.

Whatever force this argument may have had, apart from moral and political considerations, conditions have entirely changed within the past eight years. We have had radical improvements in transportation and manufacture, which have relegated old equipment to the scrap heap; other causes lie in the cost of Imperialism itself. The increase of the English public debt by $1,000,000,000, as the result of the war in South Africa, and the increase of the debt of Japan by about $700,000,000, and probably that

of Russia by an equal amount, account for the absorption of much of the capital which is now so eagerly desired for constructive work at home. Even in the United States the increase in military and naval expenditures has taken millions that might have been applied to productive uses. When the railways, therefore, have come into the money market demanding the means for increasing their trackage, building larger and more economical cars, and adapting bridges and terminals to the new conditions, it is not surprising that they have found the stock of available capital already bespoken.

As early as 1894, such students as Leroy-Beaulieu predicted that, other conditions being equal, interest rates would continue for some years to decline, because of the rapid accumulation of capital. In view of the stable conditions of the French market and the absence of anything but flurries in regard to war, the quotations of French *rentes* afford perhaps as accurate an indication as can be found of changes in the return upon capital. The 3 per cents showed an average quotation in 1894 of 100.93, which made their yield, without deducting taxes, less than 3 per cent. By 1897, when the movement of accumulating capital reached its limit, the quotation went as high as 105. In 1899 came the outbreak of war in South Africa, collapse of the Kaffir properties, and the dumping of great quantities of English war loans upon the market. By the year 1900 the average quotation of the 3 per cent. *rentes* had fallen to 100.59, and by 1904, under the influence of the war in the East, the quotation was 97.54. The mean for 1906 was 97.66, but the figures for the current year have been down to 94.50, indicating that this premier security is now near a 3½ per cent. basis.

Changes in discount rates at Berlin, London, and Paris have told the same story. The mean at the Imperial Bank of Germany was 3.84 per cent. in 1897, 5.33 per cent. in 1900, and has recently been as high as 5½ per cent. At London, the Bank of England average was 2.78 per cent. in 1897 and 4.27 per cent. in 1906. Perhaps the most striking evidence of the scarcity of capital is the practical cessation of refunding operations in Europe. The Italian Government squeezed in last year, at a time of comparative ease in the money markets, with a conversion of its 4 per cents, but it was necessary to fix the interest rate for six years at 3¾ per cent., and, after July 1, 1912, at 3½ per cent., though prior to the war between Russia and Japan a much more favorable rate had been expected. The practical abandonment of further conversions by the Japanese Government is in striking contrast with events which were going on during the period of redundant capital. When the Prussian Government, in 1897, carried out the conversion of $850,000,000 of consolidated 4 per cent. securities, which had risen above par, the Prussian Minister recalled the fact that in 1894 France had converted her 4½ per cents at 3½ per cent.; that Sweden, Norway, Luxembourg, Zurich, Saxe-Gotha, Wurtemburg, and Bavaria had effected similar conversions, and that Denmark, Belgium, and Holland had converted 3½ per cents into 3 per cents. Between 1887 and 1900, the Russian conversions were so effective that Russia was able to draw from Western Europe nearly $1,000,000,000 in new capital, while suffering practically no net increase in her interest charges.

The lesson of all this is that Imperialism, upon the economic ground of the necessity for new outlets for capital, has been brought to at least a temporary halt. There is so little money seeking investment in strictly commercial enterprises in the Philippines that the Government has been compelled to guarantee interest upon a part of the new railway contracts and upon the capital of the agricultural bank. In Cochin-China, Manchuria, and Korea, France and Japan are compelled to carry on their chief enterprises under the authority and with the capital of the state, rather than by the free initiative of private investors. While the demand for new openings for capital will probably recur within a decade or two, when the savings fund again becomes large, by reason of the enormous accumulating power of the leading civilized peoples, it is evident that for the present the economic reasons for Imperialism have ceased to be at all convincing.

LIGHT ON DARKEST JAMES.

Henry James, besides writing a new story suggested by his recent American visit, is also working upon an edition of his novels, of which the first volume is shortly to appear. It is said that there will be a preface to each, and it is also reported in London that the author is "revising very generously." James himself, in one of his short stories, described a writer as "pricking in lights," as he read his proof. Some may hope that the novelist will try the benefit of that process upon certain of his own darker passages. But we doubt very much if he will concede so much to the unregenerate. If they cannot understand him, he is not the man to undertake to supply them with both eyes and intellect.

The now proverbial obscurity of Henry James's style has a beam of light thrown upon it in W. A. Gill's *Atlantic* article upon "Henry James and his Double." With its main thesis, that the American writer is a sort of reincarnation of Marivaux, a French essayist, playwright, and novelist of the eighteenth century, we do not concern ourselves; but one of the minor points of parallelism adduced is to the purpose. Marivaux, said Sainte-Beuve, had the *style parlé*. "He copies it as closely as he can, with all its little carelessnesses, with the small words that constantly recur, and, as it were, the very gestures." Mr. Gill remarks briefly on the similarity to James. It really goes to the heart of the matter, so far as the mere outward form of writing is in question. James's style is *parlé* in a double sense. It not only follows the methods of conversation—with its syncopations, its suspended sense, its parentheses, its unconventional turns—but it also is made to *sound* like conversation. For some years, as is well known, Mr. James has dictated most of his writing. This habit has doubtless heightened the impression, not that he talks like a book, but that his books talk with him. Simple souls troubled by any given refractory sentence or page of his writings, will find an almost infallible solvent in reading it aloud slowly—or, if their own way of gabbling is too strong for them, in imagining how a reflective artist, feeling for his word, balancing his phrase, seeking the nice shade for his thought, would deliberately *utter* the passage to his secretary. Dictated matter necessarily aims more at the ear than the eye; and, remembering that James's is a spoken style, in both meanings of the word, baffled readers would do well to try to understand by hearing.

We are perfectly aware that all this cuts no deeper than the bark. The true James subtleties are those of thought. A man might perfectly grasp every sentence in "The Sacred Fount," and still feel dazed at the drift and meaning of the whole. The same could be said, in a less degree, of "The Golden Bowl." Both are compact of delicate and elusive suggestion, rather than blurting expression, and he who does not keep his mind bent to the task of following the faintly-marked path, must needs go astray. But such books are obviously not meant for the general. They who write them, perforce, or of set choice, limit their audience. And we suppose the defence of such works always comes down to something like Mrs. Browning's protest against those who insisted that her husband was obscure. She wrote to Robert, after he had sent her a volume of his poems:

> People who still complain of darkness are blind. . . . Subtleties of thought which are not directly apprehensible by minds of a common range are here, as elsewhere in your writings, but if to utter things "hard to be understood" from *that* cause be an offence, why, we may begin with "our beloved brother Paul," you know, and go down through all the geniuses of the world, and bid them put away their inspirations.

Whether James's style is a good style, or not, is scarcely the point. It is the form in which he has chosen to express

himself. That his way of writing fits his mental processes, like glove to hand, is obvious. It is the clearest case of the style being of the man. Now, whether the man be worth trying to understand is a question which people may debate as they please. But if the dispute be whether he can be understood, by those who go about it in the right way, it is one of the idlest and most vexatious of controversies. All the newspaper jokes and the afternoon-tea brilliances and the gibes of the critics about "darkest James" simply prove that superficial people do not catch what was never meant for them.

The supposition, or the pathetic wish, that Henry James might write "clear and plain," like those novelists of whom Mr. Howells has just said that they apparently suppose that "their work can do without literary quality," betrays a hopeless confusion about the whole subject. There is, of course, no doubt that James could do the grammar-school English of the "best sellers," if he chose. He could do it with his left hand, and in his sleep. But he has deliberately gone his own way, with his eyes open, knowing perfectly well, we may be sure, just the kind of appreciation to which he was limiting himself. And if it be a proof of fine writing to win the admiration of fine writers, he has not missed it. No one has had higher praise from the best craftsmen of his time, who admire him most precisely for his mastery of style. Themselves knowing the difficulty of making language come obedient to each refinement or variant of thought, they marvel at his command of the fit word, the exact phrase, the fatally correct shading. And it is barely possible that Henry James finds in their approval more contentment than he would in the laudations of ninety and nine who charge him with being obscure.

SOME MUSEUM PROBLEMS.

The recent opening of the new museum of the Essex Institute in Salem, Mass., which aims, among other things, to give a view of life in New England during colonial days, is certain to start afresh the perennial discussion as to the future of our ethnological collections. Museums of the type of the American Museum of Natural History in this city have their problems as truly as those devoted to the fine arts. They, too, suffer from the generous but indiscreet benefactor who wills a collection on condition that it be retained intact—its rubbish and duplicates as well as its exhibits of value. And museums like the Essex Institute, which have more or less a local character, are constantly in danger of having to devote a room to some hero of their particular city whose achievements in a distant quarter of the globe are the excuse for adding looks and curiosities valuable enough in themselves, but wholly out of keeping with the general purposes of the institution.

An institution the size of the American Natural History Museum has fewer troubles of this kind, but the very complexity and magnitude of the collections bring up other problems. Primarily, there is a certain rivalry between the natural history and the ethnographical and anthropological collections; but transcending that are three questions of a general nature which sooner or later every museum must face: Is it to be purely a resort for popular entertainment? Is its object the serious instruction of visitors? Or is the promotion of research its main purpose? The great majority of the visitors are bent purely on entertainment, much as they would go to a Sunday evening vaudevillo concert. Striking groups of native races, or the memorabilia of an Arctic expedition, the largest meteorite yet found, and the latest skeleton of a prehistoric creature are the things that appeal to them. The significance of these objects is plain; they afford a ready excuse for ohs and ahs. The hope of museum curators, of course, is that those people who are attracted by the more showy exhibits will be awakened to a serious interest in the more strictly scientific displays; that the men who come to be amused will remain to study. But even where the purpose is to arrest the attention of the multitude, the method of display must never fall into the fatal error of sacrificing essential truth to the merely spectacular.

When it comes to those persons who visit a museum for serious instruction, the problem is more difficult. The striking exhibit they glance at; but they wish to complete some study or to master in a general way some one subject. They may be school children or college students sent by their teachers to get a view of a phase in the evolution of species. But, as has recently been pointed out, if a great museum is to be laid out for thorough and systematic study of this kind, the whole is likely to become "a maze of separate and intercrossing systems," wholly confusing to any visitor who is not already an expert. In the arrangement of material there must be some compromise worked out between the rigidly scientific and the merely popular.

Finally, if the student is bent on profound research, he finds even an ordinarily systematic arrangement unsatisfactory. He must have access to every specimen, to every duplicate which the museum possesses, and he is by no means content if he is referred to the cellar and allowed to open box after box of valuable but discarded objects. Moreover, as Prof. George A. Dorsey of the Field Columbia Museum has pointed out in *Science*, collections "forced into retirement always suffer," not only by the inevitable deterioration which follows storing, but by the loss of personal interest as well. Yet the display of every object required by the specialist in his researches would not only be physically impossible: it would bewilder the visitor who wants to see only a few typical specimens in any one line; and it would nearly destroy the usefulness of the museum as an instructor of the general public.

The great museums in large cities suffer most from the complexity of the demands upon them. All three kinds of visitors pour in, and exhibits often increase much faster than wings to accommodate them. Hence, it is a fact that the most representative and systematic collections are frequently to be found in small museums, which are not bothered by a great mass of exhibits along many lines. In a small city, too, the short distances make it easy for classes to assemble in the museum. Along this line the Essex Institute has done much for popular education, more, probably, in proportion to its means, than the American Natural History Museum has been able to do, on account of its distance from Brooklyn and the Bronx, and even from some of our own Manhattan schools. Hence, Prof. Franz Boas has volunteered in *Science* the suggestion that every encouragement be given to the movement to establish school museums. Indeed, he is of the opinion that if museums are to fulfil only serious and scientific educational purposes, as opposed to popular entertainment, small and not large ones are desirable. At the same time, he admits that the large museum has its definite functions as the storehouse of great "series of material which for all time to come must form the basis of scientific inductions."

The solution of these problems in any instance must depend on the size and purpose of the museum. Ultimately we may see the establishment of collections for the public and those intended only for men who are giving their lives to science and research.

A CENTURY OF GEOLOGY.

The Geological Society of London has just been celebrating its centennial, and the speakers of the occasion have dwelt on the vast strides which the science has made in the hundred years and the profound influence which it has had on our conception of man and the universe. The beginnings of geology were the first crude speculations as to the history and structure of the world, a subject that could not fail to excite the curiosity and stimulate the imagination of primitive man. But the ancient cosmogonies and creation-myths were framed with what now seems to us sublime indiffer-

ence to easily observed facts. As Sir Archibald Geikie, the president of the Society for the year, pointed out in his address, the science, according to any modern view, remained in its infancy till toward the end of the eighteenth century. Before that time geologists believed that valleys and mountains were produced by great and sudden upheavals, and that each plant and animal in the long series preserved in the rocks was a special creation. This is the conception embedded in Blake's "Tiger," with its question, "Did he who made the lamb make thee?" Palissy, Guettard, and perhaps others had propounded theories which have since found acceptance; but it was left for James Hutton, in his "Theory of the Earth," 1785, to put forward the new ideas with a lucidity and force that compelled attention. A long controversy raged between his disciples and those of the old school, headed by the Saxon mineralogist Werner; but Hutton was sustained by Playfair, James Hall, and later Charles Lyell. So recently as a generation ago Lyell, born in 1797, was still looked upon as the great champion of uniformitarianism—the doctrine that existing causes, acting in the same manner and with the same intensity as at the present time, are sufficient to account for all geological changes. His "Principles of Geology" was a standard text-book; it ran through many editions in England and America; and from 1830, the year of first publication, till his death in 1875, this book prepared the educated classes to believe that nature's processes are uniform.

Popular interest in the subject was immensely strengthened by the writings of a man who, though not a geologist, had been profoundly influenced by Lyell; that is, Charles Darwin. In his "Origin of Species," 1859, he applied to the development of plants and animals the same theory of uniformitarianism that Lyell and his adherents had applied to the structure of the earth. There were no special creations, but all living things, including man himself, were the product of steadily working forces. This bold attack on the first chapters of Genesis, as commonly accepted, aroused an intellectual storm which only those whose memories run back thirty or forty years can really understand. Lyell and his fellow scientists had been the sappers and miners, slowly but surely destroying the notion that the Maker of the Universe had been incessantly interfering in the operation of it. Darwin, drawing many of his arguments from that branch of geology which is now a distinct science, palæontology, had brought the truth home to men's hearts. Before the "Origin of Species," uniformitarianism had been in the minds of the generality an abstract idea that excited as little emotion as the binomial theorem. Darwin, by applying it to human kind, shook men's dearest convictions, their most passionate faith. It is no marvel that he and his followers drew upon themselves the thunder from a thousand pulpits; and that even in Oxford a learned divine asserted that the fossils in the rocks, of which the new heretics made so much, were placed there by the Devil on purpose to mislead human inquirers.

But all this bitterness and heat have now passed into the limbo of "old, unhappy, far-off things, and battles long ago." The statement that man is descended from a monkey, or even a jellyfish, is coolly admitted by the most ardent theologian. So deeply has the notion of uniformitarianism penetrated the consciousness of educated men that we look upon it as we look upon the law of gravitation, or any other commonplace. Indeed, we no longer realize how wide a gulf the geologists and allied scientists have eroded between us and our grandfathers. The palæontologists of 1907 are still unearthing fossils that exhibit the genealogy of the horse and the elephant; but popular attention now seems turning toward the more terrific manifestations of natural law in earthquakes and volcanoes. For such study the last twenty-five years have provided an unusual amount of material. The catastrophe of August, 1883, which rent asunder the island of Krakatoa, has been followed by a succession of appalling disturbances of the earth's crust: the reawakening of the New Zealand volcano, Tarawera, and the resultant destruction of the famous pink and white terraces of Rotomahana; the earthquake at Charleston, S. C.; the long series of earthquakes in Japan, one of them perhaps the most formidable yet recorded; and the earth-movements of southeastern Alaska, disrupting the Muir glacier. The events in 1902 are still fresh in mind: the destruction by earthquake of considerable parts of Chilpancinzo in Mexico and Quetzaltenango in Guatemala; the eruptions in the West Indies, with the annihilation of Saint-Pierre; and the foundering of the island of Tori-Shima in Japanese waters. And then, more recently, the vast disturbances in Formosa, the new chapter in the history of Vesuvius, and the earthquakes of San Francisco, Valparaiso, and Jamaica.

Here are tremendous catastrophes which a century and a half ago would have been widely regarded as unmistakable evidence of the direct interposition of Providence to punish a guilty world. Men would have instantly recalled Isaiah's threat against Jerusalem, "Thou shalt be visited of the Lord of hosts with thunder and with earthquake, and great noise, . . . and the flame of devouring fire." But to-day we see in these disasters nothing but the steady and inevitable settling of the earth's crust and the display of those Titanic forces which, without haste and without rest, regardless of puny man, his follies, his sins, and his card-houses, work from everlasting to everlasting.

MEETING OF GERMAN PHILOLOGISTS.

BASLE, September 29.

A notable gathering of scholars, the forty-ninth meeting of the Versammlung deutscher Philologen und Schulmänner, has been held in Basle, September 23 to 28. In most of the addresses of welcome allusion was made to the fact that Basle had the honor of entertaining the association once before, just sixty years ago. In comparing the programme of the early meeting with that of to-day one is impressed by the greater variety of interests at present represented. Then attention was centred almost exclusively on classical philology, with a section for the pedagogical side and a short glance at the Oriental languages; now there are ten sections in all, sections for classical, Indo-European, and Oriental philology, pedagogy, Germanic, Romance, and English philology, archæology, history and epigraphy, and mathematics and the natural sciences. The association has felt the same difficulty that similar associations in America have felt, namely that of adapting the programme, to such a variety of topics. In accordance with suggestions made at the last meeting, more time was devoted this year to the sessions of the various sections, and care was taken to have in the general sessions only such papers and addresses as promised to be of general appeal.

The most interesting of the general sessions was one in which four addresses were held on the subject of university and school, especially the university training of teachers, Professor Klein speaking for mathematics and the natural sciences; Prof. Paul Wendland of Breslau for the classics; Prof. Alois Brandl of Berlin for modern languages, and Prof. Adolf Harnack of Berlin for history and religion. The addresses were subsequently discussed in a very animated session of the pedagogical section. Professor Harnack's admirable address, perhaps the finest of the whole meeting, pointed out among other things that in the training of teachers of history there were especially three weak places that should be strengthened by new courses at the universities: first, lack of a comprehensive view embracing in broad outlines the whole course of history and connecting the scattered periods that have been studied in detail; second, lack of a proper knowledge and appreciation of the period of the Roman Emperors and the first few centuries of Christianity, the period in which those Christian ideals were developed which in conflict or in combination with the earlier classic ideals reawakened by the Renaissance have determined the course of modern history; third, lack of knowledge of government and institutions of to-day. This ignorance of their own government probably does not exist to the same degree among American students; but it may well be asked whether the first two points do not contain valuable suggestions for American universities.

Professor Brandl's strong emphasis of the practical side of modern language study

aroused stout opposition from others among the modern philologists, who would lay the stress upon the cultural value of the study of the literature. His suggestion that in the schools English should be begun first, then French, and then Latin, instead of the reverse order which now prevails, aroused the classical philologists. In fact the warm discussion of the address, the feeling shown by the speakers, and also by the audience in its free expression of approval and disapproval, all made one realize that these issues, are still very much alive in Germany.

It is, of course, impossible to do justice here to the rich programmes of the various sections. Prof. G. E. Hale of Chicago read a paper before the classical philologists, "Indogermanische Modus-Syntax, eine Kritik und ein System." Prof. Karl Lamprecht gave an informal talk before the historical section, explaining the equipment and plans for his new seminar for universal history and Kulturgeschichte, to be opened this fall in Leipzig. With a thorough study of German civilization as a basis, the civilization of other countries is to be studied, at first certain more important typical ones. The two thus far selected for especial attention are the United States and Japan; and Professor Lamprecht had at the meeting an exhibit of part of the material already available for the study of these two countries. In addition to the ordinary source-material, the seminar has for Japan an extensive collection of its art, and for the United States a collection of material for acquainting the student with the external side, the *milieu* of our civilization. It seemed decidedly odd to find here on exhibition many of our familiar albums of views, also lantern slides, a few American newspapers, and several numbers of the German-American magazine *Die Glocke*.

Graz was chosen as the place of the next meeting. NEIL C. BROOKS.

CONGRESS OF THE RISORGIMENTO.

ROME, September 18.

The second congress of the National Society for the History of the Italian Risorgimento was held in Perugia from September 12 to 14, and proved the most notable among the various congresses organized in connection with the summer exhibition of old Umbrian art in that city. The proceedings were a gratifying demonstration of the vigorous life to which the new Italian society of modern history has been born, and, unlike those of many congresses, presented concrete results, which should contribute materially to the advancement of historical studies. The society, which counts but nine months of existence, has been placed under the patronage of Victor Emanuel III., and includes among its life members the Queen Mother, the Dukes of Genoa and of Aosta, the Ministers of the Interior, of Public Instruction, of War, and of the Navy, as well as a number of municipalities, libraries, and learned societies; the total number of its life members is thirty-five, and of its ordinary members four hundred and eighty-four, including several foreigners, French, English, and American.

The first number of the new historical review, *Il Risorgimento Italiano, Rivista Storica*, the organ of the society, will appear on January 1, 1908, printed by the publisher Bocca, and edited by Benjamin Manzone, editor of the *Rivista Storica del Risorgimento Italiano*, which suspended publication in 1900. The committee on editing announced the initiation of two important series of works upon Risorgimento history—one of popular writings, of which the first volume will be an accurate life of Garibaldi by Abba, author of the Noterelle; the second of documented monographs, of which the first volume will be a study by Victor Ferrari upon the Piedmontese entry into the Italian war of 1848, based upon the unpublished correspondence of Castagneto, secretary of King Charles Albert, with Gabrio Casati, president of the provisional Lombard government. Upon the proposal of Ettore Verga, the congress voted unanimously to conclude negotiations with the editor, Pietro Barbèra, for the publication of a dictionary of characters and events of the Risorgimento in two volumes of about seven hundred pages each, to be compiled under the direction of the society, and to include minor figures of the period as well as those whose services are already familiar in history. This work should be welcome to students, who until now have had no better volumes of general reference than the biographical dictionaries of De Gubernatis, compilations of auto-eulogy and historical error.

Papers were read by Victor Ferrari, "A Little More Light upon the Piedmontese Intervention in Lombardy in 1848"; by H. Nelson Gay, "The Offer of the Command of an Army Made to Garibaldi by the Government of the United States in 1861"; and by Camillo Pariset, "The Liberation of Perugia from Papal Rule." All three of these papers were résumés of monographs soon to be published.

At the closing session it was voted to postpone all modification of the constitution of the society until the convocation of the next congress, to be held in Turin, September, 1908, and the central council of the society was confirmed in office without change for another year.

NEWS FOR BIBLIOPHILES.

A copy of Daniel Denton's "Brief Description of New York formerly called New Netherlands," London, 1670, is the most valuable item in the library of the Earl of Sheffield, which is to be sold by Sotheby, Wilkinson & Hodge in London on November 5 and 6. This book is the first extended account of New York printed in English, and this copy is of especial interest as it seems to have the imprint intact. The type page of the title is larger than the text, and in all but a few copies the date, and often part of the imprint, has been cut off by the binder. The uncut copy mentioned by Sabin as belonging to John F. McCoy is now in the Hoe library. Only two copies with the date intact have been sold at auction in recent years; one, the Barlow copy, brought $525 in 1890 and $615 in the Ives sale the next year; the other, Lord Ashburton's fine copy, brought £400 in 1900. Both are now in private libraries in New York. Short copies are not uncommon. There are three in the British Museum, two in the John Carter Brown Library at Providence, and one copy in each of the following libraries: Lenox, Columbia, New York Historical Society, New York State, Long Island Historical Society, Harvard, and the Congressional. There are also several copies in private hands. The earliest sale at auction which we can trace was Topham Beauclerk's copy, which brought 2s. 3d. in 1781.

Though Denton's "Description" is always called the first account of New York in English, there are three or four earlier books, also in English, of even greater rarity, which tell something of the place while it was in the possession of the Dutch. The earliest of these seems to be George Gardyner's "Description of the New World," London, 1651, which contains, on pages 93-94, an account of New York. Of this book there are copies in the Lenox Library, the Harvard Library, and four in private hands. In 1653 appeared "The Second Part of the Tragedy of Amboyna: or a True Relation of a Most Bloody, Treacherous, and Cruel Design of the Dutch in the New Netherlands in America. For the total Ruining and Murthering of the English Colonies in New England." This is extremely rare. There is one copy in the British Museum and two copies are in private libraries in America; but no others seem traceable. This pamphlet was reprinted the same year in a volume having the title "The Commonwealth's Great Ship Commonly called the Soveraigne of the Seas." In Norton's "New England's Ensigne," London, 1659, is an account of Robert Hodgson, a Quaker, who was arrested at Hempstead, L. I., and haled to New Amsterdam at the tail of a cart. "An Abbreviate of Holland's Deliverance by, and Ingratitude to the Crown of England and House of Nassau," London, 1665, contains, on pages 40 and 43, a narrative of the settlement of New Netherlands by the Dutch in 1624. The only copy of this book which could be traced by Mr. Cole is in a private library in New York. These are the more important of the few original books in English, relating to New York, written before the Treaty of Breda, in 1667, when New Netherlands was ceded to the English.

In the Earl of Sheffield's collection are several very rare pieces relating to the Pequot War and King Philip's War in New England. There is a copy of Underhill's "Newes from America," 1638, with the rare "Figure of the Indian Fort of Palizado," which is lacking in most copies; also Vincent's "True Relation of the late Battell fought in New England," 1638. These are the two most valuable contemporary printed narratives of the War with the Pequots. Hubbard's "Present state of New England," 1677, the London edition; Mather's "Brief History of the War with the Indians in New England," 1676, and the still rarer "News from New England," 1676, and "A Farther, briefer, and True Relation of the Late Wars risen in New England," 1676, are all important contemporary pieces. The best of the earlier books on New England is Edward Winslow's "Good Newes from New England, or a True Relation of things very remarkable at the Plantation of Plimoth in New England," 1624, the second issue with the additional leaf "A Briefe Relation of a credible intelligence of the present State of Virginia." Lord Ashburton's copy, also the second issue, brought £240 in November, 1900.

Besides the Americana, the Earl of Sheffield's collection includes a few notable

books in other departments. The best of these are Virgil's "XII Bukes of Eneados," translated by Gawin Douglas, 1553; a curious book with a Shakespearean interest, "The Run-awayes Answer to a Booke called a Rodde for Runne-awayes," 1625; Nash's "Have with You to Saffron Walden," 1596; and some first editions of Goldsmith.

On November 6, Sotheby sells the library of Charles F. Cox of New York, mostly books on magic and other occult subjects, including some rare and unusual volumes. There are a number of books on witchcraft, but none of the early American books on the Salem delusion. Mather's "Angelographia," Boston, 1696, and Whitefield's "Journal," 3 parts, printed in Philadelphia by Benjamin Franklin in 1739, are interesting items. On November 7 the same firm offers the library of Francis Baring, which is most notable for the long series of books by or attributed to DeFoe. There are more than sixty numbers, but many of the volumes contain several pieces.

On October 22, 23, and 24, C. F. Libbie & Co. of Boston sell the library of Col. A. A. Ripka of Falmouth, Mass., with additions, including books on the Civil War, Lincolniana, Confederate imprints, a long series of American chap-books, first editions, books on the Indians, etc. The most important single item is probably "A History of the Indians Wars with the first Settlers of the United States, particularly in New England," by Daniel Clarke Sanders, President of the University of Vermont, published in Montpelier in 1812. Owing to a caustic review of the book in the *Liberal and Philosophical Repository*, the author made every effort to suppress it, and but few copies have survived. The sum of $102.50 was paid for Field's copy in May, 1875; but the highest of recent auction records is $90, paid for Mr. Chubbuck's copy in 1903.

Mr. Cobden-Sanderson of the Doves Press and Bindery, Hammersmith, Englaud, will visit America to lecture on printing and binding. Among the cities which be will visit are Detroit, Chicago, St. Louis, Pittsburgh, Baltimore, Washington, Philadelphia, and New York. He will be in this city early in December.

Correspondence.

ERRORS IN GEER'S "LOUISIANA PURCHASE."

To the Editor of The Nation:

Sir: Some years ago I subscribed to a comprehensive history of North America. In reading the editor's introduction to the first volume I learned that one of the reasons for publishing the history was to permit specialists to deal with their own subjects. We were told that a glaring example of a historian attempting too great a task was found in a recent pretentious general history where more than five hundred errors had been discovered in a single volume.

As yet I have had little time to read the many volumes of this history, but last night I picked up No. VIII., written by Prof. C. W. Geer, "The Louisiana Purchase." By accident the volume opened at page 233. The name of Zebulon Montgomery Pike caught my eye, and I read a few of the following pages, devoted to an account of his and Fremont's exploring expeditions. On page 235 there is one positive misstatement of fact and two inaccurate or incomplete statements. The author says:

> In the course of his explorations Pike discovered and ascended the peak which now bears his name.

It is true that Pike saw the peak, but he never ascended it According to his statement, on Thursday, November 27, 1806, he climbed a mountain which he supposed was the peak, but on arriving at the top, found he was still fifteen or sixteen miles from the base of the "Great Peak" itself. He thereupon gave up the attempt, believing that "no human being could have ascended to its summit." The fact that Pike did not ascend the peak is known to every one acquainted with Colorado history, and is shown to any one who even casually reads his Journal.

Two or three sentences further on Professor Geer falls into another error. Speaking of the expedition, he says:

> At one time their entire food for forty-eight hours consisted of a single partridge.

The Journal shows that Pike left his command at about the point where Pueblo is now located, aud with three companions attempted the ascent of the "Great White Peak." It was on this trip that he states:

> It began to snow, and we sought shelter under the side of a projecting rock, where we *all four* made a meal on one partridge, *and a pair of deer's ribs*, which the ravens had left us, being the first food we had eaten for forty-eight hours.

It is seen that it was only the *four* men who went without food, and a pair of deer's ribs would be quite an addition to a single partridge for four men.

Again, on the same page, Professor Geer tells us that Pike induced the Indians "to give up the Spanish flag that had been left with them, and he hoisted the American flag in its place, a ceremony which meant no more to the Indians than did Lewis's similar action on the Upper Missouri." As Pike relates the incident, the Spaniards had left *several* of their flags in the Indian village, one of which had been unfurled at the chief's door during the day of a conference he was holding with them. Pike induced the chief to take down that flag and to hoist an American flag in its place; and then, on perceiving that the Indians were downcast and sorrowful, he returned to them the Spanish flag, on their promising not to hoist it again during his stay in their camp.

So much for the patent errors found on page 235. As there are five hundred pages it is evident that unless Professor Geer has studied his original source with more care than he has Pike's narrative there may be more than five hundred errors in this single volume.

That not much more care is taken in other instances is shown on page 237, when discussing Frémont's first expedition, Professor Geer writes:

> On this expedition he planted the American flag on the peak which bears his name, which is the highest point in the Rocky Mountains, thirteen thousand feet above sea level.

Every schoolboy knows that Frémont's Peak is not the highest point in the Rocky Mountains, but that Pike's Peak and not less than fifty more in the State of Colorado alone are more than 14,000 feet high. As for 13,000 feet being the highest point in the Rocky Mountains, there are whole regions in Colorado at a greater elevation. For more than twenty years daily trains have been crossing Alpine Pass at an elevation of 13,550 feet, and the fact is proclaimed to the world in millions of railway advertisements. Two railroads in Colorado send trains to an elevation of more than 14,000 feet, and one of them, up Pike's Peak, has been in existence for more than ten years. Frémont's Peak is given as 13,570 feet, and it is the highest point in Wyoming and in the Wind River Mountain Range. But I have shown enough to illustrate Professor Geer's ignorance of ordinary geographical facts and the carelessness with which he goes over his sources. The ordinary layman, of course, cannot check up all the authorities cited in a work of this kind; and all that can be said is that if the proportion of errors continues throughout the book little reliance can be placed on it.

W. H. Bryant.

Denver, September 21.

A LITERARY PARALLEL.

To the Editor of The Nation:

Sir: Is it not in ouestionable taste for an author to retell the tale of another without giving proper credit for the same? This seems to have been done by Mr. Vance Thompson in the October *Outing*, p. 20, in his "The Yarns of a Traveller." The yarn entitled "The Uncommitted Murder" is evidently a condensation of the incident related by M. Octave Mirbeau in "Le Jardin des Supplices," p. xviii., published in Paris and now in its twenty-sixth thousand. The similarity is too great for Mr. Thompson to have received this story from a third person, and not to have seen the original at all. For instance, in one case, he says:

> I felt a kind of lightness, an elasticity, an afflux of nervous waves—and, at that instant, without definite will of my own, my hand went out to grip his throat.

The French of Mirbeau reads:

> Mes mains allaient, toutes seules, je vous assure, ardentes et terribles. . . . Je sentais en moi une légèreté, une élasticité, un afflux d'ondes nerveuses.

Comparison of the two stories will show other points of resemblance.

Milton S. Garver.

New Haven, Conn., October 4.

ROSWITHA AND TERENCE.

To the Editor of The Nation:

Sir: What Roswitha owed to Byzantine influence, in the genesis of her dramatic efforts, I have never made any attempt to find out, and so have no basis from which to dispute your reviewer's comment (in your issue of September 26) upon the views of Mr. Tunison. As to the assertion that "the immediate model for the structure of her dramas is, as she states in her preface, Terence," any one who has read to any extent in both Terence and Roswitha is qualified to ask just what is meant by an "im-

mediate model." But for Roswitha's own words, I doubt very much whether any critic would ever have thought of referring to her poems as modelled upon Terence, either in their structure or in anything else. The fact seems to be that her allusion to Terence has habitually had read into it a significance which a more careful consideration of her own works would have made impossible to any one who stops to think what the word "model" implies. Roswitha, with her Christian teaching, was scandalized that the scholars of her time, seduced by the beautiful language of Terence, were defiling themselves with the knowledge of pagan wickedness therein expressed. ("Dum dulcedine sermonis delectantur, nefandarum notitia rerum maculantur.") She determined to fill the mould with Christian thought, but the mould was something entirely beyond her humble power. I should like to see some one bring forward from her poems a few concrete traces of supposed resemblance to Terence which would not apply equally well to Plautus and presumably much better to any unskilled dramatic experimenter who might be unearthed from the débris of her own immediate predecessors, either Byzantine or Western.

W. H. JOHNSON.

Granville, O., October 3.

We meant by "immediate model" that which first suggested to Roswitha the general plan of her comedies. Since, as Professor Johnson rightly says, "she determined to fill the mould with Christian thought," one should expect to find Terentian reminiscences as rare as knots in bulrushes. The number of plays is the same, and the dialogue shows some traces of the language of Roman comedy. Barack, in his edition of 1854, p. xxxix, said enough on this subject in declaring the influence of Terence a negative one. Our point was simply that Roswitha was led to write plays, as she tells us, from her reading of Terence—not from anything that might have come to her from Byzantium. Speculation as to her borrowings from unskilled dramatic predecessors will be appropriate as soon as the same are unearthed. THE REVIEWER.

THE ADDITION TO "GOD SAVE THE KING."

TO THE EDITOR OF THE NATION:

SIR: The additional verse to "God Save the King," attributed to Longfellow, as to which inquiry is made by W. E. A. Axon in the *Nation* of August 22, is the concluding stanza of an "International Ode," by Oliver Wendell Holmes, which was sung by 1,200 public school children on the occasion of the visit of the present King of Great Britain, then Prince of Wales, to Boston, October 18, 1860. The ode will be found in any complete edition of Holmes's Poems.

C. R. C.

Boston, October 8.

Notes.

It is good news to hear that Kipling's verse, hitherto available only in four separate books, will be brought out this month in a single volume by Doubleday, Page & Co. Mr. Kipling has revised the collection and added poems not before included in any of his books.

Prof. Churton Collins is preparing a book on the visits of Voltaire, Montesquieu, and Rousseau to England. He is said to have new letters of Voltaire's. If he can make clear the exact nature of the mutual borrowing between England and France during those years, he will do a good work.

Alexander Rogers has made a translation in verse of the complete "Shah Namah." His work is to be published immediately by Chapman & Hall.

Of special interest to anthropologists will be the volume of essays by different authors which is to be presented to Dr. Edward Burnett Tylor of Oxford, on the occasion of his seventy-fifth birthday. The range of subjects will be wide and the collection as a whole may be expected to sustain the claim of the British to distinction in the anthropological field. As might be expected a good deal of space is to be devoted to Australia and the eastern archipelago. Andrew Lang is to write on "Australian Problems," D. Y. Cunningham on "The Australian Forehead," Alfred C. Haddon on the "Religion of the Torres Strait Islanders," and Dr. C. G. Seligman and T. A. Joyce on "Prehistoric Objects in British New Guinea." Under the head of classical anthropology there will be a paper by Dr. L. R. Farnell on the "Sonder-Götter" in Greek Polytheism, an account of the rite at the Temple of Mylitta by E. Sidney Hartland, and of the Segynnæ of Herodotus by J. L. Myres, as well as a discussion as to the origin of the Dorians by William Ridgeway. The vexed question of Exogamy is to be dealt with by A. E. Crawley and again by Northcote W. Thomas. In addition to the contributions already mentioned, we are to have the views of Dr. J. G. Frazier on the Folklore of the Old Testament, those of Dr. Charles S. Myers on "The Ethnological Study of Music," those of Sir John Rhŷs on "The Nine Witches of Gloucester," and of Dr. Westermarck on "L'Âr, or the Transference of Conditional Curses in Morocco." The volume is to be published by Henry Frowde.

The Tudor Facsimile Texts will hereafter be issued by T. C. & E. C. Jack. Four new reprints are about ready for delivery: "King Darius," "Lusty Juventus," "Nice Wanton," and Heywood's "Ray of the Weather."

The World's Classics of the Oxford University Press are increased by six new volumes: Ruskin's "Sesame and Lilies" and "Ethics of the Dust" (one volume), Cervantes's "Don Quixote" (two volumes), Butler's "Analogy of Religion," Fielding's "Journal of a Voyage to Lisbon," and Smollett's "Travels Through France and Italy." All are provided with Introductions; in the Smollett this has been extended by Thomas Seccombe to a pretty long and quite interesting attempt to reverse the contemptuous belittling of "Smelfungus" by Sterne and Walpole. We are glad to hear a plea for the author of "Humphry Clinker." One curious point Mr. Seccombe brings out, that the majority of the so-called portraits are not of Smollett at all, but ingeniously altered plates of George Washington. We could wish Mr. Seccombe had given his authority for this statement. There is something piquant in the thought of Washington standing for the author of "Peregrine Pickle."

The "Pleasures of Literature" is well suited to be brought out in handy and attractive form, as we see it in the volume now issued by Putnams. The book was first published in 1851, when the author, Robert Aris Willmott, was incumbent of the living at Bear Wood, where John Walter of the London *Times* had lately built the Church of St. Catherine. The little essays are not much more than a collection of quotations, examples, and anecdotes; but they are put together with a happy touch, and their quaint flavor of learning and morality is still thoroughly enjoyable.

Houghton, Mifflin & Co. issue a new edition of Margaret E. White's "After Noontide," with a sketch of the compiler by her daughter, Eliza Orne White. "No man can be perfectly happy until after his sixtieth birthday," wrote Bonstetten, and these words might be taken to sum up the spirit in which Mrs. White made this selection of paragraphs and poetical quotations for the old.

Houghton, Mifflin & Co. have begun the publication in ten illustrated volumes of "The Children's Hour," or, as it is further described in the title, "a comprehensive and careful selection of the best literature for children." The selections are arranged by subjects: stories from various countries, myths, classical stories, stories of legendary heroes, poems, out-of-doors adventures, etc. The examination of the proposed table of contents shows that the editor, Miss Eva Marsh Tappan, has made a wise and broad choice of material, and that the books can be recommended heartily to those who have grown disgusted with the ephemeral children's books poured out by the press every year.

Few books have been the cause of more and more wholesome laughter than John Habberton's story of "Helen's Babies," and it is pleasant to see a new edition of the book, with appropriate illustrations, issued by Moffat, Yard & Co.

Dodd, Mead & Co. are gradually filling out their edition of Trollope's novels in volumes of a size and type to enhance the pleasure of reading, or rereading, that most British of novelists. "John Caldigate," of the Manor House Series, is now added in two volumes. The only complaint possible from lovers of Trollope is that the edition is not completed more rapidly.

In placing the price of E. O. Gordon's "Saint George" at $5 net, the publishers (E. P. Dutton & Co.) show a pleasing confidence in the wealth of the American nation. The book contains little more than 40,000 words of text, and can boast of no illustrations which are better than mediocre in execution. When one considers how much good literature can be bought nowadays for five dollars, it would be impossible to praise this book with any heartiness even if it reached a higher level of style and scholarship than it does. So far as scholarship is concerned, not much can be expected from a writer who calls Constantius Chlorus, "King of Britain"; states that Constantine built the "present cathedral mosque of S. Sophia"; calls Tintoretto "Tintorel"; declares that in Caer-

leon alone ten thousand Christians were slaughtered during the persecution of Diocletian; and cites Wykeham's celebrated motto as "Manners make the man." We will not deny that Mr. Gordon shows a spirit of generous idealism in writing of the chivalrous and national associations which centre around the figure of St. George; but his temper is uncritical and his arrangement of material defective. In structure the book consists of four parts. Besides a biographical sketch of the martyr, which would do credit to any hagiology, there are chapters on the Commemoration of St. George in Church Liturgies and National Institutions, on Celebrated Knights of St. George, and on St. George in Art. To criticise details is beyond our purpose, but proceeding from the principle *ex uno disce omnes*, we shall give our readers some means of understanding Mr. Gordon's attitude toward history and legend. The subjoined excerpts speak for themselves:

King Arthur (like St. George) has been, and is still by many, regarded as a mythical hero; but, says Fuller (writing in Queen Elizabeth's time), "The best evidence that once Arthur lived in Britain is because it is certain that he died in Britain as appeared undeniably by his corpse, coffin and epitaph, taken up out of his monument in Glastonbury in the reign of Henry II., whereof many persons of quality were eye-witnesses."

King Arthur, we may be sure, would not have established Winchester as the headquarters of his Society if the Druidical festival of the White-sun-tide had been tainted with any suspicion of *sun-worship*.

Strengthened by historical evidence is the tradition that the British King and his Knights held their Round Table Assemblies within the walls of the stately basilica of the Roman Castle, by the West Gate opposite the Winton (St. Katharine's Hill), and here the venerable relic of chivalry—the Round Table itself—has from that time to this been preserved.

The third volume of H. A. Cushing's "Writings of Samuel Adams" (Putnams) includes papers from 1773 to 1777, a period in which events moved from political agitation to actual war. The Declaration of Independence and a Confederation of the States seemed to crown Adams's efforts with success, yet his part in either measure was small, for his strength did not lie in practical legislation. In the Committee of Correspondence his pen was busy, for the acts of Parliament against Boston brought out material sympathy from the other colonies, all of which had to be acknowledged with suitable thanks and denunciations of tyranny. In the Congress he felt his own limitations, and wished to be recalled, that better men might be sent to meet the "grandest revolution the world has ever seen." His singleness of purpose and the intensity with which he pursued it, made him a strong support to the cause which he espoused, yet he was prone to concentrate his efforts against individuals rather than on practical measures of redress, and friend suffered as well as foe under his criticism. He warmly admired Arthur Lee, and regarded him as a great aid to the American cause in Europe. He disliked Schuyler and favored Gates, even disparaging Washington for pursuing a Fabian policy. His strong religious feeling caused him to believe the times to be infected with "levity, folly, and vice," and he was mortified to learn that in his own State men had been elected to office for their riches, a preference both "dishonorable and dangerous to a government." He gloried in his poverty and invited martyrdom. His private letters, of which Mr. Cushing has made a goodly collection, are more illuminative of his character than his public papers. It is unnecessary to detail his opinions. His prejudices crop out everywhere, as when he says that the New York Legislature is septennial, and "therefore must be corrupted." His strength lay in agitation, in town meetings, and in manifestoes, and he would resort to them even where they were not judicious. How unsuited his views and methods were for actual conditions is shown by his proposed reply of Congress to Gage, only a few sentences of which were adopted by the committee. Mr. Cushing shows great industry in locating his material, but is much too sparing in his notes, leaving too many references unexplained. Initial letters or dashes, when used in place of names, should be noted, as on pp. 268 and 272, where Cushing and Mifflin are intended. There are errors of dates and names, and a wrong committee of Congress is given in the note to p. 336.

"The Savage South Seas" (The Macmillan Co.), the latest of the admirable series of Color Books, is a description by pen and pencil of the natives of British New Guinea, the Solomon Islands, and the New Hebrides. The main feature of the book is the sixty-eight illustrations, which are beautiful reproductions in color of paintings by Norman H. Hardy. Representing every important phase of native life, industries, amusements, and religious ceremonies, as well as the pile houses and the scenery, they enable one very vividly to realize it. Among the most interesting pictures are those showing the marvellous decorations of the canoes, the carved wooden figures or memorial effigies, and the personal ornaments, which excite wonder that a people so low in the scale of life can possess so much artistic ability. The accompanying text is by E. Way Elkington, a writer and traveller of some experience in these regions, who, to the description of those things which the artist has pictured, adds much information in regard to the customs, superstitions, legends, and practices of the natives and their relations with the white traders. One of the customs described as prevailing in New Guinea, that the woman and not the man should make the proposals of marriage, is not without a grain of practical common sense. If a girl desires to marry a certain young man, she prepares some food and sends it to him. If he eats it, her suit is accepted, and "without any further ceremony they become man and wife." In some parts of this island the boys have exciting athletic games which require considerable skill. In that known as *evanena* two rows of players stand facing each other with arms interlocked so as to form a platform upon which a boy gets up and runs forward:

Immediately he has passed over the first pair, they let go of each other and run forward, and place themselves in front of the others at the end of the row, thus making a continuous passage, enabling a constant race to be kept up with the boy on the platform and those forming it. Roars of laughter greet the youth who is fast enough to reach the end of the platform before another set of arms is ready for him, and if he succeeds in doing this he is a proud winner, but if, on the other hand, he stumbles and falls, he is anything but a hero, and becomes one of the figures of the platform, taking the place of one of the end boys.

A sketch of mission work in the South Seas includes a brief account of James Chalmers, the remarkable Scotchman known as "Tamate," and the chapter and the book close with an affirmation of Stevenson's assertion that "the missionaries are the best and most useful whites in the Pacific." There are a map and an excellent index.

"Turkey and the Turks" (Boston: L. C. Page and Co.) is substantially the reproduction of lectures which the author, Prof. Will S. Monroe, delivered after a visit to that country. The personal incidents and impressions are to be found in the chapters on Constantinople in which he gives many entertaining and graphic descriptions of the life and principal objects of interest in the city, from the mosque of St. Sophia to the whirling and howling dervishes. A brief introductory sketch of the geographical features of the Balkan peninsula is followed by a condensed summary of the history of the Ottoman empire. Other topics treated are the characteristics of the different races and their industries, the Mohammedan religion, the government and education; one chapter is devoted to Abdul-Hamid II., and the imperial harem. As a whole, the book is to be commended for the useful information which it gives, but in some points it merits criticism. From the statements in regard to the present situation in Macedonia, the uninformed reader would be led to believe that the disturbed condition is due wholly to Turkish misgovernment, no mention being made of the principal cause, the racial animosities and ambitions of the Greeks, Servians, and Bulgarians. In the review of the present political situation we find no mention of the formidable revolt of the Yemen Arabs which has been in progress nearly three years. The Hejaz or pilgrim railway to connect Mecca with Damascus, of which 463 miles are in operation, and the 105-mile branch connecting it with the Mediterranean at Haifa are omitted in the enumeration of the Asiatic railways. Harput is not a vilayet as stated on p. 86. Peter should be substituted for Paul in the preface and on p. 79. The illustrations are mostly of scenes in Constantinople with a few of Smyrna and Ephesus.

No. 3 of vol. XV., New Series, of the Modern Language Association's publications has appeared, with eight articles of varied interest. Caroline Strong discusses the "History and Relations of the Tail-Rhyme Strophe in Latin, French, and English," holding that rhythms may have a closer connection with the thought and life of a people than is generally acknowledged, and that efforts to enter into the taste of our ancestors and trace the literary relations of their form and thought may be of help in the important study of comparative literature. A bibliography of sixty-five titles accompanies the article. Robert M. Wernaer writes of "The New Constructive Criticism." Charles Harris finds a theme in "The English Comedians in Germany before the Thirty Years' War." He cites Moryson's reference to the so-called English comedians whom he saw at the Frankfort Fair in September, 1592, and concludes, on the basis of Röchell's Chronicle for Münster, 1601, and other documents of the

seventeenth century, that, while barn-storming was precarious, the actors were reasonably successful in their quest of financial gain. "L'Art dans les *Contes Dévots* de Gautier de Coincy" is rather extensively treated in French by Prof. Albert Schinz. One of the most interesting of the essays is by Walter Y. Durand, who reminds us of "De Quincey and Carlyle in their Relation to the Germans." Mr. Durand seeks to estimate the importance of De Quincey in comparison with Carlyle in introducing German literature and thought into England, and declares in favor of the thorny Scot. He thinks that Carlyle wielded a more enduring influence by transfusing rather than translating. Prof. Albert S. Cook has a scholarly analysis of "The Character of Criseyde," reviewing Shakespeare, Ten Brink, and others in their estimate of the heroine, and finding, both in contradiction and confirmation of their opinions, that Criseyde is amorous and circumspect, in manner a society woman of the period, whose wit and governance never desert her, William Guild Howard puzzles over "Five Obscure Allusions in Herder," and Miss Lisi Cipriani pursues "Studies in the Influence of the Romance of the Rose upon Chaucer." She holds that both Skeat and Ten Brink underestimate the influence of the Romance.

In two small volumes, entitled "Deutsches Leben im 12, und 13, Jahrhundert" (Leipzig: Goeschen), Prof. Dr. J. Dieffenbacher of the University of Freiburg, in Breisgau, gives a clear and concise delineation of German public and private life in the twelfth and thirteenth centuries, a knowledge of which is essential to a proper appreciation of the literature of that period. This literature consists of epics and lyrics, the latter of which found their most ardent, graceful and melodious expression in the *Minnesong*. In the first volume the author gives a comprehensive description of the political, social, ecclesiastical and judicial institutions of that time, especially under the famous Hohenstaufen dynasty, and also of the characteristics and conditions of all classes from the sovereign to the serf. In the second volume are portrayed the various features of private life: dwellings, clothing, food, courtship, marriage, education, amusements, games, music, gymnastics, hunting, and the rules of social intercourse. Professor Dieffenbacher calls his work a *Realkommentar* to the epic and lyric poetry of that day; and students, who are pursuing their researches in this direction, will find it an excellent key to German mediæval literature.

One of the most genial humorists and keenest satirists in Germany at the beginning of the sixteenth century was Heinrich Bebel, whose "Facetiæ" were published in 1506, twelve years before the author's death. By directing the pointed weapons of his wit and sarcasm against priests and monks he contributed largely to the popularization and promotion of the Reformation. The fact that he wrote in Latin instead of German prevented his works from being so generally appreciated as they otherwise would have been. For the same reason they are seldom mentioned even in the most elaborate histories of German literature. They have now been translated for the first time by Albert Wesselski, and just issued by Müller, in Munich and Leipzig, in two volumes, under the title "Heinrich Bebel's Schwänke."

A carefully written and impartial work based on thorough research is Marianne Weber's "Ehefrau und Mutter in der Rechtsentwicklung" (Tübingen: Mohr). It is an admirable and quite exhaustive history of women's legal rights as wives and mothers, and the different stages of the development of these rights from the earliest times to the present day. Many readers will be surprised to learn that in the code of the Babylonian sovereign Hammurabi, about 2500 B. C., women were placed on perfect equality with men as to the ownership and control of their property. Inscriptions on stone monuments excavated in the valley of the Euphrates prove that these enactments were in force several centuries before they were codified by the great Babylonian king and lawgiver. Similar laws existed also in ancient Egypt. Interesting and very equitable were the stipulations concerning divorce, remarriage and the claims of the children. Much less regard was paid to women in the Mosaic code and in Greek and Roman legislation. The primitive Germans regarded women as mere chattels with no rights which a man was bound to respect.

The educators of Germany are deeply interested in the so-called Mannheimer System of reorganizing the public schools of the country for the special purpose of meeting the practical difficulty that from one-fifth to one-third of the pupils never succeed in finishing the course of eight years in the prescribed time. The "Statistisches Jahrbuch," reports, for example, that in Bremen only 66.6 per cent. succeed; in Darmstadt, 63.8; in Freiburg-im-B., 66.2; in Leipzig, 73.2; in Mayence, 77.1; in Wiesbaden, 75.2; in Munich, 75. Seven years ago the city of Mannheim introduced the system of dividing the public school children, after the first year, into three classes: the *Hauptklassen*, for all normal pupils capable of taking the full course; *Förderklassen*, for the less able; and for the weak-minded (*Schwachsinnige*) special classes, each with its own course of studies, and in case of improvement, the possibility of transfer to the higher grades. Thus, last year 141 out of a total of 872 in the *Förderklassen* were promoted into the *Hauptklassen*. One of the important works on the subject is Dr. Sickingen's "Unterrichtsbetreib in grossen Volksschulkörpern" (Mannheim: J. Bensheimer). This new system has been vigorously discussed by educational conventions, and in educational journals, but generally has been commended, and in several instances been adopted elsewhere. Charlottenburg has done so, with an additional fourth class or grade; Leipzig has experimented since Easter of 1905 with *Förderklassen;* Vienna is trying the plan in some of its schools, and more recently Pforzheim, Zwickau, and Zürich have done the same. Munich reports special success with some twenty *Hilfsklassen* established there recently. The achievements of the movement are presented in full in a "prize" brochure of Oberlehrer Lutz of Mannheim, entitled "Welche Aufnahme die Mannheimer Schulorganisation gefunden hat." The same problem, in so far as it affects the secondary schools from both a medical and pedagogical point of view, is discussed in two addresses on the subject, by Dr. Albert Uffenheimer, of the medical department of the University of Munich, and Prof. Otto Stählin of the Royal Maximilian gymnasium, published together in a pamphlet "Warum kommen die Kinder in der Schule nicht vorwärts?"

Baden, which was the first among the German States to admit women to her universities on exactly the same conditions that prevail in the case of men, has now decided to open the technological institute at Karlsruhe to women, taking the lead also in this innovation. Women can matriculate at Karlsruhe if they can show a *testimonium maturitatis* from a German nine-year secondary school and possess the other qualifications necessary for matriculation. Only German women and not foreigners are, however, to be the recipients of this new academic privilege.

The secularization of the public schools of Germany by the abolition of all specifically Christian teaching in the curriculum and the substitution of ethical instruction of a general character, is the fixed programme of an increasing propaganda in Germany, growing particularly out of the hostility to the Church's influence in these schools. Recently this opposition has assumed organized form in the Deutscher Bund für weltliche Schulen und Moralunterricht, which has held its first general convention in Berlin. A leading agent in the propaganada is Dr. H. Spiller, who reported in full his tour of investigation made in the schools of Germany and Switzerland. The feeling for such secularization seems to be especially strong among the common school teachers.

"Das Neue Testament in religiösen Betrachtungen für das moderne Bedürfnis" is the title of a new popular religious commentary on the New Testament from a conservative standpoint, and intended to demonstrate that the older views are still the most acceptable, notwithstanding modern scientific research. The publisher is C. Bertelsmann of Gütersloh, and the editor Dr. Gottlob Mayer. The whole series is to appear in fifteen volumes, to be issued in about fifty parts. The work is intended to meet as far as practicable the objections raised against the Scriptures in modern criticism; it will deal also with the ethical and social problems of the times.

The *Alte Glaube* of Leipzig, No. 51, gives details of the discovery of a considerable number of parchments and papyri made recently in the ruins of an old Coptic cloister in Upper Egypt, but not in the famous Oxyrhynchos district. A preliminary investigation has shown that these are chiefly Greek and Coptic texts dating from the sixth century after Christ. Among them are gospel fragments, a sermon of Bishop Cyril of Jerusalem, who died in 386 A. D.; a document in the Nubian language concerning the canons of the Nicene Council, and finally seventy-five sheets containing Sayings of the Lord in Coptic translation. As the text of these Logia does not agree with any of the known Greek recensions of these Sayings, it is thought that they represent a translation of a lost Greek collection. Special interest attaches itself to the question of the relation of

these Coptic Logia to the Greek gospel fragments also lately found in Egypt by Grenfell and Hunt. The whole find throws new light on the wonderful ups and downs of the gospel traditions in the first Christian centuries, as also on the erratic history of the New Testament canon.

The Cornell University expedition to the Assyro-Bahylonian Orient, consisting of A. T. Olmstead, B. B. Charles, and J. E. Wrench, has made its first report. The maps of the region have heen found very defective; accordingly, the expedition has devoted considerahle time to fixing sites definitely. Place names which hitherto have heen taken down almost entirely hy ear have heen in many cases corrected. The report continues:

All the Hittite sites west of Kaisariye and Konia have heen visited and the inscriptions collated. Many new readings have heen secured. At Boghaz-Keui, at the suggestion of the German excavators, the Hittite inscription, one of the largest known and generally considered quite illegihle, was studied, and as a result of two and a half days' work the greater part of the inscription was recovered. . . . Inscriptions hitherto visited have heen squeezed, photographed, and copied. Ten days were spent in making a squeeze (paper impression) of the "Monumentum Ancyranum," a most important inscription. A considerahle numher of classic and of Arahic inscriptions have been copied, many of which are new. At Angora and Boghaz-Keui cuneiform tahlets were also ohtained and one Hittite seal.

At Giaour Kalesi, a well known Hittite site, the palace was planned and was found to he of a distinctly Mycenæan character. . . . Over fifty sites have heen carefully examined and proved to he pre-classic, and of these a considerahle proportion can be connected with an already known classic locality. The pre-classic site of Iconium, the most important city of southeastern Asia Minor, has been found. Much of the pottery found there is similar to the early types found at Troy, and a hetter site tor excavation has not yet heen seen hy the expedition. The most important material for dating sites is the pottery. Very little has thus far heen done in attempting to assign to the proper dates the pottery of the interior of Asia Minor. An attempt has heen made to do this in connection with the pottery survey, and while many of the results must he tentative in character, the general development has heen ascertained and has already heen very useful in fixing the dates of the various sites visited. Over three thousand potsherds have thus far heen collected and studied. Most important are the various sherds of Mycenæan character showing connection with the Greek world of the time of Homer. In the light of the material collected it seems almost certain that some of the most widespread views in regard to the earlier people of Asia Minor and their connections must he modified or ahandoned. Nearly a thousand coins, ranging in time from Persian to early Turkish, have heen secured, hut there has heen no time as yet to study them. A marhle idol of a type hitherto found only in the Greek islands in pre-Mycenæan settlements was secured at Angora. This link hetween the early inhahitants of Greece and of Asia Minor is of very great interest.

Some idea of the multiplicity of races and languages in the world can he gained from facts in the annual report of the British and Foreign Bihle Society just issued. The Scriptures, either in whole or in part, are now translated and puhlished in 409 different languages and dialects. This is an increasc of eight since the last report, the new translations heing in dialects in India, China, the Philippines, Tunis, Rhodesia, and the New Hehrides. In addition to these the Editorial Committee has had under consideration the puhlication of translations in 144 other languages, 59 of which helong to Asia, 53 to Africa, 14 to Oceania, 16 to Europe, and 2 to America.

The Italian government is planning to found an archæological institute in Athens after the model of the German archæological schools in Rome and Athens. France, Germany, England, America, and Austria have all long heen represented, and Italians will no douht welcome the opportunity for archæological research in Greece which such an institute will afford them.

John Strachan, profcssor of Greek since 1885, and of comparative philology since 1889 at Owens College, Manchester, dled on Septemher 25. He was born in 1862, near Keith, Banffshire, and was educated at Aherdeen, Camhridge, and Jena universities. In 1891 he edited a school edition of hook vi. of Herodotus. His attention, however, was strongly drawn toward Celtic. On this suhject he published many papers in the learned journals of Germany and England. Among the articles in the Transactions of the Philological Society may be mentioned: "The Compensatory Lengthening of Vowels in Irish," 1893; "The Deponent Verb in Irish," 1894; "The Particle -ro- in Irish," 1896; "The Suhjunctive Mood in Irish," 1897; "The Sigmatic Future and Suhjunctive in Irish," and "Action and Time in the Irish Verh," hoth in 1900. With Dr. Whitley Stokes he was joint editor of "Thesaurus Palæohihernicus," of which two volumes appeared, in 1901 and 1903. He also puhlished "Selections from the Old Irish Glosses," 1904; and "Old Irish Paradigms," 1905. At the time of his death he was working on a grammar of medlæval We'sh.

The death is announced of two German novelists: Frau Emilie von Walhurg, in her seventy-fifth year, author of "Ruth," "Die Rose vom Haff," and "Onkel Hermann", and Frau Sophie Junghans, in her sixty-second year, author of "Haus Eckherg," 'Erhin wider Willen," "Schwiegertochter," "Hella Jasmund," etc.

STUDIES IN HISTORY.

Papers of the Military Historical Society of Massachusetts. Vol. VI. The Shenandoah Campaigns of 1862 and 1864 and the Appomattox Campaign 1865. Boston: Puhlished hy the Society.

The present volume is perhaps not equal to some of its predecessors in value and interest; it contains, however, as was to be expected, several papers that repay careful perusal, notahly that on Cedar Creek hy Gen. Hazard Stevens, on Five Forks hy Col. William W. Swan, and on the generalship of the Appomattox campaign hy Col. Livermore. Of these the last only is of recent date.

Col. Swan's account of Five Forks is painstaking and remarkahly clear, though it adds little to our direct knowledge concerning the two most interesting points ahout this engagement—Warren's suspension as commander of the Fifth Corps, and Sheridan's generalship. The author who, although on Warren's staff, gives a very halanced and convincing account of that general's conduct, confirms the prevailing opinion that Warren's relief from command was, on the whole, hasty. The fundamental trouble was an incompatihility of temperament hetween Sheridan and Warren. The former was essentially an *officier d'avant-guarde*, seeing for himself and going in with his troops; Warren, notwithstanding his Gettysburg exploit, was the type of the modern intellectual soldier who clings to the map and the telegraph wire. There was also clearly some misconception on the part of Warren as to what his corps was to do, though neither the proceedings of the Warren court of inquiry nor the Official Records show whether the fault lay with Warren or with Sheridan. Nor does Col. Swan help us at this point. Col. Swan states that Sheridan did not know what the enemy's real position was, hut the most that can he said is that he failed to impart that knowledge to Warren. For the inference is overwhelming from the disposition of his own troops and the direction he gave to the Fifth Corps that Sheridan knew very accurately the extent of front held hy the enemy; at all events his cavalry divisions covered that front exactly, holding the enemy in play, and Sheridan himself took post at his extreme right, the tactical pivot of his line. He now ordered forward Warren's Fifth Corps to make the real attack at the very point where the enemy's front ended.

But the Fifth Corps lost its way. Warren had not understood, or had not heen made to understand, what the enemy's position was, as his order to his divisional commanders proves. Everything depended on the quick dash of an overwhelming force at the extreme end of the enemy's line, and Sheridan himself rode in among the skirmishers, a hattle flag in his hand, while Warren was far away to the right, only slowly realizing that he and his leading division were marching away from the hattle. Sheridan, judging others hy himself, evidently thought that Warren should have heen at the critical point, and should have personally led his troops to the assault, hut without douht Warren had no idea of what was expected of him. Col. Swan's statement that Sheridan did not know the location of the enemy's works cannot he accepted, although Sheridan probahly did not know how far hack from the end of the front the return works extended; as to that, however, he correctly judged that, whatever the distance they extended, a whole army corps was amply sufficient to sweep around and over them. All Sheridan's actions at Five Forks point to a clear insight into the prohlem in front of him, and generalship of the highest order in solving it. Yet his impetuosity was very prohahly the reason why Warren did not understand what he was to do, and there can be little douht that it was unjust to take so extreme a measure as to relieve him from command.

The discussion of the Appomattox campaign hy Col. Thomas L. Livermore is thoughtful and valuable. The essence of the argument is that Lee was not justified in retaining his position at Petershurg until Grant was able to move; that he could have retreated, and that his failure to do so was a grave military error. To discuss such a thesis adequately in a short space is impossible, and all that can he attempted here is to point out some of the steps in Col. Livermore's argument that appear open to question. In the first place, then, it must be said that he does not analyze

closely enough what was implied by the "retreat" of Lee's army. A retreat, in the sense of merely getting his army out of Richmond, was of no service to Lee, in fact not worth considering; there was nowhere to retreat to. It was even more the case in 1865 than ever before that the only chance of the Confederacy lay in striking a heavy blow at the Federal army, and this accorded with the true theory of war, of which Lee had hitherto been one of the most consistent exponents. If his army was to retreat from Richmond it must retreat for the purpose of effecting something, and the Confederate correspondence shows conclusively that the one hope of effective action was a rapid concentration of Lee and Johnston against Sherman in North Carolina. But to carry out such a movement meant that Lee's army must be mobile, must be not merely capable of crawling out of Richmond, but of moving swiftly to the Roanoke River, and in every direction. And it is abundantly proved that the state of the roads and of Lee's transport service at this moment meant a very low degree of mobility. Further, we have it pretty clearly from Johnston's and Lee's correspondence that, for reasons that were doubtless good, the Confederate generals thought that Sherman could best be attacked after his crossing of the Roanoke, which was not to be expected before the middle of April.

Col. Livermore thinks that Lee showed "the inertness of a fatalist" in clinging to Richmond; yet he admits that the disproportion between the numbers of the opposing armies was not much greater than at the opening of the Wilderness campaign. At the Wilderness Lee took the offensive; was he, a few months later, tamely to abandon the Confederate capital without striking a blow? If Lee did make any mistake, it was possibly that he underrated in favor of his opponents the displacement of morale that was taking place and that went on with such disastrous rapidity after Grant succeeded in breaking through the Confederate right on April 1. But, although mistaken, surely Lee was justified in believing that Grant's movement at the end of March might not prove to be a decisive attack on his line of communications, but only a partial attack. The roads were still such quagmires that the transportation problem, even for Grant, seemed insoluble, and it may be noted that writing to Sheridan on the 29th of March Grant says: "I now feel like ending the matter, if it is possible to do so before going back." This implies, clearly enough, that the Federal movement might have remained a partial one, as Lee thought probable, and that "finishing the matter" was, in Grant's own mind, a pretty big undertaking. Does not this show that Lee, whose army was far from mobile, who had not yet got Sherman just where he wanted him, whose lack of numbers was not much more pronounced than often before, who was urged by every political consideration not to abandon Richmond before it was absolutely necessary, was entirely correct in not attempting a useless retreat? A retreat that was merely a retreat would have utterly demoralized and ruined the Confederacy. Lee did not think it probable that Grant could move the bulk of his army far from his base so early in the season, and, with the high courage that had so long dominated the whole course of the war, he still thought it possible he might find the opportunity of dealing a direct blow at his opponent. So long as he could not strike Sherman, Lee was bound to remain where he could best support his own government while retarding Grant, and even possibly striking him.

Such are some of the points which, as it would appear, Col. Livermore has either missed or insufficiently considered. Yet it is only just to say that his analysis of Lee's mentality during the last phase of the war is suggestive and valuable, and that it represents a class of writing on military matters not frequently met with in this country.

By-Ways of Virginia History: A Jamestown Memorial, embracing a Sketch of Pocahontas. By R. H. Early. Richmond: The Everett-Waddey Co. $1.50 net.

Social Life of Virginia in the Seventeenth Century: An Inquiry into the Origin of the Higher Planting Class, together with an Account of the Habits, Customs, and Diversions of the People. By Philip Alexander Bruce. Printed for the author. For sale by the Bell Book and Stationery Co., Richmond. $1.50 net.

The Jamestown celebration has naturally stimulated Virginia writers into unusual activity the present year. The story of Virginia is presented anew in all its phases, and the just claims of the Old Dominion to a very high, if not the supreme, place of honor among American commonwealths, are set forth with emphasis. "By-Ways of Virginia History" is hardly an appropriate title for a book containing chapters treating of such leading figures of the early time as Raleigh and Capt. John Smith, of Washington, at a later day, of the question of Labor (Slavery), and the Struggle for Liberty (the Revolution). In studying such men and events, we are certainly in the high-road and not in by-ways. The service Mr. Early renders is not in rescuing little-known figures and incidents from oblivion, as his title might suggest, but rather in bringing to bear upon what has always been in the foreground, information from sources heretofore not thoroughly used—county records, manuscripts, and neglected books. Mr. Early is patriotic and industrious, and has put in his debt those who in this Jamestown year feel an unusual interest in Virginia.

Mr. Bruce's book is a more substantial contribution to history. His scholarship is well known, and this volume, like his work in general, shows wide reading, an appreciation of historical values, and a faculty for presentation. As to the arrival in the earliest period of the "Higher Planting Class," and how it became throughout Virginia colonial history the dominant element, reproducing in America the social England of the Tudor and Stuart periods, an aristocracy therefore in which the power and liberties of the plain people had dwindled almost to the vanishing point, Mr. Bruce tells us much that is worth knowing. He writes in conclusion:

> This was the beginning of a social system which was to make a lasting impression upon the history of the Western Hemisphere, and which was to produce the memorable body of men, Washington, Henry, Jefferson, Madison, Monroe, and Marshall, the transmitted influence of whose political careers has, with the growth of the United States in power, steadily broadened, until it has now come to touch the affairs of the entire globe.

But the fact nevertheless remains that some of the most remarkable of Virginia's great men, notably Jefferson and Richard Henry Lee, were not in love with the system that had produced them, much preferring the town-meeting-ridden society of New England; and, if we seek for the informing spirit of America, the government of, by, and for the people of Abraham Lincoln, it must be traced to another source than the oligarchical development whose characteristics he so graphically and accurately details.

CURRENT FICTION.

The Fruit of the Tree. By Edith Wharton. New York: Charles Scribner's Sons.

Again Mrs. Wharton has done a difficult thing with ease and precision. With all the groping and stumbling of American novelists toward an interpretation of American life, it is matter for thanksgiving that we have one who knows what she is about. With all her amenity and poise, her air of the disinterested observer, she is sure of her object and rarely fails to attain it. This book would seem at first to be a composite of three. Is it about the attitude of "the best society" toward common morality and justice; or the relation between employer and employed; or the duty of medical science to prolong life at the cost of hopeless suffering? Before the end one may perceive it to be a study of the selfishness induced in a strong man by preoccupation with his work, and in a strong woman by preoccupation with her happiness. Wisely, no doubt, Mrs. Wharton has embodied life, not lectured upon it, and it is unnecessary to reduce the interpretation to the last analysis in order to feel its meaning.

The amiable rottenness of "the best society" has been a favorite theme of Mrs. Wharton's; here it affords hardly more than a background for the principal scene. That is by no means the scene to which we are first introduced, and which holds our attention throughout the first book of the story. Book i., by itself, seems to belong to a familiar type of current American fiction: the industrial novel. The Westmore Mills at Hanaford, a manufacturing town not far from New York, have within a generation launched upon the world, in the person of their young owner, Dick Westmore, a new devotee of leisure, sport, and fashion. In due time he has married a beautiful society girl, Bessy Langhope, who has been brought up in the aroma, though not in the full pecuniary privilege, of the gay world. His death leaves her not heartbroken, though decently regretful, the heiress of his entire wealth. Presently she comes to Hanaford upon a virtuous but perfunctory errand of inspection; with the probability that she will merely pass through the mills in great lady fashion, shaking the dust of them from her feet with all possible expedition, and faring back to her own polite and luxurious world of Lynbrook and New York. Chance rescues her from the manipulation of the astute and plausible person whose unscrupulously

successful management of the mills has piled a Pelion upon the Ossa of the Westmore income. The assistant manager, John Amherst, is a young man of good family (Mrs. Wharton could, perhaps, not be expected to put up with a hero who lacked that saving grace), with a bent for mechanics, a hunger for hard work, and strong opinions as to the rights of hard workers. She visits the mills with him, and learns from him of a peculiarly barbarous instance of the suffering imposed by unscrupulous management. She is moved by the visible instance, not by the principle involved; but this is not evident at the moment, and when at the end of the first book Amherst marries her, his faith in her seriousness is part of his love.

At this point the ordinary industrial novel might have been content to end, with a sound of wedding bells and popular plaudits; but here the social-sociological sidescene, like the social background, becomes mere setting for what, one supposes, would be called the psychological event. Amherst and his Bessy do not live happy ever after; the regeneration of the Westmore mills does not take place during the honeymoon. The man discovers the woman to be selfish, shallow, emotional. She is surrounded by traditions, habits, and persons wherewith he has nothing in common. What interests one most, interests the other not at all; he does not care for her pleasures nor she for his work, especially when its development entails some personal sacrifice on her part. They virtually separate. The third person now assumes importance. Justine Brent is a trained nurse (of excellent family!), now a kind of companion to Bessy, and nurse to her little daughter by the first marriage. She is also a very good friend of Amherst's. Bessy is fatally injured as a direct result of disregarding Amherst's advice. Her life is deliberately, even desperately, prolonged by a young doctor who regards her as "a beautiful case," and is determined to score a hit. The other physicians, as well as Justine, believe that the torture is hopeless; and Justine, when she gets the chance, puts her out of misery by an over-dose of morphine. In view of her own clear conscience and her knowledge of Amherst, she thinks that she has done the right thing, according to his lights as well as her own. Nevertheless, for negative reasons, she does not tell him, even after their eventual marriage, and the fact comes out horribly through the young doctor, now a morphia victim and blackmailer.

Then follows the really moving part of the tale; for Amherst, "like many men of emancipated thought, had remained subject to the old conventions of feeling." His reason assures him that Justine is guiltless and has done well; but he cannot bear the fact that she has technically killed Bessy. We shall betray nothing here of the further conduct of the story, except our conviction that, according to any enlightened view, it "turns out right." Persons who are content to dispose of such a novel as "unpleasant," are fain to make a silly affair of fiction.

Love of Life. By Jack London. New York: The Macmillan Co.

This is much the usual Jack London thing: wolf-dogs and miners and Indians; starving and freezing and killing. The title story gives the last grewsome detail in the frightful experience of a miner who drags himself, half-starving, a long distance through the waste toward a rescue which is after all a matter of chance. Through the last stage of his journey he is followed persistently by a sick wolf:

> His knees had become raw meat like his feet, and though he padded them with the shirt from his back it was a red track he left behind him on the moss and stones. Once, glancing back, he saw the wolf licking hungrily his bleeding trail.

What is this other creature on all fours which may, one fancies, be discerned sharing that grisly refreshment? It is, we doubt, a creature of the fancy, a symbol of the morbid attitude toward horrors which does not mark Mr. London alone among popular story writers.

From Van Dweller to Commuter. By Albert Bigelow Paine. New York: Harper & Brothers.

This is a good-humored, rambling account of domestic adventures in New York and its purlieus. The recorder of them, the Little Woman, the Precious Ones, and the Tiny Small One are the central personages of the narrative, and about them circulate such well-known figures of comedy as landlords, janitresses, movers, servant girls of all nations, carpenters, gardeners, and the like. A succession of local habitations—which the writer usually refers to as "nests"—ranging from Harlem apartments and Manhattan boarding houses to a suburban cottage, with fireplace and garden, provide frequent change of scene and new fields of experience. The record is set down with a vivacity at times forced, at other times trite, but occasionally, one is glad to confess it, both natural and refreshing.

> The family had moved from flat to flat, always pursuing the will-o'-the-wisp hope that each new change would bring permanent satisfaction. Once, for a while, the hope seemed realized.

But the Precious Ones had by this time grown fond of change. We were scarcely settled before they began to ask when we were going to move again, and often requested as a favor that we take them out to look at some flats. . . . In fact, they really embarrassed us sometimes, when, on warm Sunday afternoons, where people were sitting out on shady steps, they would pause eagerly in front of the sign, *To Let*, with, "Oh, papa, look! Seven rooms and bath! Oh, mamma, let's go in and see them!"

Though the narrative for the most part runs too familiarly along well-worn grooves, its facile humor and abundant sentiment may well afford some innocent diversion—especially to readers whose memory turns backward to adventures of kindred nature.

The Crested Seas. By James Brendan Connolly. New York: Charles Scribner's Sons.

Mr. Connolly's technical facility is a dangerous possession. One has the feeling that his stories are produced too easily; that having discovered certain situations that can be counted upon to succeed with his readers, the author is satisfied with repeating them over and over under rather thin disguises. Are we not threatened by a school of "out-of-Gloucester" fiction somewhat analogous to the "kailyard" school of a decade or more ago? In two of the stories of the present volume the theme is that of conversion through coincidences bearing a supernatural interpretation; in two more it is of life nobly risked for friendship; two tell of daring runs for home made against every odd of wind and weather—in the one case that Skipper Coleman might have Christmas with the wife whom he had left in anger; in the other, that Skipper Clancy might greet the new arrival in his household. No fault, surely, is to be found with this constant appeal to sentiments eternally fruitful in human life; the danger is that one shall trust a good sentiment to buoy up an unseaworthy story. Mr. Connolly's sailors too often swear with a certain literary consciousness and philosophize in a diction too fluent and cultivated to convince a thoughtful reader. When the captain, in "The Illimitable Senses," is setting forth his views on the interplay of the supernatural and the natural, we seem to lose touch with dramatic veracity at hearing him observe:

> They were beginning to catch a glimmering of the mighty scheme—a scheme so vast in conception, so sublime in execution, that for the ordinary mind to attempt to grasp its immensity is to court the overthrow of reason.

There is a Gloucesterman for you, indeed!

That the author possesses a real, if not too versatile, narrative gift is undeniable. He is at his best when least impeded by plot. In "The Christmas Passage," "The Drawn Shutters," and "The Ice Dogs," there are records of flights through perilous seas that would be hard to surpass in their kind. Mention should also be made of "The Harsh Word," in which the author rises above his familiar broad-sided character delineation and presents us with an individual and highly suggestive study. The story of Bushie of the Cygnet—weak-hearted, lovable, contemptible, and pathetic Bushie—goes far to cover many artistic sins.

Judaism. By Israel Abrahams. London: Archibald Constable & Co.

The publication by Constable of a series of shilling booklets of about 100 pages each on Religions Ancient and Modern may be taken as an indication of the growing popular interest in the presentation of religious systems other than the one into which we happen to have been born or to which we are attached. The publishers have been fortunate in securing the coöperation of distinguished scholars; and as a result the volumes so far issued have been well received, and will no doubt prove useful in spreading the results of recent research. Prof. Flinders Petrie has written "The Religion of Ancient Egypt"; Dr. T. G. Pinches, for many years connected with the department of Assyrian antiquities at the British Museum, "The Religion of Babylonia and Assyria"; Miss Jane Harrison, a most distinguished authority on Greek religion, has prepared an exceptionally able volume, "The Religion of Ancient Greece"; and so on through a long list issued or to come. The latest volume, an exposition of "Judaism," in a compass of 105 pages by Mr. Abrahams, reader in Talmudic and Rabbinic Literature at the University of Cambridge, may be heartily recommended to

all who desire an authoritative and singularly impartial survey of a religion which is at once "ancient and modern," and of which most people have strange misconceptions.

Mr. Abrahams properly insists on the distinction between the religion of the ancient Hebrews and Judaism. The latter is an outcome of the former, hut along a line of development that makes Judaism a practically new and distinct product. Judaism hegins with the decline of the political life of the Jews. The so-called Babylonian exile proved a fatal interruption of political progress. Abortive attempts were made after the Restoration to reëstablish a Jewish State, but these attempts reflected little credit on the ability of the Jews to govern themselves under the new conditions brought about by the rise of the world-powers, Persia, Greece, and Rome. The political vitality of the people grew weaker with each succeeding generation, but in return the religious life of the people gave rise to manifestations which eventually made Judaism a much more potent factor than a petty Jewish state could ever have been.

Mr. Abrahams, who writes as a scholar and as a broad-minded Jew, aims to set forth the chief traits of this new religion which arose, as it were, out of the decay of the Jewish state, and to trace the more important phenomena connected with Judaism in the course of its long and eventful history. This he does succinctly, skilfully, and with commendable courage; for he does not hesitate to point out the weak points in the system of orthodox Judaism, while shielding it from some of the unjust attacks that have been made upon it by those who judge from external symptoms. The chapter on "Religion as Law" is an excellent summary of the peculiar conception of religious duty which in Talmudic Judaism produced a most complicated body of petty enactments concerning almost every act of daily life. That the ethical and the genuine religious spirit was not stifled under the weight of the Talmudical regulations is a tribute to the humanitarian element in Judaism which should warn us against identifying Judaism entirely with law. It is this element—to be directly traced to the Hebrew prophets of the eighth and seventh centuries before Christ—that enabled Judaism to throw off the shackles of traditional rites with the rise of those modern conditions which led to the gradual political and social enfranchisement of the Jews in all civilized countries. This process—the adaptation of the old Judaism to new conditions—is still going on; and while on the one hand the process is one of disintegration. on the other hand it has served to emphasize the ethical and spiritual content of the religion.

Mr. Abrahams speaks in no uncertain terms of the futility of all attempts to reestablish a Jewish state, and he plainly hints that a restoration would be a misfortune rather than a boon. He might have made still stronger his warning against the confusion that is being created hy romantic and sentimental appeals to arouse the "national" spirit in the modern Jew. Fortunately, the currents of modern life are all in the other direction, towards bringing Judaism and the Jews into closer contact with the world. In his closing chapter, "The Survival of Judaism," which will be read with special interest, Mr. Abrahams has forcibly shown that if Judaism still has a mission to perform, it must be in the world about us and not in an isolated district, apart from the intellectual movem nts of the day.

The Annual of the British School of Athens. No. xii.; Session 1905-1906. Pp. 523, 12 plates. New York: The Macmillan Co.

This is a larger volume than any of its predecessors, and contains a great variety of archæological papers—from one on Damophon of Messene, and a brief report of last year's explorations at Palæcastro, to interesting Notes on the Sporades. For the first year since his excavations hegan in 1900, Arthur Evans makes no report on his work at Cnosus, and we may hope that he is occupied with the definitive account of his explorations. His chief assistant, Duncan Mackenzie, continuing a discussion of Cretan palaces and the Ægean civilization, makes a detailed and very ingenious argument from the ancient Cretan dress, to support the view that the pre-Hellenic, non-Aryan, and non-Semitic inhabitants of Greece and Crete came from Africa, though they were not of a negro race. Their garb seems to be either the loin-cloth or developed from this. This is natural if they were derived from a warm country, while it is unnatural if they had come down from the northern regions, where much more and warmer clothing would be necessary. Mr. Mackenzie admits, however, that "it is a long story from the primitive aprons of Neolithic Crete to the gorgeous loin-cloth costumes and elaborate embroidered gowns of the Queen's Procession" at Cnosus. He argues also for the southern connections of the central hearth in the Mycenæan great hall or *megaron.*

Nearly half of the thick volume is devoted to reports of the British explorations in Sparta in the spring of 1906, with articles on Mediæval Fortresses in Laconia, the City Wall, the Great Altar near the Eurotas, the Cult of Orthia, Spartan Inscriptions, the Theatre, Roman Baths, etc.—with sufficient and satisfactory illustrations. Sparta, which has been neglected, comparatively speaking, by archæologists, is deçlared to he a site of rare promise for exploration. The store of votive offerings, discovered last year, while scientifically important, is not so popularly exciting as was inferred from the brief report by cable at the time of the excavations. As all know, Sparta had no city walls in her great period —her citizens were her walls—but the city was fortified in successive stages from the fourth to the second century B. C., with a wall between five and six miles in extent. For a considerable distance this wall is now traced and examined. It was from seven to ten feet in breadth, with a basement of limestone blocks and a roofing of terra-cotta tiles. The body of the wall was of sun-burned bricks, which have been resolved into common earth, and its height does not seem to have been estimated. A number of inscriptions, copied by Fourmont nearly two centuries ago, have been rediscovered, under circumstances which indicate that the French traveller, who has not had a very good name among scholars of late, after copying the inscriptions, buried them, in order to preserve the stones as well as possible for future generations. Fourmont's act shows more conscience than many archæologists of to-day display. The uncovering of ruins of antiquity, and then leaving the stones, often before adequate publication, to be used by modern masons, is far too frequent. The story told in these reports from Sparta of the recent destruction of ancient monuments, is pitiful, and emphasizes the urgency of studying at once these remains of classical antiquity.

The British School at Athens is accomplishing an important and honorable work in stimulating and training scholars. To it is due in large measure the great increase in the number of scientific archæologists in Great Britain. The American School of Classical Studies at Athens, founded in 1881, at about the same time as the British School, perhaps has not trained quite so many technical archæologists, but a larger number of its former students now occupy prominent and influential places as teachers of the classics.

A Short History of Philosophy. By Archibald B. D. Alexander. Pp. 588. New York: The Macmillan Co. $2.60 net.

In less than six hundred pages the author gives the history of philosophy from the beginning to the present time. It is thus possible for the student to have a book of reference on this subject in one volume; otherwise, it is doubtful whether there was any demand for such a work as Mr. Alexander has written. Already there are many good treatises on the history of philosophy, and in this one there is nothing so different from the others published in Europe and America, as to justify its appearance. It may be remarked, however, that certain chapters contain an exposition of systems of philosophy generally unnoticed by English-speaking historians. Among these chapters are those on the earlier rationalism of Bossuet, Fontenelle, and Bayle; on the popular philosophy of Mendelssohn, Nicolai, and Lessing; on the "philosophy of feeling" of Hamann, Herder, Jacohi, and Schiller; and on the French thought of the nineteenth century. It is singular that the author, although a Scotchman, gives but seven pages, exclusive of those occupied by Humè, to the philosophy of his native country—about one-third of the space devoted to the exposition of Leibniz.

The classification adopted is good, heing well fitted to show the historical relations of system to system. It is not clear, however, for what reason Mr. Alexander puts under the head of "Systems of Unity" in the Pre-Socratic period, the philosophy of Pythagoras, which was plainly pluralistic, while that of Heraclitus is interpreted as a system of pluralism.

For the most part the author's explanations and criticisms are clear and just. He is, however, less happy in his chapters on German philosophy from Kant to Hegel than in any other parts of his work. The exposition of the Critique of Pure Reason is particularly slovenly. For example:

> The matter is the thing perceived; the form is that which reduces the manifoldness of appearance to order. But that which gives order to our sensations cannot belong to the phenomena themselves, hut must be the pure forms which, lying already in the mind, take up the matter and give it unity.

Yet, as we understand Kant, the "thing" is not perceived; the form does not reduce "the manifoldness to order," and the "pure forms" do not "take up the matter and give it unity," nor do they lie in the mind. The chapter on Hegel is also unsatisfactory, and is a new illustration of the fact that it is well-nigh impossible to make Hegelianism speak English. Moreover, in the brief account given of recent British ethics, the author fails to bring out clearly the distinction between the various systems of Utilitarianism, as for example that between the "greatest happiness" principle as interpreted by Bentham and Mill respectively.

The book is well-printed, has a full bibliography, a good table of contents, and an excellent index.

Science.

The Collected Mathematical Works of George William Hill. Vol. IV. Washington: Carnegie Institution.

This is a quarto of solid mathematics of 460 pages, which differs from the other three volumes in that about a quarter of its matter here appears for the first time in print. The thirty-three memoirs are of various degrees of importance. All but two or three relate to planetary and lunar theory.

This science, which in Ptolemy's time, in Keppler's, in Newton's, represented the very highest climbs of scientific intelligence, to-day, by force of its own perfectionment, and by the growth of other sciences that began by being its pupils, is reduced to an art of performing excessively intricate calculations. It must be a peculiar mind that can devote a lifetime to it; and with less devotion there is no chance of being able to improve it. Tradition (along with something else) influences the scientific world greatly to honor any exceptional mastery of it; and yet it has now come to offer the barest minimum of interest from the point of view of philosophy or that of positive science, and scarcely more from that of logic; not even very much from a purely mathematical standpoint. Its difficulty consists in its extreme intricacy and in the extraordinary exactitude of the observational data with which its results must be confronted. As to the complexity of the facts themselves, it is as nothing compared with that of almost the simplest terrestrial phenomena; for the single dynamical law involved—that of gravitation—is all but the simplest conceivable, and has already been most thoroughly studied.

In another five or ten centuries we may hope that such calculations as Mr. Hill's will bring some discovery of vital moment, just as Lord Rayleigh's fastidiousness about the specific gravity of nitrogen did. But our hope is subject to two parlous conditions: first, that the Greenwich Observatory will keep up its work during all that time; and, secondly, that men will continue to be produced with faith, like Mr. Hill's, sufficient to induce them to spend their lives in computations which can have no useful results in their time, and for which none will thank them but those in whose breasts their enthusiasm can kindle a sympathetic spark. It is that spark, hot and lasting, which is the second reason of the honor that all true men of science pay them.

Among the papers in this volume which do not relate to planetary or lunar theory, there is none that compares in interest with that infinite determinant by which Mr. Hill succeeded in solving for the first time an important class of differential equations. A useful method is developed for deducing the coefficients of a power series from special values of the series. There is an extremely interesting memoir of forty pages on the distribution of gravity over the earth's surface, in which the author introduces an idea which he has repeatedly introduced into his astronomical work.

There is also a paper upon the proper choice of a projection for a map whose "chief end is to present to the eye a picture of what appears on the surface of the earth." The paper occupies but eleven pages, and we should not have taken notice of it here, but for the fact that it furnishes some data for the study of a question in a branch of science whose students would little dream of seeking light in anybody's "collected mathematical works." The question relates to psychology: namely, how much justification is there for two imputations ordinarily made upon the wisdom of mathematicians in general, especially theoretical astronomers, and above all others Laplace?

One of these imputed characters is a readiness to assume superior competence to deal with some matters that are altogether outside their horizons. The other is a disposition to take short cuts to the solution of problems, mostly practical, that properly demand examination of the results of extended experience, and to take these short cuts by setting up hastily adopted principles as entitled to overrule every other consideration. This is substantially what Napoleon said of Laplace, although the real fault was Napoleon's own for supposing that great capacity in one narrow direction was any reason for expecting marked talent in a totally different line.

The particular problem of the map-projection which Mr. Hill treats, plainly calls for a thorough acquaintance with three extensive classes of facts. In the first place, the problem is a psychological one; and a large mass of psychological observations bearing upon the question are on record; and they can readily be supplemented by experiment. In the second place, a knowledge of the methods of the cartographical draughtsman is called for. In the third place, the problem, far from being at all novel, has been many times luminously treated by men well-versed in all three classes of facts.

Mr. Hill's memoir, however, shows insufficient consideration of each of these three classes of facts. He bases his conclusion upon principles which seem to be, considering the high rank of the author as a scientist, astoundingly arbitrary, and certainly not universally true. Two of these principles were first put forward by great mathematicians; but one of them is, none the less, obtrusively absurd to anybody acquainted with the art of cartographical draughting, while the other, apparently based upon a consideration of small consequence, conflicts with the defined purpose of the maps under consideration. In short, the memoir is a remarkable instance of a publication which, beginning by clearly defining its purpose as a practical one, neglects all the practical aspects of the problem, and busies itself exclusively with matters of curiosity which are practical trivialities. The map of Asia that is given at the end is certainly better than the frightful deformities which, until recently, were given in our atlases. But it does not present as good a picture of the continent as some others. If, instead of Asia, what was to be pictured had been the entire United States and all its possessions, a very different projection would show the relations between the parts very satisfactorily.

Handbook of the Trees of the Northern States and Canada. By Romeyn B. Hough. Lowville, N. Y. Published by the author.

This volume may well be styled photo-descriptive. Opened at any page, its scope and value are instantly apparent. The unique wood sections, which comprise Mr. Hough's "American Woods," are widely known; and it was during trips in search of them that he obtained the series of nearly seven hundred negatives which practically constitute the present work. For the nature-lover, the lumberman, and especially for the student of the evolution of our arboreal flora, this mode of graphic presentation will prove of great help. Indeed, it is difficult to see how such a method can be surpassed. The volume treats of all the trees of the northern United States and Canada, two pages facing each other being devoted to each species.

For example, pages 228 and 229 are devoted to the sycamore. The names buttonwood and button-ball tree are given as synonyms, followed by the scientific title. On the first page are photographs of a branchlet bearing the mature leaves and fruit; a fruiting head separating, with scattered akenes and hairs; a branchlet from a vigorous shoot showing stipules; a branchlet in winter, and an example of the cup-shaped base of the petiole. These are all photographed on a background ruled into inch squares, giving at once the relative size. The winter branchlet of natural size is of especial value, as presenting clearly the winter characters of the tree. On the opposite page is a photograph of a large isolated trunk showing the general character of bark and branches, while a foot-rule laid against the tree shows proportions. The distribution of the sycamore is indicated by the shaded area on a two by two and a half-inch map. Another cut of about the same size shows the photographic appearance of a thin section of the wood magnified fifteen diameters. The rest of the page is filled with some three hundred words of text descriptive of the color, size, and abundance of the tree, and especially of its adaptability to commercial use. A few lines of fine print give technical characters of leaves, flowers, and fruit. A foot-note refers to page 437, where we find a synopsis of the family and genus. Following this synopsis is a well-compiled glossary and an index of both common and botanical names.

The photographs are excellent, and there is nothing but praise for the work as a whole. From the point of view of evolution its value is apparent when we review the char-

acters of twenty-two species of oaks presented in regular sequence. This handbook should be widely useful in nature libraries, schools, and colleges.

"Ornithological and Other Oddities," by Frank Finn (John Lane Company), is a collection of thirty-eight short articles, which have appeared in various English publications. All but six deal with birds, and some of the subjects are of unusual interest. There are two criticisms of the volume itself. An unusually wide margin at the outer side of the page is balanced by almost none on the binding side, making perusal anything but easy; and it is difficult to understand why this book has been put out of the reach of many readers by a price of five dollars. Certain of the topics, such as courtship, the toilet of birds, talking and fighting birds, are far from new, and contain little more than a popular review of well-known facts. The most valuable portion is that dealing with the birds of India, a country where Mr. Finn has spent many years. This matter we wish that he had elaborated into a book, instead of burying it in one of the indefinable ornithological miscellanies which of late are appearing in numbers. New and interesting facts are related about the koel, brain-fever bird, and other Indian cuckoos, and about the colony of wild herons, cormorants, and snake-birds in the Calcutta Zoölogical Gardens. Year after year new species came to this haven of birds, and increased so that at last it was found necessary to shoot several hundred herons. This was done with discrimination, and without breaking up the colony as a whole. Every word of this account is full of interest. The domestic life of the dabchick, as observed by the author in India, is well told, and other subjects, worthy of more extended treatment, concern the feathered scavengers at Dhappa, and the treatment of animals in India. We hardly agree with the author that the concave-casqued hornbill "owes the yellow color of its neck and some of its wing feathers" solely to a free supply of oil from the oil-gland.

At the first autumn session of the French Académie de Médecine (October 1) Professor Grimbert of the Paris École de Pharmacie read a summary of the nature and quantity of medicaments furnished each year to the 219 city hospitals. Some of his figures, going back forty years, show fashion as well as progress in medicine; but, on the whole, they may be taken as indicating present therapeutical practice in France. In spite of recent synthetic products, "classic" remedies in many cases hold their own. The annual use of opium is 440 pounds, with 110 pounds of Sydenham's laudanum; extract of quinquina, 880 pounds; adhesive plaster of the old elaborate composition (diachylon), 4,400 pounds; and tincture of iodine, 6,600 pounds. Among chemical products always in favor are subnitrate of bismuth, 1,320 pounds; salicylate of soda for rheumatics, 880; bromide of potassium for nerves, 2,640; and glycerine, 121,000 pounds. The once universal physic calomel has only 66 pounds to its credit; nitrate of silver, 132; and cantharides, within twenty years, have sunk from 440 to 35 pounds. But from 10,000 to 12,000 leeches, belonging to the same period of medication, are ordered yearly, going along with a slow revival of bleeding in French practice. There is a considerable diminution in the use of certain remedies which, until lately, were constantly employed: salts of quinine from 165 to 110 pounds; antipyrine from 874 to 550 (but this corresponds with the rapid rise of newer preparations like pyramidon, aspirine, etc.); iodide of potassium from 2,640 to 1,240; iodide of sodium from 220 to 132 pounds. The diminution in the use of toxic antiseptics has been still more rapid: iodoform from 1,320 to 440; and phenic or carbolic acid from 26,400 to 11,000 pounds. These are doubtless supplied in part by the strict attention now paid to asepsy; but it may be noted that the use of formol has increased from 660 to 4,400 litres a year, and oxygenated water from 2,200 to 224,000 litres. As a consequence of the struggle undertaken by the medical profession in France against alcohol, the consumption of rum (its hospital shape) has sunk from 66,000 litres in 1900 to 27,400 in 1906—a cutting off of 40,000 American quarts, or nearly 60 per cent. in six years. The record of rise to favor for a new drug is held by salicylate of methyl, from 4½ to 1,540 pounds a year.

The general press has given altogether too sensational an air to the experiments of Yves Delage, professor at the Sorbonne, as reported to the French Academy of Sciences. He has continued with original results the line of investigation begun by Prof. Jacques Loeb of the University of California. So far from "creating living beings" these experiments concern only artificial parthenogenesis in animals like sea urchins, whose natural reproduction supposes differentiation of sex. M. Delage says:

> I had a purely theoretic idea that the succession of phenomena produced in the egg from the moment of fecundation consisted simply in a series of successive coagulations and liquefactions of the colloidal substances composing the egg. My experiments aimed at producing, by means of physical or chemical agents, these coagulations and liquefactions in proper order and time just as is done when the egg is fecundated naturally.

The ninth International Geographical Congress has been called to meet in Geneva from July 27 to August 6 next year. In connection with this meeting there will be ten excursions under leadership of prominent scholars. The Geographical Society of Geneva, which has just issued this preliminary announcement, will publish the final programme in January, 1908. The number of participants in the scientific excursions is to be limited.

Maurice Loewy, the French astronomer and director of the Paris Observatory, dropped dead on October 15 at a meeting of the National Board of French Observatories. He was in his seventy-fifth year. A Viennese by birth, he was educated in his native city, and became one of the most distinguished students at the observatory there. The prejudice against his Jewish origin, however, stood in the way of his professional advancement in Vienna, and Leverrier invited him to come to the Paris Observatory as his student. In 1864 Leverrier appointed Loewy his assistant at the observatory. In 1872 he became a member of the Bureau of Longitudes, and in the following year of the Academy of Sciences. With a reorganization of the observatory, in 1873, Loewy was placed at the head of the division of instruments, and upon the death of Leverrier he was installed as director of the institution. In 1882 he headed a scientific party to Cape Horn, as a result of which he published a remarkable treatise correcting existing data on the paths of some of the heavenly bodies. In addition to his early investigations of longitude, Loewy's chief contributions to the science of astronomy were his discoveries concerning the influence of the planets on the photosphere of the sun, and concerning twin stars. He has made some delicate calculations on the distances between astral bodies and the earth, and has improved methods of calculation in maritime science. His monographs have been published in the records of the Viennese Academy, in the *Comptes rendus* of the Paris Academy of Sciences, and in the *Annales* of the Paris Observatory.

Charles Stewart, conservator of the Museum of the Royal College of Surgeons, and Hunterian professor of human and comparative anatomy, has just died in London at the age of sixty-seven.

Drama.

A New Variorum Edition of Shakespeare: The Tragedie of Antonie and Cleopatra. Edited by Horace Howard Furness. Philadelphia: J. B. Lippincott Company. $4 net.

There is no question as to the satisfaction with which Shakesperean scholars receive a new volume of Dr. Furness's monumental edition. It is no small benefaction to present the hard-pressed student with an accurate reprint of the Folio text, with the pith of the commentary of two centuries, textual and interpretative, the history of research into date and sources, and the record of the stage tradition. In addition to these features, the present volume contains a reprint of the passages from Plutarch's life of Anthony used by Shakespeare, of the account of Cleopatra by Dion Cassius, of Dryden's "All for Love," and summaries of some twenty other dramatic treatments of the story. Dr. Furness's skill in condensation and selection is once more triumphantly exhibited, and the former standard of painstaking accuracy is upheld. For all these things he deserves our warmest gratitude.

It has been often observed that in the later volumes of this edition the comments of the editor appear with greater fulness and frequency than in the earlier. This tendency has now reached such proportions that the new volume contains more of Dr. Furness than of any other one critic. We thus have a new as well as a variorum edition. The most striking characteristic of Dr. Furness as an editor, as distinct from a compiler, is his loyalty to the text of the First Folio. The conservative tendency of the last generation of Shakespearean textual critics becomes in him, as it did in Knight, all but an idolatry. After a few pages the reader finds himself assuming that the final sentences of a note on a textual difficulty will seek to decide the controversy in favor of the Folio reading, if that is in the remotest degree possible. This method, one must admit, is im-

measurably preferable to such rash emendation as destroys the value of a text like Hudson's; yet, on the other hand, it is well to remember that the circumstances of publication and the standard of workmanship in the edition of 1623 assure a fairly large percentage of error. Dr. Furness's own estimate of from sixty to a hundred and twenty necessary corrections in a single play should warn us against a policy of following the Folio at all costs. A few examples will show to what extremes he is prepared to go. In the speech of Charmian (II., i., 4), "Oh, that I knewe this Husband, which you say, must *change* his Hornes with Garlands," all but two nineteenth-century editors have accepted Theobald's emendation of "change" to "charge," in the familiar sense of "load." Dr. Furness returns to "change," in the sense of "indifferently changing the symbols of disgrace with the chaplets of marriage." But remembering that the horns, the symbols of disgrace, already imply marriage, it is hard to find sense in such a "change"; and it is not quite fair to call the alternation of *n* to *r* the substitution of another word. Again, in Anthony's speech (I., ii., 186),

> I shall breake
> The cause of our Expedience to the Queene,
> And get her *love* to part,

modern editors, with one or two exceptions, have emended "love" to "leave," a change elsewhere necessary in the Folio. Dr. Furness retains "love," giving weight to Capell's point that it would be beneath Anthony's dignity to get leave of any one. But "leave" in this sense is a formal word, in which the idea of permission is often reduced to the vanishing point. The same consideration answers Dr. Furness's own reason that Anthony's previous sentence, "Let our officers have notice what we purpose," makes a later leave-getting absurd. At times such extreme defences of the old copy seem due to insufficient attention to the larger context. In Cæsar's speech (I., iv., 44),

> It hath bin taught us from the primall state
> That he which is was wisht, untill he were:
> And the ebb'd man,
> Ne're lov'd till ne're worth love,
> Comes *fear'd*, by being lack'd,

Theobald, followed by all except Collier and Knight, alters "fear'd" to "dear'd." To us it seems clear that "he which is" refers to Cæsar, now in power, but becoming unpopular, and that "the ebb'd man" is Pompey, out of power, but, as stated by Messala in the previous speech, "belov'd of those that only have fear'd Cæsar." It was on this interpretation that Theobald made his alteration; but Dr. Furness returns to "fear'd," ignoring, as it seems to us, the bearing of Messala's speech, which indicates the point of Cæsar's moralizing. Opinions may differ in single instances, but as to the general fact there can be no doubt that Dr. Furness's ardor in changing to the text of 1623 leads him frequently into desperate situations.

The prefaces of these volumes are always lively and interesting. They seem to be written after the long toil of the compilation is over, and the editor is allowing himself to relax. Thus they are often whimsical, sometimes sparkling and jocular, sometimes indicating weariness and a doubt as to the value of the whole laborious business. In any case, they are not always to be taken as representing the editor's sober and fixed opinion; for they occasionally contradict that opinion as expressed in the body of the volumes. For this reason, we do not seek to controvert what seems to us an exaggeration of the nobility of the characters of Cleopatra and Octavius, nor the outburst against the study of Shakespeare's source, especially as elsewhere in the book Dr. Furness points out the high value of just such study. More serious is his insistence on the theory that many corruptions of the text are due to the hypothetical reader to the compositor. It is no longer safe, in view of Guy M. Carleton's researches, to base inferences on the alleged practice in early printing offices of reading copy aloud to the compositor. The external evidence for such a practice has been disposed of, and the internal evidence afforded in the present volume can be explained by the fact that a compositor or transcriber using his eyes on the copy may still make mistakes from a confusion of sounds in his mind's ear.

But, be it repeated, differences of opinion with regard to the soundness of Dr. Furness's original contributions, do not affect the high value to be placed upon the main purpose of his work and the splendid manner in which he continues to carry it out.

About December 1 the Macmillan Company will publish "Faust: A Drama," by Stephen Phillips.

Lovers of Elizabethan literature will find much pleasure in reading Pietro Bardi's scholarly translation of Marlowe's "Faustus"—"La Tragica Storia del Dottor Fausto" (Bari: Lateraza). It is interesting particularly to see how readily the verse of Marlowe goes over into Italian prose. Apparently the expansiveness and marked rhetorical flavor of modern Italian make it an appropriate vehicle for this sort of translation. Of the version, with the accompanying notes and introduction, little but good is to be said. At a few points, however, the translator has quailed unnecessarily before the audacities of the original. For example:

Fu questo il volto che *spinse mille navi nel mare?*

seems a tame rendering for the famous

Was this the face that *launched* a thousand ships?

The more drastic *varò* (launched) seems possible and preferable. Or take the line

See, see where Christ's blood *streams* in the firmament!

Vedi dovo il sangue di Cristo *irriga* il firmamento!

The literal rendering misses the metaphor which "streams" certainly is in this case. *Raggia* or even *balena* would give the comet-like effect intended. Evidently the translator has been misled by supposing streams must be logically congruous with the ensuing "A drop, a single drop," etc. The Elizabethan metaphor seldom advanced with such Quintilianian regularity. But such lapses are rare, and the prettily made brochure does credit to Italian scholarship. Since, except for fragments, this is a pioneer version in Italian, one may regret that Mr. Bullen's composite and arbitrarily eclectic text was adopted. To parallel the texts of 1604 and 1616 seems the ideal, or if this be impracticable, to stand loyally by the fuller version.

"The Step-Sister," by Charles Klein, produced in the Garrick Theatre on Monday evening, was a great disappointment. Instead of being in any sense a kindred work to "The Lion and the Mouse," it proved to be conventional domestic melodrama of a third-rate kind, of which the humor, the pathos, and the incidents, with very few exceptions, were alike mechanical. Some of the characters exhibited a certain inventiveness, but the general impression conveyed by the performance was one of cheap theatricality.

Music.

Alfred Bruneau. By Arthur Hervey. New York: John Lane Co. $1 net.

The late Edvard Grieg was for several decades one of the most popular of composers, yet up to two years before his death there was no biography of him in any language except the Norwegian. Of Saint-Saëns, who, now that Grieg is no more, must be called the greatest of living composers, there exists to this day no life except a short one in German. Dvorák, though dead since 1904, still awaits his biographer; so do Massenet, Goldmark, Paderewski, and even the much-discussed Richard Strauss, to whom the Germans alone have devoted biographic volumes. Our own Edward MacDowell has been honored, thanks to an English publisher, John Lane, with a monograph in the series of Living Masters of Music—a title which, it is to be feared, will soon be as inappropriate for him as it is now for Grieg. To the same series belongs the book of Arthur Hervey on Alfred Bruneau, a Frenchman who thus receives biographic attention before his countryman Saint-Saëns, whose junior he is by twenty-two years.

Maybe the uneventfulness of the lives of most composers accounts for the scant attention paid them by bookmakers—but no, for how about Liszt, whose life was full of romance, which will be revealed to English readers for the first time when James Huneker completes his two volumes? In the case of Bruneau, not only has his life been barren of stirring events, but his music is so little known in England and America that one is rather surprised to come across this volume. Those, however, who are interested in French musical developments will be glad to have it; and probably it will serve the useful purpose of calling the attention of our performing musicians to works which perhaps would be as much appreciated here as they are in Paris. The attitude of the musicians and managers is often mysterious and incomprehensible. Mr. Hervey expresses his surprise that Bruneau's opera, "L'Attaque du Moulin," after creating a profound sensation in London (the *Times* pronounced it "a masterpiece of art . . . a story of thrilling human interest . . . an opera the like of which has seldom been seen"), was afterwards unaccountably neglected. But this is no unusual thing. In New York, Paderewski's "Manru" was, toward the end of one season, sung before four crowded and enthusiastic audiences; yet that was the last ever heard of it.

Mr. Hervey goes so far as to claim for M. Bruneau that he "created a special style of musical drama"; and he is no doubt right, though the word special does not in

this case signify original. His melodies—he is sufficiently old-fashioned to have melodies—are his own, hut his system is Wagnerian. Bruneau's operas are an adaptation of the Wagnerian system of *Leitmotiv* to modern French realism. In his suhjects, indeed, he represents the antipode of the great German. "In ordinary life," says our author, "people do not express their thoughts in song, and it is in order that this apparent ahsurdity should be lessened that Wagner chose legendary suhjects for most of his works." Bruneau, on the other hand, declares that "nothing is so contrary to modernity as the return to the clouds of the legend; nothing is so opposed to the spirit of our race as the conception of happiness in death"—a comment which does not indicate an excessively deep comprehension of the spirit of Wagner's poems.

In the opera "Messidor," Bruneau made a new departure hy discarding verse. Berlioz had held the opinion that prose was hetter suited for operatic texts than verse, hut he never put his belief into practice. Gounod went farther; he began setting to music a play in prose, but for some reason or other did not finish it; so it remained for Bruneau to carry out the plan. His collahorator was Émile Zola, who also prepared the "books" for the other operas of Bruneau. His association with this eminent novelist is, indeed, the most interesting phase in the life of Bruneau, as it affords us a glimpse of his character. Bruneau was struggling hard for recognition, and was just heginning to he appreciated when the Dreyfus case came up. During this trial he remained the faithful companion of Zola, heing ever at his side. "Strange though it may seem," says Mr. Hervey, "the fact of an artist heing known to helong to the unpopular camp was sufficient to prejudice some people against his works, and Bruneau found this to his cost." But the storm hlew over, and he is now coming into his own.

Bruneau is one of the leading musical critics of the French metropolis and the author of some valuable books on music in France and in Russia. He has given a vivid account of his conservatory days, when he was a pupil of Massenet. That eminent opera composer, "his face encircled by a short and silky fair heard, his long hair hrushed back," used to sit at the piano, singing with his caressing yet penetrating voice some example of Gluck, of Wagner, of Saint-Saëns, while some fifty young students from all parts of the world, surrounded him, following intently the music he was passionately analyzing. To the more advanced students he taught instrumentation at his home; to them he played the music of his operas as soon as it was written, and he had the queer habit of scrihhling on the pages of his manuscript from day to day remarks on the weather and of persons he had met—"something like an orchestrated edition of the journal of the Goncourt hrothers,"

The festivals held in Portland and Bangor early in Octoher are the great musical events of the year in Maine. By means of them Mr. and Mrs. William R. Chapman have done more for the development of a love of music in that State than all other factors comhined. No fewer than thirty-six towns now coöperate in making these festivals notahle, and there is a healthful rivalry among them to excel at rehearsals as well as at the puhlic performances. Some of the greatest singers in the world have also heen thus hrought to Maine. This year Emma Calvé was the higgest star, and all Maine turned out to honor her and enjoy her rare art. Among the other artists were Janet Spencer, Daniel Beddoe, Cecil Fanning, Clifford Wiley, Virginia Wilson, Renée Chemet. With a chorus of 1,000 voices "Samson and Delilah" was sung without cuts.

The Olive Mead Quartet gives its first New York concert on Thursday evening, January 2, later than its usual date of opening, on account of a Western tour, which includes engagements on the Pacific Coast.

Harold Bauer will play one of the MacDowell sonatas at his American recitals this season. Other novelties on his programmes will he his own arrangement of an organ piece hy César Franck, pieces by Dehussy, "some Hungarian melodies of Bach quite unknown," and a suite by Albeniz, hased on Spanish national airs.

An important sale of autographs is to he held hy Loe Liepmannsohn in Berlin on Novemher 4 and 5. The collection is particularly rich in musical manuscripts. Beethoven, Brahms, Chopin, Haydn, Liszt, Mozart, Schuhert, Wagner, and others are represented.

Art.

Die Malerische Decoration der San Francesco Kirche zu Assisi: Ein Beitrag zur Lösung der Cimabue Frage. Von Andreas Auhert. Leipzig: W. Hierseman.

Dr. Auhert's hook is a careful study of a much disputed question, and, so far as its main issues are concerned, it is the most conclusive essay that has as yet appeared upon the subject. In undertaking the rehahilitation of Cimahue as an artistic personality worthy of his traditional fame, the author has sought to confute recent negative criticism, which, in its more extreme partisans has gone to the point of reducing Cimabue to the mere shadow of a name. As was to be expected, he goes about his work in the spirit of an advocate, and his counter-plea is as energetic as it is uncompromising. Dr. Auhert may fairly he said to have won his case, and to have set the real Cimahue hefore the still skeptical public in a clear, and, as it may appear to many, a new light. His hrief for the Florentine master, however, is far from heing a mere piece of controversial argument; it is as well an admirable example of constructive criticism. Dr. Auhert further deserves the rare distinction of having written a book which he may justly call his own. He has set out in the heginning with independent ideas, and has remained, from start to finish, quite unaffected hy the numherless theories which have been advanced on the suhject. In fact, he fails even to mention some of the more important, and confines his quotations to a few of his opponents. But we gladly forgive him such omissions in the pleasure of reading a book which, for once, is something more than a mere compilation or a dull repetition.

The author's enthusiastic admiration of the art of the thirteenth century, and the repeated insistence upon its monumentally decorative quality, with which he prefaces his studies, are welcome and timely, for there is perhaps no division of Occidental art which is less rightly understood. With all that has heen written of late, it has remained a hahit to treat this period from a purely archæologic standpoint. From any such narrowness, Dr. Auhert is wholesomely free, and his appreciative defence of the neglected giants of pre-Giottesque painting wins our sympathies at once.

In his opening chapters, the writer claims perhaps too much originality for what he terms the "method of the two parallel lines"—*i. e.*, the parallel and contemporary study of form and ornament which underlies his researches. Still, if he cannot be called the discoverer of such a system, he certainly has used it to its hest advantage in connection with this particular problem of Trecento painting. Dr. Aubert begins his examination of the mural decorations of the Church of San Francesco at Assisi with a few remarks on the early frescoes of the Lower Church, and then passes to those which adorn the walls of the right transept in the Upper Church. These works seem to us to have been carried on hy the same hand into the upper walls of the neighboring apse; but we fully agree that they are quite distinct from, and in spirit and date earlier than, the remaining frescoes of the two transepts, the vaulted ceiling ahove the high-altar, and the apse—all of which, in spite of the oft-repeated assertions to the contrary, are ohviously the product of a single personality, whom the author chooses to term in the beginning the "Great Unknown." That this great artist is in reality no other than Cimabue himself, it is his constant effort to prove in the succeeding pages. And this, to our mind, he does prove in a most conclusive way, passing in review and close examination all the wall and panel paintings hitherto given to the great Florentine, and ending with his one documented work, the mosaic in the Pisan Duomo, which, as Dr. Auhert rightly says, remains to the present day, in spite of successive restorations, a priceless and unassailahle document to be used as a hasis for a critical test of the artist's style. We lack space to follow the writer here in the gradual unfolding of his theories, and in his painstaking discussion of the various works which he undertakes to analyze. It is enough to say that, in the exposition of his ideas, he is always lucid and generally compelling, taking little for granted, and trusting nothing to chance, leaving hehind him, in fact, a sense of solidity and seriousness which we may go far to find in most hooks on similar suhjects.

Nor does the author limit himself to Cimabue alone. His main theme naturally leads him into a study of other phases of painting of the period, and more especially of the remaining decorations of the Upper Church at Assisi. He submits the long series of frescoes which adorn the upper walls of the nave to a searching analysis, the results of which, if in this case not always conclusive, are full of suggestion. He is far from winding up his conclusions

regarding these works with the dogmatic assertiveness of the average German critic (Dr. Aubert, by the way, is not a German, but a Scandinavian), and is wisely content with leaving them to unnamed masters of the Roman school, until a more concentrated study may satisfactorily distinguish their subtler differences of style. In his remarks, again, on the famous cycle of paintings from the life of St. Francis—to this day the most mooted problem in the history of pre-Giottesque art—he reflects the unpublished doubts of many in regard to Giotto's traditional authorship of these much discussed works. But here, also, he is judiciously non-committal as to their possible creators, and, instead of indulging in a speculative game of attributions, remains content with his very persuasive and critical arguments against the probability of their Giottesque paternity.

Although we agree with Dr. Aubert in almost all the main points of his argument, we cannot always accept his opinions regarding certain side issues. To mention a single instance, it has been far from proved that the Ruccellai Madonna is really a work of Duccio, any more than that it is really the picture painted in 1285 in fulfillment of a contract with that painter. That it is a Sienese work is beyond doubt, but the probability is that it is a creation not of Duccio himself, but of an early and unknown contemporary and follower of that master. But here, as in other cases, Dr. Aubert's opinions on outward matters do not intrinsically affect the logical thread of his main discourse. His book calls for far more than passing notice, and provokes special comparison with the latest writer upon the same subject, Adolfo Venturi, the fourth volume of whose History of Italian Art has already been reviewed in these columns, and who, as regards Cimabue, has arrived quite independently at very similar conclusions. Dr. Aubert's Cimabue, however, is by far the more clearly defined and the more critically constructed of the two, and we venture even to say that future research will merely build on his foundation.

The Montross gallery in this city has started unusually early this season with an exhibition of American painters, living and dead. Among the artists represented are George Innes, John La Farge, Eastman Johnson, Elihu Vedder, George Fuller, Homer Martin, L. L. Lathrop, William M. Chase, Childe Hassam, A. P. Ryder, Charles Melville Dewey, Willard L. Metcalf, Kenyon Cox, T. L. Dewing, Horatio Walker, J. Alden Weir, H. Siddons Mowbray, Elliott Daingerfield, and J. Francis Murphy. A collection of mezzotints and stipples, principally of the latter part of the eighteenth century, are to be seen at Koppel's gallery, in this city. Most of them are engraved from portraits of Reynolds and George Morland's scenes of rural life. Wunderlich & Co. of this city will exhibit till November 4 selected etchings by D. Y. Cameron.

The National Gallery in London has been undergoing a thorough rearrangement under the new director, Sir Charles Holroyd. Almost all screens on which pictures were hung have been done away with; they blocked up the space so that one could not get so good a general survey of the rooms as at present. The pictures they displayed have all found places on the walls without overcrowding. The works of each master are kept together, and those belonging to each school of painting, always in separate rooms, have now been more carefully classified according to the latest authorities. The arrangement is not quite complete yet, and the official catalogue will not be forthcoming for some months.

Several important discoveries are reported from Rome: During the removal of an old house at the foot of the Tarpeian rock in Rome the statue of an old woman carrying a basket was found. It is realistic in style and belongs to the same period as the well-known statue of the old woman with the wine-jug in the Capitoline Museum. Probably these statues served to adorn the market halls situated in that neighborhood. The excavations which Prof. Dante Vaglieri is conducting on the Palatine have led to important finds, including remains of a temple of the sixth century, B. C., dedicated to Victory. It is situated on the slope of the Palatine, and faced the Circus Maximus. Near Santa Maria della Vittoria many remains of the oldest walls of Rome have been found.

At Prinias in Crete remains of an archaic Greek temple and fragments of its sculptural decoration have been unearthed. The east side of the temple was surmounted by a pediment containing statues. Not enough has been found to make out the whole composition, but the extant remains show a procession of warriors carrying shields and lances. Fragments of votive figures and cult images have also come to light. Among these is the figure of Rhea seated on a throne, similar in style to the statues from the Sacred Way at Branchidæ. The base of the throne has also been found. It is ornamented with reliefs representing lions and stags. A number of iron weapons, such as arrow and lance-heads, knives and double axes were discovered on the same site.

A private dispatch received in this city announces the death of Prof. Adolf Furtwängler last week in Athens. Professor Furtwängler was born in Freiburg-i-Br. in 1853, and received his education there and in Leipzig and Munich. He early devoted himself to archæology and classical art, and in 1878-79 took part in the excavations at Olympia. His university career led him to Bonn, then to Berlin, where he was appointed professor extraordinary, and finally, in 1894, to Munich, where he was professor in the University and conservator of the museum of plaster casts. His publications make a long list; among them may be mentioned: "Eros in der Vasenmalerei," "Plinius und seine Quellen über die bildenden Künste," "Die Bronzefunde aus Olympia," "Beschreibung der Vasensammlung im Antiquarium der königlichen Museen zu Berlin," "Meisterwerke der griechischen Plastik," "Die antiken Gemmen; Geschichte der Steinschneidekunst im klassischen Altertum," "Denkmäler griechischer und römischer Skulptur," and "Griechische Vasenmalerei."

The death is announced from Cologne of Prof. Carl Aldenhoven, in his sixty-fifth year. He was director of the Wallraf-Richartz museum, and had written much on art subjects, his chief work being "Geschichte der Kölner Malerschule."

Finance.

"SENTIMENT" AND THE STOCK EXCHANGE MOVEMENT.

Contrary to an impression which had begun rather generally to prevail a fortnight ago, that matters were mending in financial markets, the Stock Exchange during the past week has witnessed further liquidation, as violent in its way as that of March and August. Prices of important stocks have declined below the previous low level of the year, with the loss of all of the gain since the successful New York city bond issue of September 10. The most notable fact about the movement was the explanation commonly assigned on Wall Street; it was, that the market was breaking because of "adverse sentiment." Last week, the New York Public Service Commission's inquiry into the New York street railway system produced testimony showing on its face something much like misappropriation of funds. Up to that time the stock market had received with apathy, if not indifference, the sufficiently unpleasant developments in these hearings; the common idea was that the incidents were of a restricted and local character, and did not affect the run of values as a whole.

Anthony N. Brady's testimony of a week ago, however, that he sold to the Metropolitan Securities Company for $250,000 a paper railway with nothing but a franchise, that the company had paid him $965,000, and had instructed him to remit the $715,000 balance in checks of his own to the five conspicuous "insiders" of the street railway group, came with a genuine shock to Wall Street. The men involved in this startling disclosure all possess large wealth, and occupy important positions in great corporations, here and in Philadelphia. Immediately, in response to these disclosures, the stock market broke, and no other explanation was heard on Wall Street except the moral effect of the "Brady testimony."

People naturally ask how such revelations break the price of stocks. Sometimes the laying bare of such a scandal so unsettles confidence, among investors as a class, that they rush to turn their securities into cash. Something like this occurred in the New York bank failures, which in 1884 followed misuse of funds by the presidents of the institutions. In that episode, however, the investing public was actuated less by dislike of the scandals themselves than by fear that the whole structure of credit might be brought down if the methods employed by the wrecked Marine and Metropolitan Banks had been generally practised. The case of the street railway disclosures is not quite the same. This company, with its capital of $52,000,000, has, it is true, been placed in the hands of receivers, apparently as a result of corrupt "inside" management. Nevertheless, no intelligent investor was likely to draw the sudden inference that exactly similar influences were at work in all other companies. Therefore, it is not to be supposed that the real investor sold in quantity as a result of the unpleasant news. Of such liquidation there were, in fact, few evidences.

But if the incident did not cause investment selling, it may have stopped invest-

ment buying; and what was at once apparent on the Stock Exchange was that the outside buying orders, which had been fairly numerous a week before, seemed to have stopped entirely. With this support withdrawn, it was comparatively easy for speculators for the decline to attack the market, breaking down prices and thereby undermining the position of speculators for the rise who, at the lower range of prices, found themselves forced to sell because the collateral on their bank loans had shrunk in value. To what extent even this impairment of public confidence will go is an open question; doubtless the result depends in part on the course of this investigation, and others which may follow.

Pending this break in stocks, Wall Street has largely devoted itself to discussing the way out of its dilemma. On this point, opinions differ oddly. In some quarters, one may hear that the whole investigation is objectionable because the exposure has caused this turn for the worse. This argument, if consistently applied, would go rather further even than those who used it in Wall Street desire; it could be invoked against all exposure of financial wrongdoing. On the other hand, the point is made in important banking circles that the only way to restore public confidence is to punish the malefactors, though they may be ten times millionaires, just as if they were common criminals. In this argument there is at least this much of force—that exemplary punishment could certainly do more than any other expedient to prevent repetition of such abuses.

It may be asked whether, after all, Wall Street may not have exaggerated the influence of the Metropolitan affair. That it has exerted an unfavorable influence, there can be little doubt; whether it was the sole cause for the collapse is less certain. The tightening of the money market, notably in New York, since the opening of October, has already been referred to in this column; only a week ago the New York bank position was so weak that fair probability existed of a deficit in reserves, unless outstanding loans could be reduced. They were reduced nearly six million dollars in the statement issued last Saturday, a reduction unmistakably due to Stock Exchange liquidation. That is as much as to say that the selling of stocks on Wall Street, for whatever cause, may have been necessary and inevitable to the bringing the banks back to a normal position.

Aside from this, it was remarked on the Stock Exchange that last week's most urgent selling came not from America, but from certain Amsterdam institutions, which presumably held large quantities of our stocks in connection with last year's speculation in "Americans," and which could apparently carry these stocks no longer. Clearly it would be absurd to ascribe this European selling to the street railway incident. No doubt the increasing signs of trade reaction—notably illustrated by the Union Pacific's order for cutting down expenditure—added their influence. To the problem of retrenchment by corporations and relaxation of industrial activity, however, there are two different sides. Unpleasant as the process may be in its ordinary effects, people must not overlook the fact that nearly a year ago, responsible heads of these very corporations were expressing the hope that what they called "trade relaxation" might be near at hand, since only through such reduction in the demands on the general stock of capital could the financial situation as a whole be restored to equilibrium.

BOOKS OF THE WEEK.

Abhedânanda Swâmi. Reincarnation. The Vedanta Society.
Adler, Marcus Nathan. The Itinerary of Benjamin of Tudela. Henry Frowde.

The Nation.

NEW YORK, THURSDAY, OCTOBER 24, 1907.

The Week.

The suspension on Tuesday of the Knickerbocker Trust Company, an institution with $63,000,000 deposits, following the difficulties of the Mercantile National Bank, with its $12,000,000, earlier in the week, cannot be characterized except as the outcome of prolonged indulgence in unsound banking. The case of the Mercantile, which was saved from insolvency through the prompt and judicious assistance of the larger New York banks, is a sequel to the career of certain promoting financiers, who undertook to support their outside schemes by buying control of a group of small banks and obtaining access to the surplus funds. That episode we discuss at length in the article on current finance in another column. The troubles of the Knickerbocker Trust arose, as far as can now be seen, from a not wholly dissimilar use of the institution's resources; but they must also be ascribed to the defective provisions of the law for trust company reserves, and to the wholly inadequate supervision of the State Banking Department. We believe that a remedy for these evils will now be forced, through urgent and enlightened public demand, and that the house-cleaning of New York's fiduciary institutions will make for a much safer financial future.

"Well, it looks as if legitimate business would now have a chance to get banking accommodation." Words to that effect have been heard from hundreds of business men within the past few days. They think they see in the rescue of certain banks from domination by promoters and stock gamblers, the promise of a return of all the banks to the traditional and safer methods of an older day. That is, in a word, to utilize savings and employ capital so as to secure the steady ongoing of mercantile and manufacturing enterprise. The honorable tradition has been that each bank has its customers whom it must "take care of." That simply means that the merchant and the manufacturer, the planter and the farmer and the dealer, shall be able to get their necessary loans, on proper security, and always be sure that good bills will be discounted for them. To minister to such business needs, banks were first created; and their chief duty should be to fulfil that end of their being. But what have we seen in New York during the past half-dozen years? Great banking institutions prostituted into tools of unscrupulous speculators. Under such a twisted and malign conception of banking, business can, for a time, make shift to get on. But let a period of restricted credit befall, as in the past six months, and what is the result? It is legitimate business that is first made to suffer. It is the merchant, the manufacturer, whom the president of the bank sends for and says that he is sorry, but that he is compelled to ask him to cut down the "line" that the bank is carrying for him by one-third or one-half. And interest on loans is marked up, even for old customers. But all the time, there is too much reason to believe, the resources of certain banks were being put at the disposal of promoters and speculators. In other words, the hold of stock gamblers upon banks has really been a grip upon the throat of business. The immense discredit into which this vicious system has now fallen must give great satisfaction to those conservative bankers who have consistently denounced and resisted speculative banking. It was to them that the very speculators had to turn, when the crisis came; and for their courageous, firm, and thorough dealing with the perverted banks, the financial community is lastingly in their debt.

What is perhaps the largest cash prize ever offered for literary effort, aside from limericks and short fiction with "heart-interest," is put up by Senator Bourne of Oregon for the "strongest and best written argument" in support of a "second elective term" for Theodore Roosevelt. Three propositions laid down by Mr. Bourne form the skeleton which the successful contestant is to clothe in verbal flesh. At first glance, the thing seems so easy that any citizen not of the undesirable sort could do it out of sheer patriotic inspiration. It is true that the first "proposition," that the President "must and will" be re-elected by reason of "honesty, courage, initiative, imagination," et cetera, demands only the sort of fervor which Dolliver, Beveridge, or any of the political novelists, like Brand Whitlock or David Graham Phillips, could supply. But Mr. Bourne's introductory demonstration is more difficult. It must be shown that Roosevelt is competent to arbitrate the destinies of this nation, to regulate most of the affairs of a free people, to spin, on occasion, the very globe in his hands; in short, to decide anything and everything—except the next Republican nomination. To show that a man of incredible justice and wisdom must still be overridden on the question which concerns him most nearly, demands the logical adroitness of Root or Spooner. William Allen White could make another hit like his "What's the matter with Kansas?" if his straight-driving Western pen could only be made to explain how infallibility can be wrong in its most emphatic expression of belief. We suggest that a collaboration would stand an excellent chance of winning the prize, for the field of independent competitors is narrowed by the circumstance that some of the chief Republican intellects, Fairbanks, for example, Foraker, Knox, La Follette, and Cannon, will not be in the running at all.

Gov. Hughes's speech at the New York Republican Club Friday night has been eagerly scanned to see if he gave Mr. Parsons, in the arms of Hearst, any comfort. The comfort is exceedingly cold. In general, Mr. Hughes restated his position of last year. He is for a resolute but patient and orderly plan of putting an end to public abuses, "without tumult or disorder, without injustice or demagoguery." That looks as hard and straight at Hearst as did any of the Governor's speeches last year. Still more explicit was his reference to "those political grafters who endeavor to make selfish profit out of public wrongs." And, coming down to details, Mr. Hughes plainly declared that, as Governor, he had steadfastly refused to express either approval or disapproval of "party action or of particular candidates"—especially to "pronounce upon such action or candidacies in advance." Now, if words have any meaning, this is intended to inform the people of this city that Gov. Hughes did not advise the fusion with Hearst. In his attitude towards national politics, Gov. Hughes seems determined to drive the politicians to despair. He roundly declares that he is not seeking "any public office," and that he is not trying, and will not try, to influence the choice of "any delegate to any convention." The men whom he has called about him in the public service, he has "counselled" to stick to their jobs, and let politics alone. No; if the people of this country have any notion of bidding Gov. Hughes go up higher, they will have to attend to the business themselves, without the intervention of any machine. Here is a man who makes it evident that he does not want, and will not seek, the Presidency; and who thinks of the burdens of that great office as tolerable only when assumed "under honorable conditions and at the command of the people." What a fool! the politicians will think, to imagine that he can get on without spokesmen and workers and press agents and a personal organization. Yet such is the perversity of political human nature, such the liking of Amer-

icans for a man not too consumed with anxiety for office, that the Hughes boom for the Presidency is certain to be strengthened by his denial that he wants any boom.

To call this a two-billion-dollar country is to-day far inside the truth, in the view of the various officials who are now making out their estimates to lay before Congress. Every department wants more money, and as all the purposes for which they want it, from four new battleships to ship subsidies, public buildings, and food-inspection, are equally worthy, the obvious policy is to give each what it asks. That, again, can be done only on the assurance that the country will stand the bills. Indeed, the efforts to rouse some enthusiasm which can be cashed later on have been among the most prominent features of recent news. The President's cruise down the Mississippi, furnishing the opportunity for a thousand special articles on river improvements, the dispatch of the fleet to the Pacific, the voyages of the Lusitania, with demonstrations that Americans could have done still better with an adequate subsidy, down to the attacks of indigestion which could have been averted by a little more liberal provision for Federal inspection, already increased 500 per cent. in ten years—all these help to get Congress into a money-spending frame of mind. The last Congress was the doer. It had the satisfaction of carrying out the Presidential programme of legislation. One need not be in Speaker Cannon's special confidence, however, to be sure that his programme for the new House resembles that of the Lords in "Iolanthe," to do nothing in particular and do it very well.

The seizure this week of 8,750,000 cigarettes manufactured by the Tobacco Trust is very drastic governmental action. Yet this policy, like so many of the other recent policies "with teeth," is not based on a new law at all. It is, in fact, in the poor old Sherman law that authority for the seizure is found. Nobody ever thought before of using the section which declares forfeit "any property owned under any contract or by any combination, or pursuant to any conspiracy," but the authority existed all along. Most so-called "lost arts" are believed by archæologists never to have existed at all. Yet the race which inhabited this country in the days before the infiltration of iron in our blood and the summary expulsion of the coward and the weakling, seems to have known a few things about making laws that will really hit the malevolent corporations. Possibly in time another stanza may be added to those popular verses which tell the merits of "old wine, old books, and old friends." "Old laws to enforce" would not be a bad working motto for the Attorney-General's office.

The refusal of the Navy Department to allow some of its officers who are studying engineering problems to witness the experiments with gas engines now going on at the Jamestown Exposition, is characteristic. The experiments in question are of the greatest interest to the martime world; but the the Navy Department intends to ignore them, because it is not satisfied that the gasolene launches now in its possession are a success! One thing the present régime in the Department cannot be accused of—a desire to lead in the naval world. In the matters of turbine engines, the speed of its torpedo boat destroyers, the size of its battleships, its floating mines, etc., it is ever content to follow. What has become of our American enterprise and initiative? Since the English naval architects are at this moment discussing a thirty-knot gasolene liner and an explosion-engine battleship, one would think that the Navy Department would have detailed at least one engineer officer to go to Jamestown, and then to England, for the purpose of finding out everything possible as to this new method of propulsion. Some bright mind might even suggest that the Department ought to be experimenting itself, instead of being content to build twenty-four-knot destroyers, when other nations insist on thirty-three knots, and to turn out seventeen-knot battleships two years after the appearance of the twenty-two-knot Dreadnought.

The recent newspaper statement that our army is 20,000 below the authorized strength is borne out by many facts which have appeared of late. At the unveiling of the McKinley monument a company of the Twelfth Infantry paraded with but 18 men in line. The Sixty-third Company of Coast Artillery at Fort Casey, Wash., has 27 men in it, or 25 per cent. of its authorized strength. In the East there are artillery companies reduced to eight and ten men. The dearth is not peculiar to any locality or branch of the service. "The same situation," says the *Army and Navy Register*, "exists at all army posts, and in the infantry and cavalry, as well as the artillery." When regiments go to the Philippines they are supposed to have ranks full of men with at least two years to serve. The adjutant of the Twenty-third Infantry, which is to leave in February, reports, according to the *Army and Navy Journal*, that there were in the regiment on September 21 only 136 enlisted men who have service enough to go to the archipelago. Of these, only *nineteen are privates*, two are cooks, and the rest sergeants and corporals. Now, if every one agreed that one or two causes were responsible for this state of affairs, the army might regard it with cheerfulness. But there is no general agreement, save perhaps on the desirability of raising the pay of the non-commissioned officers and on the relation of the prosperity of the country to the falling off in enlistments. Among the other causes assigned are the constant shifting of officers, and the presence of many incompetent ones; rough, brutal, and inefficient or untrained sergeants and corporals; too many practice marches and manœuvres; dislike of foreign service; the refusal of the public to consider desertion a crime; the absence of an army service corps, as a result of which lack the man who enlisted to carry a rifle is compelled to become a scavenger, a teamster, a servant, or a day-laborer as soon as he enters the service; and the absence of a beer canteen. Finally, the disease of a depleted army is a progressive one. The smaller a company becomes, the less contented it is bound to be. It takes the life and interest out of a soldier if he is made to go through a company drill when there is but a platoon, and officers similarly lose interest. So far as the pay is concerned, a higher rate for non-commissioned officers as well as for officers seems just and desirable, and would help to keep in the service a permanent staff of sergeants. But a mere increase of $2 a month in the pay of the private will help, in our judgment, not at all—nor would $5 or $10, as long as there is such unrest among the officers and so much hard, non-military labor required of the soldier.

According to the Pension Commissioner's report for the fiscal year ending June 30, 1907, there were no less than 24,000 pensioners of our little war with Spain and the Filipinos, on the rolls on that date—only *nine* years after the battle of Santiago. The size of this small army of young pensioners becomes the more astounding if one remembers that the Fifth Corps, which assaulted Santiago, had only 17,000 men in it when it sailed from Tampa, and that all told there were in service in the army in the years 1898 to 1901 not over 350,000 men. Perhaps during these years 40,000 more served for one period or another in the navy. Moreover, all of these men were supposed to have undergone before enlistment the most rigid physical examination ever applied in this country, and it was confidently asserted that the pension evil was therefore not to be dreaded as a result of this war. At the battle of Santiago 21 officers and 222 men were killed, and 101 officers and 1,688 men were wounded. The casualties in the Philippines were much larger, but if every man wounded since 1898 had been given a pension, and one were awarded for every soldier killed, we should still

be unable to account for two-thirds of the noble army of 24,000. Evidently, the typhoid-fever patients of our camps are getting their fingers into the Treasury. It must not be forgotten, too, that the 24,000 pensioners referred to do not include officers and men on the army retired lists in consequence of Cuban or Philippine service.

The Princeton Board of Trustees has voted to defer serious consideration of President Wilson's quadrangle plan for two years. If this be a setback to the president, he may find some consolation in the permission given him to continue his efforts to convert faculty, students, and trustees. Two years hence he may have the heavier battalions on his side. Universities are slow-moving bodies, and many a college president would be satisfied with having to his credit so radical an innovation as the preceptorial system Mr. Wilson inaugurated at Princeton. It must be confessed that the college world has not been in the habit of thinking of Princeton as an experiment station; but its situation and organization make it an ideal place for trying the quadrangle system. Somewhere the experiment must be made before long—the discussion of the English college plan at Harvard proves that. Our universities cannot continue to grow as they have without some new subdivisions, if only for purely administrative reasons. And the ever-widening gulf between student and professor is still another reason why our educational experts should support President Wilson in his warfare on the baneful undergraduate clubs, and his quest of a truer collegiate democracy.

When Irishmen are not fighting the English, they are fighting each other. A bitter quarrel has been raging for some months between the Sinn Fein (or revolutionary) movement in Ireland and the Nationalist party. By the latest bulletins from the field of battle, however, it would appear that Mr. Redmond and his fellow-Parliamentarians are getting the better of the controversy. To have enlisted John Dillon on their side would alone more than make up for the defection of Sir Thomas Esmonde; while the news that William O'Brien is willing to return to public life in aid of Redmond, together with the adherence of influential Catholic prelates, shows which way the tide is running. The Sinn Fein agitation made an undoubted appeal to national pride, and threatened at one time to carry off most of Young Ireland with it. Time and argument, however, have apparently convinced the mass of Irishmen that they have most to hope from orderly political methods, and in keeping their representatives at work, with as solid a backing as possible, within the House of Commons. It is significant, in this connection, that there are rumors of a new Irish Bill next year.

Affairs in Morocco are moving rapidly. Even though the general trend of recent events has been towards the ultimate establishment of a French protectorate, no one expected that a protectorate would so soon be openly discussed. Yet that is the question that is reported to have been taken up in the interview at Rabat between Sultan Abd-el-Aziz and the French Minister Regnault. As a preliminary step towards a protectorate, the Sultan is said to have wanted the French Government "to take immediate possession of the entire Moroccan coast." This, of course, France will not do at present. So open a violation of the Act of Algeciras would certainly lead to trouble with Germany. But French interests are well enough subserved by formal adherence to the Algeciras agreement in the matter of organizing the joint European police for the ports, composed of natives under French and Spanish officers and a Swiss inspector-general. That such an organization is doomed to failure, there can be little doubt. Not only will it be difficult to count on the services of the native police against their countrymen, but the safety of the officers themselves would be in some danger. Moreover, it is in the power of France to bring about the failure of the international police in ways financial. The Sultan must bear the cost of the police, and the Sultan, a bankrupt, is now turning to France for money. Soon he may be turning to her also for protection against his brother, Mulai Hafid.

It has been clear for a long time that responsibility for the continuance of the chaos in Macedonia must be shared alike by Bulgaria, Greece, and Servia, together with the Ottoman Government. Evidence coming from partisan sources is to be had on all sides, and that portion of it relating to the rôle of each nationality as the sufferer at the hands of the others is unquestionably true. Last week, it is reported, the Greek Crown Prince and the Cabinet participated in the ceremonial laying of the foundation stones for three cities to be erected in Thessaly as homes for the Greek inhabitants recently expelled from Anchialos, Philippopolis, and other Bulgarian cities. There are to be a new Anchialos and Philippopolis, the cost of which hundreds of poor Bulgarian peasants will undoubtedly pay with their lives and property to the active Greek guerrilla bands. The corner-stone celebrations must have been truly impressive. They carry the mind across 2,500 years to the time when Greek emigrants, carrying fire from the native altar, went across the seas to found new Corinths and Sicyons. The unhappy present-day meaning of the event is that racial war is rife in the Balkans, and that the governments are determined not to have peace except at their own price.

Macmillan's Magazine, one of the best of the London monthlies, will soon cease publication. *Macmillan's* was founded about the same time as *Temple Bar* and *The Cornhill;* all three maintained a high standard and enjoyed the credit of introducing to the public several authors who have since become famous. But *Temple Bar* has already gone, and of the trio *The Cornhill* will be the only survivor. A year or two ago *Longmans'* also succumbed. Presumably, these magazines, which have tried to preserve some kind of literary standard, are drowned out by the flood of cheap and popular periodicals. We are not passionate admirers of magazine literature; we would not transfer, even to a good magazine, Milton's dictum about a good book, and say that he who kills it, "kills reason itself, kills the image of God, as it were, in the eye." Yet we cannot see *Macmillan's* pass out of existence without expressing our regret. A popular magazine, as most people know, is like an army, in that it travels on its belly; it will go as far as its advertising will carry it, and not a step farther. The importance of the advertising is indicated by a remark made a few years ago by a magazine publisher: "If I can get a circulation of 400,000, I can afford to give my magazine to any one who will pay the postage, and I can grow rich from the advertising." Whether this statement was ever literally true we do not pretend to say; probably the present prices of white paper would force a revision of the estimate; but, under any circumstances, the fact remains that the proverbial advice to the publisher of a magazine is: Advertisements are the principal thing; therefore get advertisements. To the achievement of this end the direct and obvious means is a huge circulation. The aim, then, is to make your stories, your articles, and your pictures appeal to the largest possible reading public. To choose material of literary excellence is fatal; for not one reader in a thousand can boast anything more than the most rudimentary taste. They are incapable of sustained attention, and they therefore demand all sorts of scraps and snippets; they must have even the short story shortened still further into the "storiette." It is for a clientèle of this grade that many of our most widely circulated magazines are obviously intended. These cheap and vulgar productions not only crowd out decent magazines where they might otherwise be read, but by gobbling up the advertising they leave the magazine of respectable but limited circulation with little or no financial support.

THE END AT THE HAGUE.

A half-apologetic air appears in the very act drawn up and adopted last Thursday to summarize the work and mark the close of the Hague Conference. It speaks of the constant "desire" of the delegates to meet the hopes centred in their deliberations, yet has but a meagre array of actual achievements to submit. The world hoped for measures that would be effective in preventing war, and it gets a convention providing that fishing boats shall be inviolable in time of war! We do not say that none of the agreements reached are of no greater value. The establishment of an international prize court; the extension of the Geneva convention to warfare by sea; the limitations imposed upon the collection of contractual debts, with some of the regulations about submarine mines and bombardments, and the pious vow in favor of arbitration, all have their merit and promise. Taking the work at The Hague as a whole, however, it cannot be denied that it is a keen disappointment. But though disappointing, the net result is not necessarily discouraging.

In the very fact that representatives of all the civilized nations have for four months been debating the means of preserving the peace of the world, we have a fresh guarantee of that peace. War is one of those evils which cannot bear public discussion. Brutal natures may secretly exult in it; ambitious men may, in their hearts, hope to gratify their lust for power by means of it; but no one can get up in a gathering of enlightened men and speak of war in anything except a deprecating tone. Even when alleged to be necessary, war has to be grouped with the unavoidable calamities of the human race. On the other hand, the blessings of peace are such and so obvious as to extort tributes of praise even from those who pay them insincerely. And the progress of civilization and the hopes of philanthropists are so bound up with the maintenance of peace, that it is easy to enlist eloquence and poetry and logic and large aspiration in its cause.

Hence the fact that the debating honors of the Conference have been carried off by those who have been most ardent in demanding that the bulwarks of the world's peace be built high and strong. Members of our own delegation have won personal distinction and reflected lustre upon their country by their stout championship of the advanced positions of peace-advocates. Mr. Choate and Gen. Porter have most ably expounded and defended the humane views with which President Roosevelt and Secretary Root, by their instructions, identified this government. That the chief project, the one for an international court to pass judicially upon disputes between nations, failed of final adoption, was not for lack of convincing advocacy by Mr. Choate. He found in the French and Italian delegations warm seconders. A large majority, indeed, of the whole Conference was won over to the plan, but the requirement of practical unanimity, in order to make any convention binding, proved a fatal obstacle.

The real sentiments of the Conference were, in fact, often obscured by this disregard of majority rule. Again and again were projects recorded as "defeated," though they had perhaps 39 votes in their favor to only 6 or 7 against. To find the seven votes in opposition became, in truth, the apparent task of those who would obstruct the passage of the more important measures. Furthermore, the national pride and personal dignity of the South American delegates were often skilfully played upon to bring about the delay or defeat of projects which it was awkward directly to oppose. From all this it is clear that if the assembly at The Hague had been subject to the ordinary rules of procedure, it would have decided by a very large vote in favor of measures now set down among those rejected. But this majority sentiment, though not technically effective at The Hague, really does represent and actuate the majority of the nations. In that thought there is cheer for the despondent.

In a way, the plan of legislating for the world's peace—which is the main intent of the Hague Conference—is not unlike the slow establishment of parliamentary government.. H. Stanley Jevons has written of it in the *Contemporary* as if it were the faint beginnings of the establishment of an International Parliament. Viewed in that light, we see more reason to be patient with the delays and repeated disappointments. It was a long road from Magna Charta to the final vindication of the Commons' power of the purse, and to the current proposals to strip the House of Lords of its remaining right to obstruct the people's will. One has but to think of all the jealousies to be composed, the prejudices disarmed, and the selfish interests compelled to surrender. Something of the same process is visible in the successive Hague Congresses; and by the time the next one comes round, we may hope for a more assured tone and more fruitful action. Such a result we may confidently look for if the matters left for diplomatic adjustment among the Powers are vigorously urged, as they should be, and if the rulers and the press of the various countries meanwhile seek peace and ensue it. In some respects, and especially as compared with the high hopes of lovers of their kind, the Hague Conference adjourns as a failure; but nothing is a failure which leaves earnest men only baffled in order to fight better.

THE PHILIPPINE ASSEMBLY.

With the opening of the Philippine Assembly by Secretary Taft, the islands enter upon a new phase of their development under American rule. Nearly nine years ago, through inexcusable blundering on the part of our civil and military authorities, we began that needless war upon the Filipinos which cost both them and us so dear. It is depressing to recall with what enthusiasm our country entered upon that campaign of conquest, and with what absurd expectations of wealth and profit. The sun was never to set on our dominions; the Philippines were not only to make us all rich, but were to help us obtain the greater part of the Asiatic trade; we were to make the Filipinos love us as soon as we had shot them to pieces; and, finally, interest in their affairs was, as Attorney-General Griggs put it, to cleanse American politics and inspire the nation by making it forget its "purely parochial domestic problems."

From that intoxication we have long since sobered up. Not even Griggs could now make such a speech as he delivered in 1899. Our parochial problems, such as race questions and the control of corporations and railways, have so fully absorbed our attention that practically no one knows or cares what is happening in the archipelago. No newspaper keeps a special correspondent there, and it requires the visit of Mr. Taft, or rumors of war, to set the Philippine cable instruments to ticking. We have denied to the Filipinos the tariff benefits our Republican President declared we were in honor bound to give, and have to all intents and purposes told them we did not care if their trade remained hopelessly prostrate. In this affair the moral sense of the nation has proved less effective than the lobby of the Sugar Trust. In short, as recent newspaper interviews with our Congressmen have again proved, we are heartily sick of our Eastern possessions. Even those public men who would continue to hold the islands express no enthusiasm. We must, they say, have a coaling station—and, then, "We cannot let go if we would." But the desire to sell the islands to Japan or to turn them over to the Filipinos themselves under some kind of joint protectorate grows steadily.

While this extraordinary change of sentiment has been going on at home, the native hostility towards the American conquerors has become more and more intensified. The desire for independence which provoked their rebellion against the Spaniards has in no wise abated. Two-thirds of the Assembly, which listened last week to Secretary Taft's declaration that the islands will not be ready for self-government for a generation, desire immediate independence, while the remainder ask the fixing now of a date in the not remote fu-

ture. That during our nine years of possession we have accomplished something besides slaughter and destruction, no one would deny. The greatest of our achievements is the establishment of the school system, and of local self-government in the cities and provinces. And yet both of these acts have increased the longing of the Filipinos for the full management of their own affairs. The establishment of the Assembly is, of course, the most striking reminder of our nation's good-will toward the natives, and our promise to turn over the government of the Philippines to the Filipinos. And Mr. Taft's sturdy stand against the exploitation of the islands by the Trusts, rich capitalists, and the horde of unprincipled adventurers that followed on the heels of the troops, is one of the things we can most be proud of.

So far as the new Assembly itself is concerned, its powers are, of course, limited. It consists of 81 members apportioned on the basis of one delegate for each 90,000 persons, and it may be increased to 100 members automatically. This Assembly is intended to correspond to our own House of Representatives, and the Philippine Commission is to bear to it somewhat the relation of the Senate to the lower house. The Commission, which is wholly an appointed body, will have the right to veto any measure of the Assembly. In this way "too radical" legislation may be checked. But the Assembly cannot be deprived of its right to express its opinion. What its course will be, no one can foresee. That it will be vigorous in its assertion of the right of the Filipinos to their own country, we may take for granted. As well-wishers, we must hope that it will display the same ability that won for Aguinaldo's ill-fated Parliament the praise of American observers. We wish for it, too, conservatism in utterance and deed, and that patience which is characteristic of those whose cause is just.

That the situation in the islands, already a delicate one, may be made more critical by the opening of the Assembly, no one can dispute. Two months ago, on August 23, on account of the reappearance everywhere, after the Assembly elections, of the Filipino flags, the Philippine Commission deemed it necessary to pass a rigid law, forbidding the Filipinos to display the "flags, banners, emblems, or devices used in the Philippine Islands for the purpose of rebellion or insurrection." But this was not all; the Commission also amended the already extremely obnoxious and unwise sedition act, as follows:

> Every person who shall utter seditious words or speeches, write, publish, or circulate scurrilous libels against the Government of the United States or the insular government of the Philippine Islands, or who shall print, write, publish, utter, or make any statement or speech or do any act which may *tend* to disturb or obstruct any lawful officer in executing his office, or which may tend to instigate others to cabal or meet together for unlawful purposes, or which suggests or incites rebellious conspiracies or riots, or which tends to stir up the people against the lawful authorities or to disturb the peace of the community, the safety and order of the government, or who shall knowingly conceal such evil practices, shall be punished by a fine not exceeding $2,000 or by imprisonment not exceeding two years, or both, at the discretion of the courts.

All this is aimed, we learn, against "post-election celebrations in which demonstrations against American sovereignty are made." What the Assembly will say to such imitations of the Czar's ukases, to such heavyhanded measures for limiting free speech and encouraging informers, the next few months may show.

PROTECTION FALLING INTO DISREPUTE.

When Mr. Chamberlain set out, four or five years ago, to make England protectionist, the high-tariff Bourbons in this country were in ecstasies. The last bulwark of free trade was about to be destroyed. The whole world would shortly come round to the magic doctrine of getting rich by taxing yourself, and where could the ridiculous revenue reformers of the United States turn for comfort? Tariff revision would appear so plain an absurdity that nobody outside of a lunatic asylum could any longer talk about interfering with the beneficent operations of the Steel Corporation, for example, by removing the needless duty on steel rails. All the other tariff beneficiaries were to be left encased in their fat, undisturbed.

Well, a change has come over the spirit of that dream. Our protectionists can certainly no more lift up their eyes to Chamberlain, whence they thought their strength came. He has led his party to disastrous defeat, although he had organized manufacturers, after the American fashion, to finance his campaign lavishly, which they did in the hope of writing their own duties in the law afterwards, in the manner of the McKinley Bill. Furthermore, Chamberlain is hopelessly broken in health, and permanently retired from public life. The net result of his protectionist foray is to leave England more firmly committed to free trade than ever. If anything had been lacking to complete the disgust of Englishmen of all parties with the scheme of a British Zollverein, having preferential trade inside it and high duties against nations outside, it would have been supplied by the new Australian tariff. Against it, English newspapers of all opinions and public men of every faction have been declaiming ever since its schedules were first published.

The reason is that this new fiscal law of the Australian Commonwealth is really a measure of extreme protection. It builds high the tariff walls about the island continent. There is, indeed, a pretence of "preference" for British goods, but examination proves it to be a sham. The framers of the tariff really mean to protect Australian manufacturers against all effective competition. If 40 per cent. on blankets, for instance, would do it, the duty is made 50, and then a kind reduction of 10 per cent. is made in behalf of goods from the Mother Country. The practical result is well depicted in one of Mr. Gould's cartoons. The British lion stands before a high tariff wall, over the top of which the head of the Australian kangaroo appears, and in which two doors are built, one entirely shut, the other open a crack. The latter is a special concession to the lion. "But I can't get through," he protests. "You were not meant to," cheerfully answers the kangaroo. The new tariff is regarded almost universally as a death-blow to the fantastic project of Chamberlain to wean away the colonies from protection by making England herself protectionist. It is safe to say that, in Great Britain to-day, protective tariffs are more abhorred than ever, and free trade more firmly based than before. The *National Review*, which had staked everything on preferential trade, now says gloomily:

> If we cannot get more effective support from the colonies in trade and arms . . . colonization would mean sheer loss of national blood, leading to national death.

At the very time when alien aid and comfort are thus failing our American protectionists, they have to face portents at home. They see the high tariff denounced in the house of its friends. Never, it is probable, have so many trade associations of one kind and another, from newspaper-proprietors to carriage-builders, gone on record with a demand that the tariff be revised. Even the Protective Tariff League has lifted up its heel against Dingleyism, through the admission of its Secretary that the sentiment for tariff revision is everywhere rising and will soon be irresistible. Protection is losing the supernatural aspect which it long had in many minds. That it does not miraculously keep everybody employed and hold stocks at top figures, all can now see. And once this exaggerated respect has been lost, the high tariff comes in for outright denunciation. Not in our memory have so many abusive things been said of it by those who formerly were its stoutest champions.

In this respect, there is a striking analogy between the talk to-day about protection, and the talk, in 1848-56, about slavery. Many frank people in the South admitted that slavery was a curse. Olmsted on his travels found hundreds of men who saw the evil of the

institution, and wished to Heaven it had never been established in the South; but, of course, they all said that it would never do to free the slaves. That would ruin everything. Similarly, many protectionists are saying to-day that the high tariff contains undoubted abominations, and has demoralized our politics, but that we cannot get rid of it, because to attempt to do so would bring universal disaster. But slavery disappeared, and nobody wishes it back. The South is more prosperous than it ever could have been under a slave system. In like manuer, overdone protection will one day be swept away, and we shall wonder that Americans so long endured it. They must see to it that they do not imitate the pro-slavery men, by making of the high tariff, as Von Holst showed that the South did of slavery, the more of a fetich the more untenable it was proved to be.

THE HAPSBURG MONARCHY.

In the discussions to which the illness of the Austrian Emperor has given rise, the remarkable feature is the absence of the pessimistic tone with which it has been customary to debate the future of the Dual Monarchy. That the termination of the present reign must bring about the dissolution of the Hapsburg territories had become a commonplace of European politics. To-day it would appear to be admitted that not only has the importance of Francis Joseph as a unifier been exaggerated, but that the disintegrating forces at work in Austria-Hungary have been unduly dwelt upon to the exclusion of important factors that make for the maintenance of the *status quo*. In saying this we do not for a moment deny the immense loyalty which animates the great bulk of Francis Joseph's subjects, a fact attested even by the fond way in which his former Slav or German subjects in this country speak of Unser Kaiser.

In two ways the Hapsburg monarchy was to be broken up. On the one hand, Hungary, chafing under the connection with Austria, would refuse to acknowledge the successor of Francis Joseph; on the other, Germany would proceed towards the realization of the Pan-Germanic hope by incorporating the more than ten million Austro-Hungarian subjects of Teutonic race. Add to these two possibilities Bohemia, with aspirations for Czech autonomy, Galicia cherishing dreams of a restored Poland, Italy longing for the Tyrol, with minor dreams of a Greater Croatia, Greater Dalmatia, etc., and there could be little doubt that the signal given by the Germans and the Magyars would be followed by chaos. On the other side, it was unlikely that in the absence of a Hungarian secession or an aggressive move by Germany, the small Slav nations would of themselves attempt the break-up of the mouarchy. The problem resolves itself, therefore, largely into the question whether the ambitions of Hungary or of the Hohenzollern rulers call for the near dismemberment of the Austro-Hungarian monarchy. In both cases the answer must be a negative.

However pugnacious the Magyar leaders may have been in their attitude towards Austria, they have, on the whole, recognized that the maintenance of the partnership is necessary to their own safety. The aid of the Austrian army is not to be despised by a nation eager to preserve its independence; and it is clear that formal independence is not much to be preferred to the virtual independence which Hungary at present enjoys. The argument that the Hungarians, who have been so recusant towards their venerable ruler, would be still more refractory under his successor, is not wholly sound. It may well be that the Magyar statesmen have hoped to extort from the septuagenarian Francis Joseph, who is naturally anxious to leave harmony behind him, greater concessions than they could expect from a young monarch with plenty of time ahead to settle controversies. Economic reasons, no less than political, also counsel Hungary towards moderation; for, anxious though she may be to establish her own industrial independence, she cannot hope to do that as yet without the coöperation of the Cisleithan half of the monarchy.

One of the surest guarantees against Hungarian secession is to be found in the existence of a powerful Austria; for such an Austria is not only a desirable partner, but may become a formidable enemy. In so far as concerns the Austrian Empire, as distinguished from Hungary, it is fully as strong now as it ever was during the present reign. In spite of continuing echoes of racial strife, the recent introduction of universal suffrage has reduced to a minimum the danger from that source. The Emperor has recognized the advantages that would accrue from the substitution of a truly Imperial for a sectional Parliament, and to that end he has been willing to work in conjunction even with the Socialists. The results of the first Reichsrath election last May, on the basis of universal suffrage, were disastrous to nationalist parties, like the Czechs of Bohemia or the Austrian Pan-Germans. The leading parties in the Parliament are the Christian Socialists and the Social-Democrats, both of which as class parties are opposed to nationalistic separatism.

As to a Pan-Germanic movement, the elections of last May, shattering the strength of that party, removed for the moment any danger of Hohenzollern aggression. The German Kaiser, even if he were so inclined, would not attempt the incorporation of the Austrian Germans without their consent. It is, indeed, doubtful whether the Kaiser would care to make the effort in any case. It is easy enough to speak of incorporating the Germans of Austria into the German Empire, but inasmuch as large numbers of the Hapsburg Germans are scattered all over the monarchy, to a large extent in Hungary, it is evident that the task cannot be accomplished without bringing Germany into conflict with the Slavs and the Magyars. That such an enterprise might also mean a general war, with the Continent arrayed against Germany, must also be taken into consideration. Italy eager for a share of the Austrian spoils, Russia alarmed by the tremendous advance towards Constantinople and Asia Minor which German success would mean, France and Great Britain, as a matter of course, would all take sides against the Kaiser.

For the welfare of Europe at large, it is desirable that the Austro-Hungarian monarchy should persist. The very fact that it is an association of nations, rather than a nation, makes it the fittest place for the working out of a problem that is sure to become of greater importance with time. That problem concerns the fate of the small European peoples. Are they bound to be ultimately absorbed by the great Powers, or is there a chance for the development of a strong federated state composed of small nationalities enjoying extensive political and complete cultural autonomy? That ideal is now stirring strongly in Russia among Poles, Letts, Jews, and Armenians It has, of course, been agitating the nationalities within the Hapsburg realm. Many shrewd observers believe that the preservation of that realm guarantees the smaller nations the realization of their ideals; and that under the protection of the Hapsburg sceptre they may pursue their own racial development. With the monarchy broken up they might be swallowed by their powerful neighbors.

THE "FACTS" OF HISTORY.

A pleasant illustration of the science of history—it happens that two books are published this autumn almost simultaneously, dealing with the same period, but with results so diametrically opposite as to startle even the most hardened reader. One of these, from the Catholic Summer School Press, is by Dr. J. J. Walsh, and explains its purpose frankly in the title: "The Thirteenth Greatest of Centuries." Dr. Walsh admits that his thesis will appear paradoxical, preposterous, to most people, yet it is easy to understand his point of view. Name the thirteenth century, and immediately we think of Dante and his supreme vision; of the Latin hymns, *Stabat mater dolorosa* and *Dies iræ dies illa*, which in the magnificence of their rhythm sound

like the very trumpets of heaven; of St. Francis, who for a while made Christianity a reality of common life; of Thomas Aquinas, whose "Summa Theologiæ" is almost a sum of human knowledge; of the Gothic cathedrals, the universities, the organized charities, the great beginnings everywhere — there needs no special learning to be stirred by the wonders of that age.

On the contrary, here is another scholar, G. G. Coulton, with very special learning, who comes to us with a second edition of his "From St. Francis to Dante," avowing that the thirteenth century was a sink of every kind of skepticism, vice, misery, cruelty, filth, and degradation. About the only good thing to be said for it is that the preceding ages were even worse. And his point of view is also plain. His book is based on the well-known Chronicle of Salimbene, the gossiping, very human memoirs of a Franciscan friar, who saw the wickedness of the world about him and set it down at length for the edification of his niece. His intention was honest enough, and so indeed is Mr. Coulton's. Says he:

> I have found it hopeless, however, to give in a book of this compass more than a very small fraction of the evidence which I have collected during the past nine years to show that what Salimbene describes is nothing exceptional, but simply the normal state of thirteenth century society.

And what Salimbene and his contemporary chroniclers describe is so bad that a good deal of it is left in the original Latin and tucked away in notes.

Which of the two is right, Dr. Walsh or Mr. Coulton? There is always an easy solution of the difficulty when doctors disagree. Of course, both are equally right and wrong, and the truth lies in the middle—a shiftless way of deciding, no doubt. Yet in the present case there may be good reason for rejecting both extremes, for both writers carried an avowed prejudice into the past. Dr. Walsh is a devout Catholic, and his aim is to show the supremacy of the so-called age of faith, when the Roman Church had reached the fulness of its power. Without impugning his entire sincerity, one can see how he would inevitably select for his picture of the age the Flowers of St. Francis rather than Salimbene's prying Chronicle, and the activity of the universities rather than the horrors of civil war. But the prejudice of Mr. Coulton is no less marked; he is a stalwart believer in Progress, and goes to the thirteenth century with the settled conviction that it must be seven centuries worse, as it is seven centuries earlier, than the twentieth. He has an absolute measuring rod for the rise of civilization, and to belong to the past is to be damned. Naturally, in his endeavor to flatter the living at the expense of the dead, he does not dwell on the ancient triumphs of art and religion, but gathers his evidence from the reformers and scandal-mongers of the period. And as the thirteenth century is commonly called the age of faith, he is bound, first of all, to make it out an age of doubt:

> The world is far purer and better for the decay of sacerdotalism. One-tenth of the abuses that reigned in the thirteenth century would have sufficed to wreck any church in a less barbarous age. . . Art was not the produce of mediæval religion, but of worldliness under some restraint of religion, etc.

Now, we all believe in Progress, but is it not possible that the doctrine of advance, held absolutely and mechanically as Mr. Coulton holds it, may become a source of error the more insidious as it falls in more perfectly with the current of the day? There is such a thing as the fallacy of the present, just as there is a fallacy of the past. And these two fallacies point to two historical methods whose difference is deeper-seated than the prejudices of Catholicism and Progress. What, in a word, is the true criterion of an age, the products of its higher and rarer imagination, or the daily, unrelieved life of the multitude? Who reports the thirteenth century truly, Dante or Salimbene?

Certainly, Dante saw and experienced evil enough in his lifetime. He was pointed at in the streets of Florence as the man who had been through hell; but he had also seen the vision of peace. How real to him was the consolation of that vision, and to what degree does he stand for his age? It is a question of the reality of the imagination. Historians of the type of Mr. Coulton would give to that reality the least value. For the distress of Dante's exile they see little compensation in his inner life, and even this little is peculiar to himself and without meaning to the people for whom he wrote down what he felt. Again, the danger before the historian is the more insidious because it accords with his training. The great works of the imagination are open to all who can read; the task of the scholar is to run down the obscure records of an age and build up his picture from what the world ignores—otherwise, in what is he learned? And the temptation lies there. These obscure records are just those that contain the minute and ephemeral transactions of life, and it is extremely difficult to dwell among them continually without coming to regard them as the only reality, and thus emphasizing them far beyond their desert. Dante's glimpse of Beatrice grows more and more a shadowy thing, and Salimbene's complaint over the vermin of the convents more and more a characteristic of the century. Not many historians can preserve their balance; can at the same time see the great things and the little things of the past, and compute the gains and losses of time. Hence the so-called science of history offers one of the subtlest temptations to distort the facts.

CANCER AND TRYPSIN.

A little more than a year ago we printed an article on the treatment of cancer by trypsin, summarizing expositions of the process contributed by Dr. C. W. Saleeby to *Harper's Weekly* and *McClure's Magazine*. In conclusion we remarked that Dr. Saleeby's zeal would be discounted by cool observers, especially in view of the fact that competent authorities in London, where the method had been tried, were skeptical as to cures. In the twelvemonth that has passed trypsin has been employed in this country, in England, and on the European Continent. On the basis of these experiments Dr. Saleeby again writes in eager support of the treatment, this time in the September issue of the *Contemporary Review*. In spite of his warmth, well-trained scientists will, we believe, still maintain an attitude of skepticism.

In the first place, the theory upon which trypsin is urged—first propounded by Dr. John Beard, lecturer on comparative embryology in the University of Edinburgh—is not yet proved, and is, indeed, imperfectly understood. These matters are, of course, beyond the layman; but so distinguished a pathologist as Prof. James Ewing of the Cornell Medical School is quoted in the *Journal of the American Medical Association*, December 15, 1906, as wholly unable to follow Dr. Beard's reasoning, "either embryologic or physiologic." Professor Ewing has also talked with various other "embryologists and physiologists, and has found that they, too, have been unable to grasp" Dr. Beard's meaning. But, as Dr. Saleeby says, "the theory is naught." It may still be proved true; and even if it is both incomprehensible and false, trypsin may conceivably cure cancer.

Let us, then, examine some of the cases in which he pins his faith. Three difficulties attend such examination. For one thing, *cancer* is a generic term, used by the laity and by many physicians to cover a group of tumors, varying in malignancy and obstinacy. For example, epithelioma, a skin-cancer, is frequently excised completely and permanently by the knife, and it sometimes breaks down and disappears under application of X-rays or radium. Therefore, cures of epithelioma signify little as regards the more malignant and deep-seated types of carcinoma. Furthermore, unless the cancer is exposed on the surface of the body, exact diagnosis is often impossible. Even microscopic examination of a small scrap may be inconclusive; for the cells may be mixed and different in different parts of the tumor

As the New York *Medical Record* for December 22, 1906, puts it, there may not be absolute certainty "until this diagnosis has been made a number of times by a number of competent microscopists." And, finally, a cancer is not really cured if it returns to the same or to some other part of the body within three years. With these points in mind, we may consider some of the cases in this country to which Dr. Saleeby points with pride.

The first was published by Dr. Clarence Rice in the New York *Medical Record* of November 24, 1906. "This," says Dr. Saleeby, "is a case of what cannot be doubted to have been cancer of the larynx, and it was cured." Dr. Rice reports four cases, of which only one was benefited by trypsin. He and other physicians think the cured case was a malignant cancer, but there was no *microscopic examination;* and the exact nature of the tumor is therefore uncertain.

Dr. Saleeby next cites a report on twenty-nine cases, including "two absolute cures," by Dr. William J. Morton in the New York *Medical Record*, December 8, 1906. "Many of the other cases," adds Dr. Saleeby, "are now going on toward cures." But Dr. Saleeby fails to note that the two "absolute cures"—to date—reported by Dr. Morton, were epithelioma; and that most of the cases were also treated by X-rays. Of the other twenty-seven cases, five were dead at the time of the report; three had to be operated on; three were benefited but little or not at all; and sixteen—six of them epithelioma—were improved, at least temporarily. The report, however, does not say they "are going on toward cures." In one of the operated cases, Dr. Morton tells us, "a remarkable process of retrogression by degeneration and atrophy of a carcinomatous breast gland to final and curative obliteration has been microscopically demonstrated." This case Dr. Saleeby described in an article in *Harper's Weekly*, January 19, 1907, as "the most valuable, because of the completeness of the demonstration." Yet, according to an article in the New York *Medical Journal* of March 2, 1907, by Dr. William Seaman Bainbridge, who performed the operation mentioned above, Dr. Morton's report was "published in advance of a thorough study of the entire tumor mass, and against my most emphatic advice." What is more, the patient died in four months, with metastatic cancerous growths in many other parts of the body.

Another case noted by Dr. Saleeby was a multiple fibrosarcoma of the tongue reported by Dr. Frederick Holme Wiggin of this city for the *Journal of the American Medical Association*, December 15, 1906. According to Dr. Saleeby, the patient was "treated and cured by trypsin and amylopsin"; but according to Dr. Wiggin, "the growths at the back of the tongue had not quite disappeared." Dr. Wiggin also speaks of the case as "inconclusive." Indeed, two pathologists pronounced it fibroma, and not sarcoma; in other words, not malignant. Again, Dr. Saleeby tells us of a case of cancer of the stomach treated in the clinic of Professor Von Leyden of the University of Berlin, and reported last January in a German medical publication. The remedy applied was "trypsin, amongst other things," and the result was "either great improvement or recovery." Yet, according to the *Journal of the American Medical Association*, May 4, 1907, the verdict from Von Leyden's clinic is, "that trypsin to date, while displaying a curative influence, cannot yet be heralded as a definite method of treatment."

We have considered Dr. Saleeby's strongest cases; we will not weary the reader with an analysis of the others. It is evident that Dr. Saleeby has written with the enthusiasm of a poet on a subject that demands absolutely dispassionate discussion. Trypsin—like several other methods of treatment—apparently checks, at least temporarily, the growth of one or more varieties of cancer and breaks down the cancerous tissue. Possibly a complete cure for certain forms of cancer, even the malignant, may yet be worked out through the employment of trypsin. But that is a matter of speculation. We must wait several years before we can pass on the question of permanent recovery. We should therefore be guilty of exciting groundless hopes if we did not say frankly that to-day there is not a single unequivocal record of malignant sarcoma or carcinoma cured by trypsin and amylopsin alone.

THE GERMAN BOOK WORLD.

The most ardent adherents of the ultra-modern school of German literature are beginning to admit that a reaction has set in. A general revision of the critical standards introduced by youthful heretics has resulted in a return to the old ideals and in a restoration to their former exalted places of almost all the masters regarded as classics. The personality of Goethe was not esteemed at its full worth until it began to be compared with that of the most powerful moulder of modern German thought, Nietzsche. Even by so radical a writer and reformer as Ellen Key, who has become more popular in Germany than in her native Sweden, Goethe is now pronounced the consummation of what Nietzsche only aspired to. The steady progress of the Goethe renascence far surpasses the Schiller revival which seemed to have begun at the occasion of his centenary. Even the tradition that Schiller alone is the German people's own poet is being disposed of by the fact that a demand for good new editions of Goethe at moderate prices and of popular works on Goethe has increased until the publishers' output in this field has assumed remarkable proportions.

Selections being much favored by German readers, the number of Goethe books of that kind is almost appalling. Dr. Wilhelm Bode, the editor of the quarterly magazine *Stunden mit Goethe*, now in its third year, has edited a selection of the letters of Goethe in two volumes under the auspices of the Deutsche Dichter Gedächtnisstiftung in Hamburg, and has also compiled two volumes of aphorisms from Goethe's conversation, called "Goethe's Gedanken nach seinen mündlichen Äusserungen (Berlin: Mittler & Sohn.) More of Goethe's conversation is being offered in "Goethe im Gespräch," edited by Franz Diebel and Fried. Gundelfinger for the Insel-Verlag of Leipzig. One of the most practical collections of aphorisms is probably that compiled and arranged under different headings by Theo. Achelis, and entitled "Was sagt Goethe?" (Stuttgart: Greiner & Pfeifer.) A new edition of the Conversations with Eckermann has been prepared by Adolf Bartels for Eugen Diederichs, Jena. This firm is also publishing the correspondence with Bettina von Arnim, edited by Jonas Fränkel, and a noteworthy edition in two volumes of the correspondence with Schiller, prefaced by Houston Stewart Chamberlain, whose characterization of the two German masters is one of the best in our modern criticism. There are numerous new editions. Dr. Georg Ellinger is supervising the critical edition which bears the imprint of the Bibliographical Institute of Leipzig; and the Goethe Gesellschaft of Weimar plans an edition in six volumes, revised by Erich Schmidt, which is to be the people's Goethe. The same society has published a comprehensive collection of "Maximen und Reflexionen." The "Goethe Jahrbuch," now in its twenty-sixth year, edited by Ludwig Geiger, is still devoted to the more serious work of Goethe scholars. There are new editions of the Italian Journey (Berlin: Julius Bard), and of the poems (Berlin: S. Fischer).

Among books on Goethe and his work may be mentioned Carlyle's, in a fine new edition by Oesterheld of Berlin; and "Goethe's Tod," a faithful record of his death by Karl Schüddekopf, is published by the Insel-Verlag of Leipzig. Among the Breslauer Bieträge zur Literaturgeschichte is a treatise on Goethe's nature-sense by Arthur Kutscher. Eugen Diederichs, Jena, publishes Jacob Minor's address on Goethe's "Mahomet," given at the Goethe Day in Weimar. A remarkable work has been undertaken by Hans Gerhard Gräf for the Literarische Anstalt, Rütten & Loening of Frankfort. It is a chronological record of Goethe's opinion of his own works, called "Goethe über seine Dichtungen," of which five volumes cover the epic and dramatic poems alone; the sixth is to be devoted to the dramas, and the seventh to his lyrical poetry. Nor should the pictorial Goethe be forgotten: "Goethe Bilderbuch" (Leipzig: Schulze), with its well-selected and finely reproduced portraits and pictures and the carefully edited text. The "Goethe Kalender," edited by Otto Julius Bierbaum, who with the late Hartleben was one of the faithful adherents of Goethe during the storm and stress, is eagerly welcomed year after year.

German Romanticism comes in for a large share of attention. An *edition de luxe* of Brentano's "Gockel, Hinkel, und Gackeleia,"

with the designs which the author himself had made for the book, is limited to 300 copies and published by the Insel-Verlag of Leipzig. Bettina von Arnim's novel, "Günderode," is being brought out by the same house. Brentano's "Godwi" is republished by Hermann Seeman, Berlin, and two volumes of selections from his writings bear the imprint of Herder, Freiburg. The centenary of Anastasius Grün has been productive of a new complete edition of his works in ten volumes (Leipzig: Max Hesse). That delightful piece of broad old German humor, "Die Johslade," by Kortum, has been edited and prefaced by Bierbaum and reprinted in a garb faithfully reproducing the typography and binding of the period when it was first given to the laughter-loving world (Leipzig: Insel-Verlag). Among the rare and curious works reprinted under the collective title Die Fruchtschale, by R. Piper of Munich, are Jörg Wickram's story, "Der Goldfaden" (1557); a volume of aphorisms by Friedrich Schlegel, called "Fragmente und Ideen"; autobiographical fragments by Adalbert Stifter; a new edition of Platen's journal; and the Irish fairy tales collected by the Grimm brothers. A complete edition of their "Kinder und Hausmärchen" is being brought out by J. G. Cotta of Stuttgart. Kleist is being republished under the supervision of Wilhelm Herzog by the Insel-Verlag. The same house announces for publication in the spring the last work from the pen of Nietzsche, "Ecce Homo," while the publisher of Nietzsche's complete works (Leipzig. C. G. Naumann) plans a pocket edition in ten volumes at a moderate price.

A library of selections from the writings of the classics bears the pompous title Statuen deutscher Kultur (Munich: Beck). However carefully they are compiled, it seems doubtful whether the excerpts from Jean Paul's "Titan" and "Flegeljahre," published respectively under the titles "Träume" and "Idyllen," will convey a correct impression of the author's individuality to one not already familiar with his writings. The same doubt arises with reference to the tales culled from "Heinrich von Ofterdingen" and presented under the title "Novalis' Märchen." Equally ponderous is the collective name bestowed upon a similar enterprise, Erzieher zu deutscher Kultur (Jena: Eugen Diederichs). The introductory volume, "Schiller als ästhetischer Erzieher," contains about two hundred extracts from his writings carefully selected and arranged by Alexander von Gleichen-Russwurm, whose name appears also on the title-page of the little volume in the Kultur series (Berlin: Marquardt & Co.) called "Schillers Weltanschauung und unsere Zeit." A companion volume to the former work is entitled "Klassische Schönheit," and contains selections from Winkelmann and Lessing. "Hans Sachs als Humorist," with commentary by Otto Brandt, and the "Schopenhauer-Brevier," by Rudolf Presber, are books of the same order. Tolstoy and Ibsen have not escaped this new form of literary exploitation. Their reading of life is presented in the "Tolstoi-Buch," by Dr. Heinrich Meyer-Benfey, and "Schicksal und Wille," by Dr. Wilh. Hand.

A curiously interesting work is called "Zehn lyrische Selbstportraits" (Leipzig: Theo. Weicher). It contains facsimile reproductions of autobiographical sketches of ten contemporary German poets: Ferdinand von Saar, Felix Dahn, Johannes Trojan, Martin Greif, Ernst von Wildenbruch, Detlev von Liliencron, Gustav Falke, Arno Holz, Richard Dehmel, and Otto Julius Bierbaum, with portraits from life by M. A. Stremel. Some additions to the Kultur series are of special interest. Dr. Käthe Schirmacher presents an exhaustive statement of the relations between Germany and France since the war of 1870-1, "Deutschland und Frankreich, seit fünfunddreissig Jahren." Her scholarship and many years' residence in France have peculiarly fitted her for this task. Johannes Schlaf contributes a singularly dispassionate treatise on war, "Der Krieg," in which he gives America credit for changing the drift of modern thought on that subject, speaking appreciatively of William Lloyd Garrison, the non-resistant. Eduard von Mayer in "Fürsten und Künstler" shows in historical and philosophical perspective the relations between the artists and the patrons of all times. Jarno Jessen draws a sympathetic portrait in "Kaiserin Friedrich," a woman whose social service and many British innovations endeared her to those Germans broad enough to overlook the hated British alliance and to see in her a remarkable personality. The editor of the series, Dr. Cornelius Gurlitt, is the author of a book, "Dresden," which presents a vivid account of its development as a centre of German culture.

Marie von Ebner-Eschenbach calls a selection from her works intended for young readers "Aus meinen Schriften" (Berlin: Gebr. Paetel). It contains some of her gems, like the inimitable dog stories, "Die Spitzin" and "Krambambuli"; and also some of her romantic tales, poems, and aphorisms, which will be enjoyed by readers of every age. Otto Ernst, who as a dramatist has risen to a prominent place through "Flachsmann als Erzieher," and as a novelist became famous through "Asmus Sempers Jugendland," is also a charming *causeur*. His volume of humorous talks, "Vom geruhigen Leben" (Leipzig: L. Staackmann), is a mine of homely wisdom, with not a few critical thrusts at education, society, etc. Wilhelm Scharrelmann, who will be remembered for his controversy with the school authorities of Bremen, and who, in collaboration with Johann Wiegand, wrote that powerful play "Krieg," which was by some critics attributed to Gorki, has published a volume of short stories, "Die Fahrt ins Leben" (Berlin: Egon Fleischel & Co.). With a remarkably firm grip upon the realities of life he combines exquisite sentiment. Some of these scenes of everyday life are prose poems. Herman Hesse, who since the publication of his novel "Peter Camenzind" and the deep impression made by his story of school life, "Unterm Rad," has become one of those figures in contemporary German fiction that stand for strength, originality, and seriousness of purpose, has written a book of stories. They need no heading like "Aus Kinderzeiten" and "Der Lateinschüler" to suggest a background of personal reminiscences, and justify their collective title, "Diesseits" (Berlin: S. Fischer). With charming simplicity, the author reveals the source of his inspiration—the homely incidents of average life. But there is a dignity and sweetness about his realism, which proves the progress German fiction has made since it has outgrown the naturalistic creed.

A. VON ENDE.

NEWS FOR BIBLIOPHILES.

A little book, well known to collectors of first editions of Charles Lamb, under the title "Original Letters, &c., of Sir John Falstaff and His Friends," has been included with more or less justice in the various Lamb bibliographies. It was published in 1796, "Printed for the Author." The strongest evidence that Lamb actually had any hand in the little book is in a letter by Southey to Moxon, dated February 2, 1836, more than a year after Lamb's death. Speaking of Lamb's friend, James (or "Jem") White, Southey says: "He and Lamb were joint authors of the 'Original Letters of Falstaff.'" John Matthew Gutch, who was also a Christ's Hospital boy, wrote in his copy of the book:

> These Letters were the production of my old schoolfellow, James White, with incidental hints and corrections by another schoolfellow, Charles Lamb.

That indefatigable searcher after everything relating to Lamb, Ernest Dressel North of this city, has discovered an interesting copy of the book. The sheets are actually of the first edition, but there is a reprinted title-page reading, "The Second Edition," and dated 1797, instead of 1796. On one of the fly-leaves is this inscription, apparently in Lamb's own autograph: "To be half bound & Letter'd 'Falstaff's Letters.'" This is evidently one of the copies of which Bryan Waller Procter tells in his "Memoir" of Lamb: "Lamb thought highly of White's book, which he used often to purchase and give away to his friends, in justification of his own taste, and to extend the fame of the author." And Procter adds: "The copy which he gave me I have still."

On Tuesday afternoon and evening, October 29, the Anderson Auction Company of this city sells a selection of books from the library of an old New York collector. There are a few items of Americana: Egede's "Description of Greenland," 1745; Gordon's "New Jersey," 1834; a presentation copy of Kennedy's "Texas," 1841; Ramsey's "Annals of Tennessee," 1853, etc. On October 30 and 31 this firm offers the library of H. C. G. Bals of Indianapolis, which contains, among other desirable lots, Chaucer's Works, Bonham's edition, without date, but issued about 1550; first editions of Dickens, Thackeray, and Lever; a few good Western books, such as Dillon's Indiana, 1843, and a long series of presentation copies of James Whitcomb Riley's books.

The copy of Gabriel Thomas's "Historical and Geographical Account of the Province and Country of Pensilvania and of West-New-Jersey," London, 1698, which was offered at the sale of the library of Rev. Horace E. Hayden in Philadelphia on October 17, brought $825. Two copies were sold at auction in London last season, one bringing £160 at Sotheby's on May 6, and the other £99 at Hodgson's, on May 31. The previous American record was $805, in the McKee sale in 1902.

Correspondence.

DEFECTS OF COLLEGE ENTRANCE REQUIREMENTS.

To the Editor of The Nation:

Sir: The New England Association of Colleges and Preparatory Schools gave much of the time of its meeting last week to the discussion of college-entrance requirements and examinations, a subject which, in some of its aspects or particulars, is almost inevitably assigned a place every year in the programme of all our larger educational associations. Indeed, the subject is of paramount importance to the majority of secondary schools, for the demands of the colleges determine in great measure both the extent and the kind of teaching done by the schools.

In the consideration of this subject the opinions of certain classes of persons are to be received with caution. These are: First, teachers in schools which from their situation or by choice prepare for a single college; secondly, those college authorities whose views are based upon the feeling in such schools; and, thirdly, those teachers whose one cry is always for easier requirements and easier examinations, to the end that their own work may be the easier. The first two classes are not able to understand how great a boon uniform requirements for the different colleges would be to the majority of schools, and how greatly the schools desire this uniformity. As to the last class, I venture to assert that it is much smaller than college authorities seem disposed to consider it. As a matter of fact, teachers know that it is not a difficult thing to prepare a boy of any ability for any college in a reasonable time, if he and his teachers can devote themselves to direct preparation for the entrance examinations of the college of his choice. If any one doubts this, let him investigate the results obtained by private tutors.

The secondary schools would do well, it seems to me, to agree to urge upon the colleges the two vital objections to the present system, and to abandon the irritating discussion of details until there have been established the general principles upon which the objections rest. The first of these objections is that there is still so great a diversity in the requirements of different colleges that the schools cannot arrange any course of study in any subject which shall prepare for all colleges, or even, it is almost safe to say, for any two colleges. This fact may unconsciously influence the attitude of some private schools which owe their patronage largely to their fitting boys to meet the peculiar requirements of a particular college. It is perhaps not to be expected, or even desired, that all our colleges will agree to require only the same subjects of candidates for admission, but it certainly is possible to make the requirements in a given subject identical and to express them in identical terms. It serves no high purpose, for instance, that Princeton alone should require Sallust, and Yale alone require the Bucolics of Virgil; that Yale should base her examination in Latin grammar upon the Catilinarian orations of Cicero, while Harvard sets these orations for the final examination and asks the questions in grammar in the preliminary examination. It is undignified and demoralizing for a school to have to teach candidates for Harvard in one section, candidates for Yale in another, and candidates for Princeton in a third.

But there is something infinitely worse than lack of uniformity. Uniform requirements might be vicious, and uniformly vicious requirements seem to me likely to be the result of the little tendency toward uniformity that one may detect in the requirements in Latin. Many teachers would undoubtedly be willing to see the colleges agree upon the same four books of Cæsar, six orations of Cicero, and six books of Virgil. For my part, I should prefer to continue to prepare some of my students for a college here or there which asks only that I send to it boys who can show that they have had the training which thorough study of the language gives and that they can read Latin. I believe, as I have said elsewhere, at greater length and with a fuller setting forth of the reasons, that a much smaller portion of the literature should be prescribed, and that ability and power should be tested by examinations at sight. If the college must know what authors and how much of them the candidate has read, a certificate from the school would put it in possession of the facts.

I do not intend to enter here into an attempt to prove anew the value of the translation at sight as a test. I shall merely make the assertion that it may be made to test the quality of the work done, and that this is more important to the college than the quantity. Furthermore, I do not urge this plan of examination as an easier one than that now in vogue. I know by experience that it is harder to prepare a boy so that he shall be able to prove that he has some mastery of Latin than it is to prepare him to show that he has been carried through certain parts of certain authors. Many teachers meet the present requirement by simply coaching their students in the authors prescribed, and any system that encourages this does an injury to the teacher and the boy, and to the cause of true education.

I may state the second objection to the present system, then, by saying that it holds the schools to a narrow drudgery, and prevents them from setting before themselves the highest ideals and from contributing their share towards rational education. The Latin requirements doubtless give the best illustration of the evils to which I call attention, but the evils exist to a greater or less degree in other requirements of the colleges.

The college entrance requirements will not satisfy the schools until they are made uniform, and so long as the colleges keep the requirement in any subject one primarily of quantity they will continue to have reason to complain of the quality of the preparation in that subject. They themselves have put the emphasis in the wrong place. That they cannot so arrange their requirements and examinations as to demand and receive satisfactory evidence of thorough preparation without prescribing the full and exact amount to be studied, is *à priori* unreasonable, and has been proved untrue by the long experience of at least one great university of our own country.

John C. Kirtland, Jr.

Exeter, N. H., October 14.

INEFFECTIVE TEACHING IN ENGLISH.

To the Editor of The Nation:

Sir: Two articles entitled "Overdone Teaching in English" have recently appeared in the *Nation*. Last week, at a meeting of the New England Association of Colleges and Preparatory Schools in Boston, there was a further attack upon English as it is taught in the schools and colleges. This cumulative arraignment can not but sting into instant questioning any one who is attempting, with the reproach ever before him of the "monstrous disproportion between energy expended and results obtained," to teach English in either school or college. Is the teaching of English in our preparatory schools really overdone, or is it wrongly, ineffectively done? Is the difficulty a matter of quantity and nature of material, or is it a matter of method of attack, of end in view? These are the questions crystallized by the attacks of Prof. F. B. Gummere, Prof. A. G. Newcomer, and the New England Association of Colleges and Schools.

Both Professor Gummere and Professor Newcomer maintain that the radical error in our present system of English instruction is the amount and nature of the reading prescribed. They would reduce by half the present list, discarding fiction, such as "Ivanhoe," as never meant for study, setting aside the intenser classics, such as "Macbeth," for maturer years. There might, one may grant, be a wise simplification of the list of books assigned for careful study: "Macbeth" might, perhaps, give way to a simpler historical play—though I question it; Burke's "Speech on Conciliation" may more certainly yield with profit to shorter speeches. But to reduce the list by half, and substitute for a first-hand dealing with books a history of literature with certain selected texts as samples, would surely be a fatal retrogression. There must inevitably result a cramming of the mind with dead material of dates and characteristics; we should have conscientious teachers giving the book *in toto;* and then, speedily, examinations covering the ground from Caedmon to Stevenson—the very camel of the fable stalking through our schools in place of the gnat.

The whole present system is, after all, a system of samples, and Professor Gummere's contention that our study of the "classics" leaves no rich field still fallow, and results in "an invasion and forced possession of lighter literature which time can seldom cure," is hardly justified by facts. The whole land of the ballads and of Scott lies behind "Ivanhoe"; the whole Forest of Arden, the coast of France, and the London of Prince Hal, the Rome of the ancient Cæsars, lie away beyond the borders of the Scottish heath. And many boys and girls learn the way to them in the school. My own experience in preparatory teaching, the general consensus of opinion among freshmen newly come from their preparatory training, convince me that here lies the fundamental weakness of Professor Gummere's plea for a saving of the classic for maturer years, and a substitution of "the average, the sprightly, the attractive, the typical" in the preparatory grades. Doubtless there are some so bored by a study of some "masterpiece" in school that they fly full speed to the lightest litera-

ture. No wonder, if in a highly reputable New York school "Lady of the Lake" is read in two grades and studied in a third, if in a Massachusetts high school lines of "Julius Cæsar" are doled out to the whisperer to be memorized in amounts proportioned to his crime! Let judgment fall, however, not upon the unfortunate masterpiece, but upon the stupidity of teachers. Match these less frequent cases with the countless instances in which Homer, Shakespeare, Milton, read under the guidance of a genuine lover of them, have rendered quick the spirit of the boy and girl, and sent them, face forward forever, into the Promised Land of books. To many a one the written pages of the classics speak no word till a man possessed by the great human spirit that breathes through them has interpreted the writing. A few are fortunate enough to be led from their own homes into the vital, human world of the best literature—of such, doubtless, Professor Gummere is thinking; but the majority of American boys and girls, from the poorest to the richest, must find their way thither through the instigation and guidance of the schools, or not at all. But few in proportion go from our schools to our colleges; to save the best for maturer years and college courses, and to abide in the mediocre during preparatory training, is inevitably to make the mediocre a permanent abiding place for many a restless, but untutored mind. The course of action suggested by Professor Gummere is the shortest and most direct way, I believe, to that "forced possession of lighter literature" which he would avoid.

The giants of the old days did not leave their Virgil and Horace, their Homer and Æschylus, for "maturer years"; they studied them in the schools. And the result was a living culture which we moderns do not attain, and the way to which does not lie in a substitution of "the sprightly" for the lofty. Nor will a mastery of our English tongue and power of expression ever come to us through the study of grammar and composition advised by Professor Newcomer in the time saved by this reduction of the reading list. Right and very essential such a study is in its place, as a strong foundation, but equally powerless is it to give, without the aid of much, and that the best, literature, that fine sense for the values of language which is the essence of culture and the source of all fineness of expression. That can come only through genuine familiarity with sounding English prose, as in the old days it came from deep grounded acquaintance with pure Latin and sonorous Greek.

I cannot think that Professor Gummere and Professor Newcomer have truly pointed out the fault in our English teaching. Their criticisms have an unconscious personal bias: the ballad stage does not last through all the preparatory years; English grammar and rhetoric cannot forever supply the place of literature, even in the preparatory school. The line of thought in the papers read before the New England Association of Colleges and Schools is more suggestive of practical relief. In all the vigorous attack upon the excessive amount of the college requirements in general and in particular, there was a notable rest from battle with the amount of the English requirement. Not quantity nor quality of reading assigned was the fault pointed out as lying at the bottom of our present ineffective English teaching; the fault stressed in no uncertain terms by Dr. Farrand of Newark Academy, and more particularly by President Faunce of Brown University, was the method of attack, the substitution of knowledge as an end to our study of literature in the schools in the place of appreciation and power of expression. The examinations set in English by most colleges—with the exception, named, of Harvard, and with the exception also of Bryn Mawr, where power to write, not knowledge, *per se*, is tested—are cramping the English in our preparatory schools. While over-edited text-books and English examinations of the present kind press upon the indifferent boy or girl, and the unwilling but submissive teacher, the necessity of knowing, for mere knowing's sake, at a definite examination time, the mass of allusions and facts, the sum and substance, of every masterpiece named in the "Study and Practice" list, the teaching of English will be devitalized. While every book studied must be bared to the skeleton, and every bone numbered against that same examination day, there can be none of the joyous illumination that comes from order, and clarity, and fineness of discrimination, to light the way to personal achievement. Only the teacher who will let his fearful conscience lie low, and his spirit rise, can wholly surmount these difficulties and stimulate the schoolboy and girl to vital appreciation and thought and expression.

The American people have a right to question why the energy and time and money expended upon the teaching of English in our schools and colleges to-day have no more effect. The English colleges, we are told, have no elaborate courses in English, yet turn out men cultured in speech and written word; the French schools have no courses in composition, yet send out students who can write French. And we bring forth, after hard labor, men "illiterate and unashamed"—to use President Faunce's graphic phrase—before the beauty of their own language! These comparisons are illuminating, and both confirm and add to the ideas already suggested. The training of the French school and university makes every written work a "composition," every master of science or economics, of history or mathematics, a master also of French. That fact is to me the most illuminating that can be brought to bear upon the present situation. We waste time hopelessly through specialization and lack of coöperation. While we train students to write themes on subjects connected with English courses, and other departments allow the same students to write the detail of their regular work as fancy dictates, regarding only substance, and accepting slipshod English, we shall never send from our schools to our colleges, from our colleges to the outer world, writers of clear and efficient English. Yet, in no school or college, so far as I know, is real coöperation established. We are making a beginning at Wellesley, but beginnings are ever difficult, and the public opinion necessary to assure success is not yet established. In it, to my mind, lies the great hope of our future effectiveness.

But, one may say, if English courses trained students as they should train them, they would spontaneously, instinctively, write clear English always. Instinct!—instinct springs from inheritance and childhood training; lacking it, a man must learn by slow, difficult degrees to conform to custom. Our schoolboys and schoolgirls, our college men and women, are no Latins by inheritance, and they come very often from homes wherein is no instinct for culture, no instinct that leads to comeliness of speech or manner. Remembrance of the cultured homes from which the men of the English colleges pass by way of the far-famed classical training of the public schools to the university, points the moral, and makes only more visible the darkness of the cultureless homes in our money-getting land. We deal with another race—a motley, composite, untrained race—and there is vital need that concerted training in our schools and colleges act as a substitute for that inheritance and breeding which best of all beget spontaneous and instinctive purity of speech.

Truly, not less but more of the best that literature can give, a more vital comprehension of the magnificent power of the English classics to mould mind and spirit and speech—these are essentials, if we are ever to create in America that fine spirit of culture, that fine sense of rectitude in things intellectual as well as in things moral, for which the whole land thirsts.

AGNES FRANCES PERKINS.

Wellesley College, October 16.

TO THE EDITOR OF THE NATION:

SIR. The letter of Prof. F. B. Gummere in your issue of September 19, and that of Prof. A. G. Newcomer, in your issue of October 3, are both much to the point. Nevertheless they suggest the question: Why don't you do something about it?

The present course of English instruction in our secondary schools is not a diabolical invention of those in charge of the schools. On the contrary, it is the direct and logical outgrowth of the entrance requirements outlined with tiresome similarity in nearly all college catalogues issued throughout the United States. There is no avail in privately advising teachers to do one thing, while officially countenancing another. If college instructors in English are really desirous of a change in the condition of affairs, they must realize that the remedy lies in their hands, and in theirs only; they must completely revolutionize the college entrance requirements.

Unfortunately this is more easily said than done. In too many of our universities and colleges there is a sharp line of demarcation drawn between "rhetoric" and "literature." Rhetoric, and all that it presupposes by way of previous preparation, is looked upon with suspicion and bare toleration. The voice of command is that which ponderously reiterates the opinion that, if youth be sufficiently stuffed with literature, enough rhetorical juice will unconsciously be expressed for the due digestion of the lump.

Such being the case, there can be slight hope for a universal reform. Radical action must be taken where radical action is possible; that is, in institutions whose departments of English are at once united and enlightened. There should be enough such institutions to coöperate successfully in the establishment of an entrance requirement in English, suited not only to the immediate needs of the secondary-

school student, but to his preparation for maturer thought in college. A group of New England colleges have already made a feeble attempt in the suggested direction. I have no right to say that they would welcome an infusion of enthusiasm from South and West; but there is no reason why they should not. HOMER EATON KEYES.

Dartmouth College, Hanover, N. H., October 9.

THE "S.P" OF PHI BETA KAPPA.

TO THE EDITOR OF THE NATION:

SIR: A recent issue of the Providence *Journal* contained a discussion of the meaning of the letters S.P., which stand on the key of Phi Beta Kappa. It is there stated that the meaning of these letters may be quite unknown, or that they may be the initials of *Societatis Particeps*. Since the original minutes of Phi Beta Kappa give an answer to the question which differs decidedly from these, I address this letter to you.

I remained at Williamsburg last month after the meeting of the Triennial Council of Phi Beta Kappa in order to examine carefully the minutes of the society with reference to this point. They yielded evidence which was unexpectedly clear and unequivocal. The main evidence lies in the presence of the dot of the letter *i* in each word, which was not erased, and in depressions in the paper corresponding to the erasure of parts of letters extending above and below the line. These are so placed as to leave little doubt that the letters stand for the words *Societas Philosophica*. These words may be regarded as practically certain, with the exception of the termination of the second. In that part of the word which follows the second *h* we have no indications of the letters, and cannot decide with certainty on the number. The space is such that there must have been more than two letters; and four, such as would be contained in *Philosophorum*, would be rather too long, although not impossible. There is nothing in the manuscript to decide a choice between *Philosophica* and *Philosophiæ*. E. A. BIRGE.

University of Wisconsin, Madison, October 16.

Notes.

Putnams announce the following volumes of the Cambridge University Press: "The Life of Sir Richard C. Jebb," by Caroline Jebb; "Pages of Greek Verse," by Walter Headlam; "Scientific Papers," by G. H. Darwin; "Algebraic Equations," by G. B. Mathews: "The Jâtaka. or Stories of the Buddha's Former Births," vol. VI.; and "The Introduction to the Theory of Multiple-Periodic Functions," by H. F. Baker.

E. P. Dutton & Co. are publishing several additions to their various series: in the London Library, "Popular Tales from the Norse" by Sir George Webbe Dasent, "Specimens of English Dramatic Poets" by Charles Lamb, and "Notes on the Parables of Our Lord" by Archbishop Trench; in the Muses' Library, the Poetical Works of Thomas Campion edited by Percival Vivian; in the New Universal Library, "A Summer in Sky" by Alexander Smith, and "The Life of Cardinal Wolsey" by George Cavendish.

W. M. Rossetti has prepared two more volumes about the Rossetti circle to be published by Brown, Langham & Co. (London). One is the "Diary of Dr. Polidori," his uncle; the other is the "Letters of Christina Rossetti" with notes and portraits.

The Baker & Taylor Co. is preparing what is to be called the Child's Guide Series. The first volume, "The Child's Guide to Pictures," will be by Charles H. Caffin. A guide to mythology will be written by Mary E. Burt, and biography will be treated by Edwin and Catherine Markham.

William Knight's "Victorian Anthology," in the Newnes-Scribner thin paper series, has at least the virtue of inclusiveness. Tennyson, and Browning, to be sure, are barred out because their works are so well known and because it would be so difficult to draw the line when once selection began. But as a compensation, Dr. Knight begins as far back as Charles Lamb, who died in 1834, and is in no proper sense a Victorian, and takes in many poets not commonly read. His choice and sense of proportion are sometimes puzzling. Thus, four poems are taken from Adelaide Anne Procter, whereas from Matthew Arnold there are only three, two sets of stanzas from "Empedocles," and "A Wish." Again Clough has eight poems, as if he were more important than the elegiast who sang his death. We observe that the American poets are well represented, even including Walt Whitman.

In the same series Dr. Knight has the first volume, containing the longer poems, of Scott. The shorter poems are reserved for a second volume.

"The Poems of Edgar Allan Poe," collected and edited by E. C. Stedman and G. E. Woodberry, and published by Stone & Kimball in 1895, is now brought out by Duffield & Co.

E. P. Dutton & Co. issue a second and cheaper edition of Florence A. Maccunn's "Mary Stuart." In reviewing this book, April 26, 1906, the *Nation* characterized it as "a simple, lively narrative of the remarkable adventures through which Mary Stuart passed."

Members of the Congregational Church will be glad to know that "The 'Retractation' of Robert Browne, Father of Congregationalism," has been edited by Champlin Burrage and published by Henry Frowde. It is printed from the MS. in Lambeth Palace Library.

"The Modern Reader's Bible," arranged by Richard G. Moulton, hitherto issued in a number of small volumes, is now published by the Macmillan Co. in a single volume.

John Lane Company will soon have ready for publication a luxurious reprint of Jeremy Taylor's "Marriage Ring," with notes by Francis Coutts.

From the State University of Iowa has recently been issued the first number of a serial publication, to be known as the Iowa Studies in Language and Literature. The special title of this number is "The Syntax of the Genitive Case in the Lindisfarne Gospels," by Christian Emil Bale. It therefore forms a contribution to the study of the Northern form of Old English, a field which, formerly little known, has in recent years received increased attention, especially on the side of pronunciation and inflections. This is no doubt due to a fuller recognition of the importance of Northern English for an understanding of standard English of to-day. From the point of view of the use of the genitive case Mr. Bale discusses nouns, verbs, and adjectives, and the (modern) phrasal possessive with "of," of which there are numerous instances in Northern Old English two hundred years before it was established in (the Southern) English of London. While this form may have developed wholly independent of foreign influence, the author seems inclined to regard it as in part due to the wide distribution of Norse in Northern England, in which language similar constructions were common.

The Boston Athenæum centenary is appropriately celebrated by the publication of a memorial volume, which opens with a genial characterization of the influence of the Athenæum on American literature, by Prof. Barrett Wendell. As he calls up the distinguished men who frequented the library one cannot doubt that to it was largely due the fact that "the Boston of the mid-nineteenth century . . . was the most memorable centre of intellectual activity yet developed in English-speaking America." Among them are the historians Prescott, Bancroft, Sparks, Ticknor, Hildreth, and Parkman; the statesmen Webster and Sumner; the divines Channing and Emerson. As his "Note-Books" indicate, Hawthorne was an occasional visitor, while the records show that Oliver Wendell Holmes, "who began as a grave reader of works on medicine, ended as a riotously general reader of everything which could possibly interest his humanely assimilative mind; his record, indeed, makes one half believe that without the Athenæum we might never have had, in its full luxuriance, that wonderful Autocrat of the Breakfast Table." The librarian, Charles K. Bolton, contributes an historical sketch in which are some interesting facts in regard to the earliest Boston libraries. The first was that for which Capt. R. Keayne, in his will dated in 1653, made provision, "a Library & Galiere for Devines & Schollers to meete in." His books, which he bequeathed to it, he adds, are "not simply for show, but properly for use, they being all English, none Lattine or Greeke; . . . and though my bookes be not many, nor very fitt for such a worke being Engiish & smale bookes, yet after this beginning the Lord may stirr up some others that will add more to them & helpe to carry the worke on by bookes of more valew, antiquity, use and esteeme." It is evident that in old times more than the intellectual needs of readers was cared for, as the first librarian of the Athenæum notes in a blank-book, "A box of Snuff is wanted." Women were not admitted until March, 1829, when "the Trustees voted to give free use of the Library to Miss Hannah Adams, the historian." Referring to this unprecedented event, Josiah Quincy, in his history of the library, says: "One solitary female ventured to claim the freedom of its alcoves, and to endure the raising of the masculine eyebrows, provoked by the unaccustomed sight." Among the other contents are lists of the officers, members of the staff, proprietors, chief gifts and bequests, and the special collections. These include 384 books

which belonged to George Washington, first editions of American authors, international law, and Confederate literature or books and newspapers published in the Southern States during the civil war. The value and attractiveness of the volume are enhanced by the thirty-four illustrations, portraits of the presidents and librarians, and pictures of the various homes of the library.

G. M. Godden of Kincairney, Weybridge, Surrey, England, is preparing a life of the novelist Henry Fielding, to be published next spring. He desires copies for publication of any autograph letters by or to Fielding.

Sig. Ernesto Nathan has edited the *edizione diplomatica* of Garibaldi's "Memorie" from the definitive autograph copy (Turin: Società Tipografico-Editrice Nazionale). The volume is handsomely printed, and will be henceforth for every reader and student the authentic source of one of the world's most remarkable autobiographies. Had Odysseus, returned to Ithaca after his many wanderings, written his memoirs, they would probably have more nearly resembled these confessions of Garibaldi than any others the world now has or is likely to have. We may remark also that it is two men of action, and not men of letters—Garibaldi and Grant—who produced the foremost autobiographies of their generation.

The publication in Italy of works on the Risorgimento goes on apace. We have received lately two volumes concerning men who, though not of the first importance, were nevertheless concerned in critical events. First, Michele Rosi writes of Antonio Mordini under the obscuring title "Il Risorgimento Italiano e l'Azione d'un Patriota, Cospiratore e Soldato" (Rome: Casa Editrice Nazionale). Next, Capt. N. M. Campolieti deals with Carlo de Cristoforis in "La Mente e l'Anime d'un Eroe" (Milan: L. Mondalni). As Mordini and Cristoforis were both republicans, these volumes are valuable because they throw light on republican activity in 1848-9 and on the succeeding decade of conspiracies. Mordini's career, which extended down to 1902, is also interesting as showing how the young Mazzinian of 1848 grew naturally to be in his prime a loyal minister of the Crown.

The publishing house of Nicola Zanichelli, in Bologna, which brought out Carducci's later writings, as well as his collected works, has just issued, through the Italian press, an appeal addressed to all who possess letters of Carducci, inviting their cooperation in the preparation of an edition of his correspondence. Zanichelli has purchased from Carducci's heirs the publisher's rights to all the letters in their possession. The work, which will cover a period of more than fifty years, should be not only of the greatest importance for the history of Italian literature, but also, if the publishers succeed in bringing together considerable correspondence of Carducci's earlier life, of not a little interest for the political history of the first troublous years of united Italy.

In a book of 164 pages, entitled "Japans Zukunftsreligion" (Berlin: Karl Curtius), Dr. Hans Haas, for many years pastor of the progressiveiy inclined Protestant congregations in Tokio and Yokohama, publishes three lectures, in which he discusses the development of religious forces in Japan. He regards a modern type of Christian religious thought as the most likely to prevail there. Quoting the statement of Count Ito, to the effect that the only true civilization is based on Christian principles, and that the future leaders of Japan must be men educated in accordance with the teachings of Christianity, Dr. Haas declares that modern Japan is rapidly discarding its old religious ideas, the mainstay of which is still Buddhism; and that Christianity properly presented will appeal strongly to the Japanese as the correct substitute. This opinion is not altogether in harmony with that of other observers, but the author insists that his views are not too rosy, since, within fifty years more has been achieved in Japan than in any other mission field.

Under the title "Moderne Propheten," Karl Rösener, has begun the publication of a series of critical essays on the ideas and ideals of leaders of modern thought, particularly in religion and philosophy. The first volume, just issued by Beck of Munich, a work of 231 pages, deals with Hartmann, Tolstoy, and Nietzsche. The discussions are not of a sensational character, but are marked by objective scholarship. A second volume is to discuss Carlyle, Ruskin, and Emerson; and a third, perhaps, Chamberlain, Gobineau, and Naumann. The grouping in the first volume is certainly not based on a harmony of thought on the part of the "prophets," for Nietzsche's contempt for the philosophy of Hartmann is well known.

The well known German Oriental traveller and savant, Max Schlagintweit, has recently issued two small volumes. The first is entitled, "Verkehrswege und Verkehrsprojekte in Vorderasien," which, with a chart, comes from the house of Paetel, in Berlin. The work gives a bird's-eye picture of the railroads of Asia Minor, Syria, Transcaucasia, and Turkestan. By way of appendix Major Schlagintweit gives a survey of the roads of the Iran. The other volume, entitled "Die Reform im Kongostaat," from the house of Oldenbourg, in Munich, is a cool discussion of the Congo problem. The author is of the conviction that a group of British merchants in Liverpool in conjunction with others of Hamburg, are decrying the present condition of affairs in the Congo for the purpose of having Great Britain take possession of this country. The writer insists that affairs in the Congo are in a satisfactory condition, and do not justify interference on the part of outsiders.

The building of the Baghdad Railway is strougly urged by the noted traveller, Mark Sykes, in an account of a recent journey in northern Mesopotamia, published in the *Geographical Journal* for October. He says that it will not only put an end to the ceaseless intertribal warfare between the Kurds and Arabs, but it will change the nomads into cultivators of the soil. The leading Kurdish chieftains in the region through which it will pass are eager for it. One of them said to him: "When the railway comes, we shall be very rich. I shall bring all my people down here; the government will be forced to protect them; and we may build, perhaps, five hundred villages." The truth of this statement is proved by what is taking place in the country around Aleppo, since its increasing size and prosperity has made it necessary to bring the Bedawin under control. Ten years ago the sixty-mile tract between that city and the Euphrates was practically an uninhabited desert. Last year Mr. Sykes passed over it and never left cultivated land until he was "within two hours' ride of the river." In another district fifty-six new villages have sprung up in the last three years, showing that all that is needed for the regeneration of the country is the protection of the peasant farmer.

Some interesting facts illustrating the influence the librarian may exert on the quality of books circulated, by the mere display in attractive editions and on convenient and conspicuous shelves of the most approved books, are reported by the head of the circulating department of the Grand Rapids Public Library in the *Library Journal*. For the display of such books as are deemed especially worthy of attention, a special room has been fitted up to hold about 2,500 volumes. Here among the better grade of the new and popular books have been placed during the year excellent editions of the principal works of the great writers of the world, and from this room are now circulated more than one-third of all the books issued from the library, though it contains only about 3 per cent. of the total stock. The novels of Jane Austen, Hawthorne, Victor Hugo, the essays and histories of Irving, Gilbert White's "Natural History of Selborne," which, in the former indiscriminate arrangement, were drawn only once or twice a year, have, since the new plan went into effect, been issued as many times a month, and some of them have rivalled in popularity the much advertised books of the hour. All the larger libraries now report regularly the proportion of fiction circulated, and from the high percentage the conclusion has been drawn that the great majority of the patrons of the public library use it only for drawing fiction; but there may be a great difference between the percentage of fiction drawn and the percentage of the library's patrons that draw it. To get at the latter fact a special investigation has recently been made by the Grand Rapids Library. Of the total card holders, numbering 15,000, only 3,890 drew fiction during the past year, and of these, 1,050, or about 7 per cent. of the library's patrons, drew more than 60 per cent. of all the novels taken out. A further study showed that 3,071 novels, or 16 per cent. of the whole issue, were drawn by 152 card holders. Thus, the large relative issue of fiction seems due, not as is so generally complained, to the demands of the public at large, but to the voracious appetite of a small proportion of readers. It is hoped that further investigation along this line may be made in other cities.

Good reading and the intelligent use of the public libraries of Great Britain are significantly aided by the National Home Reading Union. The membership is large and the "special courses" are now more than fifty in number, says the chairman, Dr. Alex. Hill, master of Downing College, Cambridge, in a communication to the London *Times*. In response to the interest excited by the controversy last winter in

regard to the place of Greek in education, a course of reading, "Homer in Translations," was prepared which proved so successful that a general request has been made for a similar course on the Greek dramatists. This and courses on Oriental literature, Carlyle, Goethe and Schiller, Tennyson, History of The Netherlands, Marco Polo, heredity, and the origin and history of cultivated plants are the most recent additions to the list.

GREEK RELIGION.

The Cults of the Greek States. By Lewis Richard Farnell. 5 vols. Vols. III. and IV. Oxford: University Press. III., pp. 393; IV., pp. 454. 40+52 plates. $9.75.

An epigrammatic saying was current among scholars a few years ago, that the Greeks had a rich mythology, but no religion, while the Romans had a well-established religion, but no mythology. This idea, if it still existed, would be overthrown by the mere appearance of these large volumes on Greek cults. The first two volumes of the work were published in 1895; the fifth volume, on the cults of heroes, is to be published in a year or two.

The whole field of Hellenic antiquities has assumed a different aspect in the last half-century, because of the discovery of more than a hundred thousand inscriptions on stone, and of a profusion of old coins and painted vases, and the uncovering of the ruins of many ancient structures. But perhaps no part of this field has changed in appearance more completely than that occupied by mythology and religion. Treatises on these kindred subjects used to have a rather bad name among scholars, as being based on imagination rather than on fact. At one time the myths of Greece, so far as was possible, were brought into relation with those of ancient India, and all facts inconsistent with this hypothesis were supposed to be late accretions to the story. Some thought the solar myth explained most of Greek belief with regard to gods and heroes. Other scholars accepted much as due to the Egyptians and Phœnicians. Others still inclined to the view of Euhemerus—that the Greek gods and demi-gods were only mighty men of valor, whose achievements had been magnified after their deaths. Some were disposed to derive all Greek religion from the worship of ancestors, and almost all of the Hellenic delties were said to have been originally gods of the lower world. In these discussions the word *chthonic* appeared often, and was treated as a universal solvent. Theosophists found indications of serpent and phallic worship in Greece as well as elsewhere. Then scholars endeavored to explain what was obscure in the religion of ancient Greece from what has been observed in modern races at a primitive stage of culture, and general anthropological principles were applied, often excessively. Thus the totem was introduced into Greece, even in cults which afforded no apparent indication of it, and the matriarchate was made to explain the prominence of the goddesses Hera, Athena, Aphrodite, and Artemis. More recently, and much more effectively than the last two principles, the "demon of vegetation" has been introduced.

The most important step in advance, in the study of Greek religion, has been made by transferring the centre of interest and research from myth to ritual. For historical purposes, the advantage of the cult over the myth is clear on a moment's consideration. The cult is far more stable. While sometimes a myth may suggest or affect a cult, far more frequently ritual suggests an ætiologic myth. In all departments of life, customs are continued long after the reason for them has been forgotten. Until very recently, at least, the boys of Portsmouth, N. H., have celebrated Pope Night, without knowing or caring much about Guy Fawkes and the Gunpowder Plot. The children who dance about the Maypole have no thought of the origin of that festival. Many of our Yule-tide festivities were customary among our ancestors before Christianity was received by them. In nothing are men more conservative than in their religious customs. At least in its interpretation, a doctrine can be modified more easily than a rite. So, in Greece, a charming myth might be accepted and retold readily in another land, but one of the first Hellenic principles, supported by an oracle from Delphi, was to worship the gods in the manner of the fathers. A band of colonists or emigrants generally would take their cults with them. Sometimes these would be assimilated to those of the land whither they went, but sometimes a cult, together with the immigrants who brought it, would be accepted by the earlier inhabitants. If the same special form of worship of the same divinity is found in places remote from each other, some historical explanation is to be sought. The cults of the Greeks have the greater historical importance because the Hellenes were a pious people, and were disposed to consecrate all things of secular life. The question is indefinitely complicated, however, for cults have a tendency to cleave to the soil as well as to accompany emigrants. Newcomers naturally believed it well to accept the local cults, and sometimes, as it appears, gave the old local worship to the new divinities which they brought with them. Thus Farnell holds that Apollo was not originally a god of divination, but his worshippers took possession of an old oracle of the earth-goddess at Delphi, and he explains certain other chthonian traits in the Apolline ritual as inherited from the earlier system. Even the name *bee* (*Melissa*) given to the Pythian priestess may have been so derived, since some priestesses of the earth-goddess Demeter also were so-called. The great Isthmian festival of Poseidon at Corinth belonged originally, according to Farnell, to some buried demon of vegetation. Thus the cults sometimes seem more stable even than the divinities to whom they are sacred.

To show the service which the study of cults renders to mythology, two illustrations may suffice. Scholars have been strongly inclined to believe, with many of the ancients, that Apollo was originally a sun-god, the divinity of physical and mental light, the god of prophecy, of poetry, of music, and of art, of health of body and of mind. In a brilliant tract, Roscher equated Apollo with the Roman Mars. Both, in his view, were at first sun-gods and war-gods. But Apollo resigned the latter office to Ares, and Mars surrendered his functions as sun-god to Apollo, imported from Greece. The myths agree well with this theory. But Farnell holds that Apollo was originally a demon of vegetation, and he finds in early Greek cults little or no evidence to connect this god with the sun. The offerings of first fruits, which were borne to Apollo along the Sacred Way, are explained as due to him as an agrarian divinity. Another example of the working of the method is the treatment of Demeter Thesmophoros. From Virgil's time, this epithet has been interpreted as declaring her to be the patron goddess of laws and institutions. But in cult, no evidence is found of such functions on the part of Demeter. The case is clearer than that of Apollo. It is not easy to resist the conclusion that the ordinary interpretation of the epithet has been wrong, and Farnell interprets this as *Giver of Wealth*.

Volume III. is given to Earth (Gaia) and her "emanations," Demeter and Persephone; Hades or Pluto; and Rhea-Cybele, the mother of the gods. The catalogue of local worships of Earth is brief. But, from the original earth-goddess, not simply Demeter, but also Persephone, Themis, Erinys, Aglauros, and Medusa are regarded as emanations or detachments. In most of these are found both chthonian and vegetative or agrarian elements. Many festivals are connected with agricultural processes. The divinities of the earth must be appeased before the breaking of the ground for sowing, and again before the harvest, which in primitive times was regarded as a dangerous act; and a thanksgiving service was due after the harvest was gathered. Some survivals of human sacrifice in the worship of Apollo are explained by Farnell as connected with Apollo's original office as a demon of vegetation. The devil must be expelled before the harvest. The most important worship of Demeter was in Attica, at Eleusis, but of this comparatively little is known. In spite of the fact that hundreds of thousands of Greeks were initiated into the mysteries, we can only surmise as to the worship within the sanctuary. The cult of Hades never had great importance in Greece. Farnell thinks him to have been developed as the counterpart of Zeus, who, as a god of vegetation, had acquired something of a chthonian character. Agamemnon, "king of men," in his view, was not an "emanation" from Zeus, as some have thought, but a buried ancestor who became a chthonian power with Zeus. The name Rhea, too, was not much used in cults; the appellation Great Mother was preferred. Her worship is derived by Farnell from Crete, where the Greeks found a mother goddess, to whom, in order to form a system, they affiliated Zeus and Hera. We are not obliged, however, to derive from her Hera, Athena, and the rest, who may have come down with the Greeks from the north.

Volume IV. is devoted to Poseidon and Apollo—chiefly to the latter. Even Poseidon is thought to have a vegetative function, but this point is not pressed by our author. Poseidon is believed to have been originally a fresh-water god, and his name is connected with the root of the verb to drink (cf. *potion*). The worship of Apollo is much more interesting to us. Our author believes him to have come into Hellas with the in-

vaders from the north. The Apolline worship at Delphi is recognized as brought from Crete, and as earlier than that at Delos. The Delian temple and worship were founded by the Ionians when making their way across the Ægean Sea. Having left their earlier homes in Greece, they diverted to the altar at Delos the offerings which had been brought by Apollo's worshippers to the temple at Delphi. Lycia was colonized at a very early period by worshippers of Lycean Apollo (from whom the land received its name), setting out perhaps from Argos, and moving by way of Crete and Rhodes. The Cretan worship of Apollo thus becomes prehistoric, but Farnell is not inclined to believe him to be derived from a Cretan sun-god, though he thinks Apollo may have stepped into the place, and become the successor of some Cretan divinity, just as some Christian saints in the popular mind took the places of some old pagan gods and heroes. The purification from blood-guiltiness, which became an important part of the service of Apollo's shrine, according to Farnell, indicates Dionysiac influence, and the lustration with pig's blood was borrowed from the older chthonian cults. That Apollo became the special god of music and song, Farnell explains not from any primitive characteristic or from any musical traits of his special worshippers, but as due to his brilliant festivals at Delphi.

On the whole, the work before us is judicious and sane—and in this field these epithets are a special compliment. The author avoids hobbies, and bases his arguments on evidence clearly presented. The "sources" are gathered and printed in full, by themselves, with a geographical register which shows conveniently the grouping of each cult. He says nothing in these two volumes about the solar myth, and has only a few sentences with reference to those who lay much stress on ancestor-worship in Greece. He thinks it necessary to be more explicit in his arguments against totemistic views. To say that the work is very learned would give it only a small part of its meed of praise. It presents perhaps the best fairly concise, yet accurate and intelligible, statement of the latest views with regard to the Eleusinian Mysteries and the Delphian oracle of Apollo, as well as the most complete statement of the cults of the divinities here discussed. The etymologies in general are according to the strictest philological sect, but, neglecting the quantity of the vowel, the author thinks the old name of Delphi, Pytho, to be the *Place of Inquiry*, and thus in itself to indicate the seat of an oracle. The study of cults carries us back into the prehistoric period with more precision and certainty than was expected. But many problems remain for solution, and doubtless many of our author's conclusions must be modified.

CURRENT FICTION.

The Stooping Lady. By Maurice Hewlett. New York: Dodd, Mead & Co.

The last thing to be looked for from Mr. Hewlett is a surprise. We have him ticketed. He has his own trail quite plainly blazed. He is "tapestry." And now he appears in 1809, marching straight into the modern world. Richard Brinsley Sheridan is there and "Prinny"; Creevy noses about in the offing; Castlereagh's name floats through the pages; there is mention of Tom Moore. Yet the most embittered enemy of the historical novel will find nothing to carp at in "The Stooping Lady." The reasons are simple. Instead of harking back to the diction of Shaftesbury or of Isaac Walton, Mr. Hewlett uses a tongue no more archaic than that of Miss Edgeworth, certainly less prim. He succeeds in making his main characters live, and places his celebrities well in the background.

Now we all know that plays in which people thrill in attics while heroes as recent as Napoleon or Wellington ride past, unseen by the audience, are far more impressive than those in which mediocre actors, with wide waistcoats or hook noses, declaim straight over the footlights. Conceding this to be also true in stories, Mr. Hewlett at once gains an air of reality by using the greater lights merely to give atmosphere, and in letting go his wonderful skill and imagination in sketching so minor a personage as Cobbett, brilliantly focussing and embodying all the queer traits of that vulgar and forcible agitator. As for the rest, Mr. Hewlett's stupid sporting young man who is a gentleman, the other who is a cur, the minx, the old Lady Kew type of grandmother, are entirely like such people in Thackeray's time, or our own; and his girl, Hermia Mary (this is saying a great deal), seems to live with the real heroines of fiction. To-day at least, whatever readers of the future may think, she comes before one's eyes with the youth and spirit of Clara Middleton. Not only has Mr. Hewlett created a warm and breathing woman, in spite of fancy dress costume rather than by its aid, but in treating that age of robust drinking, gaming, and general indiscretion, he never once lapses into a hint of the perversity which has at times cast a suspicion of taint across his mediæval pictures. Rightly or wrongly, he evidently believes this secret taint characteristic of the Middle Ages, a quality entirely different from the frank animalism of the Regency. Consequently, his young men brawl and misbehave themselves without a trace of morbidness. His lady loves very nobly; and suddenly, out of a gay comedy scene he evolves a climax of unexpected, but quite logical, pathos. His attack upon the sensibilities is perfectly free from cheapness; and, as a solution of the purely personal problem of Hermia's future, the closing drama at Charing Cross is a miracle of delicacy and tact.

The whole book might be taken as conclusive illustration of the disputed truth that a high degree of skill need in no way hamper an author's individuality or warmth of expression, that a classic restraint of manner by no means reduces the emotional quality to the academic level of an eighteenth-century essayist.

Ancestors. By Gertrude Atherton. New York: Harper & Brothers.

Whether "Senator North" be tolerable or the reverse, whatever the value of Mrs. Atherton's serious historical studies, there can be no question that "Ancestors" is an able book. Whether the people be natural and closely studied or no, hardly seems to matter; the forward movement is so swift as to carry one on with a sense of growing excitement. Mrs. Atherton, moreover, shows enlarged grasp, a capacity for carrying on coördinating threads without loss of speed. Although the opening, at the usual English country house, is sufficiently well done, the real pace is struck only when Elton Gwynne decides to look up a California property, and cast his future fortunes in America. Like Plantagenet Palliser, this rising young statesman is pitchforked out of the House of Commons into a peerage. Unable to endure the ignominy of a tame seat among the Lords, and a big title with a small income, the young man vanishes from home, to emerge in America as plain Jack Gwynne. To be quite frank, this does not appear over likely. Better at once to confess it a rather strained method of introducing a study of a keen, trained Englishman's sensations on making acquaintance with American political customs at their worst—in San Francisco before the earthquake. Nevertheless, Mrs. Atherton gives those impressions with such vividness as to win instant acceptance of the somewhat dubious device by which her situation has been brought about.

Once safe in California, the story proceeds breathlessly. Notwithstanding all the descriptions, all the lenses which have been turned upon that exotic city, she still is able to give a picture of untarnished freshness. In truth, she is at her best in a frankly garish scheme of color. She revels in a jumble of high buildings, plotting politicians, patriots (for California only), alien races, millionaires with Spanish surnames. She runs two risks often deadly in fiction, only to emerge quite successful. She ventures to use the characters we have met in her earlier novels, Helena Belmont, Magdalena Trennahan—all "The Californians." But the greater achievement is to end with an account of the recent earthquake without producing an anti-climax.

That Mrs. Atherton's manner at times is somewhat rough cannot be denied. Thoughtful she is, and in a way penetrating, though quite without subtlety and grasping things more violently than is always to the taste of the over sensitive. With an unmistakable intellectual development, she does not fine down either in point of view or expression, but this defect is distinctly mitigated by her remaining vivid and forcible, and by her showing no symptom of crystallizing into a hack imitator of her own, sometimes sensational, successes.

The Way of a Man. By Emerson Hough. New York: The Outing Publishing Company.

The villain of this novel is no conventional ranter of melodrama. An English marquis by birth, possessed of ingratiating manners, diabolical cleverness, and incredible coolness, he has added thereto all that mystic India could teach. "I am a Raja Yogi," he confesses to John Cowles, his dearest foe and the teller of the story. "I have taken the eight mystic steps."

"All that means nothing to me," I admitted, simply.

"No, it means nothing for me to tell you that I have learned Yama, Niyama, Asana, Pranayama, Pratyahara, Dharana, Dhyana, and Samadhi! Yes, I was something of an adept once. . . . But——" he smiled with all his old mockery—"mostly I failed on

Pratyahara, which says the senses must be quelled. . . . I'd liefer die than not enjoy."

With such an agent of darkness abroad, it is needless to say that trouble will beset the ways of John Cowles and Ellen Merlwether. The time of the story is just before the outbreak of the American Civil War. Leaving an unloved but plighted sweetheart behind him in Virginia, John Cowles makes a journey to St. Louis and westward through the desert regions of the La Platte on a private mission to Col. Meriwether, a connection of his murdered father's. On the way, fate brings his predestined love to him; and in the company of Ellen, who is also going to meet the colonel, her father, he loses the caravan and is hopelessly lost in the wilderness. Here the two live for some three months together, honestly, of course, eating buffalo flesh and what other provender the desert affords. Some weeks later, when want had considerably abated, their attention went to more philosophical topics:

"What is marriage, John Cowles?" she asked of me, abruptly, without preface.
"It is the Plan," I answered apathetically.
She pondered for a time. "Are we then only creatures, puppets, toys?"
"Yes," I said to her. "A man is a toy. Love was born before man was created, before animals or plants. Atom ran to atom, seeking. It was love."
She pondered yet a while. . . .

Had she known what testings of soul were to be hers upon her return to civilization—upon the discovery that her lover's promise had been given to another—she would doubtless have pondered even longer. But enough of the plot. "The Way of a Man" is chiefly of interest in the illustration it affords of several tendencies in contemporary fiction, as deplorable as they are conspicuous: the glorification of the violent, the primitive, and the crude; a sophomorical searching after effects of style; and a habit of cheap philosophizing.

The Tents of Wickedness. By Miriam Coles Harris. New York: D. Appleton & Co.

This story belongs in so special a category as hardly to find place in a review of novels at large, if only because the same author who captivated public fancy in 1860 with "Rutledge," is still sufficiently abreast of things to make a spirited (not to say acrimonious) attack upon New York society, divorce, and the Episcopal Church.

"The Tents of Wickedness" indeed appear to cover most of the world's surface, except that portion which is protected by the Church of Rome. Leonora Hungerford, fresh from a French convent, has tilts with the frivolity of her elders only equalled by those of Elsie Dinsmore, or to go farther back, of Anna Ross, when she left the Manse to visit her bad cousins. Numbers of pages are devoted to explaining the rite of confession to singularly ill-informed worldlings. A great many things happen in the story, and Leonora finds frequent occasion to enlighten and rebuke her father and all his friends. Clerics of the younger Church show a remarkable instability (one turns broker and another "goes over"), while priests of the true faith are busy saving souls and frustrating lynchings. And when Leonora's stepmother unjustly complains of the persecuted young girl's maid, Leonora quietly answers, "I don't *tiens* particularly to Juliette," which certainly shows the high advantages of her foreign education.

Leading American Soldiers. By R. M. Johnston. New York: Henry Holt & Co. $1.75 net.

To study America in her martial aspect one turns naturally to the period from 1861 to 1865. In our earlier wars the resources were meagre, the armies small, the opposing generals not usually men of note. Washington and Jackson are more interesting in other ways than on the battlefield, while Greene, Taylor, and Scott are not relatively conspicuous men. The civil war, however, was a colossal struggle in every way, and Professor Johnston shows a proper eye for proportion in taking eight of his thirteen types from the men who were famous then. Undoubtedly the story of American soldiership culminates in interest at the battle of Gettysburg, to which Mr. Johnston assigns adequate space. He has other merits than a good sense of proportion. Though not a man of military training, he has sound judgment and industry, and has written a book for Prof. W. P. Trent's series on Leading Americans, which will help general readers, if not technical students.

Confining our particular remarks to the Gettysburg campaign, we may say that the critics always have fought over it, and always will. Our author, we think, is too much influenced by the writers who sustain Lee through thick and thin, casting the responsibility for the Confederate defeat upon the shortcoming of subordinates. It can be plausibly asserted that errors abounded in the enterprise for which the chief was to blame. Great and brilliant though Lee was, he could make mistakes. It would probably have been better if Lee, utilizing his interior lines, after Chancellorsville, had left D. H. Hill to defend Richmond, while he himself, with a large force, crossed the mountains into Tennessee; there, uniting with Bragg, by marching rapidly upon Cincinnati, in May and June of 1863, when the North was full of discontent and mutiny, he might have so threatened the connections between East and West that Grant would have been forced to loosen his hold on Vicksburg and hurry to the Ohio. In such a plan of campaign the possibilities of a good result to the Confederates were large. But leaving aside the matter of grand strategy, we believe that Lee's conduct in Pennsylvania was far from faultless. Mr. Johnston admits the error of allowing Stuart to depart with the cavalry, thus leaving the army without eyes and ears in a hostile country. The event proved that it would have been better to manœuvre to get between the Federals and Washington, than to risk an offensive battle. The battle once joined there were serious errors, both of omission and commission, notably the charge of Pickett, which cannot fairly be ascribed to the corps-commanders. We think Mr. Johnston might have paid more heed to the much abused Longstreet's defence of himself, and could have learned much from Gen. E. P. Alexander's "Memoirs of a Confederate," which probably appeared too late for our author's use.

As Mr. Johnston is too easy as regards the errors of Lee, his recognition of the merits of Meade we hold to be quite too cool. Put into command of his widely scattered host only a day or two before the battle, losing at its beginning his chief lieutenant, a man upon whom he especially relied, embarrassed by the insubordination of Sickles, who threw his schemes into confusion at a most critical moment, Meade undertook the conflict heavily handicapped. His course during the three days was bold and skilful in a high degree. He utilized to the utmost the advantages of position, the "fish-hook" of Cemetery Hill and Ridge, which fell into his hands. Alexander pronounces the Federal tactics a masterpiece in the management of large masses in a defensive engagement. We contend that in refusing to throw his exhausted army on the afternoon of July 3, upon an enemy whose demoralization at the moment he had no means of knowing, Meade took the prudent course. A little of the imprudence which Lee was constantly showing, might have put the Confederates to rout and closed the war. We can see now that the risk should have been run, but Meade had reason in his caution. Lee was a brilliant military genius, but with all that he had the mortal liability to shortcoming. We know that Lee was much dissatisfied with himself after Gettysburg.

There are plenty of other cases where we might take issue with Mr. Johnston in his estimates of men and interpretation of events—in all of which, as in the case of Gettysburg, we have no doubt he might make a good defence, and in the judgment of many quite confute and confound his critic. The contentions among those who seek to interpret wars are only less marked than they are among the combatants in the field. Though many things in the story of American soldiers strike us differently we do not fail to recognize in this narrator knowledge, fair-mindedness, and good sense.

Berlin comme je l'ai vu. Par Charles Huard. New York: G. E. Stechert & Co.

It takes a Frenchman to discover Berlin, and when he has found it, he may be expected to express himself interestingly. Particularly if he is an artist as well as an author, he is likely to be entertaining, as in the case of M. Huard, who had pad and crayon always with him, and gives us some ninety-three sketches of the strange Allemands. There are inviting vistas in parks, burly German cab drivers and cooks, busy modern streets, quaint taverns, Herr Studiosus with beer-steins, and, of course, Prussian police and majestic military. That it is Berlin we see before us no one who knows the imperial city will doubt; and that the author aims to be fair and generous, is also certain. But German as are the sketches, both in crayon and in word, there is still in the background a suggestion of the avenues and quays of Paris and the French lorgnette. The volume is a mate to "New York comme je l'ai vu," the second in a series to be concluded by a work on London.

Beginning with the famous avenue Unter den Linden, Huard thinks with many others that the Berliners have exaggerated its at-

traction, and yet he admits its importance in one of the great cities of the world. He meets there few Frenchmen, many Russians, and, above all and everywhere, Americans, whose nasal accent, revealing Pittsburgh and Chicago, dominates the bars and grill-rooms, hotels, and shipping-offices. Entering the Tiergarten, Huard finds a population of marble and bronze, nor can he "make three steps forward without having to swallow a couple of monuments"! The Sieges Allee in particular arrests him, but not because of its charms; he sees in the thirty-two figures of Prussian or Brandenburgian sovereigns only a horrible show of brutal force—heavy fists and ponderous boots displayed with little discretion. The French, it is true, have erected numerous monuments in honor of their victories, for the glory of their armies; but never have they so impudently sung of their triumphs, so insulted the conquered. Nevertheless, the Tiergarten is the paradise of children and nurses, of saunterers and dreamers. M. Huard is especially struck by the admirable cleanliness of the lawns and of the drives—a characteristic not only of the Garden, but of Berlin as a whole. In comparison, Paris is a stable, London a sewer, and New York a dirty hole (*une bauge!*).

Taking up the streets and street life of Berlin, M. Huard remarks that while one must plough through the disagreeable in entering the capital by whatever route is chosen, once one is inside the transformation comes quickly and completely. Berlin is new and without pronounced character, very new, newer than any American city, newer than Chicago, which is the only city of the world to be compared with Berlin for prodigious rapidity of development. Much that one sees in Berlin recalls an American city born yesterday in the fire of speculation, but an American city in which there is lacking the frenzied rush of the mobs, the atmosphere of strife, and the audacity of new architecture. One is also impressed with the admirable discipline of the Berlin people, the suppressed cries of their venders, the modesty of street advertising. "When Buffalo Bill made his tour of Germany," said Mark Twain, "his principal poster was not larger than a trunk label." Strolling further in the city, Huard is impressed with the marvellous development of German industry. It was but a few years ago that England controlled the markets of the world; but now Germany's stock of tools is greater than that of Great Britain or France, and comparable only to the industrial outfit of America.

There was one kind of dress which never escaped the artist-author's eye or pencil. That was the uniform of the German soldier. To the amateurs of military spectacles, Berlin offers a field of observation unexcelled, nor is it possible that in any other city of the world so many regiments file by, or so many sentinels cross one's path. Indeed, from the deference shown the humblest wearer of a uniform, one sees, from the time one first sets foot in Germany, that the soldier is King, the officer is God! Little enlivens this military show—except an occasional marriage with an American heiress. Besides the military, "the quantity of doctors and professors is innumerable, all ceremoniously running afoul of each other, each carrying his head high, and repeating the other's respective titles to everbody's satisfaction." The women even absurdly use their hushands' titles. One lady having saluted another in the tramway with "Comment allez-vous Madame le Chef d'Escadron?" received in reply: "Très bien, je vous remercie, chère Madame Professeur de Théologie!"

In dealing with the palaces and museums of Berlin, M. Huard shows the fullest appreciation, praising the Emperor for his art designs in a manner scarcely to be expected from a foreign critic. He is delightful, both as artist and scribe, in his pictures of "Old Berlin," lingering long and sketching with much feeling the little Fischerstrasse, and paying due homage, with the scared, scampering urchins, to the frowning, helmeted, heavily treading *Schutzmann*. This majestic officer of the law recalls in turn the pleasures of the German *Verboten*. In Germany one is forbidden to sit on certain benches, to speak in certain rooms, to smoke in certain gardens, to stand, to walk, to go up, to come down; in fact, to do just the very thing one wishes. And then, as if to make life still more miserable—at least for a Frenchman—the Germans do not know how to cook, but serve the most abominable concoctions ever devised by man. Epicures among the Germans are unknown, and that is why the poor stranger within the Berlin gates would rather be stretched out, parched and panting, on the deserts of Sahara than encounter *deutsche Suppe* or a German *Salat*.

A Vedic Concordance. By Maurice Bloomfield. Royal 4to. Pp. 1102. Boston: Ginn & Co. $6.

In the preface to his "Concordance to the Holy Scriptures," the marvellous and erratic Cruden gives a brief historical account of concordances. Their value has been practically recognized for well-nigh seven centuries, from the time of the Dominican friar, Hugo de St. Chers, who made a concordance to the Vulgate, employing, we are told, five hundred monks to help him. "The meaning of the Scripture may be here known," says Cruden, "by that which is accounted the best rule of interpreting Scripture, namely, *by comparing one Scripture with another*." The rule holds no less for the sacred books of the Hindus than for those of the Christians. Bloomfield's monumental work, accordingly, might justly make the proud claim to be a tool of absolutely first importance for the understanding of the books which are not only the most ancient scriptures of India, but are also the oldest recorded documents of the Indo-European family. It is well described by its title as "an alphabetic index to every line of every stanza of the published Vedic literature and to the liturgical formulas thereof, that is, an index to the Vedic Mantras, together with an account of their variations in the different Vedic books."

Strictly speaking, this concordance has no predecessor. Editors of many of the various Vedic texts have, indeed, given for each an index of first lines of every stanza; but Bloomfield's is an index to *every* line of every stanza. The earlier indexes, too, were scattered through many different volumes; but Bloomfield's, while being vastly more comprehensive in its scope, gives everything in one single volume and in one single alphabetic arrangement—advantages so great as to need only a bare rehearsal. From a rough calculation, the work would seem to contain a good deal over one hundred thousand entries, and of these some forty thousand come from the Rig-Veda alone, which is, of course, by far the most important of the books indexed; but, as appears from a bibliography of the works cited, not less than one hundred and eighteen other works, of which many are very extensive, have been read and excerpted.

It is more or less the fashion now to decry the kind of philological activity which consists in indexing and pigeon-holing innumerable facts on slips, *die Zettelwirtschaft* as the Germans call it. It is therefore in place to mention the fact that, although Bloomfield's book does indeed presuppose an enormous amount of patient manipulation of slips, such drudgery would have been of no avail without a very broad and scholarly acquaintance with the Vedic literature as a whole. Most Vedic texts, even though largely or wholly metrical, are usually printed, like a German hymnbook, as solid prose. It requires the eye and mind of the highly practised expert to disengage the verse from the prose and to resolve the stanzas into the metrical units of which they consist.

The "Concordance" is, however, not merely an instrument for the interpretation of the Vedas, it is a text-critical tool of the most far-reaching importance. The recorded Vedic texts of the several different schools represent each the result of a long process of transmission, by oral tradition, of material, much of which was once common to the predecessors of many different schools. Thus it happens that the readings of the different schools are to the Vedic text-critic what the readings of the different manuscripts are to the critical editor of a Greek text. The variants of verses which do not differ at the beginning and for which therefore the alphabetic order does not require more than one entry, are shown by Bloomfield in a very clear and compact form; so that the readings of as many as eight different texts, or perhaps more, can be instantly seen from a single brief entry; while for variants of verses which involve more than one alphabetic entry, a simple and effective system of cross-references has been devised.

Hardly one single Vedic text has been edited so well in all respects, that a new edition is not already needed. The new editions should be made upon a broad and comprehensive and uniform plan. For the future editors of these texts, Professor Bloomfield has done a great service. His work is unpretentious; but—rapidly as books get out of date now-a-days—it is likely to maintain itself as an indispensable tool of Vedic scholarship through not a few decades. It is a worthy companion to Whitney's great critical commentary on the Atharva-Veda; and it is safe to say that not in India or Europe or America has any work appeared in this field within the last score of years, transcending these two in scientific value and significance. The typography, binding, in short, all the externals of the work merit the highest praise. In his preface, Bloomfield acknowledges the help received from no less than fourteen of his old pupils at the

Johns Hopkins University. The list is one to awaken his pride no less than his gratitude. The "Concordance" forms volume 10 of the Harvard Oriental Series.

Science.

Cyclopedia of American Agriculture: A Popular Survey of Agricultural Conditions, Practices, and Ideals in the United States and Canada. Edited by L. H. Bailey. With one hundred full-page plates, and more than two thousand illustrations in the text. 4 vols. Vol. I.-Farms. Vol. II.-Crops. New York: The Macmillan Company. $5 each.

The name of Liberty Hyde Bailey on the title-page of this new cyclopædia is a sufficient guarantee of its comprehensiveness and authority. It is of similar scope and character to Professor Bailey's "Cyclopedia of American Horticulture," and the veteran author's long service in the Cornell Agriculture Experiment Station as an investigator and educator of the people has eminently fitted him for the management of the important work of bringing together in compact form the voluminous and scattered results of the study and practice of agriculture. No branch of scientific research has ever been subsidized so extensively as agriculture in America by the Federal and State Governments through their agricultural departments, commissions, colleges, and experiment stations. In this there has been undeniably a great waste of money and loss of efficiency, not due to dishonesty, but chiefly to the fact that the gigantic task of investigation and popular education was pioneer work for which neither the methods nor the men were ready. Yet taken as a whole this research has undoubtedly paid richly in increased yield of crops, improved stock, protection against insect foes and disease, greater certainty of results, and unequalled rapidity of development of new territory. But the lack of system and even of coöperation among the institutions in different States, or in the same, has resulted in a mass of literature of all degrees of value, which greatly needs to be summarized and digested in such a work as this. About one hundred experts have contributed articles to each of these two volumes, and credit is given to twice as many more for assistance in various ways. These contributions have been coördinated with considerable skill to avoid repetition as far as possible. The alphabetic arrangement has been wisely abandoned, except for subdivisions of articles, each of the large volumes of about 700 pages being divided by subjects, and a full index being given to the whole volume.

The geography of agriculture is the first topic. The achievements and possibilities of each State are discussed in turn, generally by local authorities, and there are special articles on tropical agriculture in Hawaii, Porto Rico, and the Philippines. The planning of all sorts of farms is then considered, with estimates of the cost of different undertakings. Farm buildings, sanitation, and machinery are next treated, with some reference to rural art. The succeeding chapter on the position and texture of the soil includes the results of the notable series of investigations which have been carried on in the last fifteen years by the United States Department of Agriculture. There is a contribution by the pioneer in soil analysis, Prof. E. W. Hilgard, now of the University of California, as well as articles by the young men whom the Department has been training up for this special work. The chapter on tillage includes a great deal of historical matter, beginning with the Egyptians and Virgil, and recalling many of the forgotten benefactors of mankind, Jethro Tull of horse-hoe husbandry and John Johnston of tile drainage. Special attention is given to the agriculture of the arid and semi-arid regions; the Campbell system of dry farming is described by its inventor, irrigation by Elwood Mead, and alkali by Thomas H. Means. The chapter on weather service is especially commendable, for its clear treatment of this difficult subject and its practical interpretation of weather signs. The second volume is chiefly devoted to North American field crops, from alfalfa to wheat, preceded by chapters on the growth and breeding of plants in general.

The "Cyclopedia of American Agriculture" is indispensable to public and reference libraries, and it should be extensively purchased for circulating and school libraries in the rural districts. Probably few farmers will conceive it possible to invest $20 in such a work, though they could well afford to, for it would easily save its cost in a year or two by attention to its instructions in regard, for example, to the purchase of fertilizers, insecticides, and seeds. It is a book which would be read in any family whose members read at all, for the language is in most cases as simple as can be employed on the subjects treated, and the book as a whole is readily comprehensible to any person of average education. The technical data which form its foundations are duly subordinated.

The pictures are mostly what they should be—small drawings inserted in the text just at the point where they are needed, though there are also many full-page halftones. A few color plates might have been introduced to advantage, not to make a show and sell the book, but to bring out some points better than the black-and-white can do. In certain cases the arrangement or character of the illustrations could be improved, as, for example, in the case of mushrooms, where the cuts of the edible and poisonous species of *amanita* should have been placed side by side instead of 300 pages apart, and their differences clearly indicated by marking directly on the cuts. In the article on chemical weed-killers directions for the use of sulphuric acid, carbolic acid, and arsenical compounds are given without the slightest warning as to the dangerous nature of these substances and the precautions necessary in handling them.

The American Electrochemical Society held its twelfth general meeting in this city October 17, 18, and 19. The programme contained the following papers: "Diamond and Moissanite; Natural, Artificial, and Meteoric," Dr. George F. Kunz; "Deflocculated Graphic," E. G. Acheson; "Electrothermic Reduction of Iron Ores," Albert E. Greene and Frank S. MacGregor; "The Electric-Furnace Experiments for the Production of Pig Iron at Sault Ste. Marie," Dr. Joseph W. Richards; "Electric-Furnace Experiments," Dr. H. N. Potter; "Moissan's Experiments on the Boiling Points of the Metals," Dr. O. P. Watts; "The Electrometallurgy of Zinc," Gustave Gin; "A New Application of Chlorine in Metallurgy," C. E. Baker; "The Heat Conductivity of Carbon," F. A. J. Fitzgerald; "Granular Carbon Resistors," Prof. S. A. Tucker; "Physico-chemical Notes on the Aluminates of Soda," P. B. Sadtler; "Action of Ammonium Persulphates on Metals," J. W. Turrentine; "Use of the Capillary Electrometer for Alternating Voltages," M. G. Floyd; "Electroscopic Determination of Radium in some Tufa at Hot Springs, Arkansas," Dr. Herman Schlundt"; "Electrolytic Separation of Silver and Copper," H. W. Gillett; "Electrolytic Determination of Minute Quantities of Copper," E. E. Free; "Electrolytic Reduction of Nitric Acid," Dr. H. E. Patten; "Electrochemical Methods for the Qualitative and Quantitative Determination of Free Silicon in the Presence of Silica, Silicates, Oxides, Free Carbon, and Carborundum," W. R. Mott; "Nature of Electrolytic Conductors," Dr. L. Kahlenberg; "The Electrolytic Theory of the Corrosion of Iron," Dr. A. S. Cushman.

Drama.

Unpublished Correspondence of David Garrick. Edited by George Pierce Baker. Boston: Houghton, Mifflin & Co. $7.50 net.

Of all the illustrious Englishmen of the eighteenth century, few are so well known to students of that period as the "modern Roscius," David Garrick. His personal charm, no less than his brilliant histrionic genius, won him the intimate friendship of many of the most famous literary and artistic personages of his day, who, by pen and pencil, have reconstituted him for us almost in his habit as he lived. Boswell, Walpole, Hannah More, Madame d'Arblay, Kitty Clive, and Goldsmith, not to mention many others, and his own voluminous correspondence, have made his character, in all its varying aspects, as familiar to us as Gainsborough, Hogarth, Holland, and the rest have made his face and figure. It would be strange if, at this late date, any important new light could be thrown upon his disposition, his ability, or his career, and those who look for it in this hitherto unpublished correspondence, which Professor Baker has extracted from the collection of J. H. Leigh, will be disappointed.

With Mr. Baker the work of editing evidently has been a labor of love, as is proved by his ample explanatory notes, but it is unlikely that the ordinary reader will find in the letters the significance which the editor seems to attach to them. So far as they go they are thoroughly characteristic of their author, but the majority of them, although they possess a certain antiquarian interest, are exceedingly trivial, and are scarcely worthy of public reproduction. Everywhere they bear the marks of careless haste. The references to Miss Cadogan show that Garrick was capable of warm friendship, a fact which has never been disputed, but otherwise they are not remarkable.

Some of the letters dealing with his managerial difficulties are of more consequence, but the new matter in them is not weighty enough to call for detailed consideration. One of the most interesting passages contains a criticism of Home's "Douglas," with which most persons who are acquainted with that dreary tragedy will heartily agree, but whether Garrick would have expressed the same opinion if he had discerned a good character in it for himself is another question. One of the Hoadley letters, however, seems to prove that the actor was quite sincere in his expressed wish to leave the stage in 1765, but scarcely relieves him from all suspicion of seeking the good will of those high in authority. That he was anxious for august patronage ought not to be imputed to him as a grievous fault. In his day no actor, not even himself, could have existed without it.

But if Professor Baker's work is of somewhat less moment than he deems it as a contribution to Garrick lore, it is nevertheless a dainty volume, which will be sought eagerly by theatrical connoisseurs for the excellence of its typography and the beauty of its illustrations, which show the great actor at different periods of his life and in various characters, and afford material for an interesting study in physiognomy. Several of the portraits will be new to most readers

---

As the First Folio edition of Shakespeare (T. Y. Crowell & Co.) draws nearer completion, its value becomes always clearer. So far as we have tested the work of the editors, Charlotte Porter and Helen A. Clarke, it is done with minute accuracy, and this in an edition which attempts to reproduce the exact text of 1623, with various illustrations and readings from all sources, is a matter of the first importance. In the play of "Romeo and Juliet" now published the advantage of the Folio text is well marked by the inclusion of five significant lines in Romeo's death speech, which modern editors, with the exception of Collier, omit, on the authority of the Fourth Quarto.

The production of Percy Mackaye's "Sappho and Phaon" in the Lyric Theatre did not achieve a success commensurate with the literary and dramatic value of the work, which is a genuine tragedy, classic in form, modern in inspiration, and rich and strong in poetic expression. It deals with human emotions and passions; is picturesque, varied, and vigorous in action, and is as full of really dramatic situations as it is of imaginative fancy. From a literary point of view, it is on a level with the best work of Stephen Phillips, while for purely theatrical purposes it is superior. If it had been acted thirty or forty years ago, before the race of actors trained in the poetic drama had become almost extinct, it would have received a far more competent interpretation than is now possible. The performance on Monday evening, although a great deal of money and pains had been expended upon it, failed of its legitimate effect for two reasons; first, because the actors, trained for the most part in the modern manner, were unable to identify themselves with the romantic mood; and, secondly, because, almost without exception, they were wholly incapable of giving to the verse its proper emphasis and rhythm. Thus many essential beauties of the poetry vanished. Madame Kalich, the Sappho, can declaim with much power and discrimination, but she has not yet mastered the difficulties of English pronunciation, and in moments of excitement she was often unintelligible. Thus, the play was deprived of some of its greatest charm. None of the performers, except Madame Kalich, distinguished themselves in action. She was often exceedingly effective in the closing tragic scenes, especially in her profound despair and humiliation after Phaon's reconversion to slavery. One of the most attractive features of the representation was the incidental music, written by Prof. A. A. Stanley of the University of Michigan, and admirably rendered. The stage setting and the costumes were uncommonly beautiful.

Mrs. Patrick Campbell will play an engagement of one week at the Lyric Theatre here beginning November 11. She will present "The Second Mrs. Tanqueray," "The "Notorious Mrs. Ebbsmith," "Magda," and "Hedda Gabler." Immediately upon the completion of this engagement Mrs. Campbell will begin her tour of the country from coast to coast. In the spring she will again be seen in New York, and will offer her new productions, including a version of the "Electra" of Euripides.

The Ben Greet Players recently began a new tour in Jersey City. Thence the company travelled to Canada, where a month's season of Shakespeare's plays "as Shakespeare wrote them," has begun. Mr. Greet leaves the selection of his plays to the students of various colleges and the public, and those chosen by Canadians are "Julius Cæsar," "Macbeth," "Romeo and Juliet," "As You Like It," "Twelfth Night," and "Everyman." About the New Year, Mr. Greet hopes to present a "cycle" of plays, written around "The Wonder Book" of Nathaniel Hawthorne. They will probably be given first at a series of matinées in Boston and New York, so that the Shakespearian plays can be given at night.

The latest comedy of Madeleine Lucette Ryley, "The Sugar Bowl," which has just been produced in London, is not to be reckoned, it appears, among her most successful efforts. Most of her critics agree in regarding this story as unlikely, to say the least, and the literary execution as decidedly inferior. The most notable feature of the performance appears to have been the admirable acting of Ellis Jeffreys and Frederick Kerr, in the leading characters.

Music.

Erinnerungen an Richard Wagner. Von Angelo Neumann. Leipzig: L. Staackmann.

Neumann's volume is the most important biographic contribution to musical literature since the beginning of the century, with the exception of Wagner's Letters to Frau Wesendonck. It contains a large number of the master's letters which have never before been printed, and it gives so many interesting glimpses of life behind the scenes—both literally and figuratively—that in a short time it has reached its fourth edition. Angelo Neumann is one of the many men who have become well known through connection with Richard Wagner. He began his career as a baritone, half a century ago. In those days it was regarded as an heroic feat to sit through a whole performance of "Lohengrin," and Neumann remembers a performance of the "Flying Dutchman" with a good cast, which he left before the end of the second act. He became an enthusiast during the concerts which Wagner conducted in Vienna in 1862; he remembers how, after the "Freischütz" overture, Wagner patted on the back the first horn player, whom he had coached with special care; and he remembers meeting the great man repeatedly in the street, coming from a "Tristan" rehearsal, usually talking to himself and flicking his large red handkerchief. Two years later Neumann happened to occupy a room in the Hotel Marquardt in Stuttgart next to that of Wagner, who was then so hard up that he could not eat at the table d'hôte, because that had to be paid for at once. This was just a day or two before he received the message from Ludwig II., which instantly changed him from a fugitive from creditors to the favorite of a king, with unlimited means placed at his disposal.

In 1875, Neumann enjoyed the good fortune of being one of the artists who witnessed the rehearsals of "Tannhäuser" and "Lohengrin" in Vienna under Wagner's personal direction. What he saw on these occasions convinced him that this man was not only the foremost dramatic composer of all times, but the greatest stage-manager and actor. The six pages of details he gives of these rehearsals cannot be too highly commended to all interpreters of those operas. In the following year Neumann became joint manager, with August Förster of the Leipzig Stadttheater, and from that time on he played a rôle in the life of Wagner, the importance of which has heretofore been known to few. The first Bayreuth Festival took place in that year. Neumann heard the second cycle, and was so enthusiastic that he conceived the ambitious plan of securing for Leipzig the privilege of being the first city after Bayreuth to hear the Ring of the Nibelung. His first overtures were answered by Wagner evasively:

> My work is not yet finished; the performances called my attention to many imperfections. Leave me time to repeat my work next year here in Bayreuth in a carefully revised form.

When Wagner found, however, that for pecuniary reasons there could be no festival in 1877, he remembered the offer from Leipzig and reopened negotiations. But Förster was less enthusiastic than his partner; his doubts as to the feasibility and profitableness of the Nibelung operas grew and were fortified by various enemies of Wagner. The upshot was that the project was dropped, to the great distress of Neumann. At a dinner when one of the aforesaid enemies got up and proposed a toast of congratulation at having got rid of Wagner, Neumann dashed his glass on the floor and left the room.

It so happened that the season at the Leipzig Theatre closed with a deficit of $30,000. This gave Neumann a chance to say "I told you so" to his rueful companion. To cut a long story short, prepara-

tions for producing the Ring were soon under way. The chief obstacle to overcome was the famous Gewandhaus orchestra. The members of this ancient and honorable organization, founded in 1781 and presided over at one time by Mendelssohn, were convinced that this latest Wagnerian music was unworthy of their serious attention and would lower their artistic level. They were finally persuaded, however, to acquiesce, and, when the task was accomplished, they frankly conceded that their artistic level had been actually raised. Once before, Neumann had had trouble with this orchestra. It was when his regular conductor, Josef Sucher, was on a vacation, and be had ordered a performance of "Tannhäuser" under Arthur Nikisch. The players objected to Nikisch as too young, but were finally persuaded to try him at a rehearsal. The result was a demonstrative success. It was Neumann's good luck to introduce to the world four of the greatest living conductors—Sucher and Nikisch, as well as Anton Seidl and Felix Mottl, these last two on the recommendation of Wagner. Concerning Seidl there are many things in this volume of special interest to Americans, as it was due largely to this favorite conductor that Wagner's later operas made their triumphant entry in this country. That Wagner had more confidence in him than in any other interpreter of his works is proved by remarks in several of his letters here printed. To cite only one of these, dated September 27, 1878 (two years after Hans Richter had conducted the Ring at Bayreuth):

> No other conductor knows my tempi and the correspondence of the music to the action as Seidl does. He is my pupil. He will conduct for you the Nibelung dramas better than any one else. If this word of mine is not sufficient, I shall never have any more recommendations to make to you.

Neumann lost no time in adding Seidl to his forces, and under him battle after battle was won. The Leipzig performances were a brilliant success; so were those Neumann gave at the Victoria Theatre in Berlin. The recital of the incidents leading up to and attending these Berlin performances makes one of the most extraordinary stories in the history of music. Hülsen, the manager of the Royal Opera, had a very poor opinion of Wagner altogether, and as for the Nibelung operas, he was convinced that the only one worthy of being mounted on his stage was "Die Walküre." Wagner, on his part, refused to sell the rights for a single one of these connected works. Neumann's enthusiasm finally persuaded Hülsen to negotiate for the whole work. Diverse difficulties were overcome, the greatest being the engagement of Seidl, which Wagner made an absolute condition. There was a rule that new operas must not be conducted by any one but the regular Kapellmeister. This was finally overcome by appointing Seidl, with the Emperor's special consent, assistant conductor for three months. All the negotiations were concluded when finally Hülsen sent a telegram to Wagner telling him he agreed to everything, providing he be allowed subsequently to produce "Die Walküre." To this insulting dispatch, with its implication that the other three dramas were not worth producing, Wagner did not deign to reply. "The impudent fellow has not answered me," said Hülsen to Neumann, and the project was dropped, so far as the Royal Opera was concerned. The Victoria Theatre was then chosen, and the performances were an unprecedented success, being supported by royalty and aristocracy as well as by the populace. When the curtain had dropped on the last scene of the first cycle, it was raised again and Neumann made a speech of thanks to his patrons. Just as he had spoken the words, "Thanks above all to the exalted members of our imperial family," Wagner, who stood among the artists, abruptly left the stage. This action was generally construed as an insult to the Emperor; Neumann himself took it as such, and he refused to accept Wagner's explanation that a sudden illness (heart trouble from the great excitement) had prompted it. Not till after the composer's death did he realize that Wagner had spoken the truth.

Fortunately this incident did not for a long time estrange the two men. The Kaiser showed by attending several subsequent performances and applauding vigorously, that he did not feel insulted, while Neumann, having won Wagner's confidence, gained his consent for his project of a travelling Wagner Theatre for carrying the gospel to all the leading cities. The adventures which befell them in Paris, London, and the other European cities down to Italy take up the remaining pages of Neumann's reminiscences, a volume of absorbing interest.

"The Merry Widow," the most sensationally successful operetta produced in Europe in two decades, has at last reached this country. After a month of preliminary performances in several other cities, it was given at the New Amsterdam Theatre on Monday evening by an excellent cast, including Ethel Jackson as the widow, Donald Brian as the prince, and an artistic ensemble such as Henry W. Savage has taught Americans to expect at his productions. Its great success is significant because it disproves the theory of managers that genuine operetta is too good for our public, which for a number of years has had little but vaudeville masquerading as musical comedy. "The Merry Widow" is genuine comedy, wedded to genuine music. The composer, Franz Lehar, is not as original as Johann Strauss, but he bids fair to equal Millöcker, or even Suppé. The waltz in the second act has already reached a sale of a million copies, and it is not by any means the best thing in the score.

An interesting list of compositions is offered by the Philharmonic Society at its Carnegie Hall concerts this season. There will be revivals of Rubinstein's "Ocean" symphony, Beethoven's "Pastoral," Dvořák's "From the New World," Schubert's Unfinished Sympbony, Saint-Saëns's C-Minor sympbony with organ, Richard Strauss's symphonic poem, "Don Juan," Goldmark's "Prometheus," and Nicodé's Symphonic Variations. "Herod's Dream," which constitutes the first part of Berlioz's oratorio, "The Childhood of Christ," is planned for the third concert, at which the Philharmonic Orchestra will have the assistance of the Bach Choral Society of Montclair. Wassily Safonoff, the conductor, has also been busy during his absence in Europe in selecting novelties; among these are the "Easter" overture by Rimsky Korsakoff, "Das Meer," by Glazounoff, and the symphonic poem, "The Sunken Bell," by Vladimir Metzl, founded on Gerhart Hauptmann's play, and performed last spring under the direction of Mr. Safonoff, by the London Symphony Orchestra. The list of soloists includes Kirkby-Lunn, Edward Dethier, Fritz Kreisler, Katherine Goodson, Jean Gerardy, and Josef Hofmann. The dates of the Philharmonic concerts are Friday afternoons and Saturday evenings, November 15, 16, 29, 30, December 13, 14, January 3, 4, February 7, 8, 28, 29, March 13, 14. Last season, the first under the conductorship of Wassily Safonoff, was the most successful financially, and one of the most successful artistically in the society's career of sixty-five years.

The New York Symphony Society's programme of December 1 will be devoted to "The Family," as it has been illustrated by various composers. Walter Damrosch will give Richard Strauss's "Sinfonia Domestica," descriptive of himself, wife, and child; and Wagner's charming tribute to Cosima on the birth of their son Siegfried, entitled "Siegfried Idyl."

The directors of the Musical Art Society announce that two concerts will be given in Carnegie Hall on Thursday evenings, December 19 and March 12. In compliance with requests made by many of the subscribers of the Musical Art Society, the programmes of this season will contain a number of the works that proved most interesting during the past years. The most important works will be the "Missa Papae Marcelli," and the "Stabat Mater," by Palestrina. The choir of the society has been increased by the addition of a number of excellent artists, and is therefore better equipped to render the larger works for double chorus.

Oscar Hammerstein contemplates giving opera every night during the season at the Manhattan Opera House; the large number of singers already engaged, with the three conductors, makes such a policy possible.

The first of the first-class pianists to appear at Carnegie Hall this season is Josef Hofmann. He will give a recital next Saturday afternoon, at which he will play the whole set of twenty-five Chopin Preludes, a Beethoven sonata, a Mendelssohn scherzo, Schumann's C major fantasie, and three Liszt pieces—"Legende," "Dream of Love," and "Campanella."

Paderewski sailed from Europe Saturday for his seventh American tour. His first concert in New York was given on November 17, 1891, in Carnegie Hall. That season he played 117 times. He returned the following year and gave 67 concerts in 26 cities. His other tours were in the seasons of 1895-6, 1899-1900, 1901-2, and 1904-5. The present tour is one of the most extensive that he has ever undertaken. It will last at least until the first of May. Already eighty appearances have been booked for him, and if he is willing to undertake more this number will be increased. This, however, is doubtful, as he does not care to play more than three times a week, except under extraordinary conditions, and his tour has been arranged with this limitation in view. In addition to his own new works he has added to his repertoire several pieces of importance, which he has never played in America. Among these are

Liszt's B minor sonata; Beethoven's sonata in B flat, Op. 27, No. 1; Chopin's Scherzo in B flat minor; two études and a nocturne by the same composer; Stojowski's "Chant d'Amour," and Lizst's transcription of Schubert's "Auf dem Wasser zu singen."

Art.

Public Baths and Wash-Houses: A treatise on their planning, design, arrangement, and fitting. By Alfred W. S. Cross, pp. xii, 276; 274 illustrations, New York: Imported by Chas. Scribner's Sons. $7.50 net.

The public bath is a much more important institution in Europe than among us. The abundance of bathing facilities in American houses and hotels, as well as in clubs, gymnasiums, Young Men's Christian Association buildings, and public institutions generally in the United States, has made it superfluous to provide at public expense—or for that matter at private cost as an investment—anything like the public bath houses to be found in every British and Continental town of importance. And yet, while the well-to-do American enjoys the most complete arrangements for bathing, the poorer and humbler laboring men and women are, as a rule, unprovided for. Only within the last ten or fifteen years has America awakened to this deficiency, and begun to erect for the congested districts in our cities, bath houses, with or without laundries, and equipped with modern sanitary appliances. In England and on the Continent, on the other hand, the public bathing establishments, frequented by all classes of society, are larger and far more important architecturally than any of those erected by American municipalities. Entrances, lobbies, waiting-rooms, and rest-rooms are treated with all the elegance possible, and the swimming-pools are often of great size, and housed in halls of considerable architectural splendor. With the present increased attention to the subject in this country any authoritative account of the highly developed foreign systems should find interested readers here.

The most comprehensive treatise on bath houses hitherto published is Felix Genzmer's "Bade und Schwimm-Anstalten," issued in 1899 by Bergsträsser in the Handbuch der Architekur series. But German books are serviceable to only a few Americans, and Mr. Cross's handsome volume has appeared at the right moment to attract the attention of American architects and municipal boards. Unfortunately, the title is misleading in omitting to prefix the qualifying adjective British. Not only does Mr. Cross write exclusively for the British public, and describe and illustrate only British bath houses and British practice—all of which is, of course, perfectly proper; but for him, apparently, there are no suggestions to be derived from Europe or America. Save for a single reference of less than two pages (pp. 100-102) to the Lassar spray bath and the New York Report on Baths of 1897, and a series of illustrations of an English design for "Baths at Maine, U. S. A.," (*sic*) there is not so much as a passing allusion to foreign practice.

Except for this limitation, he has written a thorough and painstaking compendium of British practice; and if the proportion of Mr. Cross's own designs described and illustrated seems a trifle too large, this at least assures one that the book is the outcome of a wide practical experience. The work is, indeed, solidly practical from beginning to end; the illustrations consist entirely of plans, elevations, sections, and details; and the chapters on equipment are cast in the form of technical specifications. The text takes up first of all the site and general arrangement of a public bath-house, with special discussion of the entrances and ticket-offices, and follows these with chapters on swimming-baths, private baths, spray baths, and public wash houses and laundries. Several chapters are devoted to details of construction and equipment, heating and lighting, administration and maintenance. Ample appendices set forth the most important acts of Parliament and regulations of the London County Council pertaining to buildings of this class. In the treatment of all these subjects emphasis is laid on the fundamentals of convenience, abundant light, systematic heating and sound construction. The author's conclusions are generally reasonable and clearly set forth.

Much of what he says should be suggestive for American architects. One feature which strikes the American reader is the duplication of the outfit for different classes: nearly every establishment has its first and second-class baths and plunges; some even a third-class division. In this respect the Germans are somewhat more democratic than the British. An evidence of British conservatism is seen in the persistence of the "slipper" or tub bath, as the normal unit of the bathing system. The spray bath and the needle bath are referred to as if they were foreign innovations, commendable perhaps, but not for that reason to be thought of as necessarily supplanting the time-honored, if unsanitary, public slipper tub. The architecture shown is rational, but not of great distinction or charm. Perhaps the most generally useful part of Mr. Cross's work is that relating to public swimming pools, in regard to which the English practice is in many ways far ahead of our own.

The book is a handsome imperial octavo, and, like most English technical works of its class, is excellently printed. It is furnished with tables of contents and an index which might have been more detailed, but is fairly complete. In spite of its limitations, the volume should be on the shelves of every technical library and of every architect who is likely to design bath houses.

Several books of the guide-book kind come to us which will prove more or less useful. The most pretentious, and the poorest, of these is Edith Harwood's "Notable Pictures in Rome" (E. P. Dutton & Co.). Miss Harwood announces in her Introduction:

> Pictures have their own story to tell if we will allow them to talk to us. . . . Sometimes in happy hours they have told me far, far more than it is in my power to put into words, all that I can express is written in this book as an invitation to others to go and look for themselves.

After that one is a little surprised to find that nearly everything in the book that has interest is in quotation marks, though the source of the quotation is not always given. The volume contains, of course, a great deal of information, but it would be quite as readable and much handier if all the reflections and what little may pass for criticism were cut out.

The thin little book in the Modern Cicerone Series (Leipzig) on the Royal Picture Gallery at Dresden, by Prof. Hans W. Singer, is of convenient pocket size, is profusely illustrated, and the choice of a hundred and odd paintings, for comment, out of the nearly three thousand in the gallery, is intelligent, while the author's remarks are sensible. We can object only to the somewhat pedantic habit of speaking of all artists by their surnames, however unfamiliar, as Vicelli for Titian, Raibolini for Francia, and Gianuzzi for Giulio Romano, and to such Germanisms as Barock.

"The Umbrian Cities of Italy," by J. W. and A. M. Cruikshank (Boston: L. C. Page & Co.) is frankly a guide-book, though "it does not give information about the details of travel, nor . . . notice all monuments irrespective of their merit or interest." The plans for the identification of particular pictures in lavishly decorated churches or other buildings should prove very useful. The illustrations are good, though one regrets that so many of them are on a very small scale. The authors evidently know their ground well, and have covered it carefully. Such a statement as that the reliefs on the Cathedral of Orvieto "are the finest works executed south of the Alps since the great Greek masters," seems a trifle extreme when one thinks of Donatello and Michelangelo; but too much enthusiasm is preferable to none.

J. Walker McSpadden's "Famous Painters of America" (Thomas Y. Crowell & Co.) is, in the author's own words, an attempt to find the man under the skin of the painter. In ours, it is a collection of personal gossip about eleven men who happened to be artists, from Benjamin West to Chase and Abbey. The general reader may find some mild entertainment in it—it makes no pretence to give any information about art.

Among the ruins of the ancient Greek city of Pagasæ, in Thessaly, a rare find has been made in the form of a grave monument, decorated, not as usual with reliefs, but with paintings. The fortunate excavator, H. Orwanitopoulos, distinguished four colors all of which are in excellent preservation. In view of the scanty materials at our command for a proper estimation of Greek painting and use of color, each new find of this kind is of great value. The stele is also decorated with ten interesting inscriptions.

A provisional account has appeared of the recent excavations at Tiryns carried on by the German Archæological Institute under the direction of Dr. W. Dörpfeld. The aim of the undertaking had been to investigate the layers of earth beneath the royal palace of Tiryns, and determine whether the site was inhabited in "pre-Mycenæan" times. The results of the campaign were so successful that the excavations are to be carried on during the coming season. The layers beneath the palace were found to have accumulated to a height of six metres, and four separate periods of habitation were distinguished, all antedating the royal palace. At the

southeast corner of the palace there was found a large number of terracottas, most of which seem to have belonged to the sanctuary of Hera, where they probably served as votive offerings Moreover, the "necropolis of Tiryns" for which Dörpfeld had formerly searched in vain was discovered in the neighhorhood of the modern station.

Another valuable discovery has been made on the Palatine in Rome. In the neighborhood of the temple erected by Augustus close to the royal palace, the remains of a colossal bronze horse have come to light. This is probably part of an equestrian statue, or from a monumental frieze of the temple of Victory. Prof. Dante Vaglieri, the director of the excavations on the Palatine, is busily occupied in trying to find further fragments of this monument. At the same time the Forum Romanum has yielded some interesting remains. The convent connected with the Church of Santa Francesca Romana, on the east side of the Forum, between the Basilica Constantine and the Arch of Titus, is being fitted out as a museum for the minor antiquities found on the Forum. In digging some foundations in connection with this new museum numerous marble fragments, parts of friezes, etc., were found which have been identified as belonging to the Arch of Titus. The presence of such fragments on this site is explained by the fact that in the Middle Ages, when most of the Forum was still unexcavated, the Convent Santa Maria Francesca was joined to the Arch of Titus by a series of buildings for which, according to the unscrupulous methods of that time, all available pieces from ancient monuments were used as building materials. G. Boni, the director of the Forum excavations, will investigate the fragments and decide whether the new finds are to be restored to the Arch of Titus or kept in the Forum Museum.

The Metropolitan Museum of Art, acting in coöperation with Mrs. Saint-Gaudens, will hold a commemorative exhibition of the works of the late sculptor, Augustus Saint-Gaudens, early next year. Where originals cannot be secured, they will, so far as possible, be represented by casts, and if not by casts, by enlarged photographs.

The Charles Lawrence Hutchinson Gallery of Old Masters at the Art Institute of Chicago opened this week. It is named in honor of Mr. Hutchinson, on the completion of his twenty-fifth year as president of the Institute.

At the Wadsworth Athenæum in Hartford there are now on exhibition about 200 specimens of the early New England potters' art. These pieces, a loan from Albert Hastings Pitkin of Hartford, are one of the most complete collections of early American ware in the United States.

George Frederick Bodley, the English ecclesiastical architect, who, with Henry Vaugbn of Boston designed the Protestant Episcopal Cathedral of St. Peter and St. Paul, now being built in Washington, died on October 21. Mr. Bodley was regularly entered at an early age as an apprentice with the famous Gilbert Scott, and during the five years' term of study he lived, according to the good old-fashioned tradition, in the house of his master. Scott drilled his pupil in a rigid convention of English Gothic, but Bodley later adopted a more gracious style. He was closely associated with the pre-Raphaelite movement. A church at Scarborough, England, designed by him earlier in his career, is decorated with cartoons by Madox Brown Burne-Jones, and Rossetti. It is said to have been through him that William Morris won his first opportunity to display his art in stained glass decoration. Apart from his professional interests, Mr. Bodley was a man of wide culture and attainments. He was an amateur musician of considerable ability, and a writer of verses as well. In 1899 he published a volume under the title "Poems." He was a Royal Academician (1902), and a Fellow of the Society of Antiquaries.

Finance.

HOUSE-CLEANING OF THE BANKS.

The action taken regarding the Mercantile National Bank, the National Bank of North America, the New Amsterdam National, the Consolidated National, and the Hamilton Bank, by the executive committee of the New York Associated Banks—commonly known as the "Clearing House Committee"—is of much wider importance than appears upon the surface. To most persons the fact that a national bank had been in danger, and that it had been saved by the intervention of this committee, will doubtless be the chief point of interest; and in the eyes of bank depositors and of investors generally the immediate significance of the fact is capital. In a general way, it bas been inferred that the stipulation of the Clearing House Committee that the existing directorate of the Mercantile National and certain directors and officers of the above mentioned affiliated institutions should resign, was due to last week's breakdown of an attempt to corner United Copper stock. It was, in fact, disclosure of the extent to which the Mercantile Bank's funds had been involved in that operation which brought the matter to a head. But the action of the Clearing House means a good deal more than correction of the mischief done in this single instance. It has to do with a series of events, dating back as far as 1901. It undertakes to deal with a state of affairs which has threatened the gravest danger to sound banking ever since that time.

During the riot of Wall Street promoting schemes, half a dozen years ago, attention was called repeatedly to the extravagant prices bid for the stock of New York banking institutions. At times these prices went so high as to give to purchasers of the stocks, at such figures and at prevailing dividends, a net yield little greater than 2 per cent. Part of the buying was ascribed to large financial interests, which, in Wall Street's view, were extending their influence over groups of financial institutions so as to fortify themselves in their ambitious "syndicate undertakings." Much of the movement, however, soon became traceable to financiers of distinctly second rate, and it was not long before the nature of their bank stock operations was discovered.

What they were doing was to buy a controlling interest in the stock of a moderate-sized New York bank, put up this stock as collateral for loans in another bank, and use the proceeds of such loans to buy stock in still other institutions—repeating the operation with each successive purchase. The practical result of this exploit was that a few capitalists of no great standing, actively engaged in speculative "industrial" schemes of their own, were gaining control of a group of banks through mere stock ownership on a margin. With this control, they packed the boards of directors in their own interest, and were naturally assumed to be using the funds of these deposit banks to support their own speculations.

It is hardly necessary to point out the imminent perils of that situation. To people conversant with the facts and at all experienced in banking history, the undertaking plainly foreshadowed the possible collapse of a "chain" of such institutions, at a moment when credit at large would thereby be most seriously deranged. Personal disaster to the affairs of one of these speculative bank owners, forcing liquidation of the loans for which the holdings of bank stock were pledged, might at any time have converged suspicion on the banks themselves—if, indeed, such suspicion did not come too late, after the men in control had gutted their banks' resources in a struggle to save themselves. This possibility of disaster has been known for six years past. If it be asked why no one interfered with these practices during all that time, the answer is, first, that no one outside of the national banking department had the right to examine the accounts of these banks and challenge the manner of control; second, that the very hazards involved in existing conditions rendered open accusation extremely perilous.

It was the fortunate side of last week's fall in United Copper that it gave the Clearing House Committee both the power to act and a proper opportunity for speaking out. The Mercantile Bank applied to the committee for assistance. As a necessary preliminary to such aid, the committee examined the institution's loans and collateral. It found, as there had been every reason to expect, that the speculative owners of at least this one of the "chain of banks" had been loading its surplus account with their own dubious securities. Refusing, very wisely, to stop with stipulations regarding the future control and management of this single institution, the trained and conservative bank officials of the Clearing House Committee took in hand all of the banks which had been drawn into this dangerous circle. They demanded peremptorily, not only resignations of certain directors in all of them, but the virtual retirement of Charles W. Morse, E. R. Thomas, and their immediate associates, from the New York banking field; and those gentlemen had no option but to submit.

How great the relief produced by this drastic handling few people who have not for six years past been watching this powder-mine, lying constantly open for the sparks of Wall Street speculation, can wholly appreciate. It is in many ways a logical and inevitable sequel to the divorcing of life insurance companies, by law, from relations with promoting syndicates, and the

prohibiting of ownership, by such companies, of banking institutions. That the overthrow of the mischievous "chain banking system" this month has been accomplished without appeal to the Legislature or the courts, and through the personal pressure of the Associated Banks themselves, is a most encouraging sign. It means that leadership in our bank affairs by men of experience and conservatism is confirmed and reinforced, and that the "new order of things in American finance," of which we heard so much in 1901, was simply the very old order of things known as unsound banking, which has now had its day and run its course as it did in a dozen earlier eras of Bubble Finance.

The Queen OF Letter Writers

(Madame de Sévigné)

By Janet Aldis, author of "Jane Austen and Her Times," etc.

8vo. Illustrated. $3.50 net.

The story of Mme. de Sévigné's life involves—what this book gives in a graphic, picturesque, and charming fashion—an account of the aristocratic life of Paris and Versailles, of events in the world of literature, art, and politics, and of the petty intrigues, spites, and follies of the day.

Just Published

Wright's Short History of Greek Literature

By **Wilmer Cave Wright**, Ph.D., Associate Professor of Greek, Bryn Mawr College.

$1.50

This volume affords a general survey of the whole field of Greek literature, from Homer to Julian. It is written rather from the literary than the philological standpoint, and contains such helpful features as numerous parallels quoted from English literature, lists of standard translations, and references to modern essays dealing with the Greek masterpieces. It is a book which will appeal both to the general reader, and to the college student who wishes to realize intelligently the significance and relations to the whole of the classic masterpieces he is reading.

ROBERT NEILSON STEPHENS'S
CLEMENTINA'S HIGHWAYMAN

IN A GREAT
Public Library

The Office Clerk is instructed to cut out the advertising columns of THE NATION as a guide for the Purchasing Committee.

To many libraries and to many individuals, books advertised in THE NATION are at once recommended as desirable.

The Nation.

NEW YORK, THURSDAY, OCTOBER 31, 1907.

The Week.

People are asking if this is to be known as the "Roosevelt panic." That is comparatively unimportant. The certain and significant thing is that it will be known as a Republican and high-tariff panic. Protest as Republicans may, they will be held responsible. And it will be not only poetic but political justice that they should be. Out of their own mouths, the Republican party and the Dingleyites will stand condemned. They fixed in 1896 the standard by which they cannot escape being judged. In the party platform they referred to the panic of 1893, and the hard times following, and squarely charged the entire accountability to the party in control of the national government. Not one word did they utter about the hand of the Lord having been heavy upon the country in crop failures; not a syllable was admitted about the unwise fiscal measures, and the dishonest silver legislation, for which the Republican party was directly responsible, and which all impartial students of the time agree had a great deal to do with the financial disturbances that came later. No; it was the Democratic Administration which, the Republicans fervently alleged in 1896, had "precipitated panic" and "halted enterprise." And the political inference was stated with merciless logic:

> Every consideration of public safety and individual interest demands that the Government be rescued from the hands of those who have shown themselves incapable of conducting it . . . and shall be restored to the party which for thirty years administered it with unequalled success and *prosperity*.

Now, what are the Republicans going to do when the Democrats hand them back their poisoned chalice? What, above all, are they going to say about the tariff as an infallible and magical creator of wealth and guarantor of prosperity? A great emergency has come, and the high tariff is seen to be of no avail whatever. Yet if there is a word of truth in what has been said by Republicans all these years, the tariff is the first thing everybody should have been turning to in the crisis. Is it not high customs duties which keep wages high and everybody employed, make the trade balance favorable, and stuff the banks with money? But in an "off" year, with no political bugaboo to interfere with the beneficent workings of the high tariff, the advance agent of prosperity has been replaced by the bill collector of adversity. Whatever other effects the panic may have, it has at least opened the way to attack the tariff question in statesmanlike fashion, without having to face the old abuse and prejudice and idolatrous ignorance.

The issue of Clearing House loan certificates, on which the New York banks decided Saturday, and in which they have been followed by banks in the other principal cities, is a wise and salutary step. The two most familiar objections to the expedient arise from the facts that authorization of bills of credit in lieu of cash for payment of balances between banks is public confession that cash reserves are in some banks insufficient; and that the plan involves the lending of cash resources by strong banks to weak associates. Neither objection has any validity at the present juncture. Announcement of deficiency in the cash holdings of a few institutions could hardly add anything to the public knowledge, and therefore could not act as a cause for further misgiving. As for the compulsory support of smaller by larger institutions, public declaration of a purpose of that sort is exactly what the people want. We trust, however, that the issue of the certificates by the Clearing House Committee will be restricted jealously to actual and manifest needs. Their use, thus limited under the leadership of that master of bank finance of the higher order, the late Frederick D. Tappen, in the financial flurries of 1884 and 1890, had only good results, and brought order out of chaos almost within an hour. Their issue in a much larger sum during the prolonged financial strain of 1893, brought troubles—a result, however, of two causes, neither of which ought to operate to-day. One of these was the profusion with which the certificates were allotted to banks which might have done without them. The second cause was the desperate state of affairs in the banking centres of the West, a consequence, not of the "New York panic," but of the semi-insolvent condition into which Western industry had fallen. The farm communities especially, loaded with debt, strewn with the wrecks of mortgage companies, confronted with slack demand and low prices for their crops, were forced to call home their bank money from the East. The sign of the times was the run of half-ruined depositors on these Western institutions, and the resultant run of the Western banks on their New York depositories. But to-day the West is richer than ever before. Our wheat and cotton, for which we could hardly find a market in the distresses of fourteen years ago, are demand by the whole outside world. Whether Europe wishes to send prompt relief or not to our troubled money markets, Europe will in reality have no option. It must have our surplus wheat and cotton, and it must pay cash for them.

The runs on the trust companies last week are in part due to the fact that some years ago they entered a field—that of general banking—which had not been contemplated in the law. Originally they were designed to discharge, through the medium of incorporated companies, the duties devolved upon trustees. The law had therefore left open to trust companies all such branches of investment as would be open to an individual trustee; and these branches naturally included many investments prohibited to deposit banks. The reason for the distinction was that the banks, subject to instant call for cash by their depositors, could not be permitted investments which they could not quickly turn into money; whereas the trust companies, as the law conceived them, were subject to no such instantaneous demands. Further, the banks were required by law to keep on hand, in cash, 7 to 25 per cent. of their deposit liabilities, in order to be at all times reasonably ready to meet the call of depositors, while no cash reserve whatever was required by the trust company act. Ten or a dozen years ago, however, many of the trust companies accepted deposits subject to call—in other words, undertook to carry on without the proper restrictions exactly the kind of business which the banks were doing. The peril of such a state of things did not fail to impress conservative financiers. The New York City Associated Banks, in April, 1903, broke ground by requiring every outside institution which "cleared" its checks through banks in the Clearing House to keep in its vaults a 15 per cent. reserve. Rather than submit to dictation by the banks, all but three trust companies withdrew from Clearing House connections. The scene then shifted to Albany, where the Wainwright bill was passed in April, 1906, requiring trust companies in this city to maintain a reserve amounting to 15 per cent. of their deposits, of which at least one-third must be actual cash in vault, with option to put the remaining two-thirds, in equal parts, in the form of municipal bonds and in deposits with other banks or trust companies. Such is the present law. It is very imperfect—chiefly because it does not discriminate between companies largely engaged in trust business pure and simple, and companies which are merely deposit banks under

another name. Furthermore, it accomplishes nothing at all in the way of regulating investment of demand deposits. Last week's events are a serious warning that the time has come when the trust company law should be radically remodelled, with the purpose of separating the trust branch of the business from the simple banking branch, and of imposing on the latter the limitations and requirements imposed on the banks themselves.

An added sign that the Administration is a little nervous about the dispatch of the fleet to the Pacific, and desires to allay fears on that score, is furnished by Secretary Root's statement on Saturday. Mr. Root is usually the physician called in when the case takes a grave turn. When he is seen to drive up, people know that the family is anxious. His phrasing is certainly skilful. There is nothing, he says, in our relations with Japan which should make the sailing of the battleships to the Pacific a threat, any more than our keeping them in the Atlantic would be a threat to England or Germany. This is more reassuring, in its statement of fact, than it is ingenuous in covering the exact circumstances of the decision to send the ships. The thing was first bruited about as a war measure. Because it was, the President put out an official announcement that he had no thought of ordering the battleships to the Pacific. Then, in a few days, he suddenly changed his mind. That was the suspicious fact that caused all the flurry, and made Europeans think the move distinctly minatory. Hence Mr. Root would be much more soothing if he were able to go on and say, with the *Army and Navy Register*, that the President is "quite capable of ordering all the navy around the world, simply because it occurs to him to do so."

Mr. Bryan's series of religious addresses, in this city last Sunday, reveal him in a very engaging light. They also help one to understand his political character. It was long ago remarked that Mr. Bryan is, by nature, a preacher. He has the exhorter's impulse, with his effusive and unstudied language. His deepest instinct is the desire to convert somebody. That is one reason, probably, why he does not shrink from encountering such tremendous odds. A party, or a nation, opposed to him, he appears to think of mainly as a great gathering of sinners whom he may hope to turn from the error of their ways. Any evangelist with a burning heart would jump at the chance, and so does Mr. Bryan. In one of his sermons of Sunday, however, he rather pathetically admitted that there was a sharp difference between religion and politics, in at least one respect. In the political world, you have to persuade a majority to be of your way of thinking, or you cannot accomplish much. In religious work, here and there an individual saved may be accounted success. The religious motto, "One with God is a majority," is scarcely for the really successful politician. He, on the contrary, has to look after the one that makes the majority—"ce maudit numéro un," as Marshal MacMahon called the single deputy who carried the republic in the Constitution.

"The army could not be worse off," Congressman J. A. F. Hull, Chairman of the House Committee on Military Affairs, is quoted as saying. Its condition, he declares, is "desperate." This admission is exceedingly interesting. Never in any similar period of time has there been so much and such radical legislation for the army as has been written upon the statute books during the time that Mr. Hull has held his chairmanship, and yet the dissatisfaction in every grade in the army is greater today than ever before. Now, this is not merely because of the rise in the cost of living; nor will it be cured by the generous and deserved increase in the pay of officers and men which Mr. Hull proposes. Nor is it due in any large degree to the legislation which Mr. Hull has been so instrumental in shaping. Among the officers the most demoralizing influence has been political and personal favoritism. This same Chairman of the House Military Affairs Committee in 1901 pitchforked into the army as a full major his own hopeful son, twenty-seven years of age, and had the satisfaction of seeing him advanced to lieutenant-colonel two years later. Of course, Major Hull at once took precedence over 1,231 captains—many of twenty years' service; 1,018 first lieutenants, and 850 second lieutenants. A year ago Senator Warren, Chairman of the Senate Military Affairs Committee, succeeded in having son-in-law Capt. Pershing made a brigadier-general over the heads of 862 officers of higher rank and longer service. Mr. Hull does not refer to these facts and to the many others like them; yet they are the most powerful reason for the discontent among the officers, who feel that the pull is mightier than the sword.

Ever since the House of Representatives began to decline in prestige, various suggestions for its rehabilitation have at intervals been put forward. Representative Boutell of Illinois now proposes to restore the glory of the House by hiring carpenters to remodel the chamber in which it sits. He would take out all the desks, reduce the size of the hall by one-half, and build tiers of seats facing each other and extending from the Speaker's desk to the door. Mr. Boutell explains:

> Under such a plan the members who do not care to take part in discussions on the floor would have the alternative of sitting silent on the benches or leaving the House altogether. The House, being divided, each half facing the other, and everybody within easy speaking distance of everybody else, discussion would be a pleasure, and much more interesting than now. Bellowing across the hall would give way to a quiet discussion of the points involved in a bill. Change the hall and you will change the method of discussion.

Change the method of discussion, he implies, and you will change the current opinion about the House and its pretensions. That the huge area of the present hall, one-half of which is devoted to desks alone, has markedly influenced the recent history of that body, is unquestionably true. It has given a tremendous advantage to the member of great physical powers, who can make himself heard. In any legislative body the onus of general debate is bound to fall on a relatively small group of men of special ability; but in our House men who have the requisite talent, and who, given the chance, could make their way in a body like the Senate, are shut out for physical reasons. The Congressman whose larynx has not developed with his cerebrum is condemned practically to silence. Under existing conditions the men who appear to best advantage in a forensic contest conducted under all the handicaps of the Washington rules, fail to make an impression elsewhere. Audiences at Madison Square Garden or Cooper Union listen to some noted Congressman and wonder how such an inferior speaker ever managed to win a reputation. They would understand if they could see the man in his Congressional environment.

If financial troubles distracted attention from the great balloon "race" last week, they ought not to make people forget that similar aerial performances date back more than half a century. Indeed, the distance covered by the Pommern, 876½ miles, was much shorter than the best American record, made as long ago as July, 1859, by John Wise. In company with three other men, he journeyed from St. Louis to Henderson, Jefferson County, New York, a distance of 1,150 miles, and the time of the flight was only 19 hours and 50 minutes, which means that this balloon travelled for long periods at the rate of a mile a minute. This record was not surpassed until the Count de la Vaulx's journey of 1,200 miles from Paris to Russia a couple of years ago. Obviously, so far as the ordinary gas balloon is concerned, we are witnessing merely a revival of interest after a lapse of fifty years. Not even our aero clubs are a new departure: a European aeronautic society was form-

ed in 1853. The kind of contest we should like to see would be a New York-to-Chicago race of dirigible balloons—a fair test over a thousand-mile course. According to all reports of European efforts to navigate the air, Count Zeppelin's balloon seems to have been the most successful, to have manœuvred most easily, and made the best headway against a strong wind. Its highest speed is thirty miles an hour, and under ordinary conditions it can land in a smooth field; but if it should be caught out in a severe gale, it would have to run for its specially constructed shelter or hide behind some large structure or natural protection. The inability of the Wellman airship to make headway against a wind of more than fifteen miles an hour led to its recent failure to start for the Pole. After the Nulli Secundus made its trip over London, it could not return. The problem here is plain: how to increase the engine's power without adding seriously to the weight.

If the new prohibition movement has done nothing else, it has brought on the disreputable saloonkeeper the wrath of the better element in bis vocation. The Wholesale Liquor Dealers' Association of this State passed resolutions last week urging "the passage of laws which shall make the granting of a license to sell liquors dependent in large measure upon the character and reputation of the applicant," and also praying "that the present laws be changed to the end that the business may be ultimately conducted by men of recognized character and standing in the community." It may be noted in passing that, judged by this standard, our precious Raines law is no more satisfactory to the liquor-selling interest than to the temperance reformers. But, in general, the growing habit of blaming the disreputable saloonkeeper, and not the Puritan and the busybody, for the present renewal of agitation and hostile legislation, is on every account a good thing. Doubtless, the brewers, distillers, and wholesalers could, if they were sufficiently in earnest about it, put some of their disreputable dependents out of business. But much as the urbane, benevolent, discreet, and respectable tavern-keeper of fiction and the stage might do to regenerate his business and stop the flood of "sumptuary laws," we fear it will take more than a set of resolutions to produce him in the body.

The cause of scientific forestry the country over will profit by the splendid gift to Harvard University of 2,000 acres of valuable forest land, which has just been announced. There is no better timber in Massachusetts than stands on this tract near Petersham, a town that has long profited by the scientific methods of forestry in use on that property. So far as the university is concerned, its friends maintain that this gives it the best equipment for practical as well as theoretic instruction to be found anywhere in the country, when taken in connection with the great resources of the Arnold Arboretum, in the field of forest botany. If Harvard has been later than other colleges—Yale, for instance—in establishing forestry as a subject of university training, its present attitude shows that no great university will hereafter be complete which does not include the study and care of trees in its curriculum. For the present the forestry work at Harvard will belong to the new Graduate School of Applied Science, and students will be required to reside for a part of every year in the Petersham forests—a vast change from the days when going to Harvard meant almost monastic seclusion in Cambridge.

Sir Henry Campbell-Bannerman's speech in Scotland against the Lords was at least exceedingly canny. He was able to appeal strongly to Scottish pride. One of the bills which the Lords threw out was a land bill for Scotland; and Sir Henry was able to make great play on local feeling by showing how the wishes of the Scottish representatives had been trampled upon by the House of Lords, and how "my Lord Lansdowne had abolished or dried up the Tweed." The Prime Minister was characteristically adroit also in his use of Lord Rosebery. That sulking Liberal leader has, it is well known, made himself disliked of late by a large section of the party, and there were even cries of "Traitor Rosebery" while Sir Henry was speaking; but the latter simply brought out Rosebery's resolution against the Lords, twelve years ago, and gave it his blessing. Of course, this is the dead season, politically, in England, and nothing will be done till Parliament meets. It is highly significant, however, that the Prime Minister should have put reform of the Lords in the forefront of his coming programme, and announced that he would soon be ready, if necessary, to take an appeal to the country on that issue.

According to a part of the Parisian press, the future may see an important modification in the terms of the alliance between France and Russia. The latter, it is asserted, is now endeavoring to bring about the annulment of its obligation to maintain a certain armed strength on the German frontier, ready for coöperation with France in case of Franco-German hostilities. Russia's forces in her western provinces were withdrawn in the course of the war with Japan, and the Czar's government is described as reluctant to proceed with the reoccupation of the denuded frontier, on the ground that the international situation no longer makes such precautions necessary. The question is now being discussed in Paris. That Russia is prepared to risk the rupture of the French alliance is, of course, scarcely to be maintained, since her need of French money is as great as it ever was. On the other hand, it may very well be that the Russian government has been seized with the ambition of regaining the rôle of peacemaker of Europe, and with that end in view has thought it worth while to relax the tension of the French alliance in order to conciliate Germany. Indeed, for a Power whose prestige only two years ago was considered as non-existent, Russia seems to be looming up with remarkable strength. Fortified by the agreement with Great Britain, in amicable relations with Germany, financially bound up with France, renewedly active as co-agent with Austria in Macedonia, the Czar's Empire has once more demonstrated its immense reserves of vitality.

The fever of constitutionalism has reached Abyssinia, and Emperor Menelik is reported to have organized a Cabinet on the European model. That the reform movement will not stop there is attested by the intimate relations which Menelik bas established with the European Powers, and his endeavors, sincere though cautious, to bestow on his subjects the advantages of European civilization. The Abyssinians are now being referred to as the Japanese of Africa, and there is, in fact, a parallel to be drawn between the two nations. It is not merely that both were only a short time ago chiefly thought of in connection with musical comedy, and now have a victory over a great European nation to their credit, but that in Abyssinia, as in Japan, the system of feudal loyalty, when turned to modern uses, has shown itself capable of developing a surprising vigor. Abyssinia really has a future, because her safety is not only guarded by some ten million inhabitants of warlike stock, but is guaranteed also by a number of conventions with the European Powers. Last December, Great Britain, France, and Italy entered into a treaty pledging themselves to respect the territorial integrity of the empire and to abstain from intervention in its internal affairs. Germany has recently been successful in cultivating the Emperor's favor, and altogether European rivalry in that corner of Africa is such as to insure the Ethiopian nation its continued independence. To England, especially, friendly coöperation is necessary with the Power that largely controls the water supply of the Nile, and through whose territory the Cape-to-Cairo Railway will ultimately pass.

FIXING THE RESPONSIBILITY.

Secretary Cortelyou, in his statement last week appealing for calmness in facing the financial crisis, asked for the "coöperation of the press." This implies that newspaper sensationalism has done much to provoke and inflame that "state of mind" which is always at the bottom of a run on a bank, or a panic. And the implication is undoubtedly true. Some of the newspapers have behaved very badly. They have treated the strain on credit, with its resulting acute anxiety, as if it were a thing to be bellowed about like a prize fight or a society scandal or a murder. They have recklessly published rumor for fact, and made flaunting display of information which came to them confidentially. After the second day, however, even the worst offenders among them began to wear a chastened air. In one way or another, it was brought home to them that hysterical or provocative treatment of such a trouble is a public outrage. Hence their new and grateful soberness.

We do not perceive, however, why anybody should have been astonished at the inflammatory course of certain newspapers. It is all of a piece with what they have been doing for years. Every event has undergone its exaggeration or distortion at their hands. Their admired specialty has been to make a whooping sensation, and with so good a chance as peril to the property of millions, why should they stay their hand? And why, too, should their readers and patrons who have sat without a protest under their brawling sensationalizing of all news for so long, now suddenly grow indignant and say that it is time something were done to make the newspapers decent? The life of any newspaper is at the mercy of the community. If firm pressure and threats can make a foaming yellow editor sober down, when vast financial interests are at stake; if the artificial "cholera scare" in this city in 1892 could be stopped in the newspapers, and hence in the public mind, by the representations of advertisers, it is plain that all of the responsibility does not rest upon the heedless or mercenary journalist. Part of it must lie with the careless or callous people who suffer him to go on his way, not only unrebuked, but flattered and enriched. Those who are now temporarily enraged with a conscienceless and demoralizing press would do well to pin this moral in their hats. It might help them to be permanently angry. And that would mean a permanent and all-round cure.

Beyond the newspapers, however, many are looking to another source of responsibility for our present troubles. There is some open, and a great deal of private, attack upon President Roosevelt as the ultimate cause of it all. He it is, said an officer of the Knickerbocker Trust Company, who has broken down the credit system of the country. And last week, at Chicago, a letter was read at the Trust Conference from August Belmont, in which he laid the responsibility for our financial troubles upon the President of the United States.

Now, we are compelled to grant that a certain measure of blame attaches to Mr. Roosevelt. He, too, has been sensational in his methods of dealing with vast questions which require, above all things, dispassionate and sober treatment. He has been too excited, too sweeping, too ill advised in the speeches he has delivered within the past few weeks. At a time when he should have displayed great reserve and self-control, he has been far too talkative and impetuous. Furthermore, as the head of a party which has guaranteed unruffled prosperity to the country, the President cannot but be involved. Washington dispatches represent him as determined to do everything possible to afford relief to the situation, since he does not want his Administration to be "dimmed" by financial disturbance. Party politics being what they are, all this is inevitable, and is admitted; but when men go further and assert that Mr. Roosevelt is chiefly accountable for what has occurred in this city during the past ten days, the thing becomes an absurdity.

It was not Mr. Roosevelt who attempted to corner United Copper. It was not he who obtained control of a chain of banks, purely for speculative purposes. It was not his name that had long stood as the symbol of all that is suspect and abhorrent to sound and honest bankers. No; it was the Heinzes, the Morses, the Thomases, and their breed, who, by their gambling and piratical use of the machinery of credit, brought on its disorder. Imprudent as the President may have been in his public utterances, he might have talked till doomsday without causing a thousandth part of the trouble which these highwaymen of finance precipitated in a single day.

We have not refrained, and shall not refrain, from criticising the President. But he, though mistaken, is at least honest. He is not trying to line his pockets with filched money. He is not seeking to impose upon the public by glittering bubbles of financial schemes which are certain to collapse and bring ruin to all concerned. Nor was it the President who laid his hand upon one set of fiduciary institutions after another, to pervert them to nefarious ends. We cannot charge everything to the Big Stick when there has all the while been at work the Big Grab. The President must accept his fair share of blame; the newspapers must shoulder theirs; but the true and damning responsibility rests with the men whose greed and cunning and shameless plots to overreach the public have created the fear lest more of our financial institutions may prove to be as rotten as theirs.

BRITAIN'S SUBJECT RACES.

Discontent with British rule shows no signs of abating in Egypt, and is increasing in India. Calcutta has been the scene of riots in which the Bengali seems to have belied his traditional reputation for want of courage. The prosecution of native lawyers and educators for preaching sedition has produced no pacifying effect; the tone of the native press is uncompromising; the colleges and higher schools are hotbeds of revolutionary agitation. Just how serious a turn of affairs do these symptoms prognosticate? Tory opinion in Great Britain professes to believe that the worst may be feared, and urges a bold policy of repression. The London *Times* publishes in daily instalments a history of the Sepoy Rebellion, with the evident intention of frightening the British public. The Government of India is about to enact a stringent law for the regulation of public meetings, from which it would appear that John Morley himself is not free from anxiety. Radical opinion is outraged by the public whipping of a Hindu student at the order of a magistrate. The situation is evidently ticklish.

An interesting phase of the latest developments in India is connected with the activity of Keir Hardie, the veteran leader of the Labor Party in the British Parliament, who has been travelling through the Bengal provinces and delivering what conservative opinion regards as highly inflammatory speeches. According to the native press, he has been telling his auditors that the condition of eastern Bengal is worse than that of Russia, and "that the atrocities committed by officials would, if they were known, evoke more horror in England than the Turkish outrages in Armenia." At Barisal, on the last day of September, he declared that "he would do his best to make India a self-governing colony, like Canada; what was good for the Canadians must be good for the Indians." Needless to say, Mr. Hardie's declarations have been received by the Bengali Nationalists with the greatest enthusiasm. Individual advocates of their rights the natives of India have had before this among liberal-minded Englishmen, but never so thorough-going a champion. "God sent Mr. Keir Hardie," declares one native organ, "whose advent will demolish the gigantic conspiracy against the Hindus."

If the position taken by Keir Hardie should prove to be that of the entire Labor Party in Parliament, British colonial policy will have entered on a new phase. It has been the accepted rule of English political life that Imperial problems shall be kept entirely outside of domestic party politics. Whether Conservatives or Liberals have been in power, the affairs of India and of Egypt have been conducted with almost

the same uniformity as Great Britain's naval policy. The upsetting of the two-party system at the last general election, the appearance of a powerful third element, which in many instances refuses to be bound by political tradition, means that the separation of domestic and Imperial administrations may not in the future be so rigidly preserved as hitherto. Already Keir Hardie has moved in the House of Commons that the Indian budget be discussed in the same manner as any other appropriations bill; in other words, that the government of India be made responsible to Parliament for every one of its acts, just as any of the home departments. That was too radical a proposition to be seriously entertained—Mr. Morley himself has declared that in the last resort British rule in India must remain absolute—but the mere advocacy of this view in the House must make it increasingly difficult to deal with discontent in India.

In Egypt there has been no actual disorder, but the Nationalist agitation cannot be overlooked. The Nationalist demands, as formulated by the leader of the party, Mustapha Kamel Pasha, include the establishment of a Parliament competent to deal with the affairs of justice, public instruction, and internal administration, the creation of an "active" —instead of a puppet—Ministry, responsible to Parliament; the restriction of the present absolute authority of the English Financial Adviser, the reform of the educational system, so as to provide for the restoration of the Arabic language and the more efficient training of the Egyptians for the work of governing themselves; and the substitution of natives for Europeans in the various departments of government. On, September 14, the twenty-fifth anniversary of the occupation of Cairo by the English, Mustapha Kamel Pasha addressed an open letter to Campbell-Bannerman in which he boldly put forth the claim for national independence. As early as 1896, Gladstone had declared that the hour for evacuating Egypt had already struck; and as for the Egyptians being unfit to govern themselves, the present Premier had himself declared that "good government could never be a substitute for self-government." Whether Egypt be materially prosperous or not under British rule, argued Mustapha Kamel, is beside the question. "Chains of slavery are chains, whether they be of gold or of iron."

Great Britain is thus confronted with the grave question whether it can continue to deny—not independence, for that is out of the question—but a generous measure of self-government to its subjects in India and Egypt. The argument of Oriental incapacity, even for partial self-rule, will hardly hold now, in view of what is going on all over the East. If Persia may experiment with parliamentary institutions under present British and Russian protection, why should not India and Egypt be given the same opportunity under Britain's Imperial ægis? Movement in that direction is now conditioned by a double force—the general stirring of the Oriental peoples as a result of the Russo-Japanese war, and the appearance in British politics of the radical Labor Party.

PROTECTION OF BIRD-BREEDING.

There are still too many amateur hunters who deplete the woods and fields of animal life for the market and the milliners, or for "sport"; but their excesses are being gradually curbed by influential associations and clubs. The National Association of Audubon Societies has been particularly active during the year by campaigning in no fewer than forty State Legislatures for protective laws; and its efforts are increasingly supported by appeals from the farmers and fruit-growers, as well as the cotton-growers, who now concede that birds are the best means of checking the boll-weevil and other pests. New Jersey has a new association for the special protection of game birds, the strongest supporters of which are members of gun clubs, who realize the full import of the remark made at their first meeting by Dr. A. K. Fisher of the United States Biological Survey, that at present more wild birds are killed every year than are produced.

While all laws forbidding the indiscriminate slaughter of useful or ornamental birds must be welcomed, the trouble with such regulations is that they are exceptionally difficult to enforce. Wardens are few, and not many private individuals care to turn informers; so the evil is only partly checked. Under these circumstances it would seem that the efforts of the clubs should be exerted more especially in the direction of increasing the number of birds. In that line a good deal has already been accomplished by the Audubon and other societies, which have secured islands and other reserves in various parts of the country, from Maine to Louisiana, where land birds and water fowl can breed in safety. In the Gulf of Mexico, for instance, the Audubon Society has secured eighteen islands, and near them is the Federal reservation of seven more islands. Texas, which is believed to harbor nearly every bird at home in this country, and in which a single hunter confessed to having marketed 10,000 dozen robins in one year, is being converted into a vast bird and game preserve; and within a week President Roosevelt has created four bird and animal reserves on the Pacific Coast. A great deal more, however, remains to be done if the bird population the country over is to increase instead of decreasing. As to the means for thus turning the tables, some interesting suggestions have been made by a German, Dr. Konrad Guenther, author of a book entitled "Der Darwinismus und die Probleme des Lebens."

He begins by commending the use of Christmas trees as a means of attracting and feeding birds in winter. The tree should be placed on a balcony or roof, and on its branches should be poured, in a liquid state, a mixture of lard and diverse seeds or cereals. The mixture congeals and attracts birds of all kinds—often rare and beautiful specimens, the sight of which pays for all the trouble. This, however, is merely a palliative measure, and is not needed for the insectivorous birds, which usually winter in the South. Dr. Guenther is convinced that the rigors of winter alone would not decimate the birds. Nay, he goes so far as to express doubts whether the wholesale slaughter of them by man is the main cause of the rapid decline in their numbers. The Italians to the present day regard birds gastronomically only, and not æsthetically or agriculturally. "Uccelli" of diverse kinds are seldom absent from their menus. Yet, to take the quail as an illustration, the vast numbers of them eaten in Italy do not account for the shortage in Germany, for Eckstein has shown that the German quail mostly come from Africa via Spain, which has greatly lessened their slaughter by laws forbidding the export of the dead or captured birds. The Germans, too, used to regard birds chiefly from the point of view of epicures, and to destroy them in vast quantities; yet there was no appreciable diminution in numbers until the early part of the last century. Laws were then enacted for their protection, but largely in vain.

What brought about this change? Undoubtedly the increasing value and cultivation of the land. Swamps, the nesting places of many species of birds, were drained, cleared, and ploughed. Heath and other brush, which also harbored myriads of nests, were everywhere cut to the ground, in the fields and even in the forests. Thus the birds lost their breeding places—except those which make their homes in houses and stables; and these did not decrease in numbers; nor did the crows and other birds that nest in the high trees, of which plenty remain. The inference is clear. If we would have more birds, we must restore to them their former opportunities for nesting, must give them back, not the swamps—that is impossible—but the brush, which is easy. An interesting experiment in this direction was made along the Magdeburg-Halberstadt Railway. Brush was planted on one side, and, notwithstanding the fact that birds are inclined to avoid new grounds, there was found to be a nest every thirty metres. Similar results were obtained on the Gera-Eich-

ichter Railway. In a distance of twenty kilometres more than 700 nests were discovered. Now, inasmuch as Germany has more than 42,000 kilometres of railway, a general application of this plan would yield a million and a half of nests, or double that number if the brushwood were planted on both sides. Allowing four eggs to a nest, that would mean an annual flock of 12,000,000 birds rising from the ugly and maligned railways, like lotos flowers from the slime of the ponds.

In this country, where the land is not yet so crowded as in Germany, there would be no special cause for preferring railway lines. Bird-lovers everywhere might do much good by planting shrubs —especially such kinds as are made impenetrable by thorns—in vacant lots. If the bushes are not impenetrable, they will not prevent the ravages of cats, the chief enemies of birds. E. P. Powell relates in his delightful book, "The Country Home," how he shuts up his cat in a huge warren through the whole of every bird-nesting period, with the result of multiplying in his neighborhood, not only the more common birds, but the indigo birds, scarlet tanagers, wood thrushes, song sparrows, and other jewels of the air.

ROTATION OF LITERARY CROPS.

From present indications it would appear that we are to have the sociological novel with us for some time to come. Two subdivisions of the type may be distinguished. There is the novel of domestic relations, dealing primarily with the problems of marriage, and, by corollary, with the entire question of woman in society; and there is the novel of social relations dealing with such familiar matters as class struggle, Trusts, labor unions, and progress. The story of marriage and race comes to us chiefly from England; the novel of business and labor is emphatically a home product, and one that is bound to achieve a luxuriant growth in the course of the next few years, if public opinion continues to deal with the problems that it has so very much at heart in the present day. That neither school of fiction is new, except to the adolescent reader, merely shows that the cyclic law of fashion holds in literature as in clothes. Fifteen years ago Mme. Sarah Grand was developing the theme of sex in relation to law, and Mrs. Humphry Ward was writing "Marcella." Other hands in other climes than England are now treating the old subjects with new zest.

The extent to which fashion in popular literature makes itself felt is far greater now, however, than in the period immediately following the appearance of "Robert Elsmere." It is not as though New York, Vienna, and St. Petersburg were adopting the newest modes from Paris, but as though the latest "creations" of the French tailors were quickly to be copied in Tucson, Caracas, and Mukden. Moreover, the greater rapidity with which fashions in novels spread may be due to causes not unlike those which facilitate the speedy dissemination of French dressmaking ideals. There has been an enormous increase in the number of readers, just as in the number of millionaires; and the authors in their field, like the dressmakers in theirs, eagerly seize upon a new mode, perfect it, and exhaust it, in a far briefer time than when the class of authors and of millionaires was more restricted. Twenty years ago a new type of novel might last a decade, perhaps. To-day, less than half that time will cover the budding, bloom, and fading away of the historical tale, the detective story, the Wild West romance, the precocious child "comic," or the political novel.

This swift alternation of fashions is all the more strange because of the geographical subdivisions that are supposed to prevail in the realm of fiction. A writer, to win his reputation and maintain it, has to camp on some piece of our common earth and hold it against all comers. Some years ago one of the magazines published a "literary" map of the United States, showing just what portions of our country had been preempted by the novelist and the short-story writer. Bret Harte, for instance, held California in fealty to Apollo; New England was W. D Howells's and Miss Mary Wilkins's; Thomas Nelson Page and James Lane Allen were feudal lords of Virginia and of Kentucky; George W. Cable was warden of the Louisiana marches. By this time, however, the country has become so highly subdivided that we can no longer speak of this man's New England or that woman's Southwest. Now it is Cape Cod, or Gloucester, or Newfoundland, or the Adirondacks, or Philadelphia, or old Manhattan, or even the East Side, that constitutes an entire fief. In other words, the manorial system of some fifteen or twenty years ago is fast being transformed into a system of peasant proprietorship. There are, of course, striking exceptions to be noted. Jack London is still lord paramount in Alaska; Percival Gibbons, to go abroad, holds all South Africa under his pen; G. B. Lancaster's sway extends over the Australian continent; Robert Hichens is grand sheik of the Sahara. But even with these it is only a question of time before they will be compelled to share their broad acres with newer men.

Now, the curious thing about our literary peasant proprietors is that, quite unlike their real agricultural prototypes, they seem to have the power to nurse out of their little gardens whatever crop their heart may desire. And the desire of their heart is naturally that particular staple which happens to be in greatest demand, or, as we have put it before, which is the fashion of the hour. It is as though the demand for tea should suddenly increase, and, stirred by the example of China's prosperity, Greenland, Arizona, and Tierra del Fuego should at once set to raising tea without the least hesitation or difficulty. Does, for instance, a man named Westcott, in his Central New York patch, succeed in raising a valuable specimen of the homely philosopher which he names David Harum? Immediately the cultivation of homely philosophy is begun in the Adirondack backwoods, on Atlantic fishing boats, in Michigan lumber camps, and in Nevada gambling-dens. Does Paul Leicester Ford develop a type of the honest politician? It is but the signal for an entire harvest of idealistic district attorneys assailing bosses whose daughters they love; honest labor leaders who have the cause of the workmen at heart, but will *not* sell their votes to the machine; and members of the Legislature who resign rather than accept a bribe, to find their reward in the love of the only woman in the world, and to be carried by a wave of popular indignation into the Gubernatorial chair.

There is something exceedingly attractive about this entire system of intensive cultivation in literature. The zeal, the labor, the resourcefulness of our novelists remind us of the French agriculturist who succeeds in wresting from a half acre of soil an average prosperity far higher than that of any other European nation. With the skill of a Luther Burbank they will develop new forms and new species, grafting the delicate bloom of the Fifth Avenue belle on the Arizona ranchman's daughter, or the wisdom of the prophets on the Long Island truck farmer. Take, for instance, the author whose small estate lies south of Houston Street and east of the Bowery. By nature it is best adapted for the raising of Humorous Poverty, which, blended with Dialect and Local Color, commands a ready sale. But should the market rule otherwise, our modern agriculturist can easily turn to the production of Automobile Adventures, Religious Conflicts, or Juvenile Heroism.

CHANGES IN THE RELIGIOUS PRESS

At a recent meeting of the Methodist Episcopal ministers of this city, the topic for discussion was: "Official or Independent Church Papers: Which?" One speaker declared that the religious press is dry and uninteresting. In his opinion it seems blighted by what is in effect an official censorship, for it prints only such news and views as please those who dictate the policy. This charge contains only too much truth. That many religious papers lack interest is undeniable. The material that

fills their columns is conventional: cut and dried comment on church affairs, machine-made exposition of the Sunday-school lesson, a commonplace sermon by that rising young divine, Dr. Smith, an article urging the laity to be less critical of a pastor who is doing his best and to "hold up his hands," a poem of the mother-home-and-heaven type, and items about a new church in the Bronx and a pipe-organ at Syracuse. All this, intelligent men must admit, is pretty thin milk, even for babes in Christ. The advertising is correspondingly slender: notices of books issued by the denominational publishing houses, cards of bell-founders and dealers in ecclesiastical specialties, and a few other miscellaneous matters. The desperate straits of the advertising manager are shown by his acceptance of advertisements of patent medicines—"tonics"—and of speculative ventures in land, oil-wells, and mines, none of which could secure space in a reputable secular paper. In fine, more than one religious weekly which once enjoyed prestige and influence and was regarded as a good property now seems struck with death.

We doubt, however, whether the trouble is that the publication is "official" rather than "independent"—whatever those terms may mean. A paper which is the organ of a denomination, however its editors may be chosen, or however loose its legal ties with the ecclesiastical organization, is bound to be in practice "official." If it be not so run as to appeal to denominational pride and prejudice, the clergy will cease to care about it and recommend it to their parishioners; and the parishioners in turn will see no earthly reason for subscribing to it rather than to the *Financial Chronicle*. If it fail to humor the leading men of the denomination and magnify all denominational doings, it loses its last feeble excuse for existence. The difficulty, we suspect, with our religious contemporaries, is not that they are "official," but that they are denominational in an age which cares very little about sectarian lines. The limited circulation is evidence of a limited interest in the denomination as such.

Of this lukewarmness there are many other indications. If we may credit the laments so loudly voiced at conferences and conventions, people no longer feel that passionate attachment to the denomination which was so common fifty years ago. Methodists, when they move to another place, find it easy to cast in their lot with Presbyterians or Episcopalians or any other religious body whose place of worship is conveniently situated or is attended by their friends. Indeed, it is a frequent complaint that when families become rich and fashionable they desert the Baptists, Methodists, and Presbyterians for the Episcopalians—even in the same town. People regard the church as a social, not a religious, institution; and they choose one sect or another on exactly the same grounds as they would choose a club. The causes of this disregard of denominational lines, the slackening of the hold of dogma, we need not here discuss. The fact is patent and admitted; and under the circumstances we can hardly expect *paterfamilias* to subscribe to the denominational organ in order that his children may follow the doings of Presiding Elder Jones of the Poughkeepsie District, and thus become rooted and grounded in the one true faith.

But while zeal for the sect has waned, the religious papers have suffered on the other side from the sharp competition of cheap weeklies and monthlies, never before so numerous or so well illustrated. The *Outlook* and the *Independent*, for example, once religious papers, have, in order to survive, become pretty thoroughly secular, or at least have subordinated the religious features. They and their kind are far more entertaining than the average denominational publication; they still retain a faint odor of sanctity; and thus they are the refuge of people who want good average reading, irreproachable—indeed, highly edifying—as to manners and morals. While such papers as these are to be had, the denominational weekly, though never so ably conducted, must fight to hold its own with the generation bred in the old but now passing creeds; and it is at a terrible disadvantage with the rising children of light, who are profoundly ignorant of, and equally indifferent to, the distinction between the doctrines, say, of Calvin and Wesley.

PARIS AUTUMN BOOKS.

PARIS, October 16.

From the return to town after vacation until December, when the tide of holiday books rises, there is usually an important, though moderate, general publishing season. This year there has been so far a complaint of *improduction*.

A new volume of "Les Régimes politiques au 20e siècle," by Albert Soubies and Ernest Carette, is devoted to the single existing example of a "democratic" republic:

> This [democratic] character results solely from direct intervention of the people in domains considered as reserved to its representatives—in the exercise of executive or legislative power. Now one only state—the Swiss Confederation—has so far accepted this direct intervention.

The authors note that this strictly limited use of the word "democracy" dates from the last years of the nineteenth century. France, of course, with Gambetta's "omnipotence of universal suffrage" exercised solely and absolutely by Parliament, even to the election of the President of the Republic and direct control of administration by ministers responsible to Parliament alone, is the completest type of "parliamentary republics," to which the parts of this work previously published were given; but Chili, where the real administration is in the hands of ministers subject to the legislative body, although its people elect their President, also belongs to this class. On the contrary, our United States is to furnish the leading instance of "representative republics," in which the executive is the representative of the people quite as much as the legislators; this class will be treated in the remaining portion of this painstaking work. In the present volume Switzerland, which is neither representative nor parliamentary, but a mixture of both modified by "democratic" direct intervention, is explained in five detailed chapters: Government, Assemblies, Supreme Court, Referendum, Constitutional Reform.

A study of the primitive French Republic in its making, limited to one of its leaders, is the subject of "Les Doctrines politiques de Robespierre," by M. Deymes-Dumé, a lawyer of Bordeaux. Robespierre himself gave the credit of his intellectual formation entirely to Rousseau, in his characteristic "dedication to the Manes of Jean Jacques Rousseau":

> Divine man, thou hast taught me to know myself; thou didst lead me, very young, to prize the dignity of my nature and reflect on the great principles of the social order.

This book, like the important critical work of Jules Lemaître, but in a quite opposite direction, is inspired by the belated recognition of Rousseau as the real creator of the modern world. Its analysis of one mind's progress shows the general current of thought and feeling in a whole society. Few English readers may be prepared for the author's conclusion:

> By his positive individualism, he developed ideas of altruism and solidarity; and to his contemporaries, heedless of misery and misfortune, he showed the end at which humanity should aim—the alleviation of human suffering.

Another book on one man's thought is "Montesquieu: ses idées et ses œuvres," by H. Barckhausen, professor in the Bordeaux law faculty. Fifteen years ago Montesquieu's descendants at last consented to the publication of his manuscripts preserved at La Brède, where he lived and died. The author gives half his volume to instructive comment, from these unpublished papers, on what was long since classic in Montesquieu's work; in the other half he follows out the sequence of ideas. The book is not so logical as that on Robespierre; but, while Montesquieu cannot be said to have directly prepared the way to the French Revolution, he has always been thought to have lent a guiding hand through Thomas Jefferson to the doctrinal part of our American Constitution.

The thirty-sixth volume of the International Sociological Library deals with the theory of the facts which underlie nearly all republican foundations. It is the work which won the Concours Tenichef before the Institut International de Sociologie—"Essai sur les révolutions," by Arthur Bauer, professor of philosophy. Another large volume, which essays to go still deeper, and is illustrative of the trend of sociological thought in France, is "Le Fondement du droit et de la morale," by Jean Lagorgette.

The application of the thoughts which govern the growth of all post-Revolutionary society, but modified by Catholic lay aspirations (without theological "modernism"), appears in the new book of Marc Sangnier, whose leadership of at least a por-

tion of Young France merits watching—"La Lutte pour la démocratie." With this may perhaps be coupled, on account of the disproportionate influence of Protestant leaders in the Third Republic, C. Coignet's philosophical study, "L'Évolution du protestantisme français au 19e siècle."

In the anecdotic history of France of the Revolutions a single publisher (Perrin) brings out three volumes, of varying but genuine interest. The first is the sixth series of "La Société française pendant le Consulat," by Gilbert Stenger; it comprises army, clergy (in their critical first adaptation to the new order), magistracy, and public instruction—so many object-lessons in social and political change. Next Dr. Max Billard, for the first time, gives the complete documentary history of that tragi-comic interregnum of a few hours, the night of the 21st October, 1812—"La Conspiration de Malet." Finally, the sons of Henri Boucher have published his day-by-day "Souvenirs d'un parisien" from 1830 to 1852, but relating to what ended as the Second Republic, of whose men and things he was an interested observer.

René Bazin of the French Academy publishes a novel of contemporary life in France, with its political, religious, and social complications, under the optimistic title, "Le Blé qui lève." He is the same new-style conservative as ever, with clear, chastened style, pure thoughts, and worthy, amiable characters for his mildly interesting plot, and, for the thoughtful reader, really striking things to say of the way the world goes nowadays. As literature, his books may have lasting value. This can hardly be said of Georges Ohnet's new volume, "Cœurs en deuil." As in his previous novels (the present book gives good measure in two stories bound up together) he writes for a French public not unlike that aimed at by the American best-sellers—middle classes delighting in imaginary descriptions and doings of the fashionable world. This does not prevent his books being entertaining reading for everyhody. Their French is good, though the style is slovenly; and the story is sure to he more entertaining than M. Bazin's. No books of these writers will ever justify the stigma which Marcel Prévost angrily complains is attached to "French novels" in America. Young ladies can leave them unblushingly on their mothers' tables, and young men may read Rèné Bazin with real pleasure as well as profit to their active American souls.

These qualities of "respectability," so conspicuous in Bazin and Ohnet, are precisely wanting in Abel Hermant, most scintillating of novelists now climbing the worldly wave. He is far from being at the top, like Marcel Prévost; and he, too, has come out indignantly against the evil reputation of French novels abroad. His new volume, "La Discorde," continues his "memoirs useful to the history of society." The society is that of the very rich ("grands bourgeois"), who, of course, are also cosmopolitan; this time they are tragic. But backward Americans cannot help asking, Do such people really exist, even in Paris? The millions of French wives and mothers, whose patient and painfully methodical care of husband, children, household, and family wealth is a chief factor in making France the richest country in the world, give a reason for the same question. "Don Quixote" was also written with realism—but in another direction.

The connection will, perhaps, warrant mention of two books of a kind not usually included in this chronicle. The first is "Les Conseils de Madame Élise"—secrets of politeness and *bon ton* for popular consumption, in regard to all the events of life from the cradle to the grave. The other is an expensive book of engravings by E. L. S. (Sahib), "Paris au XIXe siècle"—Parisian costumes, scenes, and elegances through all the various régimes from the Revolution in 1790 to the year 1900, made up in 12 folio plates in limited editions, at prices varying from 150 to 1,200 francs.

In the history of literary influences, still felt among English readers of Matthew Arnold, a volume (probahly a University thesis for the doctorate) has appeared which it would be a pity should pass unnoticed. It is "Senancour (1770-1846): Poet, Religious Thinker and Political and Literary Publicist. His Life, Work, Influence," by Joachim Merlant, who signs himself simply "Professor." To the reading world Senancour is the author of "Obermann" and nothing more; but he had an early career full of movement hetween France of the Revolution and Empire, and Switzerland; and his intellectual life mirrored the passing storms without. From Stoicism to Nature, to Epicurean skepticism, German romanticism, and Hindu pessimism, the Æolian harp of his soul sounded the whole gamut. It seems as old now as the defunct Liberalism in politics, in which also he took part under the Bourbon Restoration. In literature his main importance comes from the place of "Obermann" with regard to romanticism, also now defunct, and his influence on minds like Sainte-Beuve, George Sand, Alfred de Vigny, Maurice de Guérin, down to Amiel and tardy English echoes. Professor Merlant writes from the French (and Swiss) Protestant point of view, as the subject justly demands; Senancour scarcely faced any Catholic thinker, known to this generation, with the doubtful exception of Chateaubriand; but he was drenched with German philosophy before Carlyle began washing it over English thought.

In natural sequence follow new works on that inexhaustible voice of all the romantic generations—Victor Hugo. Gustave Simon (the son of Jules Simon), who has succeeded Paul Meurice in supervising the "national" edition of Victor Hugo's complete works, puhlishes a "Cahier supplémentaire," to illustrate the two volumes of political writings—"Napoléon le Petit" and "Histoire d'un crime." Unfortunately, these scrappy notes of the time do not increase the poet's renown for accuracy, although they furnish new and good anecdotes. There is certainly need of explanation for the rapid changes from Bourbon Legitimism in youth, and magniloquent Bonapartism when the poet was peer of France under the Orléans substitute, to the vociferous exile, filling the world with his Repuhlican damnation of Napoleon the Third. It seems that, from among the infinite scraps of paper left by this man who wrote unweariedly for more than sixty years, there is always something more to be given to the world. This particular conjuncture lends timeliness to an interesting hook hy an unexpected author—"Victor Hugo, homme politique" by Camille Pelletan, the Radical Socialist politician who was Marine Minister in the Combes cahinet. It has evidently heen a labor of love; and the poet's career as political writer and, especially, speaker in and out of Parliament is told with interest, and rhetorical insight. As might be expected, the political bearing of all this oratory, of which fragments were once popular for declamation in American schools, is duly emphasized. The author is a partisan; but he is also a formed and cultivated student, who neglects none of the details of his manifold subject.

Émile Rivière, director of the École des Hautes Études at the Collège de France, publishes "Thirty-seven Years of Prehistoric and Archæological Excavation"—the record of fruitful work far removed from all modern turmoil. Since 1869 M. Rivière has printed more than 150 memoirs and accounts of his many researches, and his work has been four times crowned hy the Institut de France. To the French Academy of Sciences, July 31, 1871, he reported his discovery of entire human skeletons with other human fossils in the Baoussé-Roussé caves near Mentone. Quatrefages and Hamy at once recognized the remains as helonging to their second fossil human race—Cro-Magnon. The first, or Neanderthaloid, has only uncertain fragments, too isolated to make even prehistory. These finds have since heen greatly multiplied hy more ancient revelations in Monaco. In 1877, M. Rivière began still more important finds—in prehistoric rock engravings and paintings; but the present great development of such research dates from his lucky investigations in the grots of Dordogne twenty years later. S. D.

NEWS FOR BIBLIOPHILES.

"The American Bihliography," which is being compiled by Charles Evans, is progressing rapidly. Volume IV., covering the years 1765 to 1773, has just been received by subscribers. During this period the presses of the American colonies were very active, 3,200 items being recorded in this volume. The passage of the Stamp Act brought out a large number of political pamphlets and hroadsides, and the output of material of this sort continued to increase as the discussion about the rights of the colonists waxed stronger, and independence of the mother country hecame more and more to be considered as the only relief for the continued oppression. Much of this material was extremely fugitive. Broadsides and handbills intended to be posted up on walls and huildings or to he handed out at street corners or stuck under doors, often surreptitiously and at night, were seldom preserved. And while the numher of imprints of this character which Mr. Evans records is remarkable, it is not to be supposed that he has found them all. Many are no doubt gone heyond recovery. The collections of the Historical Societies of Massachusetts, New York, and Pennsylvania, as well as those of the Library of Congress, the New York Puhlic Lihrary, and the Library Company of Philadelphia, are all rich in this material and have all been drawn upon.

The hook is a valuahle contrihution and

will prove indispensable to every collector or student of American imprints. It is the best thing of its kind and is likely for a long time to remain so. The specialist will work out the subject more carefully in particular fields, but with so good a book already in existence and with the small demand for such works, it is improbable that a more perfect bibliography of equal scope will be published for a long time. A few modifications, however, in the plan would have increased greatly the value of the work to bibliographers and students. Titles which are described and collations which are made from the books themselves should have been so indicated, and the sources or the imperfect descriptions of other titles, whether from Sabin's "Bibliotheca," Haven's List, contemporary advertisements, of what not, should have been given. Cross references from titles of anonymous books should have been inserted. Mr. Evans has identified the authors of many political and theological pieces which were published anonymously and has put others under strange or unusual headings. In this matter the author index does not help, and the subject index (which is fully classified) often refers to numbers only. For example, the Prayer Book in the Mohawk language, printed in New York, 1769, is entered under "England, Church of." The writings of that famous Boston poetess, Phillis Wheatley, are entered under "Peters, Phillis Wheatley," and there is no reference from Wheatley in the index. The anonymous "Address from the Clergy of New-York and New-Jersey," printed by Gaine in 1771, is entered twice: first as No. 12,021, under "Cooper, Myles," with the collation given as "pp. (4), 58," and copies located in Harvard and New York Public Libraries; and, second, as No. 12,037, under "England, Church of," where the collation is given simply, "pp. 58," and copies are located in the Boston Athenæum and John Carter Brown Library. As has been pointed out before, the column headed "Auction Values" is a mere waste of space. The information is so meagre and so imperfect that it is absolutely worthless. In the present volume, with its 3,200 titles, "auction values" for ninety-three only are given, and many of these are erroneous or misleading. The two following instances will serve as examples, though others might be selected: No. 9,983, Godfrey's "Juvenile Poems on Various Subjects," 1765—the "auction value" is given as $11, the price paid for the Bierstadt copy in 1897; but the McKee copy brought $35 in 1900 and another (or possibly the same) copy brought $37 in 1901. No. 11,356, "A Brief of the Claim, on the Part of the Province of New Jersey," etc., 1769—the "auction value" is set down at $12; but the Brinley copy brought $92.50 in 1880, and a copy sold at Anderson's in 1905 for $115.

Continued use of the book and the examination of new material are likely to bring forth a number of additional titles. In the nature of the case every user will probably find a few. The following is our own quota of such additions. Some descriptions have been made from the books themselves, others taken from manuscript notes:

"The | New-England | Primer | Improved | [6 lines] | Boston: Printed for, and Sold | by John Perkins in Union Street | near the Market, 1767." From a copy bound in the original wooden boards in a private library in New York. Evans describes an edition with this imprint, but dated 1768.

"To the Honourable, the Commissioners Appointed by his most Gracious Majesty for Ascertaining, Settling, Adjusting, and Determining, the Boundary, or Partition Line between the Colonies of New York, and Nova Cæsarea or New Jersey." Dated New York, July 18, 1769, and signed by John Stevens, James Parker, Henry Cuyler, and Walter Rutherford. 9 pages, folio. A copy of this pamphlet was sold as lot 403 in the Merwin-Clayton Sales Co.'s catalogue of November 20, 1905. There seems also to have been a copy included in Brinley, lot No. 2,750.

"The | Plea and Answer | of the Right Honourable | William Earl of Stirling, | and Others. | Proprietors of East New Jersey, | to | John Hunt's | Bill in Chancery. | New-York: Printed by John Holdt, at the Exchange, 1770." Pp. 38, Appendix, pp. 11 (five schedules and affidavits). Errata, 1 p. and slip "Appendix." There is a copy of this piece in the Lenox Library.

"A | Bill | in the | Chancery of New-Jersey, | at the Suit of | Samuel Smith, Esq. | One of the Treasurers of New-Jersey, | Against | Archibald Kennedy, Esq. | And Others. | Burlington: | Printed by Isaac Collins, | M.D.C.C.L.XXIII." Pp. 11. From a copy owned by a New Jersey gentleman.

"Wilcocks, Thomas. A Choice Drop of Honey, from the Rock Christ; or, a Short Word of Advice to all Saints and Sinners. Boston, 1770." 8vo. Taken from the George H. Moore catalogue, Part II., No. 2,553. Evans (No. 11,942) gives only the Newport edition "Reprinted by Solomon Southwick, 1770," with a slightly different title.

"Articles of the Union Library Society of New York, New York, 1771." 8vo. A copy is said to have been No. 3,872 of the Hazwell sale.

"To the Subscribers for Rivington's New York Gazeteer." [New York, 1773.] Folio, 4 pp. Described from a copy belonging to the Library Company of Philadelphia as "A preliminary issue containing besides an address to the Subscribers a digest of Parliamentary proceedings and his prospectus of the Gazeteer." This probably followed Evans's No. 12,982.

"An Elegy on the Death of the Rev. Mr. George | Whitefield, | who died at Newbury-Port, on Sunday the 30th of September, 1770. Ætat 56." 4to, 1 leaf. From a copy belonging to the Historical Society of Pennsylvania.

"Old England's Triumph. | Sung at the Second Anniversary Meeting | Of the Sons of St. George, | In New York, April 23d, 1771." Folio, 1 leaf. From a copy which once belonged to Paul Leicester Ford.

"A Patriotic Advertisement." Folio, 2 pp. Described as the "Proceedings of Merchants in regard to the Stamp Act; issued about Nov. 5th. 1765."

"A Serious Address to the Inhabitants of New York." Folio, 1 page. In regard to the Stamp Act, dated Dec. 17, 1765, and signed "Britannicus Americanus."

Correspondence.

EFFORTS AT SPELLING REFORM.

To the Editor of The Nation:

Sir: Prof. Lane Cooper of Cornell University, in a letter printed in the *Nation*, October 3, 1907 (p. 301), quotes an opinion of William Wordsworth, "recorded in the 'Memoirs' (vol. ii., p. 458), by his nephew," referring to attempts at the improvement of English spelling. The passage is as follows:

He mentioned incidentally [October, 1846] that the spelling of our language was very much fixed in the time of Charles the Second, and that the attempts which have been made since, and are being made at the present day, were not likely to succeed.

Professor Cooper adds, "Attempts at what? And what has become of them?" He thus seeks information.

It is not true that English spelling was "very much fixed in the time of Charles the Second." It was only a little fixed; but that was the result of previous regulation. By whom? By reformers; by scholars and educators—the predecessors of the Simplified Spelling Board. Among them were Philemon Holland, the "translator-general," and Richard Montagu, the spirited bishop, two men who helped to bring about the discriminated use of the two pairs of letters, *i* and *j*, *u* and *v*, which had previously been used as both vowel and consonant; James Howell, prototype of the learned journalist; John Milton; Izaak Walton, who wrote "The Compleat Angler," from which you can compile a compleat simplified speller; the learned Theophilus Gale, one of the first men to adopt uniformly the simplified spellings *logic*, *music*, *public*, etc.; and many more.

In the seventeenth and eighteenth centuries a long line of worthy men had published dictionaries and manuals in which, within their lights and means, they did what they could to regulate and simplify the English spelling. In succession to Bullokar, Florio, Cotgrave, Gill, Sherwood, Cockeram, and others, came Blount, Skinner, Phillips, Coles, William Walker, Kersey, Cocker, Bailey, Dyche, Benjamin N. Defoe (the son of "Robinson Crusoe"), and others more or less unillustrious. If some of them were not adequately equipped in knowledge, if sometimes in their ignorance they helped to rivet the chains upon English spelling, that was but a part of the conditions of the time. Even Dr. Johnson endeavored at times to regulate and simplify the spelling of the words which he had to enter in his dictionary (1755); but he often left orthography and etymology to the courtesies of accident, scarcely improving in these matters upon the industrious Bailey, from whom he royally cribbed. John Walker, who brought to his task the vision of a canary and the learning of a milliner, carefully preserved Johnson's errors, and averted his eyes from Johnson's occasional improvements.

Perhaps Wordsworth was thinking of the efforts of Benjamin Franklin and of Franklin's disciple, Noah Webster, to introduce the taint of reason into English spelling. And there were other attempts. Wordsworth perhaps remembered that some of his own contemporaries, Byron, Scott, Coleridge, Southey, Lamb, Hood, and others, including their most eminent contemporary, William Wordsworth, were accustomed to use simplified spelling like *dropt, prest, stept, stopt, dipt, kist*, etc. This practice he would know to be no innovation, but the familiar usage of his predecessors, from Spenser and Shakespeare, Jonson, and Milton, through Cowley, Dryden, Prior, Pope, Thomson, Goldsmith, down to his own times—a custom which some of his younger contemporaries, Landor and Tennyson, and others were keeping up, and which Lowell and Swinburne and others were to carry on. And perhaps Wordsworth remembered, too, the practice of his other contemporaries, Thirlwall, Mitford, Hare, and other scholars, who

used and advocated these and other improvements. And Wordsworth might have known, too, of the then recent rise of the new shorthand, Isaac Pitman's Phonography (1840). Pitman established the *Phonetic Journal*, and collected a large following. Soon there were many shorthand authors in the field, who, in connection with the propagation of shorthand, advocated a phonetic or a simplified spelling—Ellis (1844), Bell (1852), E. J. Jones (1862), Everett (1877), and others in England; Andrews and Boyle (1845), Longley (1849), Graham (1854), Ben Pitman (1855), Lindsley (1864), Munson (1867), Scoville (1871), Cross (1877), and others in the United States.

If those elder men had not thus wrought in a sad sincerity, the structure of the English language and of English literature would have been less round and goodly than it is now. By the labors of the later reformers, the idea of improvement in spelling and in language was brought to the serious attention of thousands of persons who were led to study the subject in a scientific way. The agitators kept the traditional spelling from absolute stagnation, compelled its defenders to receive an idea now and then, and thus held the way open for the more scientific attempts that followed.

One of the results of the increased interest in phonetic knowledge was the movement conducted by Sir Charles Trevelyan, in coöperation with Dr. Duff and other missionaries in India, to establish, upon the basis laid by Sir William Jones, a uniform Roman transliteration of the Sanskrit, the Hindi, the Hindustani, and the other languages of poly-alphabetic India. This effort resulted in the transliteration which now prevails, and which is undergoing additional regulation in the hands of the philologists interested. Connected with this was the movement among the missionary boards of England and America to establish something like a universal phonetic alphabet for missionary use. This movement resulted in the publication of Lepsius's "Standard Alphabet" (1855; second English edition, 1863), and of Max Müller's "Languages of the Seat of War in the East" (1854; second edition, 1855, with the "Missionary Alphabet").

To the same impelling cause, the desire for a more accurate knowledge and use of the English language, in its written and printed forms, the world owes it that Alexander J. Ellis turned the resources of his acute intelligence and his liberal mind to the scientific study of English phonetics. Ellis published the results of his studies in several books and pamphlets, and especially in his great work, "On Early English Pronunciation, with Especial Reference to Chaucer and Shakespeare" (five volumes, London, 1869-1889). With the name of Ellis is linked the name of Alexander Melville Bell, inventor of "Visible Speech" (1867), the first set of alphabetic symbols formulated upon an intelligible system. Another name great in these fields of research is that of Henry Sweet, who has, by his works in phonetics and Anglo-Saxon, made all scholars his debtors. The impulse of these earlier movements (1840-1860) was felt by a young American scholar, William D. Whitney. He dealt with phonology in his philologic lectures, revised Lepsius, and presented a modification of the European alphabet which was the basis of many subsequent essays and proposals. The same zeal for scholarly reform seized another young American scholar, destined to become no less eminent, Francis A. March, who devoted himself, amid excursions into philosophy, literature, and law, to the scientific study of the English language in connection with the other languages of the Indo-European family, the results of which appeared in his "Comparative Grammar of Anglo-Saxon" (1869), and in his "Method of Philological Study of the English Language" (1870), and other works, all bearing the marks of a great and lucid mind. Another American scholar, Prof. Samuel S. Haldeman, was one of the first to state the facts of Latin pronunciation ("Elements of Latin Pronunciation," Philadelphia, 1851). This brilliant and versatile man applied the scientific principles which he had discerned to the composition of several works of instruction, whose value has never been sufficiently recognized: "Analytic Orthography" (1860), "Affixes to English Words" (1867), "Outlines of Etymology" (1878).

It was the declaration of these scholars, and of their colleagues, Trumbull, Packard, Child, Lounsbury, Price, and others in favor of a scientific regulation of English spelling, that led also to the formation of a committee of the American Philological Association (1875), which in successive reports laid down the principles of such a reform, and recommended in detail the steps to be taken. The American Spelling Reform Association was formed in 1876 to keep up and guide the agitation, to inform the public, and to secure recruits. A similar agitation was carried on in Great Britain. The leaders there had been zealous in the effort to bring to light the long-hidden records of the English language before the time of Shakespeare. The indefatigable Dr. Furnivall founded the Early English Text Society, the Chaucer Society, the New Shakespeare Society, and other printing clubs, and, seconded by Morris, Skeat, Murray, Sweet, and others rescued from oblivion a large part of the records of the English language for a period of a thousand years. And now we know, or can learn, accurately, what the English language was, what the words were, how the words were spelled and pronounced, and what they meant, in the long period from the Saxon and the Norman conquest to the time of Shakespeare. And the world now has access, among other works of the new learning, to the great "Oxford English Dictionary," in which the facts of the language are recorded with wonderful accuracy and fulness.

"What has become of these attempts?" That is part of what has become of them. And who made these attempts? Who brought about these results? They were William D. Whitney, James Hadley, Francis J. Child, Samuel S. Haldeman, Richard Morris, and other great scholars who have ceased from their labors. They were Francis A. March, Frederick J. Furnivall, Walter W. Skeat, James A. H. Murray, Thomas R. Lounsbury, and others, who, as members of the Simplified Spelling Board, are still working at the same problem, now at length in the sure and certain hope of practical success. With them are working scholars and men of letters of the younger generation, some of whose names are well-known to the public. With them are working the university professors to the number of nearly three thousand, and the teachers in public schools to the number of many more thousands, who have signed the agreement to use the simplified spellings, and are advocating the idea and teaching the facts that underlie it.

Information on this subject may be had by writing to the Simplified Spelling Board, No. 1 Madison Avenue, New York.

CHARLES P. G. SCOTT.

New York, October 12.

THE WORK OF GEORGE W. HILL.

TO THE EDITOR OF THE NATION:

SIR: I am sorry to see the *Nation* promulgate so inadequate an idea of the work of George W. Hill and other investigators like him in celestial mechanics, as it does in the issue of October 17. In substance the statement is that the science of planetary and lunar theory, which once represented the highest climbs of scientific intelligence, is to-day reduced to an art of performing excessively intricate calculations. You then imply that the performance of these calculations is all that the class of men of whom you are treating have to do, and you naturally see very little interest in it from the standpoint of philosophy or of positive science. Now, if you will slightly change your wording, and say that through the labors of a series of investigators from the time of Newton to that of Hill the theory in question is being reduced to an art of performing intricate calculations, you will hit the truth. What gives significance to the work of Hill and those in the same field is not their patience in performing calculations, but their ability to show how it is possible, by calculations within the power of one man, to reach results which would have required the labor of many lives if the methods had not been invented. Any good computer, under capable supervision, can make the intricate calculations. It is the method that costs.

SIMON NEWCOMB.

Washington, D. C., October 17.

[By calculations, we did not mean numerical computations. Professor Newcomb expresses, as his own dictum, what we intended to say. We have already done justice to Dr. Hill's mathematical invention; but there is little of that in the fourth volume, which we had under examination.—THE REVIEWER.]

Notes.

After her death, in 1906, Madame Jessie White Mario's reminiscences came into the hands of T. Fisher Unwin for publication. There has been some delay in preparing them for press, as the MS. required careful editing by some one familiar with the Risorgimento. The Duke Litta-Visconti-Arese has now undertaken this difficult task, and we may expect to see the memoirs in type within a reasonable period.

Gaillard Hunt, of the Department of State, Washington, has undertaken the collection and editing of the papers of Elihu B. Washburne, secretary of state and minister to France, and of his brothers, and

would be grateful if any persons having letters from or to them would communicate with him.

Countess Sophy Tolstoy has presented the journal of her life to the library of the Moscow Historical Museum, which also has in keeping the manuscripts of all of Tolstoy's works. The countess's memoirs are said to he very voluminous and to give interesting information about the life of her husband.

President D. S. Jordan has brought together two essays on the lowering of race-stock hy war's selection of the fittest for slaughter, and published them with the American Unitarian Association, under the title of "The Human Harvest." It is an eloquent piece of writing, handsomely printed.

The excellent life of "Alexander Hamilton, An Essay on American Union." hy Frederick Scott Oliver, has heen issued by Putnams in a new edition with frontispiece and a map.

We register the appearance of two more volumes in the World's Classics of Henry Frowde, viz.: Ruskin's "Time and Tide" and "Crown of Wild Olive," and Gihhon's "Autobiography." The latter is a good example of what many of these books show, an excellent Introduction (in this case by Prof. J. B. Bury), prefixed to a rather cheap-looking reprint.

The "Life and Letters of John Greenleaf Whittier," by Samuel T. Pickard, has been reissued hy Houghton, Mifflin & Co. in a single volume. Mr. Pickard has taken advantage of the fresh material that has become available since the book was originally published in 1894, to make certain revisions and additions, but substantially the work is the same. It loses nothing by being hrought between a single pair of covers; the type and illustrations are both excellent.

To trace the relations of poets with the aspects of "their ain countrie" and to lend realism to the descriptions with colored illustrations is a happy scheme to mix instruction with entertainment. Such a volume has been edited hy Andrew Lang with his accustomed easy grace, and called "Poets' Country" (J. B. Lippincott Co.). Mr. Lang has furnished a small part of the text, reserving for himself only Scott and Shelley; but, if not the most studious, his writing is perhaps the best fitted of any for a work that is confessedly half a picture book. Naturally he shows warmer sympathy with the Scotsman than with the English visionary, hut he knows, too, how to slip in the little controlling facts. Readers of "Marmion," who are familiar with the land, will be amused at this *boutade:*

Moi aussi, I know "lone St. Mary's silent lake" very well, and am much attached to it, when it *is* lonely, and not sonorous with the whoops of excursionists playing at kiss-in-the-ring. But the pure lake is not "crystal," the water is of the wonted mossy hrown. It is hy a loving stretch of loving memory that Scott ventures to say:

> Abrupt and sheer, the mountains sink
> At once upon the level brink.

There are no mountains, nothing is "abrupt," nothing is "sheer"; green, grassy slopes descend placidly to the loch on one side, the other side is a plain, to which hills fall easily. It is quite true that there are no trees, except where the "slender line" of land parts St. Mary's from the Loch of Lowes. There is even no "trace of silver sand," there is merely the white margin of dry stones, ordinary stones, whatever their formation may be. As to "a thousand rills," unless you call Meggat water a "rill" (it is a sizeable burn), I do not think there is a rill about the place.

So much for the veracities. E. H. Coleridge deals with Wordsworth, Coleridge, and Byron, showing, as would be expected, minute knowledge of the two lake-dwellers and treating Byron as an imitator of Wordsworth. Thc bulk of the book is contributed by Prof. J. Churton Collins, who, especially in his chapters on the less-known eighteenth-century poets, adds a really valuahle study of the relation of nature to the poetic imagination. It must be said that the last sections—on Chaucer, Goldsmith, Keats, Spenser, and Moore, by the Rev. W. J. Loftie; and on Burns, hy Michael Macmillan—are ill-balanced in proportions and in some cases without interest. Of the illustrations, reproduced from paintings hy Francis S. Walker, there is not much to say. They are pretty and effective, hut they suffer as do almost all these colored plates to-day from a rather messy impressionism. They look too much alike, and do not call up any distinct and individual hit of scenery. However, they are sufficiently in place in this volume on the "Poets' Country," and do their part in making an attractive book.

Coleridge has never before heen handed over to the tender mercies of the artist, with the exception of one or two of his principal poems, and to supply this want—if it be a want—John Lane Company has issued "The Poems of Coleridge," with an Introduction by Ernest Hartley Coleridge and illustrations by Gerald Metcalfe. The list of titles is not quite complete, as a few of these are still under copyright, but as a partial compensation two or three short poems are added which have hitherto not been collected. It would be pleasant to say that Mr. Metcalfe's drawings are an addition to the text, but this could scarcely be done truthfully. Blake might have visualized on paper what Coleridge saw with the inner eye; Gustave Doré has actually put the "Ancient Mariner" into pictures that are at least vigorous and grandiose; a lesser man was bound to fail. Certainly the illustrations now before us, which may be described as Blake uninspired plus the swirling lines of the *art nouveau*, do not clothe with grace the poet's ethereal fancies.

Another of the Wiener Beiträge zur Englischen Philologie comes to our desk with a study of "The Ancient Mariner" and "Christabel" by Albert Eichler. Those who are concerned in a minute study of Coleridge's rhythms will find grist for their mill here, and something is said too about the antecedents and influence of the poem. Some idea of the notes and of English philology as produced in Vienna may he gathered from two specimens:

Steady heisst der Wetterhahn nur im besonderen Falle, weil eben kein Wind geht; kein stehendes Beiwort.

Scar, selten="Wunde"; vgl. Prologue zu "Every Man in his Humour," 11. "And in the tyring-house bring wounds to scars."

There is something pathetic in this kind of scholarship.

Only familiar use can lay bare the qualities of a "Book of Quotations," hut the collection made by W. Gurney Benham and published by the Lippincott Company has some advantages that are open to the first inspection. Besides the usual run of English selections, the compiler has drawn from Latin, Greek, Hebrew, Arabic, and the modern Continental languages. These foreign quotations seem to be pretty accurate. Taking the Greek accents as the severest test, we have found some six or eight errors in fourteen pages, a smaller proportion than is common in English-printed books. The Index is full, and follows the convenient modern custom of comhining all sections in a single continuous alphabet. Perhaps the most useful parts of the book are those which contain the Proverbs, and the Waifs and Strays. A page is given even to London Street Sayings, where one may find the date at which such cant phrases as "Not for Joe" (c. 1860) and "Do you see any green in my eye" (c. 1840) first came into vogue. This whole part of the book is not only useful but highly interesting to read.

Dr. W. A. Craigie's double number of the "New English Dictionary" (Henry Frowde), announced as forthcoming in the *Nation* of Octoher 3, has now appeared. Although it forms the concluding section of Vol. VI (L-N) and completes N, yet Dr. Henry Bradley's part of the volume extends as yet only tbrough L and M as far as Monopoly. Thus nearly one-quarter of the letter M remains to be puhlished before Vol. VI. will be complete. The next part, announced for January 1, will bring Vol. VII. (O-P), which is more advanced already than we lately indicated, down to Premier, leaving about one-third of P still to be published. Dr. Craigie's Vol. VIII. (Q to S) is also more advanced than we indicated, since he has already published Reign to Reserve. Less than half of the letter R, and the first half of S, will therefore complete this volume. Volumes IX. and X. (the last part of S and T to Z) will then come in due season to complete this vastest of all lexicographical publications. Dr. Craigie's statistics for his double number (Niche-Nywe) just published serve to indicate the unrivalled inclusiveness of the dictionary. Some 4,323 words are here recorded. Johnson shows 379, rather less than one to eleven; Capell's "Encyclopædic Dictionary" 1,768, less than one to two; the "Century Dictionary" 1,979, and thus, like Funk's "Standard Dictionary," has not quite half the number in the Oxford publication. But the strong point of the "New English Dictionary," here and elsewhere, is its unexampled array of dated quotations arranged chronologically with specific reference in each case to chapter and verse (or the equivalent thereto). Of these quotations the present issue gives 19,586, whereas the largest numher elsewhere accessiblc (in the "Century Dictionary") is 1,854. The last half of N yields chiefly words of native English and of Latin origin—a goodly number of the latter coming through the French, others (Nidus, Nimbus) straight from the Latin without modification. Nincumpoop, apparently of native, though obscure, origin, is traced back as far as Wycherly's "Plain Dealer," II., i, where it appears as Nicompoop, and thus defies Johnson's derivation from *non compos*. It is a pity that even the catholic scope of such a truly generous publication as this could not include any record of Smollett's Nin-kom-poo-po, who

figures for George Byng, Viscount Torrington, in the "Adventures of an Atom." The account given of the substantive Novel is exceptionally interesting. Its present meaning is not traced beyond Milton (1643), and its old-time pronunciation, with stress on the last syllable, is exemplified by way of survival in Burns's "O leave novels, ye Mauchline belles." Its obsolete signification, prevalent from 1475 to 1724, of "news" throws an unexpected light on Fielding's jocose description of his own "Tom Jones" (IV., i), as "a newspaper of many volumes." Another of Dr. Craigie's curiosities—being the name of the tobacco-plant *Nicotiana*, derived from the name of Jacques Nicot, "an ambassadour which brought the first knowledge of it into this realme" in the sixteenth century—most nearly comes home to the business and bosoms of many in America.

Prof. Arthur Kenyon Rogers has done well to publish a new and revised edition of his excellent "Student's History of Philosophy" (The Macmillan Company). In the space of five hundred pages he has given an account of the history of reflective thought from the beginning down to the present time. There are many such treatises, but in none of them, we believe, is the subject so briefly, thoroughly, and clearly treated as in this. Former generations of college students had to encounter the difficulties of Schwegler, who, although well translated, was too Hegelian in his point of view, as well as in his vocabulary, to be altogether intelligible to the uninitiated. But Professor Rogers, in less space, and in much clearer language, has presented in an orderly manner the doctrines of philosophers from Thales to our own American teachers. Next to the comprehensiveness of the treatment and the clearness of the exposition, the most remarkable characteristic of the book is the accuracy of the bibliography, which is subdivided in such a way that one has references at the end of every chapter. There are some omissions, however, particularly in connection with those periods of philosophy with reference to which the student is in most need of going to the sources. If, for example, one seeks information as to the Gnostics, one will find in Professor Rogers's work notes of only second-hand value. Of course, Harnack's "History of Dogma" is the most thorough of modern treatises relating to the subject, but it is not well that Irenæus and Hippolytus should have been omitted. The few new pages devoted to recent American philosophy are indefinite, and therefore unsatisfactory. Here, for example, is what is said of Professor Royce, who, by the way, is put wrongly, as we believe, among the Hegelians:

> Josiah Royce, an American philosopher, departs less widely [than Bradley] from the Hegelian position. But by a new emphasis upon the teleological nature of the world whole, and a consequent getting away from pure intellectualism, he represents what is essentially a new type of theory. In particular, he has tried to solve more adequately the problem of the nature of the individual, and to harmonize its reality, and especially its ethical reality, with a fundamental monism.

Such a statement may be perfectly exact, but it is, to say the least, partly unintelligible.

In his latest volume, "Études d'histoire littéraire" (Paris: Hachette), Prof. F. Baldensperger of the University of Lyons, whose "Goethe en France" was noticed in these columns two or three years ago, applies the same scholarly methods to other problems of literary history. With admirable lucidity and order, he traces the influence of Young's "Night Thoughts" and Bürger's "Leonore" on French literature, reviews the various eighteenth century discussions on the universality of the French language, and discusses the more important definitions of "humor" from the seventeenth century to our own day. M. Baldensperger is equally at home in the literatures of France, England, and Germany, more especially during the period of Romanticism. His method in each of the five papers which compose this volume, is the same: he has collected all the materials relating to his chosen theme, and has introduced them bodily on the printed page, arranged in the order of time or reason, and connected by a thread of running comment. The facts of literary history are so presented as to speak for themselves. So objective a method is not favorable to charm of style or pregnant suggestiveness; but the method itself could not be more adequately illustrated than in these erudite studies.

The valuable *Hilfsbuch* to Holtzmann's 'Hand-Commentar" on the Synoptic Gospels known as Huck's "Synopse" has been adapted to English readers by Ross L. Finney (New York: Eaton & Mains). Mr. Finney has substituted the text of the American revised version for the Greek of the German work. This Harmony, which follows the order of Mark, is the most useful in existence for historical students. The manuals in common use attempt to combine the Fourth Gospel with the Synoptics, and yield a distorted notion of the progress of Christ's ministry. The present volume exhibits Mark as the basal work of the evangelic records, the use of Mark by both Matthew and Luke, the collection of Logia, and the material peculiar to each evangelist. The use of this Harmony does not blind the student to the special characteristics of the several evangelists and their relations of mutual dependence, as is often the case with the older manuals.

It is now about a year since Prof. Hugo Winckler of the University of Berlin published his reports of the research that, in conjunction with Makridi Bey, a Turkish museum official, he had made in Boghaz-keui, in Asia Minor. He offered evidence that from 1400 to 1100 B. C. this place had been the capital city of the empire of the Hittites. In laying bare an extensive castellum there, the so-called Bujuk-Kale, he had discovered a whole archive of interesting clay tablets, letters, contracts, and other official documents in the Babylonian and Hittite languages. These tablets, in extent and variety, find their parallel only in the Tel-el-Amarna correspondence. The topographical problems to a considerable extent were yet unsolved; but it was plain that the capital of the Hittites covered extensive grounds, and was protected by several fortified heights, which were connected by mighty walls. Two city gates were also unearthed, one flanked by powerful stone pillars, upon which were found in relief two immense lions. During the recent summer, Professor Winckler has continued his labors, again in conjunction with Makridi Bey. The German Archæological Institute at Athens has also taken part in the work, sending its general secretary, O. Puchstein, the Munich archæologist L. Curtius, and the architects Krenker and Kohl. Through the Institute at Athens now comes the report that Winckler's work this season has been very successful. In the large castellum he has found about five hundred clay tablets. The name of King Hattusil again turns up as the son of Supulululumas. New light on the Hittite language also appears. Near the Bujuk-Kale the ruins of two open places for public assemblages were discovered. Representations of soldiers with pointed helmets and long garments, courtiers with trailing garments, princes leading prisoners captive, and a king riding on a lion and surrounded by his bodyguard appear. Altogether five buildings have been laid bare; the most interesting an immense structure in the southern part of the city, with a large number of apartments, apparently a palace. Near by are huge sphinx images, seemingly serving as guards at long passages. Large portions of the city walls have been uncovered, and stone stairs leading up to them. Several of these buildings seem to have been destroyed by fire. Besides Boghaz-keui, the place called Kara-Ejuk, to the east of Kaisariye, was also examined, and here, too, Winckler found Hittite clay tablets, as also the remains of a temple in the Pelasgian style of architecture, built of big stones. By the side of the outer gate are sphinxes two metres in height. These are surrounded by winged steers, warriors, zither players, persons engaged in sacrificing, and other representations of the life of the Hittites. Full reports of these and other finds are to be published in the near future.

From the report of the committee of the College Section of the American Library Association, presented at the recent meeting of the Section and now printed with the Proceedings, are gathered the following facts concerning eighty representative college libraries in different parts of the United States: Four have incomes of from $30,000 to $40,000, three from $20,000 to $30,000, ten from $10,000 to $20,000, eight from $5,000 to $10,000, eighteen from $1,000 to $10,000, and thirty under $1,000. The average proportion of total college income which is devoted to library purposes is 5 per cent. Among the institutions where the proportion is conspicuously over this average are Princeton, which devotes 9.2 per cent. of its income to the library; Harvard, 9.1 per cent.; and Columbia, 7.6 per cent. In 45 universities, the librarian ranks as a full professor, and has a seat in the faculty; in 15 he is recognized in the retirement and pension system; in 22 he gives regular instruction in bibliography and library usage. Only 30 of the libraries have regular trained assistants, while 62 depend on student help. More than half the latter report that such help has been found satisfactory and economical.

The St. Petersburg committee appointed to raise a monument to Pushkin, has decided to erect also a building to serve as a museum for collections of all kinds referring to Pushkin. The city has given a site near the Troizki bridge.

The death of Maurice Albert at Paris is announced. He was a professor at the Lycée Condorcet, the Sorbonne, and the École Polytechnique. He was best known for his study of "La Littérature française sous la Révolution, l'Empire, et la Restauration, 1789-1830."

Prof. H. Spindler of Zwickau, author of various works on folk-lore including "Der Gigantenmythus in seiner ältesten Überlieferung," has just died, in his fifty-first year.

OUR COLONIAL HISTORY.

English Colonies in America. By John A. Doyle. Vol. IV., The Middle Colonies; Vol. V., The Colonies under the House of Hanover. New York: Henry Holt & Co. $3.50 per vol.

It lends a melancholy interest to Mr. Doyle's concluding volumes on the English colonies in America that his death should have followed close upon the completion of this work. Mr. Doyle's connection with American history has been long and honorable. Nearly forty years ago he won the Arnold prize at Oxford for an essay on the American colonies; in 1877 he issued a short history of the United States for the use of schools; and in 1882 and 1886 he put forth the first three volumes of his most important work, a history of the English colonies in America, the final volumes of which are now before us. In addition to these independent publications, he wrote the chapters relating to the colonial period in the seventh volume of the "Cambridge Modern History," and was a frequent contributor of reviews of books on American history and biography to the *English Historical Review.*

Such an elaborate output is somewhat remarkable when we realize that historical writing was never to Mr. Doyle more than an occasional pursuit. At Oxford he turned to history without the opportunity of obtaining any adequate training in the technique of his subject, and without any preliminary instruction in colonial history, except, possibly, a few lectures from Prof. Montague Burrows; for until the founding of the Beit professorship, Oxford never had a course in American history, colonial or national. The conditions surrounding his early career rendered it inevitable, therefore, that he should approach historical subjects somewhat as an amateur, and the later circumstances of his life were not favorable to a change in that respect. Living at Crickhowel in Breconshire, South Wales, he devoted his time to manifold interests other than historical, and made little effort to keep in touch with the newer methods of historical research and presentation. Except as he reviewed occasional books relating to America or came into contact with such publications as he found at the British Museum or elsewhere, he probably knew little of the progress of historical writing in America or of the work accomplished there during the last twenty years. Mr. Doyle was an historian, but he was also a farmer, dog fancier, and exhibitor, a master of harriers, and trustee of the Kennel Club, a writer and authority on breeding and kindred subjects. The close observer will note in his history traces of his sporting interests. In the present volumes, he says, "The condition of a Leicestershire hunting stable does not prove that the Society for the Prevention of Cruelty to Animals is superfluous"; and, again, that raids on the New England frontier were to the French rulers of Canada "but a means of blooding their hounds," while "the real quarry against which they were to be used" were the regions reached by the Hudson and the Ohio. He was also a skilled rifle shot, a local magistrate, and a member of the Council of the University College of Wales. It is not strange, therefore, that his various diversions and hobbies should have interfered with his writing of history, and that twenty-one years should have elapsed before he was able to complete the later portions of his work.

It would be manifestly unjust to criticise Mr. Doyle's history as if it were the production of an expert, and it would be equally unfair not to point out wherein it falls below the standard set for modern historical work. The earlier volumes received a cordial welcome in America, giving promise as they did of becoming a standard history of New England and the southern colonies during the seventeenth century. As year after year passed and the sequel did not appear, scholars regretted that Mr. Doyle had apparently abandoned his task. Time has, however, somewhat tempered this regret, for continued use of the history has disclosed so many defects of style, proportion, arrangement, and bibliography that it is no longer regarded as indispensable to the workers in early American history. Students of to-day are no longer referred systematically to Doyle as were those of fifteen and twenty years ago, and other writings have come in to supplant the history in its own field. This being the case, it is naturally a matter of interest to discover whether the new volumes, published at a time when the older portion of the work is beginning to lose its hold, will regain in any measure the prestige that is thus endangered.

Volumes IV. and V. contain histories of New Netherland and New York, New Jersey, and Pennsylvania to about 1700, a history of Georgia from 1732 to 1752, a chapter on the conquest of Canada to 1759, and, in lieu of a continuous account of the colonies during the "neglected period," 1700-1750, a series of chapters dealing topically with such subjects as social life, administration, economic progress, religion, literature and education, inferior races, and ethnology—an arrangement which marks a reversion to an antiquated method of treating colonial history. Mr. Doyle's various individual histories take the form of straightforward narratives, in which the chief subjects are politics, government, war, and personal careers. They are based on a few well-known printed sources and rehearse the well-known facts. Inasmuch as the range of authorities is limited, the histories contain no new information and present no especially original points of view or suggestive interpretations; consequently they have little freshness or novelty. It is hard to realize that a writer of to-day can put forth a history of New Netherland and New York in over three hundred pages and depend almost entirely on Brodhead, Smith, and the New York Colonial Documents; or of religious affairs in Connecticut, with Trumbull as his only guide; or of the conquest of Canada, relying almost entirely on Parkman and Hutchinson. The work is, therefore, a compilation from such sources as Mr. Doyle was able to obtain. Of recent monographic literature he manifestly knew little, and even the printed Calendars of State Papers he used in a most haphazard fashion. Only in the case of Georgia did he turn with any care to the manuscript material in the Record Office, and even in that instance he employed his opportunity but half-heartedly.

In organizing and distributing his data Mr. Doyle followed very conventional models, and in the work before us has neglected some of the most essential portions of our history. He has entirely ignored the dictum of the modern scholar to think "continentally." While New York receives more than three hundred pages, the economic progress of the colonies is dismissed most inadequately in twelve; the navigation acts are discussed—and in the main, incorrectly—in less than a page; and the subject of British control, which is looming large upon the horizon of the present-day student, is left out of account altogether. Mr. Doyle has simply pursued his course along the old beaten paths, seemingly unaware that new paths are being struck in every direction by those who are willing to devote time and labor to the task of investigation, and who are convinced that the history of the English Colonies in America has never been properly written.

Even within the history that Mr. Doyle has written there is evidence of haste and carelessness, and a disregard for those finer touches of accuracy and exactness that betoken the trained historian. All the chapters contain scores of minute errors in nomenclature and topography that a competent scholar might easily have corrected in the proof-sheets. For instance, Mr. Doyle places Elizabeth on the Delaware, Schoharie on the upper waters of the Hudson, Greenwich on Long Island, Flatlands and Flatbush at the southeastern extremity of Long Island, and speaks of "New Town, a village on Coney Island, opposite the northwestern portion of New York." Such place-names as Brainford, Guildford, Newhaven, Canseau, Charlestown (Charleston), and N. Hants appear, and there are many mistakes in the spelling of personal names also—Johnstone for Johnston, Wells for Wilks Lyttelton and Lyttleton, etc. The errors and inconsistencies in the footnotes are legion, and to the critic with an eye to accuracy and good form exceedingly irritating. Crosse appears for Cross, Weedon for Weeden, Bury for Barry, Stainer for Steiner, Ford for Force, etc.; the New York collection of documents is cited under six different titles, Danker and Sluyter's Journal under four, and McCrady's South Carolina under as many more; references are given to the Calendar of State Papers that defy recognition; references to various collections and volumes appear without number or page; and constant references are inserted to documents that are known to Mr. Doyle only through citation in some second-hand authority. There is a curious naïveté in Mr. Doyle's confession of his own shortcomings in not finding books or documents that he has heard of, and in misplacing references to documents that he quotes. So easily might these details have

heen corrected that it is hut charitahle to believe that the condition of Mr. Doyle's health made a final revision of his manuscript impossihle.

From what we have said thus far it is evident that Mr. Doyle's last volumes are no better than those that preceded them, and will do nothing to reëstahlish the reputation of his earlier work. Yet this fact does not render impossihle the further statement that there is much in what Mr. Doyle has written that is well worth the attention of the student and the reader. His style seems more simple and less involved than formerly, and his narrative is generally clear and interesting. His judgments are carefully considered and show historical insight, and his attitude is always that of an impartial ohserver fully aware of his obligation to tell the truth as he sees it. He has no plea to maintain, is never an apologist for the British Government, and holds the balance even between Briton and colonist. He can defend Shirley and Hutchinson and criticise Franklin with the same honesty of purpose that moves him to comment on the British Government of to-day, when he says:

> To open a campaign with wholly inadequate resources, and thus to create difficulties which have to be redeemed at a heavy price alike in hlood and money, has always heen the besetting sin of British Governments.

While Mr. Doyle's work can never become a model for the writer of history, hecause it shows on the part of its author a lack of training, painstaking, and thoroughness, and while it in no way represents historical standards and ideals of the present day, hecause it shows an inadequate knowledge of the deeper prohlems of colonial history, yet we believe that Mr. Doyle himself possessed many of the finer qualities of the historian, was endowed with historical insight and impartiality, had a critical appreciation of the value of original sources, and was gifted with a shrewd understanding of the psychology of human nature. It seems a pity that a writer possessed of so many talents should not have pursued his career as a student of history with great devotion and singleness of purpose.

CURRENT FICTION.

A Man of Sark. By John Oxenham. New York: The Baker & Taylor Company.

"A Man of Sark" is a story of action. It deals with single comhats, mêlées, pursuits, captures, caves, prisons, privateers, smugglers—an amount of detail in fact which might well swamp a less clear and vigorous narrator. Mr. Oxenham, however, has sufficient vitality to carry through all his hero's adventures, and a carefully tempered style exactly suited to the simple, open-air character of his suhject. In choosing one of the small Channel Islands for the centre of his story, he at once stimulates the dullest imagination into sympathy. Moreover, nothing is lost in novels of this purely (in a respectful sense) academic type hy falling back on a period when East Indiamen and their convoys faced trouhle upon the high seas. The very names are decorative: the mere sound of "The Plinlimmon Castle" suggests Lever and arouses interest. Throughout, Mr. Oxenham shows skill in using the picturesque nomenclature of the region, and in touching, not too heavily, upon the romantic traditions and customs of his islands. In novels of this kind it is altogether fitting that the hlack-hearded villain should in the end prove an old acquaintance, that the reader should never be unsuitably harrowed by permanent damage to any leading character, and that a happy end should come hefore the hero is too exhausted to profit by it. To sum up, "A Man of Sark" shows a brisk imagination and capahle workmanlike treament of wholesome, legitimate material.

His Own People. By Booth Tarkington. New York: Douhleday, Page & Co.

In this latest novelette of Mr. Tarkington's there is a little more intention and a little less hrilliancy than we are accustomed to associate with his work. The story tells of a young man, Rohert Russ Mellin hy name, from rural Ohio, who, with his hard-earned savings converted into American Express orders, has set out to see for himself the *beau monde* of the Continent. The opening chapter finds him realizing the dreams of his ohscurer days as he sits idly in the glass-domed palm-room of the Hôtel Magnifique at Rome, fingering an invitation to tea from a certain Comtesse de Vaurigard. The facility with which her acquaintance has heen made stirs on the reader's part some suspicions of her title; but Mellin has none. A fortnight or more of ardent devotion, a too too merry dinner with the Comtesse and her friends, a wild night at the gaming tahle—and he awakes to find himself ill, deserted, and worse than penniless. Fortunately for him, one of the women concerned has a humane enough heart to recover and return to their original owner the lost checks; and we are left with the helief that he goes back to his once-forgotten sweetheart in Ohio, a sadder and wiser Mellin.

The story is told with Mr. Tarkington's customary ease and keen pictorial sense. The characters, especially the two women, stand out sharply. Doubtless it needed an exceedingly credulous and self-confident youth to enter so unwarily into the trap, and in Mellin we have such an one—a literary aspirant, dahhler in *vers de société*, one who had always sighed for luxury, flattery, and all the choice sensations to which he regarded himself as rightful heir. Whether a knowledge of the world so provincially restricted as his would not have hetrayed hoth his innocence and his poverty to a group of professional sharpers long before the actual disclosure, is a question the pertinence of which the author evidently perceives, for he tells us with some emphasis that no French woman can understand an American. But what of the accomplices of the Comtesse, the "Honorable" Chandler Pedlow, himself an American, and Mr. Sneyd, hoth of whom must have heen adepts in these very matters?

For Maisie. By Katharine Tynan. Chicago: A. C. McClurg & Co.

This amiahle little tale belongs entirely in the realm of harmless artifice. From the moment when Kit Wells decides to live hy the work of his hands rather than hy pillage, to the occasion when the duke has him to dine, not one solitary event hears the faintest likeness to anything in real life. This, however, may he said in justice: the whole is fautlessly in key. Once granted that Maisie's mother (a real lady) marries an unlettered day-lahorer in order to secure a guardian for her daughter; granted that the lahorer takes such a fancy to another man's child, on sight, that he marries a dying woman in order to secure possession of the little girl—granting all this, it becomes perfectly easy to accept the old admiral's heing sold with the estate, the whole paraphernalia, in short, of fluent, unexacting, conventional fiction.

Katharine Tynan's Irish stories usually possess a certain mild attraction, but in shifting her stage to England, she loses this so completely as to suggest that the earlier works owe more to the imperishahle romance of Ireland itself, than to the author's ability to frame a reasonahle story. As a mere narrator, however, she is smooth, practised, and totally unobjectionahle.

Gret: the Story of a Pagan. By Beatrice Mantle. New York: The Century Co.

It is a brave reader who can face without flinching the prospect of a fresh encounter with the girl of the more or less golden West: her of the ranch, the mining camp, the roadhouse bar; her of the matchless audacity and untrammelled innocence. Such is Gret; hut not according to the usual terms: stripped, indeed, of the most approved gewgaws of the romancer and the play-maker. She is not extraordinarily heautiful, she does not carry a gun. She does not even marry the man of her first choice. On the other hand, she is a personage; a figure which stands out with uncommon vividness against the neutral hackground of Western fiction as it is commonly made. Indeed, she stands out more distinctly than might be desired against the hackground of the other persons of the tale. Hers is distinctly a star part. The California logging-camp in which she is horn and brought up not so much determines her character as affords it a fit setting. Her father, the owner of the camp, has come to lead the selfish and luxurious life of a man ahout town. Her mother, a woman of fine nature and breeding, long disillusioned as to the character of her husband, lives a life of seclusion with her two daughters, in a little cottage which overlooks the camp. She has lapsed into a state of benumhed indifference to everything hut her hooks; and Gret (the sister is a tame thing) has grown almost to womanhood in the rough-and-ready atmosphere of the camp. The mother, an agnostic, has given her no knowledge of religious matters, so that Gret, who has been born a pagan (the sister is a born *dévote*) actually remains one.

To the camp and to the girl circumstance brings a group of city dwellers, chief of whom are a "society leader," a religious (and fashionahle) mystic, and a wealthy middle-aged cynic. He is of distinguished hearing and witty converse, full of wise saws and languid learning, excellently framed to beguile a child of nature. Naturally he philanders with her in his elegant casual way; not so naturally, he proposes to marry her; and hy no means unnaturally, she, hating the selfish sophistication of the great world, finds it easy to adore the most selfish and sophisticated member of that world. Circumstances prevent the marriage; and the honest and use-

ful man who should have heen her first choice becomes in the event her second.

After all, the whole affair is conventional enough. The incidents and the people, so far as they can he separated from Gret, are of little moment. But she makes it all worth while. Her mental and moral vigor, her purity, her woman's strength capahle of taking, if need were, a man's burden, her very equivocations and suhterfuges when diplomacy alone may serve her turn —they are presented with admirahle skill as mere attrihutes of a personality greater than they. For the hreath of the morning is in her nostrils: "it ran down her veins like wine, and she stared hefore her into many colored vistas like a dazed thing, carried out of herself hy something hypnotic and potential rising out of the earth to her." With so much of the smart and the tailor-made in our fiction, it is a pleasure to come now and then upon a novel which holds one such human, hreathing creature as Gret.

The Spotter. By William W. Canfield. New York: R. F. Fenno & Co.

This is a novel with a purpose. Oil is the theme, and it is not embarrassingly difficult to make out the identity of Mr. Lanphere, president of the Cygnet Oil Company. One is invited to follow the fortunes of a number of the victims of his unscrupulous methods; in particular of one Cameron, the contented owner of a prosperous Pennsylvania farm. Oil is struck in the neighhorhood, and all his neighhors are easily persuaded to sell their land for what seem to them fahulous sums. Cameron, who loves farming and hates oil, holds out for some time; hut is finally cheated out of his property by one of the numerous secret agents of the Cygnet, who professes to he acting in the interests of the independent refineries. His job finished, the agent leaves the country, taking with him the daughter of another v'ctim, whom for some unaccountable reason he has married. Cameron tracks him to Paris, and is there sandhagged and kidnapped hy a pair of the agent's thugs. Presently he is restored to liherty, though not for some time to his right mind. Eventually certain documents fall in his way which "put the screws on" Lanphere; and Cameron comes out of the rencontre whole-pocketed, if half-hearted. In fact, since he is in possession of documents which might hring a noted criminal to justice, his acceptance of personal damages from Lanphere smacks of hlackmail. But, since Lanphere's great original has never been hanged, drawn, and quartered, the ethics of fiction—even of such melodramatic fiction as "The Spotter"—must needs how hefore the continued fact.

The Real Blake, a Portrait Biography. By Edwin J. Ellis. New York: McClure, Phillips & Co. $3.50 net.

When, five weeks ago, the "William Blake" of Arthur Symons was here reviewed, Mr. Ellis's volume, though puhlished in London before Mr. Symons's, had not made its appearance in the New York market. This is unfortunate, for most of our complaints against the earlier book should have been reserved, and sharpened, for the present culprit. If Mr. Symons writes from the point of view of ultra-romanticism, Mr. Ellis speaks from the region of spirit-rapping and tahle-turning. He has produced a hook that is almost a model of what a hiography ought not to be.

He has many faults, among them had temper and messiness; hut the worst is an inordinate use of inference. For example, Crahh Rohinson repeats a saying of Mrs. Blake's, that when Blake was four years old he saw God put His head to the window. That is all we know of the matter from any source. Mr. Ellis not only tells us what God prohahly looked like, and what window he appeared at, hut goes on to conjecture why Blake never spoke of the vision to any one except to his wife "during the summer days of his courtship." Later in Blake's childhood Mr. Ellis suspects "that he even went so far as to allow his upright flames of waving hair to he comhed down for him sometimes"—most hoys do. More pernicious is the statement that Clara Woods was Blake's "real first and last love," and the gratuitous prying into the relations hetween Blake and his wife, with conclusions which are as offensive as they are unwarranted. Of course Mr. Ellis, as a good Celt, accepts without a quaver of doubt the story that Blake was of Irish descent and that the family name was really O'Neil. Mr. Symons has shown how utterly improbahle that theory is, although in justice to Mr. Ellis it must he acknowledged that the photographs of the Deville life-mask here admirahly reproduced have a strong Irish look ahout the mouth and upper lip. So far Mr. Ellis may he within his rights, hut it certainly is drawing a long how to say of one of Blake's acts that it "recalls the mingled caution and frenzy of his great ancestor of Elizahethan days, Shawn O'Neil."

"The Real Blake," however, is not altogether destitute of profit. Here is printed in full for the first time "The Island in the Moon," that youthful satire, grotesquely dull hut not without significance in estimating Blake's literary training. More important is a complete transcription of his marginal notes to the "Angelic Wisdom" of Swedenhorg, together with the passages of Swedenhorg concerned, and even more interesting are Lavater's "Aphorisms" with Blake's illuminating comments. And other valuahle documents are given. Little hy little we are getting the whole of Blake. When shall we have all his writings in uniform style, edited with the accuracy and understanding displayed hy Mr. Sampson in his edition of the lyrical poems? That is now the real desideratum, rather than these yeasty enthusiasms over Blake's Last Judgment as "the most beautiful, poetic, and decorative picture the word contains," over Blake himself as holding "a supreme place among the world's artists," and over his hoyish and fragmentary drama as having the easy and complete vitality of Shakespeare's work. It is a pity that a critic should give himself up to these exaggerations; Blake is great enough not to need them. Mr. Ellis tells us more ahout the deht of Blake to Swedenhorgianism than any other writer has yet done. If he had worked out that connection in detail he would have performed a service to letters that is still to do. It cannot he denied that he knows his Blake thoroughly, and is as familiar with the Zoas, Zelophahads, Orcs, Valas, Oothoons, Luvahs, *et id genus omne*, as any man living; again, if he had collected and coördinated his interpretations of Blake's mysticism, and had suhdued the vanities of his own imagination he might have produced a work of indisputahle value.

Sunshine and Sport in Florida and the West Indies. By F. G. Aflalo. Philadelphia: George W. Jacohs. $4 net.

This volume is divided into three parts, treating, respectively, of "The Way There," "Tarpon-fishing and Other Sport," and, finally, "Home hy the Spanish Main." Although fishing was the pole star which held steady through the trip of eleven thousand miles, this Briton had eyes for many other things. With happy turns of speech he gives us word pictures of the life on hoard ship and in New York. Of the Irish steerage passengers, he writes:

> These reeling exiles, who wave unsteady farewells to their friends on the tender, may control Trusts. To-day they are half-starved; hut the time may come when they may corner wheat and starve their fellows.

In our city he is impressed hy the lack of drunkenness, the ceaseless toil for money, the had tea, the omnipresence of ice-water, and the utter uselessness of the haggage checking system! Some twenty pages and a numher of illustrations are devoted to the Zoölogical Park and the Aquarium in New York city, about which he is enthusiastic as a sportsman and an angler. The author journeyed south to Washington where a half hour's talk with the President completely won his heart. Then on to Florida, stopping off here and there and making a hundred and one comments on the people and the land.

Part Two, dealing with the practical and descriptive aspects of tarpon fishing, reveals the author at his hest. Every detail shows the enthusiasm of the true angler. The wonderful leaps of this gigantic herring are described—producing golden showers of iridescent spray in the sunlight, and visions of silver and hlack in the moonlight, while an evening without a moon, with the hrilliant phosphorescence of the warm Gulf water, gives the strangest effects of all:

> Sudden pale gleams break the hlackness helow and mark the pathless dash of sharks over the hidden dwellings of the coral creatures, to whom they must seem as meteors flashing through the night, and the tarpon rushes like a signal rocket, setting the water afire as it jumps.

This fishing trip as a whole consumed twelve weeks, the travelling expenses heing about one thousand dollars, and the cost of the angling some two hundred more. In eleven days the author captured seventeen splendid tarpon, the heaviest weighing 140 pounds. In addition to the account of the angling there is a chapter on the tarpon itself—an interesting summary of the known facts in regard to its life. Mr. Aflalo's natural history notes are, however, desultory, and not of special interest. He should have looked closer when he says the flicker is the only American woodpecker without red in its plumage.

After leaving Florida the author made hrief stays in Cuba, Jamaica, and Panama. He has nothing hut praise for the American system of work and sanitation in the last mentioned place. His frank and generous comments reveal a fair-mindedness only too

rare in travellers. The volume should appeal to a far wider circle of readers than the "English anglers" for whom the author chiefly intends it.

Science.

CONGRESS OF ITALIAN SCIENTISTS.

PARMA, September 30.

The Italian Society for the Advancement of Science, organized here at Parma during the past week, is really a *risorgimento*, since a body bearing the same name and having similar objects held half a score of meetings at irregular intervals in different cities and met for what proved its final session more than thirty years ago at Palermo in the midst of Italy's struggle for national existence. Led by such men as Cerruti, Celoria, and Millosevich in mathematics; by Voltera, Righi, Alfonso Sella, Cardani, and Folgheraiter in physics; Allievi, Jona, and Colombo, in engineering; Paterna, Pesci, and Ciamician, in chemistry; Cuboni and Pirotta, in agriculture; Dalla Vedova and Mariotti, geography; Issel and Artini, geology; Baccarini and Borzi, botany; Andres, Monticelli, and Romiti, comparative anatomy; Luigi Pigorini, and Sergi, anthropology; Todaro and Livini, histology; Fano and Cervello, physiology; Foà, Biguami, and Marchiafava, bacteriology; and Luzzatti, Bodio, Strengher, and Pantaleoni in economics, this association has opened with nearly twelve hundred members. Volterra, a scientist under whom American physicists have counted it a privilege to study, and who shares with Righi of Bologna the distinction of having been Marconi's master, became the active head of the committee on organization. The Italian Philosophical Society and the Italian Electro-Technical Association united with the new body for their annual session, while the different government departments, the ministries of public works, of agriculture, of industry and commerce, of post and telegraph, of war, and of marine sent one or more official delegates. Local scientific societies, like the Spectroscopic Society of Catania, the Tuscan Society of Natural Sciences of Pisa, the Italian Geographical Society of Rome, the Society of Naturalists of Naples, the Royal Institute of Science, Literature, and Art of Venice, the Chambers of Commerce of Bari and Rome, and several large industrial manufacturing corporations affiliated themselves and sent delegates. The Imperial Agricultural Academy of Rovereto, Austria, and representatives of Leipzig, Heidelberg, Bonn, Frankfurt, Vienna, Trieste, Warsaw, and Prague Universities, and residents of England, France, Sweden, Spain, Switzerland, and even Costa Rica are found on the membership list. America has six representatives: Prof. Simon Newcomb of Washington, Gaetano Lanza of Boston, a resident of Salem, Mass., one from Iowa, and two women (one a graduate of Vassar and former student of Radcliffe) from Cambridge, Mass. In all, over thirty women joined.

The chief interest of the opening exercises, if not of the entire session, centred in Volterra's able summary of the scientific tendencies of the day. The aggressive attitude of the Vatican towards Socialism and the corresponding anti-clerical agitation of the radical elements of society, to which many columns of the daily press have recently been given, the appearance first of the Papal syllabus, and then, only a week before the opening of this congress, of the encyclical, would naturally lead the Protestant observer in Italy to expect some outcropping of party antagonism at Parma. But the listener heard nothing of the kind. Volterra spoke briefly of the profound changes, both material and moral, which Italy has undergone since the last Italian congress of scientists had met, of the great and widespread development of scientific thought and with it the rise of a wholly new and modern feeling, the scientific spirit. The inheritance alike of the great and the humble, it pervades all branches of society and is indefatigably extending the application of new discoveries throughout the field of every day life. To its inspiration is due the awakening of the most sane and vital energies of the time. Impressed by the new inventions which have spread everywhere great material benefits, have increased riches, and have influenced deeply social customs and the conscience of society, the public seeks to possess itself of scientific truth, to know its details, and looks to science for material and moral progress. This expectant attitude of mind on the part of the public in turn stimulates the scientist. For example:

> Descending through all strata of society and spreading everywhere, brightening and helping, revivifying and intensifying all our life, electric appliances show constantly the power of scientific research and the utility of the most abstract studies.

If in such a way a continual current unites practical with scientific life, so those who make science their profession feel themselves drawn towards the mass of men, their life is no longer shut up in their laboratories and studies, like Gauss's, but, like Lord Kelvin, they feel constrained to put themselves into active contact with society and to share in the life which agitates the world.

Then from praise of the spiritual side of scientific studies, the delight of pure and disinterested search for truth, the joy of learning rather than of mere knowing, the speaker turned to the crisis which has overtaken all branches of knowledge, in the conditions of work and in the underlying philosophy. He dwelt on the rapid accumulation of discoveries awaiting classification and the definition of their interrelations; the keen and profound criticism of every speculation, new and old, threatening every system, even those which promised to withstand the assaults of time; the need of great technical skill demanding specialization and subdivision of scientific labor, so that a lifetime has become hardly sufficient to reach the point from which any real advance is possible; the interdependence of different branches of study so increased that further progress in any seems almost impossible without a profound knowledge of many others, not only of those which seemed related a few years ago, but also of the new departments of knowledge which are now known to be closely related. The crisis in the underlying philosophies is even more marked than in the conditions of work, where not only single hypotheses but great and universally accepted principles have suddenly become the objects of discussion and criticism, while old systems long thought buried forever are unexpectedly revived—the dreams of the alchemists re-arising, full of mystery.

The meetings of the fourteen sections into which the society divided continued throughout the week. These sections united again to hear Prof. Giacomo Ciamician of Bologna on "Organic Chemistry in Organisms." Prof. Pio Foà of Turin on "The Biological Significance of Tumors," and Prof. Maffeo Pantaleoni of Rome in a masterly review of "Forty Years of Economic Studies." If pure science found a large place in the different programmes, questions like the sterilization of city water, the necessity of developing popular education in regard to hygiene, and improving the preparation in mathematics, and in laboratory work in the preparatory schools, were not neglected. A geographical exhibition was opened in the Royal Palatine Library, and special descriptive catalogues of maps, of geographical manuscripts, and of nautical charts, were published. Excavations which are being made in the Terramara of Parma were freely opened to members. Twelve or fifteen feet below the level of the soil an old Roman road has been laid bare, and below that wood from the foundations of the house of "lake-dwellers," whom Professor Pigorini believes were contemporaries of Hammurabi. Many horn-shaped fragments of pottery have been brought to light which are thought to confirm the theory of the oriental origin of these people. (Those who are interested can find details in a recently issued monograph, "Bollettino di Paletnologia Italiana," published by Luigi Battei, Parma, 1907.)

One morning was given to the exercises commemorative of Vittorio Bottego, the African explorer, in connection with the unveiling of his statue by Ximènes. His collection of the fauna of Erythrea, which forms a special museum in the university, had been carefully reclassified, and was then reopened to the public.

The abiding impression left by the congress is of the dignity and enthusiasm which marked its sessions and the confidence in Italy's great future, which her leading scientists inspired.

ALICE HAYES.

The "Index Catalogue of the Library of the Surgeon-General's Office, United States Army," has reached the twelfth volume of the second series, including titles from O to Periodicals. How wide the field of this library is, apart from purely medical works, may be seen by glancing at the lists under such words as Passion and Pauperism.

An author is indeed to be congratulated when he is able to be, not only the student and collector of the material of which he writes, but artist as well. In "Feathered Game of the Northeast" (T. Y. Crowell & Co.) Walter H. Rich has selected about ninety New England game birds, of both land and water, and has written a short essay about each, accompanied by well-executed drawings. These are primarily meant for the man "whose nature study has been conducted in the open and mostly over a gun-barrel," although the average reader and the professional ornithologist each may find much of interest. The il-

lustrations, which are diagnostic, add considerably to the value of the volume. Mr. Rich has, however, fallen into the error very general among artists, of placing his ducks too high out of the water. No duck ever swam with the lower curve of its breast exposed. There is hardly one of the pictures of ducks in which the waterline should not be considerably raised. Fortunately the author has sane ideas on hunting. He asserts again and again the need of better protection for our birds, and continually urges moderation in bagging game. Spring shooting, he thinks, should be abolished altogether. On the more technical side we find recent scientific names given accurately, and the facts concerning life-histories, although of course mainly drawn from the point of view of the hunter, are reliable. As literature, the essays are commendable; for Mr. Rich possesses excellent powers of description, far above those of the average hunter, who is prone to wax eloquent chiefly when his mind runs on the toothsomeness of his game. The vivid portrayal of the icy blind on a lonely island at sea, where the hunter waits for the flocks of eider ducks is especially enjoyable reading. Interesting items are added here and there, as where in connection with the supposedly extinct Labrador duck we are told that "Audubon's drawings were made from a pair shot by Daniel Webster and by him presented to the naturalist." The volume contains over 430 pages, and is unusually well-printed.

Several months ago Prof. Albert Eulenburg, of the University of Berlin, published an article on suicide among the school-children of Germany, the data of which were so startling that the Prussian Cultus Ministry set on foot an official investigation. The published report covers the period from 1883 to 1903. In these twenty-one years the number of suicides in the primary and secondary schools of Prussia reached the total of 1,125. The annual average was almost fifty-four; for the age of fifteen and less, it was almost forty-two, in which the ratio between boys and girls was 4.16 to 1. In the secondary schools alone the average annual suicides numbered about fourteen. In the lower grades fear of punishment, mental derangement, hard treatment by parents, relatives, or teachers were the most important factors; in the higher grades, and especially in the secondary schools, fear of examinations, offended honor, mental disturbance, fear of punishment, love affairs, and despondency are assigned as the chief causes. In these grades fully 10 per cent. of the suicides could be ascribed to mental disturbance. Fully 28 per cent. of all these unfortunates were children or near relatives of epileptics, inebriates, or demented persons. In a surprisingly large proportion of cases the reasons for taking life were very trivial. In more than 48 per cent. it was the inability of the pupil to adapt himself to the arrangements of the school. In not a few instances dangerous literature, love affairs, premature enjoyment of the indulgences of the university students, as well as alcoholism, led to suicide. In a comparatively large number of cases the causes had nothing to do with the school at all, but originated in domestic troubles, especially punishments, criticisms, and strictness on the part of the parents.

Drama.

Memories of My Life. By Sarah Bernhardt. New York: D. Appleton & Co. $4 net.

If it be the main object of an autobiography to make a complete and merciless exposure of the character of the writer these "Memories" of Sarah Bernhardt constitute one of the most successful books ever written—and the revelation is so utterly unconscious, so vivid and so consistent in all its elaborate complexity as to leave no room for doubt or speculation. Herein lies the value of this rhapsodical but interesting *apologia pro vita sua* that it exhibits the true woman in clearer relief than it does the largely mythical superwoman whom it labors to depict. Rich as it is in minor details and vivacious descriptions it adds but little to the common knowledge of the career of the best advertised actress in the world. In fact, it is studiously reticent concerning many essential facts, including those of parentage and pedigree, about which the curious in such matters would like to be better informed. Apparently, there is no foundation for the stories, long prevalent, that her youth was passed in poverty. Her mother seems to have been amply provided for and she herself wanted for nothing in her childhood except the intelligent guidance and control of which she stood most in need. Concerning the identity and social position of her father a significant silence is observed, although he occasionally appears upon the scene. Her mother, as is generally known, was of Jewish descent, but she herself was reared in the Roman Catholic faith.

Her account of her early years, though crammed with domestic incident and anecdote of an easily credible kind, is so careful in its omissions and so reckless in its exaggeration, that only the most confiding reader would put much faith in its complete veracity. But reading between the lines, it is not difficult to discern in the wayward, affectionate, wilful, imaginative, and hysterical little girl of the Grandchamps Convent—where she received most of what regular education she had—the miniature copy of the brilliant, paradoxical and unmanageable creature who, a little later on, was to dazzle Paris with her acting and drive successive managers to despair. She furnishes a lively sketch of her convent life, her various escapades, her paroxysms of temper, her triumphs in religious theatricals and her gradual transformation into a religious devoteee. At one time, it appears, it was her highest ambition to become a nun, and she draws an imaginary picture of herself as a Carmelite penitent, an idea for which she is indebted to Victor Hugo's "Les Misérables." Her religious fervor, however, was never strong enough to render her amenable to discipline or to prevent her from indulging in the most caustic comment upon all who opposed or offended her, whether they were nuns, relatives or friends. In her case, the tongue was ever a most unruly member, and her book is highly seasoned with personalities, which, however apt or amusing, are neither polite nor amiable.

It was the Duc de Morny, the favorite of the third Napoleon, who, when her family was fairly at a loss how to dispose of her, suggested that she be put upon the stage. He therein displayed better judgment than he employed in some weightier affairs. Her recitation of "Les Deux Pigeons" gained her admission to the Conservatoire. She had made no preparation, but the magic of her voice won her judges. Her first engagement at the Français ended ingloriously. Enraged because Madame Nathalie, an old *sociétaire*, had pushed her sister, she slapped her face and resigned rather than apologize. Her unruly temper was also the cause of her leaving the Gymnase, and she ran away, on a wild impulse, to Spain, where luckily she fell into good hands. Returning to Paris, she joined the Odéon, where she rapidly rose to fame. It was there that she made the acquaintance of Prince Napoleon (Plon-Plon)—who offended her hugely by his indifference, but afterward became a good friend—and George Sand. It was there, too, that she achieved one of the most notable of her earlier triumphs in "Le Passant." After that her popularity, especially among the students, of whom she was ever the favorite, increased apace until it was interrupted by the war.

Her patriotism, as all the world knows, was as practical as it was fervid and vociferous. The Germans, in the present volume are the objects of some of her most vigorous rhetoric. But unlike most of her compatriots she laments the overthrow of the Emperor as well as the national defeat. He had entertained her at the Tuileries and greatly impressed her with his benevolence, gentleness, and wit. She holds that he was the victim of circumstance, and much more sinned against than sinning. Her remarks on political subjects are not profound but her conduct during the siege of Paris is deserving of the warmest admiration. In the emergency hospital which she established at the Odéon she displayed not only energy, endurance, and courage, qualities which she never lacked, but foresight, unselfish devotion, and tenderness. She did not desert her post even when she, with her patients, was driven by the German shells into the cellars, rendered almost uninhabitable by water and rats. Possibly some of her descriptions—that of her visit to a battlefield, for instance—may be colored somewhat too highly, but the reality, doubtless, was horrible enough, and the part she played was at once womanly and heroic.

It is impossible, and unnecessary, to follow her through her long list of triumphs and adventures, her escape from Paris, her descent into the "Enfer du Plogoff" at Finisterre—with its obvious inspirations from "Les Travailleurs de la Mer"—her balloon ascensions, etc. Imagination plays at least as great a part in them as sober fact, but Madame Sarah is a capital *raconteuse*. Nor is it needful to do more than refer to her dramatic achievements, culminating in "Phèdre," which have made her name a household word from St. Petersburg to San Francisco. It is a pity that her memories are so centred upon herself as to be forgetful of some of her friends who were almost as illustrious. Doubtless, if she had chosen, she could have told many illuminating anecdotes of Gambetta, Thiers (whom she anathematizes), Paul de Rémusat, Canrobert, Macmahon, Hugo, Augier, Bornier,

Rochefort, Rostand, and many others. To tell the plain truth, the monstrous egotism of the book greatly weakens the pleasurable impression created by its vivacity, its cleverness, and its abundance of interesting material. It cannot affect, either in one way or the other, the fame of the consummate artist, which is too firmly established ever to be shaken, but it leaves behind it the impression of a woman endowed indeed with many fine qualities, with intellect, ambition, versatility, dauntless courage, and (within certain limits) both generosity and affection, but too much given to self-glorification, to petty animosities and jealousies and unreasonable prejudices to be entirely great.

"Shakespeare, der Dichter und sein Werk," by Dr. Max J. Wolff, vol. I. (Munich: Oskar Beck), is not marked by any strong critical originality, and it is needless to say that it does not throw any new light on the poet's life; yet it is a pleasing book, and is superior, perhaps, to any work on its subject accessible in English that attempts to combine both biography and literary criticism. On the other hand it falls below several we might name that deal with Shakespeare merely from one of these points of view. The author, who is already known for his contributions to Shakespearian study, is thoroughly familiar with the vast literature of his subject, so that his book has the advantage of representing the latest and best knowledge. Naturally, much the largest part of the work is devoted to a discussion of the poems and plays—especially the characters in the latter. In this last particular, Dr. Wolff rarely departs from orthodox interpretation; but, though occasionally too diffuse, his criticism is intelligent and sympathetic—indeed, warm with enthusiam—so that the reader will accompany him with pleasure through these familiar paths. His work, like that of nearly all of his countrymen on this subject, is marred by an unconditional acceptance of the "Henry VI." plays and "Titus Andronicus" as purely Shakespearian; their inclusion in the First Folio outweighs in Dr. Wolff's mind the all but unanimous judgment of English-speaking authorities—with reference to the former, at least. This is the one literary problem in the face of which the wonted audacity of German criticism seems to fail. A good feature of the work is the picture of the life of Elizabethan London—the background of the drama—which the author calls up. With regard to the Elizabethan stage, we note that Dr. Wolff rejects the theory of the inner stage, in which, it must be confessed, he has the support of the meagre pictorial evidence relating to the subject that has come down to our times. The present volume ends with "Twelfth Night." The work is to be completed in another volume.

On Monday evening, November 4, Klaw & Erlanger will present at Wallack's Theatre Eugene W. Presbrey's dramatic version of Sir Gilbert Parker's novel, "The Right of Way," in which Guy Standing and Theodore Roberts take the principal characters. The play comes to New York after several weeks on the road, where its success has been marked.

Arnold Daly is now rehearsing at the Berkeley Theatre two new plays which will be presented on Tuesday, November 5. "The Van Dycke" is a comedy adapted from the French and produced last year in London by Beerbohm Tree. The second piece is a drama in three scenes, "After the Opera," adapted from the French by Gladys Unger. This play has been given in Paris at the Grand Guignol.

A dramatic version of the story of "The Bride of Lammermoor" has been written by Stephen Phillips, and will be produced by Martin Harvey in Glasgow, next March. Scott's novel has always proved tempting to the dramatist. Of modern adaptations the most famous are those produced by Charles Fechter and Sir Henry Irving, both at the London Lyceum.

Music.

The Wagnerian Romances. By Gertrude Hall. New York: John Lane Co. $1.50 net.

Stories from the Operas. By Gladys Davidson. Philadelphia: J. B. Lippincott Co. $1.25 net.

The Wagner Stories. By Filson Young. McClure, Phillips & Co.

The Story of the Ring. By S. H. Hamer. New York: Dodd, Mead & Co. $1 net.

Wagner Kalender auf das Jahr 1908. Berlin: Schuster & Loeffler.

Beautiful and often touching as is the music of Wagner's operas, there can be no doubt whatever that the pleasure it gives is doubled if the listener is able to follow the unfolding of the plot and to understand the dialogue. Unfortunately, few of even the great singers enunciate distinctly, nor is the majority of an operatic audience in this country conversant with German. Several translations have been made of Wagner's poems, but the necessity of not merely rendering the sense but preserving the metres and making the word accents coincide with the musical accents, has usually resulted in pretty hard reading. To overcome this difficulty, many attempts have been made simply to tell the stories of these operas in prose. Perhaps the lengthiest of these efforts is that of Gertrude Hall, who devotes 414 pages to ten of the Wagner operas. For reasons not apparent she begins with the last of them—"Parsifal," and ends with the earliest of the operas that one is likely to hear—"The Flying Dutchman." She is an enthusiast who believes that these poems form, even apart from the music, "a whole beautiful, luminous, romantic world," and that "one would not lose more by dropping out of literature the 'Idylls of the King' than the Wagnerian romances." However that may be, there can be no doubt that her conscientious transcript will be welcomed by many opera-goers.

In Gladys Davidson's book Wagner is represented by only two of his operas—"Parsifal" and "Die Meistersinger." Of the other operas whose stories are told by her, four—Gounod's "Philemon and Baucis," Meyerbeer's "Star of the North," Halévy's "The Jewess," and Bellini's "La Sonnambula"—have practically disappeared from the stage, while a fifth, Tchaikovsky's "Eugene Onegin," has never become acclimated outside of Russia. The others in the list are popular favorites of to-day and likely to remain so for some time. Their plots are told by the author in the form of short stories without reference to the stage or the music.

Filson Young has also told the Wagner stories (ten of them) in the past tense, "because that tense is proper to narrative." He goes more into details than his rivals, quoting the dialogue here and there, sometimes in verse, and altogether he has accomplished his task creditably. He draws on his imagination when he says that Wagner insisted that his hearers "should be in possession of a brief outline of the story," for Wagner's contention was that the singers should enunciate so distinctly that a libretto or a synopsis becomes as superfluous as in a theatre; but Mr. Young is right in saying that Wagner deprecated the priming of his hearers beforehand with leading motives and elaborate musical information. The *labelled* leading motives are an invention of Hans von Wolzogen. Mr. Young quite properly assures amateurs as yet unacquainted with these masterpieces that "all this semi-masonic mystery of initiation is quite unnecessary."

The fourth book on our list confines itself to the four Nibelung dramas, the story of which is told briefly, while the leading motives are interspersed in musical type. There are four full-page illustrations in colors by Harry Rountree of scenes in the operas, and marginal notes of reference which add to the value of the book.

The habit of telling the stories of Wagner's operas in prose, which threatens to become an epidemic in this country, does not appear to prevail abroad to the same extent, although "thematic guides" abound in Germany. In the "Wagner Kalender" for next year, however, the story of "Lohengrin" is thus told, as "a fairy tale for children." In the first forty pages of this "Kalender" dates relating to Wagner's life or works are given for every day in the year—not an easy feat to accomplish. Ten pages are taken up with the first sketch, in prose, of "Die Meistersinger." This has been printed before, but we find here for the first time in type the prose plot of an opera which Wagner had in mind about the time when he was busy with "Tannhäuser." The name of this opera was to be "The Mines at Falun"; it was based on one of the tales in Hoffmann's "Serapionsbrüder," and it is surmised that Wagner abandoned this plot because of the difficulty of presenting the climax in an opera—the finding of the unchanged body of a young man who had perished in the mine, years later by the woman who at the time was his bride. Hans Pfeilschmidt contributes an account of the funeral of Wagner in Bayreuth, beginning with the arrival of the special train which brought the body from Venice. The corpse was in an ordinary freight car, on which the word "Leiche" was written with chalk. There is a photograph of the funeral services, and the "Kalender" is otherwise profusely illustrated with pictures serious and comic.

The question is often asked: "Who is the greatest living pianist next to Paderewski?" Of the three thousand enthusiastic women and men who heard Josef Hofmann, at his first recital in Carnegie Hall

last Saturday, the majority would prohably have named him in answer to that question. Though a Pole, this pianist played the last of Beethoven's sonatas and Schumann's inspired Fantasie with an appreciation of their suhtle and recondite charms, as well as their more ohvious points of heauty, in a way no German pianist of the period could .have equalled. Nevertheless, he was at his hest in the Polish part of his programme, which consisted of Chopin's twenty-five Preludes, "the pearls of his works," as Rubinstein called them. They represent the great tone poet in all of his moods, and though some of them seem mere fragments, all of them are, in the words of Kullak, "masterpieces of the first rank." In the performance of these Hofmann recalled the interpretative genius of his hoyhood, which he lost for some years but has now recovered.

There are to he some special performances of operas hy seventeenth and eighteenth-century composers, as well as four modern works, Septemher of next year, at La Fenice, the large and beautiful huilding in Venice. Twenty-five operatic performances and five vocal and orchestral concerts, the programmes of the latter heing likewise entirely drawn up from compositions hy Italian musicians, will be included in the scheme. Caruso is to take part in some of the operas, and Arturo Toscanini, the chef d'orchestre at La Scala, will he the conductor. To further the project, a committee, consisting of Italian, English, and American women, is heing formed.

Art.

NOTES ON EGYPTIAN ART.

Interesting accounts hoth of Prof. J. Garstang's and Prof. W. F. Petrie's excavations in Egypt during the last season have appeared in recent issues of the London *Times*. Professor Garstang excavated for the University of Liverpool, which, as is well known, has of late taken a prominent part in the study of archæology. The site chosen hy him was Abydos. The various finds cover a wide range, dating from about 2000 B. C. to the first and second Christian centuries. The most interesting remains are attrihuted to the twelfth and thirteenth dynasties, and many of them are of singular interest and heauty. Among them are two or three representations in hronze of Osiris, one of which was covered with gilt, with inlaid eyes. A faience hippopotamus is of a somewhat unusual type, as is also a wooden statuette of a woman and child; for the hody is long and the limbs short, although length of legs and arms is the prevailing characteristic of the people. The features, too, as in some other examples recently discovered, are of a negroid rather than a purely Egyptian type. Other relics in excellent preservation are a monkey in a cage, cats, a hahoon, and a heautiful vase for offerings, representing two trussed geese. The workmanship and grace of form and feature in some cases suggest Greek art. One of the most exquisite specimens is an ivory seal—a child with finely-wrought features. A singular Kohl pot, with a slide in the middle of the lid, a palette and rubber for the grinding of cosmetics, combs, perfume pots, and other articles, show that the arts of feminine adornment reached a high degree of perfection under the twelfth and thirteenth dynasties.

Of Professor Petrie's excavations two discoveries are mentioned as of especial interest. The first is that of a succession of "Soulhouses," found at Rifeh, near Asyut, in a cemetery of the tenth to the twelfth dynasty, which was excavated from under a bed of gravel. The more modest of these miniature dwellings are models of houses such as are still inhabited hy the peasantry—a single room with one or two openings, with a roof like a Bedawy tent, propped with two poles in front. Of this type there are several varieties. In the more elaborate dwellings special care was taken to provide ventilation; more zeal was shown, perhaps, for the souls of the dead than for the hodies of the living. The furniture consists of couches with head-rests, a chair, and stand of water-jars, while a bread-maker is shown at work under the staircase. On the roof in some instances were corn-hins. A hull's head, haunch, and ribs, and tanks of water were among the provisions for the soul's sustenance. Each house was, it would seem, intended for the accommodation of one soul only. The other important discovery was the contents of a great noble's tomh—one of the first known of the twelfth dynasty. The place was a small rock chamher containing the remains of two hrothers. The inner case for the elder is elahorately painted with a diaper pattern of dark green and white on red ground, with yellow rosettes in the spaces. Minute hieroglyphs show details of animals. There were also found, in admirahle preservation, two models of hoats —one with the mast down and sail packed upon it, is being rowed down the Nile; the other has the mast up and the crew are engaged in hauling up the yards. The lookout man is sitting on the stern closely wrapped up to protect him from the north wind. Each hoat has a cabin, in front of which sits the captain. The steering oars, undamaged, are finely painted with eyes of horus, lotus flowers, and rosettes. The figures are clear and striking, including those of the servant-girls.

The German Orient Society, which has heen conducting extensive excavations during the past seven years in Assyria, Bahylonia, Palestine, and Egypt, has recently issued an account of this work on two Egyptian sites: Ahusir and Tell el-Amarna. In our issue of August 29, p. 195, we printed a hrief note on the suhject, but additional details are now at hand. The most notahle result in a section of Ahusir, known as Ahusir el-Melek, was the additional material ohtained from opening no less than 257 prehistoric graves with the usual contents of pottery, stone utensils, knives, and ornaments. A curious feature of this prehistoric necropolis is its continued use down to the period of the Hyksos. In some cases the same grave appears to have heen used twice. At Tell el-Amarna which, ever since the discovery of the cuneiform archive of Amenophis III. in 1888, has been the scene of almost continuous archæological activity, Dr. Ludwig Borchardt has been fortunate in finding towards the northern part of the mound the remains of many of the private dwellings belonging to the period of the "Heretic King," as Amenophis III. (circa 1400 B. C.) was called. Through these finds the construction of private houses in Egypt has heen made much clearer to us, and many persons may he surprised to learn that at this early date the hathroom was a regular feature of the dwelling house. In the more elahorate houses the bathroom was paved with limestone, and an outlet was provided for the water which, running through a covered pipe, emptied into a small reservoir. The bath itself, it would appear, was limited in those days to pouring jars of water over the body. Finally, in the main mound of Ahusir, work on the extensive Temple of King Neferirkere of the fifth dynasty (circa 2700 B. C.) was completed, and the excavations around the pyramid near the temple systematically continued. The most interesting discovery was of remarkahle specimens of faience work in wood, the brilliant colors of which—hlue and yellow—give to the lihation vases a striking appearance. Lastly, in the Temple of King Sahure (the predecessor of Neferirkere), comprising a pyramid, a temple for the dead, an approach, and a large gate, splendid specimens of sculptures on large hlocks rewarded the efforts of the explorers. The scenes illustrate the career of the king, who is represented as being nursed by the goddess Nechhet, and in the form of a gryphon is depicted as crushing his enemies in western Asia and in Libya. These large granite reliefs helong to the finest specimens of the Egyptian art of the period.

The *Burlington Magazine* for October is unusually antiquarian in its tone, even for this puhlication; not merely because it contains nothing of the art of to-day, but hecause it contains less than it often does of the art of all days—less that is intrinsically heautiful as art apart from historical interest or the fascination of the great attribution puzzle. The notable exception is the photogravure frontispiece after a portrait of a little girl hy Velasquez, from the Kahn collection—one of the pictures that, it has heen rumored, are to come to this country. It would seem to be of fine quality and uncontested authenticity, and one would like to see it in the Metropolitan Museum. Some of the pictures in the Irish National Portrait Collection are prohahly fine canvases, and the two new Chardins in the Louvre must have beautiful qualities, hut the reproductions are not, in these cases, adequate to give a clear notion of the originals. The sixteenth century woodcut portrait of Franz Burchard, Saxon amhassador to England, after an unknown English artist, is a magnificent piece of work, almost worthy of Holhein, hy whom the draughtsman was evidently influenced. "Art in America" deals, as is too frequently the case, only with art that happens to be in America, not with the art of America, which is, nevertheless, occasionally worthy of notice.

Among the rather scrappy contents of the *Bollettino d'Arte* for Octoher we may note the completion of Attilio Rossi's study of the works of art in the Monastery Tor de' Specchi, Rome; and capital illustrations of two drawings by Rembrandt in the National Museum, Naples. A pen sketch representing the slaying of Holofernes by

Judith must be regarded as one of the swiftest and finest creations of the master. Hardly less admirable but in a mode thoroughly familiar, through the etchings, is Joseph Interpreting Pharaoh's Dreams. The text of the new act reforming the service of fine arts in Italy is printed in full. The gist of the law is insistence upon competitive examination, whether for promotion or original appointment.

Francesco Malaguzzi Valeri, in the *Rassegna d'Arte* for October, describes the frescoes of the Grifi Chapel, in S. Pietro in Gessate, Milan. There is documentary evidence that this work was assigned to Zenale and Butinone in 1489. We have then the familiar problem of collaboration by these very similar Lombards. Our author finds in this work but little Zenale, the greater master. A considerable portion of these paintings has lately been freed from whitewash, and it is hoped that other fifteenth-century frescoes which are known to exist in this church may also be uncovered. The article is one more contribution to our knowledge of an active and promising Milanese school, the orderly development of which was thwarted by the great apparition of Leonardo. In the same number is an excellent article on the Palazzo de' Clerici, Milan, that splendid monument of the early eighteenth century, pictured by Tiepolo and hung with tapestry of the time. The author, Ugo Nebbia, makes a valiant plea for Italian rococo; and, in fact, nobody who knows well the best eighteenth-century palaces of Venice will scorn this delightful form of decoration, at once so completely of its time and so racy of the North Italian soil.

Some few years ago, there was a distinct effort in England to revive not only the art of lithography, but the methods of the first successful publishers of lithographs. Artists issued their prints in portfolios or as illustrations in periodicals. Whistler led the way with his "Notes." There were collections of C. H. Shannon's prints, Joseph Pennell's sketches in Cornwall, W. Rothenstein's series of portraits. Annuals like the "Pageant," magazines like the *Art Journal* and the *Studio*, and Christmas supplements were illustrated by lithographs. Only two or three years ago, the Macmillans undertook to bring out original lithographs and etchings in a large and well-printed quarterly. But it was no use. There was no public, in England anyway, to support such publications or to justify editors of popular magazines looking to the art for popularity. Artists, who found the stone a sympathetic medium, continued to make lithographs, but issued them separately. Now, however, suddenly, a little group of artists and writers have discovered lithography, with all the pride of a new Columbus; are appalled by the fact that, though held in esteem on the Continent, it is neglected in England; but, thinking the knowledge of it increasing, have decided to encourage this knowledge by bringing out a periodical, called the *Neolith*, devoted solely to lithography, which they feel sure "will meet a growing need and stimulate a crescent interest." In the list of artists, given as contributors, are distinguished names, but only those of a few men who have, as yet, done much, if anything, on the stone: Clausen, E. J. Sullivan, A. S. Hartrick, Oliver Hall. Text is to accompany the prints, and, with a thoroughness that threatens the comfort of one's eyes, "the literary contents of the *Neolith* will be written out by Graily Hewitt" in a "script"—one would willingly sacrifice to good type—and printed by lithography. The publication will be quarterly and it will be edited by Mrs. Hubert Bland ("E. Nesbit") from Eltham. "The autumn of 1907" is the vague date given for the first number.

The first volume of Herbert Horne's study of Botticelli will be published immediately by Bell & Sons, and the second will follow before Christmas. Mr. Horne has been engaged on this work for many years, and has gone through a mass of matter in the archives of Florence and elsewhere. There will be photogravure reproductions of almost all Botticelli's genuine works.

In the volume on George Morland, in The Makers of British Art (imported by Charles Scribner's Sons), David Henry Wilson devotes himself rather to such rehabilitation of Morland's personality as may be possible than to any attempt at criticism. We are given no notion of what may be the qualities of Morland's painting except in so far as it is illustrative or literary. We hear a great deal about the "cheeriness" and the didactic value of the pictures, nothing about their technical merits. Such technical merits as might be visible in reproduction seem slender enough, but the man may have handled his paint well. On the whole one finds his present vogue rather incomprehensible and is inclined to imagine that the prices his works fetched during his own lifetime were as good as they deserved.

In "Art and the Camera" (The Macmillan Co.), Anthony Guest adds one more to the many attempts to tell amateur photographers how to become artists. We find his remarks rather vague and inconclusive, though well meant. They are true enough, but they lead nowhere in particular. His illustrations are very good and many of them really "artistic," whether or not they are "art." For the most part, also, their artistic quality is attained by legitimate means, by intelligence in selection, in lighting, in focussing, developing, and printing, rather than by that subsequent work on the plate which generally reduces it to mush and attains to something as like art as a "crayon portrait," at the expense of all the virtues of photography as a record of fact. Most of these works by British amateurs show real taste and feeling and refreshingly little attempt to make their work look like poor charcoal drawing or etching rather than good photography.

The National Academy of Design will hold its winter exhibition in the galleries of the American Fine Arts Society, West Fifty-seventh Street, from Saturday, December 14, to January 11. Varnishing day will be December 13. The jury of selection will be Hugo Ballin, Edwin H. Blashfield, Emil Carlsen, Carlton T. Chapman, Walter Clark, E. Irving Couse, C. C. Curran, Francis Day, Henry Golden Dearth, Frederick Dielman, Frank V. Dumond, C. Warren Eaton, Ben Foster, August Franzen, Albert L. Groll, Childe Hassam, William H. Howe, George W. Maynard, Edward H. Potthast, Henry L. Prellwitz, Robert Reid, Walter Shirlaw, C. Y. Turner, Robert W. Van Boskerck, A. T. Van Laer, Robert W. Vonnoh, and Henry O. Walker. The hanging committee will be composed of H. Bolton Jones, Henry B. Snell, and Karl Bitter.

The National Arts Club in collaboration with the National Society of Craftsmen will hold an exhibition of arts and crafts at No. 119 East Nineteenth Street from November 20 to December 11, not only to show every branch of modern craft work, but also to illustrate the different periods of development. During the exhibition prominent leaders in the arts and crafts movement will deliver lectures, and eminent craftsmen will give practical demonstrations of the work. Any further information with reference to the exhibition can be obtained from the special committee, No. 119 East Nineteenth Street, New York.

The Pennsylvania Academy of the Fine Arts and the Philadelphia Water-Color Club will hold, under joint management, an exhibition of water-color, black and white, pastel, and drawing at the Academy, December 2 to December 28. The jury of selection consists of Hugh H. Breckenridge, Hermann Dudley Murphy, Violet Oakley, Frederick Ballard Williams, Thomas P. Anshutz, and Carl Newman; the hanging committee of George Walter Dawson, Blanche Dillaye, and John J. Dull.

The autumn season in the London galleries has opened with a tribute to age. In the eyes of the British public, the late Sydney Cooper was a hero, because he continued to paint sheep with mistaken minuteness until well over ninety. Today, William Callow has taken his place, and a show of Mr. Callow's water colors, dating anywhere from 1841 to 1904, is bringing the usual success to the Leicester Gallery. Mr. Callow has almost completed his seventieth year in the Old Water Color Society; he was praised in 1839 by Thackeray, who found him better than Harding, his master; he is ninety-five years old. At this ripe age he is giving his first "one-man" show. When it is a question of his work, there is no doubt that, though never an Academician, he comes more legitimately by his reputation than Sydney Cooper. He has an eye for the picturesque in landscape and architecture. He is often happy in his point of view, always careful and conscientious in his record. His drawback is that his career began just when the early British water color was at the height of popularity; and that, with the Briton's inborn conservatism, he has never had the courage to abandon the convention in which he was trained. His work has the smallness, the drawing-book preciseness, the over-elaboration of the men of his generation. The work of the earliest painters in water color, who really did not paint, but washed over their pen or pencil drawings with color, was followed by work of a minuteness of detail, of an excess of finish, that is simply tedious. One or two of Callow's drawings, especially a canal in Venice, suggest what he might have done if less timid, so full and broad are they in treatment. But to him drawings of this kind were notes, memoranda, for his own use, not to be exhibited; and he will be remembered, above all, as the typical representative of the methods of an especially inartistic

phase of the early Victorian period. Even so, however, his drawings have the grace of sincerity.

An important collection of engraved portraits of rulers of Holland and the Low Countries will be sold at auction in Amsterdam on November 26 and 27. This is the first portion of the collection of A. J. Nyland of Utrecht, which is said to be the finest of its class in Holland. Included are a number of portraits of Napoleon I. and Louis Napoleon, King of Holland. The other parts of the collection to be sold later comprise portraits of celebrated persons of the Netherlands, statesmen, artists, writers, etc., historical prints, and the library proper.

Finance.

THE BANK PANIC AND ITS PROBABLE SEQUEL.

If the "twenty-year-cycle" theory in regard to panics is correct—and the precedents are abundant—the markets are not now confronted with a depression of the more serious sort. That should be due, by the calendar, some time around 1913, and from this fact business men in general may take heart. Between current events and those of 1893, for instance, there is no close resemblance. The crisis of that year was accompanied and preceded by collapse of the underlying props of the whole financial structure, by threatened repudiation of gold payments by the Treasury, deficits in public revenue, heavy shrinkage in profits in every sort of industry, and widespread doubt as to the country's future. Clearly the present situation is no duplication of 1893.

Probably the majority of old-time Wall Street men, last week Wednesday, would have said that the scenes of that exciting day most closely resembled those of 1884. Stocks had been falling almost continuously, since the end of 1883, and the markets for money and exchange had been exceedingly unfavorable. Public confidence in certain high financiers and railway men had been seriously shaken; yet no very profound unsettlement had occurred. On the 6th of May, the failure of Grant & Ward, a firm made up of Gen. Grant, his sons, and a young adventurer in whom they had confided, startled the whole community—especially when the $20,000,000 liabilities of the concern were found to be backed by practically no assets, and when the Marine Bank on the same day closed its doors because of its president's entanglements with Ward.

The public and the market received this shock with what looked in retrospect like composure—in this resembling the reception of the Mercantile Bank troubles. What did occur, however, was a general turning of bank directors to the investigation of their own and affiliated institutions, again much like what occurred at the beginning of last week. On May 14, this urgent searching disclosed two startling facts—that the president of the Second National had stolen its securities for use in personal speculation, and that the president of the Metropolitan National had so far improperly placed its resources in securities of a Southern railway system under his control that the bank was no longer solvent. What happened next was a still closer duplication of what has occurred this week. A run on other banks began; depositors hoarded money; in the resultant general panic, a good part of Wall Street failed to get loans at any price. At one hour on that panic day, 4 per cent. was bid and paid on the Stock Exchange for use of a not enormous sum of money during the next twenty-four hours—which was equivalent to an annual rate of no less than 1,440 per cent. Despite this extraordinary bid, interior banks took fright. Their withdrawals of cash, with the hoarding by depositors which went on simultaneously, cut down cash holdings of the New York banks from $86,900,000 on May 10 to $67,500,000 on May 24.

If, then, the New York bank panic of 1884 provides the closest analogy in our history to the events of the present week, it will be interesting to see by what means the tangle of that year was straightened out, how soon the danger passed, and what the sequel was. In the first place, the New York Clearing House banks agreed to pool their assets, issued $26,500,000 loan certificates to banks in its membership whose cash reserve had been exhausted, and agreed to accept such certificates from one another in payment of daily balances at the Clearing House. At the same time, within two days of the severest strain, Europe became a heavy buyer of our stocks at the bargain prices. Exchange on London, which had been ruling above 4.88, and compelling gold exports from New York, fell abruptly to 4.83, the gold-importing point; within a week, gold was on its way to America from Germany and England, and what was of even more importance, Europe took over, in great quantity, the loans of the New York banks. On Saturday, May 24, the New York banks reported a deficit in reserves of $6,600,000; it was reduced to $1,900,000 the ensuing week; on June 7 the surplus was restored, and by July it had risen to $16,300,000. In June, call money ruled at 4 per cent. or lower, time loans at 5 and 6 per cent., and the Wall Street strain was over.

What followed later? A quiet financial summer, largely due to the very bitter Presidential election contest, yet with a vigorous rise on the Stock Exchange even in July. In 1885, after a period of abundant New York bank reserves and of call money rates as low as ½ of 1 per cent. during seven successive months, a great recovery ensued, with all the world once more watching the signs of American prosperity.

William Morton Payne's
Greater English Poets of the Nineteenth Century

A popular study, including Wordsworth and his contemporaries, Browning, Tennyson, Arnold, Rossetti, Morris and Swinburne. $2.00 net, by mail $2.10.

"Always fair minded and dignified, these essays are among the most interesting of their kind, Singularly sound and helpful."
—*Providence Journal.*

HENRY HOLT & CO. 29 W 23d St. NEW YORK

NEW EDITION

An Inquiry Into Socialism

By THOMAS KIRKUP, author of "A History of Socialism," etc. Third Edition, Revised and Enlarged. Crown 8vo. Pp. viii-216. $1.40 net.

LONGMANS, GREEN, & CO., New York

Ready Nov. 9th

Napoleon

By MAX LENZ, Ph.D., of the University of Berlin.

8vo. Illustrated. $4.50 net.

In this brilliant study of Napoleon's character and career Dr. Lenz demolishes several accepted legends. A leading German critic has classed this book with Lord Rosebery's well-known monograph, as one of the most striking contributions to Napoleonic literature made in our time.

G.P. Putnam's Sons 27 & 29 West 23d St., N. Y.

OUR NEW LIST IS FREE

It embraces several hundred good books in Bibliography, the Book Arts and General Literature, with an excellent selection of English Remainders—all attractively priced. It's a good thing for you to have. Just your name on a postal.

JUST PUBLISHED

French Colonists and Exiles in the United States

By J. G. ROSENGARTEN
Author of "The German Soldier in the Wars of the United States," etc.

An important historical monograph, in the preparation of which the author has gone carefully over the work of recognized historians and has gathered together an array of facts about the French Colonists and the Huguenots, who brought so much real worth of character and ability to the United States.

12mo. 234 pages, cloth, gilt top, $1.00 net. Postpaid, $1.08.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 7, 1907.

The Week.

The results of the elections in this part of the country fulfilled all expectations. Tammany swept New York city. The alliance between Hearst and the Republicans under the leadership of Herbert Parsons, was prompted neither by conscience nor conviction—simply by appetite for office. This unprincipled union disgusted many natural opponents of Tammany. They felt no interest in putting into the principal office, that of sheriff, Max Ihmsen, a creature of Hearst's. Consequently, the campaign was listless, and Tammany met with little or no effectual resistance. In Massachusetts the split in the Democratic party assured the victory of Guild. In New Jersey, the Republican nominee, John Franklin Fort, is apparently chosen Governor, though at this writing the figures are very close. At any rate, there has been a heavy cut in the Republican vote, for Stokes was elected Governor two years ago by a majority of over 50,000. To this loss of Republican strength many causes contributed. For one thing, the Republicans, by their attitude on the excise question, had offended many citizens, especially the Germans. Then, too, Judge Fort, the Republican nominee, was looked upon as the candidate of the old Republican machine, backed by the corporations—the machine that in the convention had defeated Senator Everett Colby and the reformers. Katzenbach, therefore, received many votes that were not so much a compliment to him or his party as a rebuke to the Republican managers. Finally, thousands of New York business men, resident in New Jersey, cast their ballots for Katzenbach by way of showing their displeasure with the national Administration, which, since the recent panic, has been intensely unpopular in New York commercial circles.

It is announced on authority that President Roosevelt is "rewriting" those parts of his annual message which deal with finance. This shows, even more strikingly than bank failures and money stringency, what a panic can do. That the President perceives the need of a change of front is much to the credit of his teachable spirit. He displays none of that haughty attitude of the public man, face to face with facts undreamed of in his philosophy, which animated Joseph Chamberlain when he said: "What I have written, I have written." But it is characteristic of Mr. Roosevelt that he proposes to "reassure" the public by large citations from his former messages and speeches to prove that he has always been the most conservative man going. But this will hardly go to the root of the trouble, which, in so far as he is responsible for it, has not been due to his words so much as to his manner and general attitude.

Rumors of an extra session of Congress, though the regular meeting is but four weeks away, seem to be without foundation. It would be difficult to name a sound reason for anticipating the December date. The analogy of 1893 has little validity. Then there was a definite peril to be removed—the silver-purchase law—and the sooner Congress set about the work the better. To-day, the situation is entirely different. As even Mr. Bryan points out, with delightful innocence, no one now questions "the quality" of the currency. There ought undoubtedly to be legislation designed to make the currency more responsive to the needs of business, and to provide for some form of issues on bank assets in an emergency, but that would look necessarily to the future, and could act only as a mild palliative for what has already occurred.

"There is plenty of money in the country, and Wall Street is no longer able to corner the currency market." This, from the Atlanta *Constitution*, of a fortnight ago, is a fair sample of the ludicrous nonsense that was talked by Southern and Western newspapers, just before the financial stringency gripped their part of the country, too. The idea that what was happening in the financial centre of the country was only a "flurry" among speculators had been sedulously cultivated. But the facts have now made their way even through the thickest skull. It is seen that nothing is so fluid and sensitive as capital; that a great shock to credit in one part of the country is certain to be reflected elsewhere. We are all bound up in the same bundle, financially as well as politically. Hence it was that the boastfulness of the Western newspapers died on their lips as they saw the conditions in New York reproducing themselves in Chicago and San Francisco, in Oregon and Oklahoma. Wall Street has, of course, its times of senseless speculation, of which the ups and downs may not immediately signify; but when through a long period the Wall Street barometer is set steadily for foul weather, prudent people everywhere make ready to go in out of the rain.

Secretary Straus has decided that eight lithographers, held at New York as imported contract laborers, are entitled to admission. His opinion is apparently good law, under the opinion of the Attorney-General, and is certainly good sense. There is at present a scarcity of such labor in this country, the Secretary holds, and therefore employers are permitted to go abroad for it. This sounds reasonable, but no doubt it will appear the height of unreason to trade unionists. They will point out that the alleged scarcity of lithographers was caused by a strike, and hence that the government, by allowing foreign workmen to be brought in, puts itself in the attitude of that most offensive of all beings, a strike-breaker. Moreover, a scarcity of labor is the very thing the unions aim to produce. To keep the supply short and wages high in consequence, and to encourage the men to be slack and insubordinate, is of the very essence of unionism as it too often manifests itself in this country. Things have come to a pretty pass if the Secretary of Commerce thinks he can interfere with these beneficent purposes.

The announcement by the Governors of North Carolina, Georgia, and Alabama of the successful conclusion of an agreement for coöperation in railroad regulation and investigation affords a new contrast between State and Federal methods. The report adopted by the Association of State Railroad Commissioners on October 11, it will be remembered, expressed the belief that all past general reductions in interstate as well as intrastate tariffs "have been brought about by the affirmative action of State authorities." Yet this has been done largely without formal agreements between the States or uniformity of policy among them. The plan of these Southern States is to make their policies uniform within their respective borders and see if they cannot get the railroads to bring their interstate rates into conformity. But jurisdiction over interstate fares and rates is, of course, lodged at Washington. These States are rash enough to believe that without any legal power of compulsion whatever they can make a better job of regulating the railroads which cross their lines than the Interstate Commerce Commission, with all the new powers granted by the act of last year.

The city which is to entertain the next Republican National Convention is expected to provide a hall seating 14,000 persons. This requirement is announced by Harry S. New, who, as acting chairman of the National Committee, is hearing the conflicting claims of the several cities. "There was no contest in the convention of 1904," says Mr.

New, "but there will be in the next one, with the probability of a much larger attendance." The last convention was a mere jollification meeting. It had nothing of any importance to decide, and the presence of fifty thousand howling dervishes would not have impaired its usefulness. The next one has very important questions to settle. It should exemplify the statesmanlike poise and calm judgment of a great party. Consequently, according to the prevailing logic, it is in order to bring in all the more outsiders, to confuse and deafen, if not to coerce and terrorize, the delegates. If the shouts in the galleries, the "demonstrations" timed by stop-watches, the flags and the marchings really reflected popular feeling, or if any one supposed that they did, the case would be different. But everybody knows how convention tickets are distributed and the galleries packed with partisans of the various candidates. The National Convention has come to be one of the important parts of our scheme of government. Some day the parties are likely to realize the absurdity of trying to conduct a dignified deliberative body in the midst of an hysterical mob.

The bulletin which the Census Bureau has issued in regard to the printing and publishing industry shows that in the half-decade between 1900 and 1905, when the present figures were gathered, there have been a great many unobserved changes in the output of the press in this country. Among the most striking features to which this bulletin calls attention is the tremendous increase in the branches of printing which bear no relation whatever to "literature." There are 792 city directories now published annually, and they use a total of 12,000,000 sheets of book paper. Telephone books use 133,000,000 sheets, and street-car transfers alone 30,000,000. The growth of the "mail-order" business has vastly increased the editions of catalogues printed, and in general the new resources of the printer's art have very greatly increased the amount spent annually on high-class commercial printing. Yet, though book and job printing increased by nearly 40 per cent. in five years, as measured by the value of product, the newspaper and periodical industry increased 46 per cent.; that is, faster still. Yet this difference itself can be accounted for chiefly on the commercial side. Prior to 1890 "subscriptions and sales" accounted for more than half of the total "value of products," whereas in 1905 56.7 per cent. of the return from newspapers and periodicals came from the advertising. This fact underlies any consideration of existing tendencies in the periodical press. Something like three-fourths of American periodicals are and always have been weeklies. The proportion of individual weeklies has fallen off only a little since 1900, but on the basis of circulation these and all other classes have been eclipsed by the monthly magazine:

> For the period from 1900 to 1905, monthly publications reported an aggregate circulation per issue (upon a decade basis) five times as great as the increase shown for the decade from 1880 to 1890, and more than four times as great as the increase shown by the daily class for 1900 to 1905, and over ten times as great as that of the weekly. Thus, in 1905, the aggregate circulation of the monthly outstripped that of every other class, and amounted to almost half the total circulation per issue of all classes of publications in the United States.

One of the most significant developments is the rise of the Italian and Polish newspapers. To make the "undesirable" immigrant into a newspaper reader may not alter his nature, but it sometimes does furnish a starting point for his assimilation. It might be added that some of these hyphenated American journals furnish a good deal more sensible and edifying reading than the sensational American papers which the immigrant's son may peruse so greedily.

The bills which Gov. Stokes has just signed providing for the direct primary in New Jersey and for practically a popular choice of United States Senators are both results of the "New Idea" movement. Both have come to be stock measures of political reformers, and the list of States which have taken them up has to be revised every year. The new method of Senatorial choice in New Jersey will doubtless attract peculiar attention, for the connection of New Jersey's Senators with the financial interests which the "New Idea" men are fighting is more obvious and more direct than in most States. The new plan is a compromise between the ordinary methods of legislative choice and such an extreme enactment as that of Oregon. It does not try to evade the Constitutional provision which confides the choice of Senators to the State Legislatures. Senatorial nominations are to be made by petition, and the names of Senatorial candidates placed on the primary ballots. The individual member of the Legislature, however, may be bound or not, as he chooses. He may file with his nomination papers a pledge that he will support the candidate for Senator who is the choice of his party within his own district, or the candidate who is the choice of the party in the State as a whole, or he may remain unpledged. Thus the Senatorial primary may have much or little influence. In a year of indifference it would be possible for a Legislature to disregard its results altogether; but in the case of a vigorous contest the plan provides a simple and effective means for the voters to make their preference felt.

The "tobacco war," which is no longer to be treated as merely market news, involves another test of the strength of combination in the agricultural field. For the last two years a great deal more tobacco has been raised than the buyers are willing to take at prices satisfactory to the growers. In the effort to hold up prices, reliance has thus far been placed in the pooling of crops and an agreement between growers not to deal individually with the buyers. The depredations of "night riders," so often reported of late, have been committed against farmers who violated or refused to subscribe to this code. But no pooling agreement, of course, can alter the stubborn fact that stocks of tobacco are too large for the immediate demands of the industry. The next stage is to stop production. Agreements not to raise tobacco in 1908 are already reported from some localities. Of course, at every stage the tobacco war has followed the tactics of the hated industrial combinations. But even under pressing necessity, an agreement between individual growers is enormously harder to enforce than one between a relatively few manufacturing establishments.

A terrible discovery has been made in the University of Berlin. The "American professor" sent from Harvard, in pursuance of the policy of international exchange, is no American at all! Professor Schofield is, in fact, a Canadian. Anybody can see what grave consequences are involved. The Harvard authorities, it is true, weakly explain that they had thought of Professor Schofield only as one of their most distinguished scholars, and say that questions of technical citizenship ought not to enter into the interchange of professors. This they contend is "academic," and not "diplomatic." But that is absurd. Who cares a straw what our exported professors know, or can teach? They are sent abroad to brag for their country, to gush for her, and to be, for the time, international figures, typifying the *entente* between two mighty peoples. Evidently, therefore, they must be Americans, *vieille roche*, or their mission will be worse than a failure. We suppose that it is too late to correct the blunder now, but one can fancy the Kaiser's feelings when this American professor appears at court, not wrapped in an American flag.

The *Daily Princetonian* chastises with scorpions those undergraduates who have lately been recreant to the "Princeton spirit":

> At yesterday's practice, with the victorious shouts of the Cornellians still in our ears, eight seniors, eight juniors, and some twenty-five underclassmen sat in the stand, mute spectators of the work of the team; while in the comfort of the dormi-

tories sat the undergraduates of Princeton, every one duty bound to be at the field to cheer the team in its efforts to make up for Saturday's defeat and force the season to a victorious conclusion. Where were the seniors, to whom every one looks as the leaders of the spirit of Princeton? Where were the juniors and the sophomores and the freshmen? Where were the cheer leaders, the men primarily responsible to the team for the active support granted it by the undergraduates?

Where, where was Roderick then? But the trouble is that in football no man's bugle horn is worth a thousand men. Football practice is not a success unless you have the thousand (count them) there in the flesh. Actors can often do better at rehearsals than when the audience is on hand; baseball players make as many star plays in practice as at any time; track athletes seldom equal at meets the records made in private; professional jugglers perform their new feats a thousand times at home before they dare attempt them on the vaudeville stage. But football players without at least fifty "rooters" per capita on the side lines are listless and ineffectual creatures.

If there is to be a great railway strike in England, it has been preceded by a tremendous amount of thundering in the index. The organization on either side, the negotiations, the rival statements, the appeals from the innocent third party—the public—have been going on a long time. Such things usually lead up to a settlement, not a rupture. Though the railway employees have voted by a very large majority for a general strike, no date has been set, and the way is still said to be open for a compromise. The chief point at issue is "recognition" of the union. The railway officials say that they will meet with representatives of their own employees, but will not deal with the Amalgamated Society of Railway Servants, covering all the roads. No one can deny that a paralyzing strike on the English railways would be exceedingly ill-timed at present. The strain on capital is serious enough without adding that burden. That is one reason why a settlement of the dispute may be the more easily reached.

The Anglo-Russian agreement is reported to have been received with a good deal of grumbling by the radical element in the Persian Parliament. The guarantee of the nation's integrity and independence by the contracting parties is welcomed, but the question is raised by what right the two Powers have proceeded to parcel out the empire into zones between themselves. "Supposing," one deputy is represented as asking, "we should be inclined to grant a concession to France, Germany, or Belgium within one of the reserved zones. Should we not be in a position to do so?" The answer is, of course, that, officially, Great Britain and Russia have not designated certain regions as their exclusive spheres of influence as against every other Power, but only as against each other, each one agreeing not to compete with the other in its assigned sphere. Should France seek to obtain a concession in northern Persia, nothing in the Anglo-Russian agreement imposes a restraint on the Persian Government.

Signs of a reawakening terrorism in Russia are multiplying. The outside world can understand why political assassination should suggest itself to the revolutionists as a satisfactory method of combating the autocracy, without at all taking the same view of its effectiveness. The revolutionists profess to pursue, through organized assassination, a two-fold object. The temporary aim is to bring about, through terror, the mitigation of specific intolerable conditions, such as the frightening of prison officials into a more humane treatment of their political prisoners. Under this head would come the recent assassination of the Chief of Prisons, Maximoffsky, or of the dramatic way in which, *seriatim*, the blow has fallen upon the men connected with the torture of the famous Mlle. Spiridonova. The broader aim of terrorism is to disorganize the entire governmental system by reducing the bureaucracy to a general state of nervous prostration. The revolutionists may have been partly successful in the first object, but experience should have demonstrated by this time that nothing permanent can be gained from campaigning by panic methods. Men who are frightened soon forget their fear—not even excepting Nicholas II. As an instance in point, the very liberties which were granted in 1905, in a moment of panic, have since been revoked in greater part as the government has recovered confidence. To frighten the government and to keep it frightened would be good tactics—but for that, individual campaigning by assassination is altogether inadequate.

The resignation of the Michelsen Cabinet in Norway deserves commemoration on grounds of pure historic interest. That Ministry was the first organized under the restored independent Norwegian monarchy, and its head was the man who had most to do with the revolution of June, 1905, which effected the break-up of the Scandinavian dual monarchy. Premier Michelsen's retirement is said to be due to the condition of his health and to possess no political significance; and the continuity of government policy is assured by the appointment as Premier of M. Loevland, who was Minister of Foreign Affairs in the late Cabinet and the leading Norwegian representative in the negotiations with Sweden for the settlement of questions arising from the dissolution of the Union. Since that event Norway has given the outside world little occasion for comment, aside from the travels of her young and popular King. Rumors of friction with Sweden over the terms of the military convention embodied in the treaty of separation, and of extensive military preparations on both sides, would appear to have little basis in fact. Time makes it apparent that separation has brought good both to Norway and Sweden. The former, with the most advanced democracy in Europe, is free from grave political problems, and at liberty to devote itself to the development of its economic interests. In Sweden the shock of separation has had a salutary effect on public life by supplying a powerful impulse towards democracy and the general reorganization of the national life in accordance with modern conditions.

Hungary is never without her critical problem. The agreement with Austria has just been concluded, after years of bickering, when the question of universal suffrage assumes dimensions of first-rate importance. The great popular demonstration arranged by the Socialists of Budapest two weeks ago has not been without effect, and within a few days Count Andrassy, Minister of the Interior, will have laid before the Chamber the Government's proposals for electoral reform. That the Magyar majority will try to concede as little as possible is taken for granted. The universal-suffrage agitation, combined with the Socialist movement, has its main strength among the non-Magyar nationalities of Hungary—the Slavs, Rumans, Germans, etc.—and the present ruling classes cannot but look forward with anxiety to a reform that would raise the number of Hungarian electors from one to four millions. The question of universal suffrage was injected into Hungarian politics early in 1905 by the extra-parliamentary Cabinet of Baron Fejervary, in its struggle with the Parliamentary majority led by the Independence party. Brought forward largely as a threat against the Magyar leaders, universal suffrage was seized upon by the masses of the nation and made an unavoidable issue. The amazingly rapid triumph of universal suffrage in Austria has stimulated the Hungarian movement. That the Magyar rulers will have to yield sooner or later there can be little doubt; but there is no reason why, with their exceptional talent for politics, they should not succeed in turning universal suffrage to their own advantage, as Francis Joseph has done in Austria.

SAFEGUARDING THE FUTURE.

The financial tangle seems to be slowly straightening out. But it is not too early to bring to attention two important measures of reform in our financial system generally, the imperative need for which has been shown by recent events. Of one we spoke a week ago: the radical remodelling of the trust-company law. No intelligent man will now deny that this law, even as amended in 1906, is in need of complete overhauling; and the question how to separate the trust business of trust companies from the banking business, pure and simple, ought at once to be seriously considered. The prime defect, even of the Wainwright law for a 15 per cent. reserve, one-third in cash, was that it dealt properly neither with such trust companies as are only banks under another name, nor with such as are doing a simple trustee business. Applied to the one, this statute was inadequate; applied to the other, it was in some respects too stringent. Moreover, it did not in the least solve the problem of admitting the trust companies as members of the Clearing House; for the rule and tradition of that institution is that all banks in its membership must maintain a 25 per cent. cash reserve.

Yet the experience of the last two weeks proved that membership in a clearing house, on the part of trust companies doing a banking business, means much more than local prestige, and more even than the gaining of such benefits as are conferred by mutual protection in a time of stress. People have wondered how it was possible that the "run" on the trust companies should have continued during four or more successive days, when two days have hitherto made up the longest record of a bank run. The answer is that the long lines before the companies' doors were not made up exclusively of panic-stricken individual depositors, but that the companies themselves, having withdrawn in the past four years from even indirect connection with the Clearing House, had left the exchange of checks and balances between themselves and other institutions to be conducted by messengers at the tellers' windows. This being so, these messengers, engaged in the very routine business which clearing houses were invented to perform, added by their presence to the lines which were reckoned "bank runs." To render forever impossible the repetition of such events, the shortest road is the rigid separation of the trust and banking departments of the companies, the application of the banking law's full requirements to the second of those departments, and the admission of the companies on that basis to the Clearing House.

If reform in the trust-company law has been shown to be imperative, so has reform of the currency. We are far from sympathizing with the idea that a rigid bank note system, such as the country now possesses, was in any respect a cause for the breakdown of credit. Never, in our opinion, in a case of grave financial disturbance has there been less ground for putting the blame on the currency. But if an inelastic currency did not cause the trouble, it may nevertheless have impeded natural means of quick relief; and here the defects of our present law are serious. What the markets needed, and still need, is actual currency; and when hoarding by scared depositors has begun, nothing but an elastic bank-note-issuing system will instantly and automatically meet such requirements. Last week Comptroller Ridgely offered special facilities for national banks to take out new circulation under the present law. The step was well-advised. But the existing machinery, with the requirement of bond collateral, is awkward, and the process inevitably long. In 1893, when the same appeal was made in the July panic, and when $9,000,000 new notes were actually taken out by New York city banks, it was September before the greater part of them went into circulation, and by that time the panic was over and the notes no longer needed.

Considered as an emergency provision, the currency plan approved by the New York Chamber of Commerce a year ago, and by the National Bankers' Convention last September, would amply meet the needs of such occasions. Like the Imperial Bank of Germany's "emergency circulation," which has repeatedly done quick service in averting or allaying a panic, the plan for permissible note issues—backed by an institution's general assets, equal to 40 per cent. of a bank's outstanding bond-secured circulation, taxed at 2½ per cent. per annum, and supported by a cash reserve of 25 per cent.—would at this moment be an invaluable recourse at New York, had it been made available by law. After what has happened, it will be impossible for Congress at the coming session again to neglect the subject.

JOHN MORLEY ON INDIA.

It was a singular political fate which made John Morley responsible for the government of India at a time of unrest and danger. Himself an old Radical, sworn enemy of everything that looks like oppression or tyranny, it has been his official duty for the past year, as Secretary of State for India, to employ every resource of the law against seditious agitation. He has laid a heavy hand upon disturbers of the peace. He has banished native leaders without trial. To every appeal to countenance anything approaching disorder, he has presented an iron front. In his official communications, as in his statements in Parliament, he has borne himself as a resolute and unyielding ruler.

Many of his old friends and admirers have been somewhat troubled by this uncompromising attitude. Mr. Morley himself seems to have felt the need of explaining and defending his course, for he went down to his constituents in Arbroath the other evening, and made a long speech on the whole situation in India, and on his methods of dealing with it. Personally, he took the position of a man who had abandoned not one principle which he had ever advocated. To be a member of an autocratic government was not an inconsistency, he implied, for a man of radical convictions, provided he clung to them all the same, and applied them wherever possible. In this sense, Mr. Morley's defence was like that of all political opportunists, using the word in its good sense. He might say of himself, as another did: "The ship swings on the tide, but the anchor holds."

Mr. Morley's great point was that it is the government's bounden duty to put down disorder with a firm hand. If India were to become self-governing tomorrow, and one of her reform leaders were to be at the head of the Administration, the obligation to repress violence would be the same. To maintain order is essential to anything like future progress. The one thing that the Secretary for India has dreaded was to hear "through the dark distances the roar and scream of confusion and carnage in India." In doing his utmost to prevent that, Mr. Morley has kept his eye close on the facts before him, and has refused to be misled by fallacious analogies. People have pressed upon him the case of self-governing Canada. He has been asked how, holding his well-known views about Ireland, he has been harder upon the Hindus than upon the Irish Nationalists. But his answer has been that there is no such thing as a political panacea. Because a doctrine, or a course of action, is true and vital in one set of circumstances, it does not follow that the same will hold in a completely different set of circumstances. But, in all circumstances, order is the first law of liberalism and progress as well as of heaven.

While firmly insisting upon this, Mr. Morley keeps his mind open to the significance and possibilities of the native movement in India. This he refuses to check, so long as it confines itself to orderly methods. Many, he says, have protested to him against the license accorded to native newspapers and speakers. Why doesn't he stop it? Orientals cannot understand that sort of liberty, and will only abuse it. But Mr. Morley's reply is one that Americans like Senator Lodge, who are all the while saying that we must govern so as to "impress the Oriental imagination,"

would do well to bear in mind. Whether the Orientals understand it or not, said John Morley, it is a Western experiment that is being carried out in India. The government there represents Western civilization, with its principles and practices, "and I for one will not be hurried into repression by the argument that Orientals do not understand this toleration."

Hence every facility for self-improvement and self-expression is to be guaranteed to the Hindus. Of what schools and the press can do for them, Mr. Morley is in no wise afraid. Moreover, reform schemes are being put into execution at the very time when seditious movements are dealt with sternly. The various Indian princes and protected states are to be left much more to themselves, to look after their own affairs as far as possible. Natives are to be drawn into the government. Two Hindus have been appointed members of the Council of India—for the first time in history. Furthermore, the government has sent out a circular to elicit opinion as to what the natives really want as a step toward self-government. The unrest in India will disappear if it is mere froth; but if it is the result of "wholesome growth" towards political consciousness in that vast population, then it will continue, and will translate itself into new forms of self-government, with which enlightened and liberal Englishmen cannot but sympathize.

A man of philosophic bent like Mr. Morley cannot speak of the problems of India without throwing light upon others resembling them. To see that order is established, and the opportunity given to settle all political questions in peace, is the first governmental duty. But with this goes the obligation to allow education and democratic aspiration to have free play and work out their natural fruits. Disorder is most criminal when the ends aimed at can be reached, though more slowly, by peaceful agitation and political change. Therefore, the repression of violence carries with it the correlative duty to make the bounds of freedom wider yet. And democracy must not be afraid of its own children, East or West. If the same striving that makes men desire to govern themselves in the Occident impels them to seek control of their own affairs in the Orient, it cannot be thwarted there any more than here.

HARDEN'S VICTORY.

Maximilian Harden's successful defence of himself in the libel suit brought against him by Gen. von Moltke is certain to have far-reaching consequences. The man himself has wielded a brilliant pen not only in his widely circulated weekly, *Die Zukunft*, but, before he founded it, in his essays on politics and education, signed "Apostata." Under this name they were published in book form in Berlin in 1892 and have run through several editions. A devoted adherent of Bismarck, he employed against Caprivi all his great powers of satire and irony. But if the ability of his pen has been acknowledged and his style likened to that of Heine, there is considerable difference of opinion as to the man and his character. He is noted for quarrelsomeness. Until 1886 he bore his family name of Witkowski. On account of family dissensions, he then called himself Harden; but feuds, long and wearisome, and almost endless literary and political disputes, have marked his career ever since. Frequently these contests have ended in bitter personalities, and as a result he generally fights his battles alone.

The fact that he was born a Jew, and that his family still belongs to the orthodox religion, although he himself avowed the Christian faith at the age of sixteen, has intensified official dislike of him, for in Berlin military and bureaucratic circles a Jew is almost as much hated as in Vienna. But he would have been severely frowned upon by aristocrats and autocrats even if he had come of the oldest Protestant lineage. He who assails governmental conditions and social privilege must expect to be hated as well as feared, and to suffer in turn attacks upon his own character and motives. Ugly allegations against Harden the man and discreditable reasons for his "pernicious activity" have for a long time been spread through the land. None the less, whether he is a mere sensationalist or an honest "muck-raker," his following has grown steadily year by year. It is not, however, to Herr Harden's credit that the great liberal and radical newspapers of Germany have held aloof from him and his crusades. Frequently they have sympathized cordially in a particular aim and have joined him in his attack; yet their support has always been restrained as if they doubted the man and were uncertain as to his political principles and their fixity.

That Harden has now made precisely the ten-strike which he has always hoped for, is plain. He is a popular hero; Germany talks of no one else; the presses will not be able to print enough copies of *Die Zukunft*, and he can correctly assert that when he thrust his probe into the festering mass of corruption he has now laid open, he was performing a great public service. His plea that when, like a true knight of the pen, he put to utter rout and shame the base "Knights of the Round Table," he was, at the risk of his own career, coming to the rescue of his sovereign, will be accepted by the masses. It will not help him with the Kaiser, who will bear him no thanks. The private life of the Prussian royal family has for decades been marvellously correct when contrasted with the license of other courts; and many a well-authenticated story of the Empress's concern for the moral welfare of her sons has made almost a noble figure of an otherwise uninteresting personality. But silence on Harden's part would obviously have pleased the Kaiser better.

As for the Kaiser, there is, in all this foul scandal, no reflection upon him, except on his failure to find out for himself what is happening, and in his judgment of men. As to his knowledge of current events, people are generally aware that his reading is limited; the things that will please him have been laid before him. Liberal journals, Socialistic organs, newspapers representing other opinions than his own and those of his Chancellor have rarely if ever reached his eyes. *Die Zukunft's* charges were brought to his attention by the Crown Prince long after they had appeared. As to his personal associates, his cordial relations with some of the leading steamship men and a few young American millionaires have provoked the criticism that he is interesting himself only in foreigners and in captains of industry. The German public, however, does not desire that he should choose his friends solely from official circles, as did some of his predecessors, but rather that he should see more of men of courage and learning, and of liberal views even though of modest achievements.

That the Social-Democratic newspapers are now stocked as never before with ammunition for their assaults on autocracy and its methods is evident from the zeal with which they have already buckled to their work. These journals have the ability to make their evidence and their arguments tell to the utmost. What will, however, shock people more, perhaps, than the frightful immorality revealed is the part the army has played in it all, and the abominable orders private soldiers were compelled to obey. For some time past there have been whisperings that all was not well in the service, and this last revelation will increase public anxiety. The nation as a whole is intensely proud of its troops, but since the Kaiser has done so little to check fast living, extravagance, and the caste spirit, the general demand for prompt reform in this direction will be much strengthened. It is characteristic of Harden, however, that he avows to-day that he is but little concerned with the abnormalities revealed; they draw from him but mild indignation. It is the political results with which he is concerned heart and soul.

OUR COMING MUSICAL DELUGE.

"One thing is certain," said a prominent concert manager the other day, "there are too many artists, entirely too

many, in America this season. Somebody must suffer." When one looks at the list of pianists, violinists, and singers who are to be heard here, one cannot help agreeing with this caterer. Formerly, when Paderewski was in the field, most other pianists maintained a discreet silence; this year they all come rushing in together—Hofmann, De Pachmann, Bauer, Hambourg, Ganz, Schelling, Buhlig, and the women—Katharine Goodson, Fannie Bloomfield-Zeisler, Augusta Cottlow, Olga Samaroff, Teresa Carreno. The violinists, headed by Kreisler and Kubelik, are with us, too; and as for the singers, they make an astounding array of talent and—expense. To name only a few: we shall hear Mmes. Abott. Eames, Farrar, Fremstad, Gadski, Morena, Sembrich, Homer, Kirkby-Lunn, Nordica, Melba, Garden, Calvé, Schumann-Heink; Messrs. Caruso, Bonci, Knote, Burrian, Dippel, Burgstaller, Reiss, Goritz, Campanari, Van Rooy, Chaliapine, Plançon, Dalmores, Zenatello, Sammarco, Renaud, Bispham.

In Berlin they are trying to meet this American peril by engaging young American singers; but we shall have them all back as soon as they have become sufficiently famous and able to ask American prices. It must be admitted that in one respect we are more favored than the present musical metropolis of the world: we have a deluge of talent, while Berlin's is a deluge chiefly of mediocrities, and aspirants to fame. The minor-concert evil has reached a crisis there. The critics are beginning to sulk and balk. They declare that most of the 800 concerts they are expected to cover each season are given solely for them—that is, for the newspaper notices; and they are beginning to see the necessity of curbing the nuisance by ignoring many of the minor affairs. While these concerts are much fewer with us, we still have too many of them; they accustom people to the free-ticket habit, and thus injure those entertainments for which there would otherwise be a paying public. We also have too many orchestral concerts, made possible by the generosity of wealthy guarantors. It is pleasant to note that the best of these—the Philharmonic and those of the Boston Symphony Orchestra—are receiving more public support than ever. Most of the others would cease to exist if conducted on their own merits, however great these may be; for the majority of Americans still look on orchestral music solely as a very expensive way of making a noise.

With opera the case is different. That, with its theatrical splendor and social surroundings, appeals to thousands whose ears cannot unravel the complex weft of orchestral scores. It is, therefore, quite possible that, notwithstanding the financial situation, the season's offerings by our two grand-opera houses, though abundant beyond all precedent, may not prove greater than the demand. It was shown last year that New York can support two operas at top-notch prices; nay, there were evenings and afternoons when the demand for tickets at both places exceeded the supply. A year's rivalry has made both Heinrich Conried and Oscar Hammerstein alive to the necessity of doing their very best, and there can be little doubt that in the matter of excellence, as well as profusion, all records will be broken this winter. Both houses have a bigger roster of artists than they had before, and some interesting novelties and revivals are not only promised, but in actual preparation.

Of special interest is Mr. Hammerstein's attempt to acclimate the modern repertory of the Opéra Comique of Paris in his Manhattan Opera House. Charpentier's "Louise," which the Parisians have applauded hundreds of times, will be heard here for the first time. So will the "Pelléas et Mélisande" of Debussy, the French Richard Strauss; so will two of Massenet's new operas, "Thais" and the "Jongleur de Notre Dame"; also, the new "Hélène" of Saint-Saëns, and a much older novelty, the "Contes d'Hofmann," an opera in which Offenbach showed that he could rise far above his habitual buffoonery. For these operas Mr. Hammerstein has imported the Chicago prima donna, Miss Mary Garden, who has won much success in Paris and Brussels in French operas, new and old But the Manhattan is to sail by no means always under the French flag; German opera, which was tabooed last year, is to take a prominent place, by the side of French and Italian works, with Mmes. Nordica and Schumann-Heink and M. Dalmores in the leading rôles. It will be a novel and fascinating experience to hear the Wagner operas under the splendid acoustic conditions of this theatre, and under the direction of Mr. Campanini, who declares that he is "a great if not a fanatical admirer of Wagner."

At the Metropolitan Opera House, also, some stirring events are impending. The centre of interest probably will be the grand fight between Caruso and—not Bonci or Knote, but Mahler—Gustav Mahler, for ten years the chief conductor and sole manager and tyrant of the Imperial Opera in Vienna, whom Mr. Conried has, with much wisdom, engaged as chief conductor and general superintendent of the Metropolitan. Caruso is the greatest of living Italian tenors, but, unfortunately, he is Italian only; he is not, like Jean de Reszke, a versatile artist who is great also in French and German opera. The result of the prevailing worship of Caruso's wonderful voice has been in the past two years to focus public interest too much on vocalism instead of on the operas themselves. Now, Mahler is a natural and violent antidote to this state of affairs. To him the opera's the thing, and the artists mere means to an end. He will have charge, in particular, of the Mozart and Wagner operas, and he may do things greatly to astonish this town. It has been said of him that, while his Mozart is like a Watteau or a miniature of the most exquisite coloring, he is a towering giant in Wagner. Under him, rehearsals will come into vogue again; and shall we venture a rash prediction? We should not be surprised if the most popular opera of the season should prove to be, not one of the Caruso favorites, but Mozart's "Don Giovanni."

PERSONALLY ANNOTATED BOOKS.

The London Library has lately come into possession of 600 volumes which were once owned by Leslie Stephen. All of them have to do with religion or philosophy, and every volume has marginal notes in Stephen's hand, or drawings from his pencil. Few of the works are now popular, if they ever were, but the historic value of them all must be heightened by Stephen's annotations. At least, the authorities of the London Library think so, for they have had the pages containing the pencilled notes "sized," so as to preserve them as long as the book itself can be kept from falling into dust.

The personal interest given to a book through former ownership, or use, by a famous man, we need not dwell upon. It has long been recognized by collectors and booksellers: "association books" have their price due to names. But the volumes from Leslie Stephen's library possess a significance far beyond that; they admit us to his literary workshop; they reveal the workings of his mind. In his scattered memoranda and criticisms on the Deists, for example, we are led into the very making of his "English Thought in the Eighteenth Century." To one volume, Hobbes's "Historia Ecclesiastica," a singular interest attaches, since on the fly-leaf three generations of scholars have written their opinion of the book. Two of them are Robert Southey and Leslie Stephen. The third and earliest is thought to be Robert Nares. Here are the three judgments:

(1.) Opus stylo barbarum, argumento confusum, et obscurum ut neque intelligi possit, nec dignum sit in quo labores ut intelligas. Nec perlegi, nec perlegam.—R. N.

(2.) Ego tamen perlegi, non sine fructu, nec sine delectatione quâdam. Nihil me pœnitet hujus perlectionis. Opusculum est tam ingenii acumine quam scabredine carminis vere Hobbesium.—R. S. [*i. e.*, Robert Southey].

(3.) Ego quoque perlegi et Roberti Southcy sententiam valde probo. Hobbesii nihil a me alienum puto.—L. S.

Some of Stephen's notes on modern books are characteristically audacious and amusing. They remind one of his letters. In his copy of Mr. Balfour's

"Foundations of Belief" are many spicy comments. One reads: "This is A. J. B.'s meanest evasion." Opposite Mr. Balfour's sentence: "I do not suggest now that the doctrine of the Incarnation supplies any philosophic solution of this difficulty," Stephen had written "Modest!" The same lightly characterizing pencil had left its trail through the "Tracts for the Times." One annotation is: "If J. H. Newman really wrote this, it is a curious instance of the kind of stuff that will pass for logic with an able theologian." On another margin occurs this: "Reverence=grovelling in the mud before a dumb idol."

This was merely the lighter vein of Leslie Stephen. Others of these scarred volumes bear witness to his serious grappling with the gravest problems that can occupy the human intellect. Spinoza was an author whom he had evidently read attentively, and Kant was another. Histories and political economies were deeply scored. Herbert Spencer had been much annotated, though Spencer, it would appear, chiefly provoked Stephen into drawing fantastic sketches on margins and end-leaves.

The habit of writing in books has been often condemned. But the objections rightly made to it do not lie against Stephen's practice. In the first place, the books were his own. They were not borrowed from either a friend or a public library. Hence his annotations cannot be called defacing the property of another. Furthermore, his jottings were worlds away from the artless "This is lovely," or "Isn't this horrid?" written by schoolgirls in current novels. Stephen's fancy was often at play as he read; that is clear; but in general his mind was on the stretch. He marked, but he also inwardly digested. Books were to him both the material and the tools of his work. In that lies the great significance of his books, blazed with the trail of his passage. He did not look upon them with something of the Arab reverence for print, as print, but made them the familiars of his thought and pencil. Like Darwin, he would doubtless have torn his volumes asunder if he could thereby have made them more useful to him.

Many great readers of our time have treated their books as Stephen did his. At the time Brunetière's library was sold, last spring, we called attention to his striking marginalia, the reading of which, according to one French critic, was like an extension of Brunetière's work. With the failing memory of the indexed moderns, they seem more and more to require impedimenta of notes and reminders. The margins of books offer a convenient place to keep them. And then, if you happen to be a scholar and a thinker, all you have to do, in order to produce an article or a lecture, is simply to go to your treasure-house and draw out things new and old. Lowell's lecture on "Don Quixote," before the Workingmen's College in London, was, as he frankly told his hearers, "drawn almost wholly from notes written on its margin in repeated readings."

GEORGE BUCHANAN.

Few readers to-day pay any attention to the Latin poetry of the Renaissance. It is set aside as something inevitably artificial, since composed in a language other than the vernacular. Yet of our own poets, not only Milton and Pope, but a romanticist like Wordsworth, were interested in the Neo-Latins, and Thomas Heywood thought it worth while to render into English numerous extracts from their writings. The Neo-Latins, certainly, did not imagine themselves artificial or regard their work as a *tour de force*. They used what to them was the most natural medium; to the Italians, it was their ancient mother-tongue. As Symonds observed:

> The *Camœnæ* had not died; on the hills of Latium where they fell asleep, they might wake again. Every familiar sight and sound recalled "the rich Virgilian rustic measure" of the Georgics and Bucolics. Latin on the lips of Pontano and Sannazaro is native and living; their verse has individual melody and coloring; it is aglow with the splendors of the Bay of Naples. Their creative impulse, it is true, was not lasting; the later "Ciceronians" stifled originality by attempting to refine. But the writers of the north, like Erasmus, with a vernacular totally remote from Latin, could use the latter for literature more freely, perhaps, than the Italians could, who felt more and more constrained to distinguish the vulgar and the polite in their own language of the past. This explains why so original a poet as Buchanan could come from the north at a time when in Italy Latin verse was on the wane. He is the last in the unbroken succession of the Neo-Latins. Milton and Gray and Vincent Bourne wrote admirable Latin verse after Buchanan; but the movement is over with him.

Buchanan cared little for his own poetry. Though Europe rang with the plaudits of that *divinum ingenium*, "prince of all poets in our times," though he was lauded by Ronsard, Montaigne, Grotius, and even the testy Scaliger, Buchanan regarded his work as accidental and ephemeral. "If my friends had allowed me," he remarks, "I should have consecrated it all to eternal oblivion." We are glad that it remains, both as a proof of his talents, and as a memorial of the movement to which he contributed so much—the introduction of humanism into Scotland. It is not surprising that the anniversary of his birth should have been commemorated in 1906 both at St. Andrews and at Glasgow by extended celebrations, and, in the present year, by the publication of two elaborate memorial volumes.* Both books contain valuable studies, written in not too patriotic a vein. It is clear that Buchanan, whose career was that of a teacher from first to last, cannot be called either a great historian, or a profound investigator of political theory. He knew every one in Europe worth knowing, and was the associate of nobles and kings, but he can lay no claim to statesmanship or to any effective influence on political developments in his native land: his influence on his royal pupil James VI. was powerful, but its result was his pupil's reaction and cordial hostility. Nor may Buchanan be counted a vital force in the propagation of religious reform. He convinced himself, after due deliberation, that Protestantism was in the right, but he nowhere shows the moral intensity of the convert; as a contemporary kindly remarked, "he was of guid religion for a poet." Buchanan was not even a great scholar, as his friends Lambin and Turnèbe were great. He was great as a teacher, reforming the instruction at the college of Ste. Barbe, where he first taught, and, through it, that of the entire University of Paris. His "Rudimenta Grammatices," the first of his works (1533), enjoyed a well-deserved vogue, and could give hints even to modern advocates of the "inductive" method, as it contains the better part of their doctrine. But Buchanan was more than a teacher. Ronsard remarked of him that he showed no trace of the pedagogue save the cap and the gown. The cap and gown—and the very stern and pedagogical aspect that some of his portraits show—were the outer signs, curiously, of a versatile man of the world, a man of letters, a poet. Warned by his own judgment, we perhaps should not take his poems too seriously; yet they reveal, despite his assertion, qualities of enduring merit.

I.

Buchanan turned to poetry at an early age. In his school days at Paris (1520), the writing of Latin verse was part of the training. The lad of fourteen took up this pursuit, he tells us, only partly from natural impulse—but partly because it was prescribed. He read much, doubtless, and was storing his mind with impressions, but he wrote no verse till, in 1534, James V. demanded of his young preceptor a satire on the Franciscans. Buchanan had already amused himself with an admirable translation of "How Dunbar was desyrit to be ane Fryer," and responded to the King's request with what he calls an ambiguous poem. If this poem comprised the two palinodes of the "Fratres Fraterrimi," both the King and the friars were singularly obtuse in thinking it ambiguous; it is the kind of recantation that Swift made in his Palinodia—bitter, scurrilous irony. The King called for more, at any rate, and Buchanan wrote his "Franciscanus," the most elaborate of his satires. The model seems at the outset to be Horace's diatribe on the mad world, as described by the converted Damasippus. In the fashion of

* *George Buchonan: A Memoriol, 1506-1906.* Contributions by various writers, compiled and edited by D. A. Millar, St. Andrews. University Press, 1907.

George Buchonon. Glasgow Quartercentenary Studies, 1906. Glasgow, 1907.

There is unnecessary duplication in this two-fold undertaking, and after the excellent life of Buchanan by Hume Brown, the plan of the St. Andrews volume is open to criticism. The life and achievements of Buchanan are there treated by essays on all his important activities—as Latin scholar, as historian, as wit and humorist, etc. Some of these essays have the character of the ten-minute speeches made at the memorial banquet—toasts on prescribed themes. The Glasgow volume contains special studies, which rightly do not attempt to cover the entire career of Buchanan. One could wish that the really excellent material in both volumes had been combined in one *Festschrift* on the plan of the Glasgow book, and that the other memorial had taken the form of a reeditiou of his works. Some of these are published, with translations, in the St. Andrews volume.

the Stoic, the friar bids his auditor give heed: he shall sprinkle himself nine times with holy water, drink nine straight draughts of hellebore, and meekly receive the truth of ascetic doctrine. The cloister, he will find, is a refuge for dullards and *roués*, and is the modern substitute for suicide. One thinks of Juvenal's reflections on the rope as a cure for matrimony; and indeed throughout the tone is anything but Horatian. Buchanan has not the excuse of the *sæva indignatio* of Juvenal and Swift. He bore the friars no special ill-will; he could remark of the Portuguese monks, to whom the Inquisition subjected him, that they were good fellows with only one failing—blissful ignorance on the subject of religion.* One would expect from him the genial ridicule and urbanity of Erasmus; instead he swings the heavy flail of a *censor morum*. It may be his interest in reproducing ancient situations that tempts him to stronger language than his subjects deserve; by slight innuendo, by the turn of a phrase, he sets the friars back in the Roman empire; they are the counterpart of the hypocritical philosophers of Juvenal's and Martial's days. Another reminiscence, and the monk's prescriptions become a new *ars amandi* in the fashion of Ovid. The latter part of the poem is episodic, and like the second half of the Æneid demands an heroic invocation; *maius opus moveo*, he quotes. The closing lines are pastoral, mimicking the epic close of a Virgilian eclogue. All this is parody of a high order, delicately managed for the most part, and distinctly a feature of Buchanan's satire. One can see how the abuse of it would lead him, with his native capacity for sarcasm, to violence and exaggeration.

The "Franciscanus" is too long a poem. Far more successful in point of structure are the "Fratres Fraterrimi," a collection of epigrams and odes. Some of these are of later date, when Buchanan, under the spur of persecution, had acquired righteous indignation and a blasphemy as audacious as Ovid's, while far more vindictive. His powers of sarcasm and condensed satire shine to the best effect in epigram—in such an epigram as that on Pius II., where every word is admirably placed; Pio, in the final place, is given a dreadful emphasis of irony:

> Vendidit aere polum, terras in morte relinquit.
> Styx superest Papæ, quam colat una, Pio†

Another good bit concerns a Dominican master at the Sorbonne.

> In vino audivit verum latitere, Gonellus,
> Sesquipede extento pinguis aquaticulo,
> Sicne, ait, in nugis frustra consumsimus annos,
> Et tulimus tetricæ jurgia lenta scholæ?
> Ergo vale steriliis veri Sorbona, tuumque
> Accipe discipulum, docta taberna, novum.
> Ex illo ad crassam scrutatus dolia fæcem,
> Pervigil et noctes perbibit atque dies.
> Tandem consumtis fœcunda iu pocula nummis,
> Hoc veri invenit, Nil scio, nil habeo.
> Soiandoque sui lepide ludibria damni,
> Soerate se jactat non minus esse sophon.§

*Nec inhumanis nec malis sed omnis religionis ignoris.

†He sold his heaven; at death leaves earth as well. Pope Pius has one last resort—in Hell.

§Gonelius of the rounded paunch heard tell
That truth lies hid in wine. Quoth he, "Ah, well!
Have I, then, spent three years to play the fool
In the long wranglings of the dismal school?
Oh, then, Sorbonne, sterile of truth, adieu!
I come a novice, learned inn, to you."
Thenceforth he studied pint-pots to the lees,
Stern vigil keeping, night and day, in sprees.
When all his money for the cup was thrown,
He found this truth, "I nothing know nor own."
One thought consoled him for his sad emprise—
That Socrates himself was just as wise.

Here the humor is more playful. There are deeper notes, too, now and then, as in the address to some pilgrims, who have wandered far to find the God whom their own hearts can reveal.

II.

Buchanan wrote his tragedies during his stay at Bordeaux from 1539 to 1544. He wrote them because a professor at Bordeaux had to write a tragedy a year for his pupils to perform. Uncertain of his aptitude for this new task, he devoted much care to the first two plays, then finding that they did well enough, he finished the others in short order. For all that he was hailed by his contemporaries as the restorer of the tragic art; the "Baptist" and the "Jephtha" were often translated, and both Milton and the French classic dramatists owed something to his influence.

Buchanan lived in a dramatic age, and he could reshape political events in terms of tragedy. He describes his "Detectio" of what he deemed the crimes of Queen Mary as *plena et tragica plane historia;* Bothwell is *huius fabulæ choragus*, and the catastrophe is noted in its place. We may credit Buchanan with an inborn feeling for tragic situation. He turned, further, for his models not so much to Seneca as to the purer ideals of the Greek drama. Two of his four plays are translations of the "Medea" and the "Alcestis" of Euripides. In the preface to the latter he remarks that the play attracts him because it is not stuffed with murders, poisonings, and the ordinary tragic horrors; its motive is primarily ethical. This is a significant protest: it remains to be seen whether Buchanan penetrated further into the spirit of Greek tragedy than the "Alcestis" and the "Medea" could lead him.

The first of his own plays, and that on which he spent most care, is the "Baptist." An age which is tired even of a pathological Salome and the sight of the Baptist's gory head will find no sensation in Buchanan's tragedy. The daughter of Herodias plays a very minor part, and the rules of the Greek stage, alas! do not permit the appearance of the head. The plot, moreover, must be considered a failure. In the opening scene, Malchus the bigot and Gamaliel the progressive discuss the new prophet and the meaning of his message. Shall they accept it, or not? One is tempted to detect here the voices of scholasticism and humanism in the presence of the Reformation. At any rate a dramatic problem is stated, which the rest of the play does nothing to solve. There is presented instead the personal fate of the Baptist, gradually brought to his doom through the machinations of Herodias: the sub-title of the play is "Calumnia." The tone in general is noble and appropriate, except for unfortunate echoes of Terentian phrases. When the chorus exclaims

> Sed cesso vatem convenire? . . .
> Atque eccum ante ipsas carceris stantem fores!

the reader is prepared for Chremes, not John the Baptist. The iambic verse, further, violates laws of accentuation not discovered in Buchanan's time; the effect is unpleasant, as it reveals instantly that Buchanan is employing, after all, an artificial medium.

The popularity of the "Baptist" is doubtless due to its implicit allusion to contemporary movements. It is dangerous to identify the characters exactly; one should take warning from Nicholas Peck, who in the eighteenth century discovered in a blank verse translation of the "Baptist" what he thought was a forgotten work of Milton's; he found it replete with allegory, which he could easily dovetail into Milton's times. Buchanan himself, publishing the play thirty years after it was written, declared in the dedication to James VI. that his royal pupil should take warning by the moral of the play, to heed no false advisers. In view, further, of his statement to the Spanish inquisition that the fate of the Baptist typified that of Sir Thomas More, we should not read too vigorous an anti-Franciscan purpose into the play. It does present a warning to the tyrant; it is the argument of the "De Jure Regni" in poetical form.

The "Jephtha," Buchanan informs us, took far less time than the "Baptist"; it is distinctly the better play. The Old Testament story contains just the situation that the most distinctive type of tragedy demands—a just man impelled to an unjust deed through inevitable obedience to a righteous power. Such a plot is as potent in "pity and fear" as the "Œdipus" itself, and it is developed by Buchanan in a manner worthy of the ancients. The meeting of Jephtha and his daughter, which recalls that of Agamemnon and Iphigenia, is treated with an effective reserve bordering on the grand style, while the messenger's report of the defeat of the Ammonites is nearer than any of Seneca's descriptions to the sublimity of Æschylus. The spirit of his model helps Buchanan here; for Æschylus and the Old Testament have something in common. Apparently the plot conceals no contemporary allusions. Symmachus, the friend of Jephtha, manifests a Euripidean humanitarianism and common sense; his declaration

> Pertinaci (quod fere ignorantiae est)
> Animo tenetur dogma susceptum semel,*

may be a reformer's thrust at scholasticism. Storgo, the mother, cries out, as she must, at the barbarous sacrifice, and her lament, rather inartistically, concludes the play. But such sentiments are merely dramatic; the Lucretian moral

> tantum religio potuit suadere malorum,

is not drawn. The Angel's prologue gives the poet's meaning; the stern dispensation of God is for Jephtha's good, as it teaches him the humbling lesson that victory comes not by his own right hand. Such sentiment keeps the play Æschylean in tone; there is no Euripidean revolt against a malignant fate, and no contemporary Protestantism.

*The stubborn mind, with ignorance oft paired,
Maintains the dogma it has once declared.

III.

Buchanan's version of the Psalms, the work which most of all established his popular reputation, was written in his cell in Portugal while he was undergoing instruction from the monks of the Inquisition. If we may assume that he had no library at his disposal, the achievement is proof that his mind was aboundingly stored with the literature that he taught. For the work is far more than a specimen of his mastery of Latin verse; it is an attempt to provide

the subjects of the different Psalms with an appropriate ancient setting. He needs for this purpose almost all the metres of the Latin poets and a few of his own invention Thus. imprecatory psalms, like. the tenth, reappear in stinging iambics; the thirty-first is in dimeters, fresh and simple as a Christian hymn; the forty-fifth, a wedding hymn, is in the stately dactylic hexameter that Catullus used for one of his epithalamia, while the nuptial joys of the one hundred and twenty-eighth suggest the other epithalamium and call for the graceful Glyconic strophe. Didactic or narrative psalms, like the seventy-eighth, are in dactylic hexameter, and while the twenty-third Psalm from its pastoral character might require the same metre, it is just as appropriately done into a reflective Horatian ode, with the same touches of the pastoral as appear now and then in Horace. The one hundred and thirty-seventh Psalm is inevitably in elegiacs—

Dum procul a patria mœsti Babylonis in oris
Fluminis ad liquidos forte sedemus aquas—

and recalls not merely the melancholy grace of Tibullus, but something of the spirit of Plato's quatrain on the Eretrians buried in Mesopotamia, far from their beloved sea. In short, here is a new sort of lyric, a harmony of Christian and pagan sentiment, which connects Buchanan at once with the humanists of the fourth century and the long line of writers of Biblical epic; and Buchanan's art has nothing to fear from a comparison with Juvencus and his descendants.

The success of the undertaking was immediate and lasting: the first edition of the Psalms, containing one of Buchanan's best poems, the graceful dedication to Queen Mary, appeared about 1564. It was followed by at least one hundred others, reaching in an unbroken line well into the nineteenth century; for the work became a text-book in Scottish schools. That its poetical qualities appealed immediately, moreover, quite apart from the interest of the general plan, is clear from the fact that the poems were set to music, and several times translated into English. Naturally a translation is futile, as the substitution of English for Latin metres destroys thereby the atmosphere that Buchanan sought to create.

IV.

The remaining poems of Buchanan are occasional in character, though the epithet applies in a way to all his verse. The one exception is his unfinished didactic poem "De Sphæra," a product of his later years. There are many things of interest in his elegies and hendecasyllables, which contain very innocuous poems of passion, and in his "Silvæ," a title which stands mainly for pastoral panegyric and lament. But of all Buchanan's works, the reader will turn with most delight to the three books of Epigrams. These are as varied in subject as Martial, and like the "Fratres Fraterrimi" show better than do the longer satires Buchanan's unrivalled powers of sarcasm. If Posthumus recognized himself in the following verses, he never could have forgotten the portrait:

Nescio an inspexti Narcissi, Posthume, fontem:
Hoc scio, deliras, Posthume, amore tui.
Ille tamen merito: nam quod malesanus amabat
Ante quidem id multis causa furoris erat.

At tua non paulo est major vesania, qui te,
Sed sine rivali, Posthume, solus ames.*

Zoilus, too, must have ceased his gossip, after the following couplet, which, some believe, inspired an epigram of Voltaire's;

Frustra ego te laudo, frustra me, Zoile, lædis;
Nemo mihi credit, Zoile, nemo tibi.†

The second book begins with a collection of epitaphs. That on Jacobus Silvius, a miserly professor of anatomy at Paris, presents a worthy confrère of Euclio and Harpagon.

Silvius hic situs est, gratis qui nil dedit umquam;
Mortuus et gratis quod legis ista, dolet.‡

Then comes a series of portraits (*iconcs*). Buchanan begins with prehistory, and borrowing a suggestion from Ovid, thus introduces Saturn and the age of Gold:

Aurea secla olim me paupere Rege fuerunt:
Lis, vis, fraus aberant, omnia pacis erant.
At nunc justitiam mentita injuria dives,
Lis, vis, fraus, auri secula nuda premunt.§

Two portraits of Helen appear with the rest. One is satirical, a variant on Juvenal's maxim *rara est adeo concordia formæ atque pudicitiæ;* the other is tenderly sympathetic:

Mille petita procis, totidem repetita carinis,
Mille poetarum fama laborque fui.
O si nota minus, minus et formosa fuissem!
Maxima matronae est laus latuisse probæ.¶

A terrible deduction from Juvenal's maxim appears in the brutal sarcasm flung at Mary of England—brutal verses in spirit, cruelly refined in form:

Sum Marie, male grata patri, male grata marito:
Cœlo invisa, meæ pestis atrox patriæ.
Nulla aberat labes; nisi quod fuit addita custos
Fida pudicitiæ forma maligna meæ‖

Not all the epigrams are satirical. One shows us the poet gayly dining with bishops; another suggests that he was no more punctilious with his dinner engagements than he was with his correspondence:

Ad coenam sese dixit tuus affore vates.
Dixit: sed vates dicere falsa solent.**

Finally, a new variety of epigram appears—one at least unknown to Martial—"Valentiniana." These poems contain no comic valentines. A pleasing introductory poem explains the time-honored custom wherehy every youth chose a maiden as his queen for the year. The poet is too old to bring the due present of a wreath; instead, he weaves verses in honor of his youthful queen. Here is one of his garlands:

Accipe quos fœtus tibi fertilis educat annus,
Flaminia o ævi flosque decusque tui;
Non capiti ornatum; neque cuim splendescere pulcher
Externi cultus munere vultus eget:
Sed magis ut noscas, uhi ver aspexeris anni,
Quam cedant veri tempora verna tuo.*

One might extract from the epigrams a dazzling array of sarcasms, fine of point and flawless in execution. They are enough to give Buchanan a high position among writers of satire; it is in this field that his genius works most naturally. It is a pity that after his powers had matured he did not turn again to satire in the large. As it is, one wonders whether our English satirists of the seventeenth century may not reflect his influence to a greater extent than has been supposed.

Excellent epigram, dignified tragedy, Christian and Pagan feeling harmonized in a new lyric—would these have gained if Buchanan had phrased them in his vernacular? Some critics feel that his genius ran to waste in an alien and conventional form. None will deny that Latin brought him in his own day a European vogue which his own language would not have secured him. More than that, only Latin, as we have seen, could have made the point he intended in his versions of the Psalms. The same is nearly as true of his satires, large and small. His subtlest effects are often obtained by parody of ancient motives: for this, the innuendo of an ancient phrase, the lilt of a verse, are often indispensable. Only in the tragedies does his diction play him false. These, then, would have gained if they had appeared in Buchanan's vernacular—could he have mastered that vernacular as Milton mastered his. But for the rest, his choice was the better; and one who imagines that for a Scot of the sixteenth century Latin was inevitably a lifeless convention, will have cause to reform his notions about "dead languages" if he will let Buchanan show him.

E. K. Rand.

Cambridge, Mass.

*I know not, Posthumus, if thou hast gazed
Into Narcissus' spring.
But, Posthumus, I know that thou art crazed
With self-admiring.
He well might crave that heart for which before
Many full mad had gone.
Thou madder art, who dost thyself adore,
Sans rival, all alone.

†In vain, oh Zoilus, I speak thee well,
In vain thou slanderest me,
For none believeth what I tell,
And none believeth thee.

‡Here Silvius lies, who living never gave
A mite away.
His ghost is vexed that you who view his grave
Aren't asked to pay.

§I ruled the golden age, a monarch poor,
From fraud and force, from lawyers' strife secure.
But now when right to wealthy wrong is sold,
Fraud. force, and lawyers crush this age of gold.

¶A thousand lovers wooed me,
A thousand ships pursued me,
A thousand toiling bards won fame through me.
Ah, had my beauty flown me!
Ah, would that none had known me!
Woman's best praise is her obscurity.

‖Mary I am, a hane to spouse and sire.
Pest of my land, a mark for heaven's ire.
No stain I lacked, save that a guardian sure,
My ugliness, has kept my body pure.

**Your poet said that he would dine with you.
He did: but poet's words are seldom true.

*Take thou these first-fruits of the fecund year,
Flaminia, thou flower and glory of thy day.
Nor wreathe thy head; thy beauty shines so clear
No outer show can further tribute pay.
But I would have thee know, when spring is here,
How the year's Spring-time pales before thy May.

NEWS FOR BIBLIOPHILES.

In the sale at Hodgson & Co.'s, London, November 21, several unusual items of Americana will be offered. "A Plaine Pathway to Plantations," by Richard Ehurne, "Printed hy G. P. for John Marriot, 1624," is a small quarto of 66 leaves, written throughout in the form of a dialogue between "Respire, a Farmer," and "Enruhie, a Merchant," "with certaine motives for a present Plantation in New-foundiand ahove the rest." There is no copy in the British Museum, and the only copy sold at auction in recent years is S. L. M. Barlow's, lacking six leaves, in 1890, which brought $10, an absurd price. Sabin evidently never saw a copy, as he gives the date 1684. Equally rare is Sir Rohert Gordon's "Encouragements for such as shall have intention to be Undertakers in the new plantation of Cape Briton, now New Galloway in Amerıca, by Mee Lochinvar," Edinhurgh, 1625. Sahin gives the date as 1620, with a second edition of 1624, hut does not locate any copy of either edition. Both dates may he in error, for the reprint made by the Bannatyne Cluh in 1867 was of this 1625 edition. Sahin notes that a copy (date not given)

went at the Gordonstoun sale in 1816 for £3. This, we may presume, was the author's own copy, as the Gordonstoun books were mainly the library of Sir Robert Gordon, gathered between 1610 and 1650. A copy of the 1625 edition in the Auchinleck sale, 1893, brought £76. No one of the great American collections dispersed at auction seems to have had it. Other rare Americana are Smith's "Map of Virginia," 1612, lacking the last leaf and also the map; "Virginia Richly Valued by the deseription of the maine-land of Florida," 1609, translated by Richard Hakluyt; John Eliot's "Brief Narrative of the Progress of the Gospel amongst the Indians in New England," 1671, the eleventh and last of the series of tracts known as the Progress of the Gospel series; Budd's "Good Order Established in Pennsylvania & New Jersey," 1685, believed to have been printed in Philadelphia, and, after Atkin's Almanac for 1685, the first book printed by William Bradford; and an uncut copy of the famous "Journal of Proceedings in the Detection of the Conspiracy formed . . . for Burning the City of New York," 1744, by Daniel Horsmanden, a book generally known as the "Negro Plot." In the same sale are a number of scarce books in other departments, among which may be noted Herrick's "Hesperides," first edition, 1648; Gray's "Elegy," first edition, 1750; Fielding's "Tom Jones," a remarkable copy of the first edition, 1749, in the original boards, uncut; Pope's "Essay on Man," first editions of the four parts; Goldsmith's "Good-Natured Man," 1768, and "Deserted Village," 1770, first editions; and Keats's "Endymion," 1818, with the one-line erratum.

On November 12 and 13, Stan. V. Henkels sells at Davis & Harvey's rooms, in Philadelphia, one of the most important collections of American autographs offered at auction in recent years, that of the late Joshua I. Cohen of Baltimore. Dr. Cohen was contemporary with Sprague, Cist, Bushnell, and Gilmore, whose collections were long ago dispersed. Mr. Henkels's catalogue is elaborate, as usual with his important sales, with lengthy quotations from important letters and numerous facsimiles. There are seven fine A.L.S. of Washington, besides three L.S. and several other documents, including ticket No. 380 in the Mountain Road Lottery, signed by Washington. There is an exceedingly interesting letter of Martha Washington and an unusual series of letters of a number of members of the Washington and Custis families. The set of Signers of the Declaration of Independence is complete, and many names are in duplicate or triplicate. The Lynch, the rarest name, is a full signature "Thomas Lynch," and is accompanied by an attestation of genuineness by J. K. Tefft, dated Savannah, April 10, 1840. The Gwinnett specimen is part of a D.S., 2 pages folio, dated 1776. Samuel Adams, Carter Braxton, Samuel Chase, Abraham Clark, Franklin, Hancock, Francis Lightfoot Lee, Lewis Morris, Thomas Nelson, John Penn, Matthew Thornton, and several others are represented by fine A.L.S. The series of letters of officers in the Revolutionary War includes practically all of the prominent generals. There are autographs of the Presidents and their cabinets, from Washington to Lincoln, and officers in the navy. A miscellaneous section includes fine specimens of Alexander Hamilton and Daniel Boone (extremely rare), several colonial governors, James Rivington, the Tory printer, etc.

On November 12 and 13 Messrs. C. F. Libbie & Co., Boston, sell the collection of Americana formed by the late W. P. Robinson of Washington. It is mainly State and town histories and genealogies. Some important sets are included, such as the *Genealogical Register*, 60 vols., a complete set; Savage's "Genealogical Dictionary," 4 vols.; the Jesuit Relations, 73 vols.; and the Historical Collections of the Essex Institute, 41 vols., a complete set to date. Among the rarer State histories are Proud's "Pennsylvania," Burk's "Virginia," Martin's "North Carolina," and Hutchinson's "Massachusetts-Bay." There are also a few good Western books, such as Imlay's "Topographical Description," third and best edition, 1797; Mrs. Kinzie's "Wau Bun," 1856; Pritt's "Olden Times Border Life," 1849; Kercheval's "Valley of Virgina," 1833; Schoolcraft's "Expedition to Itasca Lake," 1834, and his "Tour into the Interior of Missouri and Arkansaw," 1821.

On November 12, 13, and 14 the Merwin Clayton Sales Company of this city offers the library of a New York collector, including books on the Civil War (a number of Confederate imprints), Indians, Mexico, and slavery. More than 300 lots are catalogued as Lincolniana, the interest in which among collectors is certainly on the increase.

W. M. Voynich, the Polish bookseller in London, has issued a remarkable catalogue of 520 lots, books of the fifteenth, sixteenth, and seventeenth centuries not to be found in the British Museum.

The stock and goodwill of the late Pietro Franceschini, archæologist and bookseller, has been bought by Mr. Voynich of London, who will probably continue the business in its present quarters in the Palazzo Borghese, Florence. Franceschini was more of a scholar and antiquary than a bibliophile and man of affairs. Even before his death the million volumes and pamphlets he had accumulated had fallen into disorder. There are roomfuls of volumes literally dumped upon the floors. The gradual exploration of such storerooms reveals many editions of the sixteenth century. The other day an assistant who was shovelling an entrance into such a deposit turned up within a few minutes a first edition of Lamb and one of Keats. But about these matters we shall be fully informed as Mr. Voynich issues his catalogues.

The Grolier Club of this city is holding from November 7 to 30 an exhibition of ornamental leather bindings, executed in America before 1850.

Correspondence.

UNDERDONE INSTRUCTION IN ENGLISH

To the Editor of The Nation:

Sir: Referring to the interesting communications on "Overdone Instruction in English" in your issues of September 19 and October 3, it would seem to a layman that the regrettable confusion there indicated as prevailing in the schools relative to "teaching literature" arises from a fundamental error underlying all efforts to teach literature as such—the error, namely, of assuming that there is a collection or body of writings denoted by the word "literature" which constitutes a distinct entity capable of being made the subject of a systematic course of teaching or study.

A course of study must have some unity of purpose and a corresponding unity of subject matter. In none of its several senses does the word "literature" denote anything possessing such unity. In its general sense, it describes a body of writings which are as varied and multifarious as life itself, and which have no ground of unity except the history or the genius of the people producing them—a unity too remote to be grasped by the average undergraduate. And even in its most restricted sense the writings which it includes are of the most diverse character. This fact is strikingly, though unconsciously, illustrated by your correspondent, when he mentions in the same breath Bacon's Essays and Matthew Arnold's "Forsaken Merman," as component parts of this study of literature. True, both of these writings are literature, and of a high order; and each is worthy of careful study, but for purposes so different that there is no propriety in placing them in the same course. They have nothing in common except artistic excellence—a quality which might afford ground for a study of literary art, but not for the study of literature. For purposes of study as literature they are about as incongruous as would be Locke's "Essay on Human Understanding" and Tennyson's "Lotus Eaters." The association of such incongruous writings shows the aimlessness and confusion of the teaching of literature there referred to. Any course based upon such material, although it may accomplish some good, must necessarily be a sort of haphazard wool-gathering, consuming time and effort which might be better employed in aiming at something definite.

And this confusion is frequently worse confounded by a failure to distinguish clearly between the teaching of literature and the teaching of language; and to keep them separate. It is true that they are closly allied, and at many points shade into each other; but they are essentially distinct, and each suffers when made to share the attention of the student with the other. For example, the spirit of the "Forsaken Merman" would be but feebly apprehended by one who was giving his attention to the prosody or syntax of the poem, or the etymology of its words. His appreciation of it would be similar to that which would be given to a song by one who, while listening, was pondering on the laws of acoustics, and the number of sound vibrations required to produce the various notes.

This kind of teaching of English, which your correspondents call "overdone," I have ventured to call "underdone." It is both—it is overdone as regards quantity of material gone over; underdone, *i. e.*, crude and ineffectual, as regards quality of work and intellectual assimilation. A partial remedy might be found in a better classification of material and the framing of distinct courses for the various classes of writings. Then, too, a prominent place should be given to memorizing—

a practice which seems to have become almost obsolete.

That at least some acquaintance with the best works in literature can and ought to be acquired as a part of every liberal education is undeniable; but when, and where, and how, are questions upon which we are as yet badly at sea; and are likely to remain so until there is an effective cleaning up of our ideas in relation to our educational views and methods in general The confusion here adverted to is but typical of a like confusion which now prevails in our educational work as a whole. We have, either for good or ill, forsaken the ancient landmarks, and have not as yet established new ones.

The cause of this general confusion in relation to our educational aims and ideals may be expressed in the one word, "popularization." In accordance with the genius of our institutions, we have educated the masses to an extent hitherto unknown; but, in order to do this, have found it necessary to popularize our educational aims and methods; *i. e.*, to bring them down to the masses instead of bringing the masses up to them. In doing this we have both gained and lost—gained in the spread of general intelligence, and lost in the deterioration of standards and of the higher educational work. Perhaps the gain exceeds the loss; but be that as it may, it is to the latter that we owe the evil which we are now considering. And as long as these conditions prevail, and the school and college curriculum is determined, not by the judgment of the most competent as to what education ought to be, but by the demands of uninstructed popular preference, so long must we expect to have educational work "overdone" and "underdone," and done in all sorts of ways.

HERBERT L. BAKER.

Detroit, October 24.

READING FOR CHILDREN.

TO THE EDITOR OF THE NATION:

SIR: It may not be possible to set forth in a brief letter anything that can add much to the recent suggestions in these columns regarding the betterment of secondary school work in English. But a few further words may be given to the question why teacher and pupil alike find the English part of the school course unsatisfactory.

For one thing, children are taught to read far too early. A child who has not been allowed to learn to read until he has reached the age of seven or eight years may find the learning process a highly pleasurable one, especially when he begins to realize that he is acquiring the key to the mastery of delightful books without number. The writer has known such a child—far from precocious—who read some of Shakespeare's plays aloud well and entertainingly within a year of the time when he first began to make out printed or written words. Beginning his acquaintance with literature in this spirit, the child is likely to carry a love for reading up to and through his college years. On the other hand, instruction in reading given to children too young to understand, far too often results in a distaste for every printed page as taskwork.

Another grave hindrance to any such liking for real literature as would of itself during school years lead to a fair acquaintance with some of the best books is the habit of devouring indiscriminately newspapers and magazines. It is futile to expect young people brought up on scare heads and illustrated serial stories to enjoy even Scott, while Jane Austen must to such seared palates as theirs seem the veriest sawdust. It is not easy to suggest an adequate remedy for the habit of reading periodical trash, but if the homes were kept measurably free from it, the children would in many cases not be at the trouble and expense of buying it for themselves. Anything which makes real literature easier of access than rubbish is a help toward imparting the much-to-be-desired taste for good books. It would go a long way toward securing this appetite for the best if cities in general would follow the example of Cleveland and establish branches of the public library, with many books accessible on open shelves, in the high school building.

But it must be remembered that no freedom of access to the best literature will be of use unless there is leisure for reading. It is not in the class room but at home that the boy or girl must sit down quietly face to face with the author. This is impossible under the conditions that too often obtain in cities to-day, when the pupil is a member of school societies and a constant attendant at school and other parties. Hardly anywhere is our mischievous fashion of entrusting social responsibilities to beaux and belles of sixteen (so much ridiculed by our European neighbors) more disastrous than in depriving young people during their most important formative period of the time for reflecting and maturing.

Finally, the teacher of English, even more than teachers in general, needs to be capable of talking the subject into the class. In a Missouri high school, a good many years ago, there was one notably bad boy. His dislike for discipline went so far as to lead him to spend whole days in a tree top rather than obey orders. This boy, coming into the English classroom to copy matter from the blackboard, chanced to hear the teacher reading from Tennyson's "Guinevere." Instead of copying he listened and at the end of the hour petitioned to be allowed to attend the English recitations as an extra subject. This power to vivify the text, so as to make it appeal to dormant intelligences will make a success of literature teaching even in the most poorly equipped of schools.

J. Y. BERGEN.

Cambridge, Mass., October 26.

THE PRINCETON QUADRANGLE PLAN.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of October 24, speaking of President Wilson's quadrangle plan, you say, "It must be confessed that the college world has not been in the habit of thinking of Princeton as an experiment station" (p. 365). May I be allowed to point out that a plan similar to the one in question has at different times exercised the authorities at Princeton for nearly ninety years? In 1895 Prof. W. M. Sloane wrote:

To preserve that precious collegiate life which once characterized all institutions of the higher learning in the United States, and which still survives in perfect development in Princeton, there must be new and larger dormitories, or, better still, hostels or inns or colleges, whatever they should be called, which would attract to their walls men of similar tastes and standing, and under the careful supervision of the university give their inmates food as well as lodging. ("Four American Universities," p. 108.)

It is interesting to note that as early as 1818 a committee was appointed at Princeton "to consider of measures for extending the college establishment and to print a report on that subject." The report was considered by the board of trustees in November of that year, and the following was the result of their deliberations:

Resolved, (1) That an additional edifice is wanted.

Resolved, (2) That the board will as soon as possible proceed to the erection of an additional edifice.

Resolved, (3) That it be a distinct and separate edifice.

Resolved, (4) That the new edifice, when erected, shall be placed under the government of a different faculty, as soon as the number of students shall render it expedient. (J. Maclean's "History of the College of New Jersey," vol. ii., 177-179.)

Resolutions, designed to encourage liberal subscriptions to the contemplated improvements, were then adopted, and an application for aid was made to the State of New Jersey. The latter was refused, the effort to obtain funds failed, and in a few months the whole scheme was abandoned. In 1877 President Maclean wrote:

As the proposed plan did not succeed, and as it is highly probable, if not morally certain, that no attempt will be made by the college authorities to revive the scheme of having under one board of trustees a collection of colleges, with separate faculties, it is not worth while to discuss the wisdom or expediency of such a plan.

ALBERT MATTHEWS.

Boston, October 31.

Notes.

John Lane Company has ready for publication the following books: "Napoleon and the Invasion of England," by W. B. F. Wheeler and A. M. Broadley, in two volumes, with color prints and reproductions of contemporary caricatures, broadsides, songs, etc.; "Pictures from the Balkans," by John Foster Fraser, with illustrations in color and a map; "Beauty and the Beast," a translation by Ernest Dowson of the unabridged French fairy story, with four full-page illustrations in color by Charles Condor; a new edition of "Alice's Adventures in Wonderland," with illustrations, many in full-page color plates, by W. H. Walker; "Champions of the Fleet," by Edward Fraser.

It is good news to hear that the translation of Nietzsche, which had progressed through four volumes and then apparently been dropped, is to be completed. The Macmillan Company is now publishing the fifth volume containing "Beyond Good and Evil." The same house is to publish, beginning with January, the new quarterly *Harvard Theological Review*, edited by the faculty of the Harvard Divinity School.

The second volume of Prof. J. Mark Baldwin's "Thoughts and Things, or Genetic

Logic," will be published by the Macmillan Co. next month.

The John C. Winston Company issues the first volume of "Great American Lawyers," edited by William Draper Lewis, dean of the law department of the University of Pennsylvania. This work, which is to be completed in eight volumes and sold only by subscription, will contain the lives of ninety-six deceased lawyers who have been famous as scholars or practitioners. The individual biographies run to about 11,000 words each.

T. Fisher Unwin is publishing a selection of the poems of Carducci, translated by Mrs. Francis Holland, a daughter of the late Sir Spencer Walpole. The Italian and the English are printed on opposite pages.

Besides writing his autobiography Herbert Spencer provided by his will that his "Life and Letters," in "one volume of moderate size," should be compiled by his friend Dr. Duncan. This work is now to be published. It avoids repeating the material of the "Autobiography," which extends only to 1882 and thus scarcely touches Herbert Spencer's battle with the Socialists. The new work is rich in letters, and contains, in an appendix, "The Filiation of Ideas," written by Spencer in 1898-9 as a history of his intellectual development.

The November *Atlantic* is the fiftieth anniversary number, an occasion of pride for publishers and editors. Two of the former editors are still living—William Dean Howells, from 1871 to 1881, and Walter Page, from 1897 to 1899—and both are contributors to the present issue. Prof. C. E. Norton, who was in Europe when the magazine was started, tells an amusing story of losing a trunk full of MSS. (and other things) which he had procured in London for Lowell, and which disappeared mysteriously from the New York wharf. The trunk was never found, but Professor Norton confesses that the *Atlantic* did not suffer from the loss of the British contributions. There are other papers in this issue commemorating the old days of the magazine, and giving a survey of the changes in literature, science, art, and politics during the past fifty years. It opens with a hitherto unprinted poem of Lowell's, which was written in September or October of 1857, and sent to Professor Norton. We can think of no better vow for American letters at the present moment than that the *Atlantic* should continue for another fifty years to maintain its level of solitary excellence, and to thrive.

The sixteenth edition of Baedeker's "Paris and Its Environs" is just out, imported by Charles Scribner's Sons. This edition contains thirty-eight plans and fourteen maps—one more map than the fifteenth edition, 1904.

Thomas B. Mosher of Portland, Me., has added to his dainty Old World Series four new volumes. The first contains Walter Pater's unfinished romance, "Gaston de Latour"; the second, a collection of graceful and fanciful stories by Oscar Wilde, "The Happy Prince," "The Nightingale and the Rose," "The Selfish Giant," "The Devoted Friend," and "The Remarkable Rocket"; the third, "The Hour of Beauty," songs and poems by "Fiona Macleod" (William Sharp); and the fourth, poems by Andrew Lang, including "Ballads in Blue China," "Verses Vain," "Sonnets," three "Letters to Dead Authors," and "Rhymes Old and New." Among the sonnets are those on Homer, perhaps the high-water mark of Lang's writing, either in prose or verse. The reading of this little book recalls those days, twenty-five years ago, when Lang was hailed as one of the coming poets, and provokes the vain regret that he did not more strictly cultivate the thankless muse.

"The Parish Clerk," by P. H. Ditchfield, may be commended as a work of curious erudition and as a storehouse of capital anecdotes. To those, also, who are directly or indirectly interested in the disappearance of one of the ancient customs of Britain, its humor will lie close to pathos. The office of parish clerk can be traced back to the time of King Ethelbert, when Gregory the Great wrote to St. Augustine of Canterbury a letter of regulations for the marriage and mode of life of clerks. It survived the Reformation, and was one of the threads of tradition not broken by the Puritan dominion. It is at last passing away under modern conditions, leaving a memory of habits and characters racy of the soil. We cannot convey an appreciation of the book without large quotation from its treasure of stories, and these can be better enjoyed in their context than in isolation. (Published by E. P. Dutton & Co.)

"The History of the University of North Carolina," by Kemp P. Battle, is published by The Edwards & Broughton Printing Company of Raleigh. In addition to the interest it has for the alumni of one of the South's largest institutions of learning, Dr. Battle's history will prove both entertaining and instructive to any student of the country's educational growth. Only the first volume has been issued, covering the time from the foundation of the university, in 1795, to its temporary closing in 1868. With great industry the author has collected anecdotes, statistics, and items about collegiate training in America since the days just after the Revolution. While there is included, of course, a vast quantity of information regarding North Carolina and the university town of Chapel Hill, every chapter contains historical sidelights of more or less general interest. It is a curious fact, for instance, that in the beginnings of a college now ranking among the best in the South, there was an announcement of such a curriculum as the following:

For Reading, Writing, Arithmetic, and Bookkeeping, $8 per annum.
For Latin, Greek, French, English Grammar, Geography, History, and Belles Lettres, $12.50 per annum.
Geometry with practical branches, Astronomy, Natural Philosophy, Moral Philosophy, Chemistry, and the principles of Agriculture, $15.00 per annum.

The president of the university in those early days was called "Professor of Humanity," and his salary was $300 a year and two-thirds of the tuition money. In the personal reminiscences the author is at his best. No other man in his State, or in the South perhaps, has so great a store of reminiscences at his call. He was formerly president of the university, besides figuring in North Carolina politics, and more recently he has occupied the chair dealing with the State's history, spending the most of his time, however, at the task of compiling his book. The completed two volumes will comprise something more than 2,000 pages. Of its comprehensiveness nothing more need be said. Dr. Battle has not left out anything—a fact which undoubtedly will be as much a cause of satisfaction to the North Carolina graduate as an impediment to the stranger searching for the important amidst a mass of detail.

Among the numerous handbooks devoted to the history and monuments of the two great English universities, J. W. Clark's "Cambridge" (J. B. Lippincott Co.) easily holds the first place. As Registrar of the University he has long had peculiar opportunities of tracing the growth of the individual foundations and the gradual acquisition by the colleges of the river banks that were once closely built streets and wharves in the hands of the jealous and hostile town. It is unfortunate that in this new edition of his work Mr. Clark neglects the chance of adding some information about twentieth-century Cambridge, and is still content with a picture of the wine-parties and offish dons of sixty years since. In his story of the masters of Trinity he stops short at Whewell, and ignores all the important changes due to the new buildings of the last two decades. The Cavendish Laboratory and all that its presence means to Cambridge has no interest for the antiquarian Mr. Clark. In a volume that is dated 1908 and proclaims itself a new edition, one would expect to find some revision of references. By "the present century" Mr. Clark still means the nineteenth, so that a generation hence his readers will be misled into supposing that in the first decade of the twentieth century the University dined at four o'clock. The illustrations, 46 in all, are mainly woodcuts from drawings by Toussaint and Dehaines, and are pleasing enough.

The American pilgrim who visits the hackneyed shrines of literature and history that abound in the English counties is not apt to linger on his round. Few, however, have surpassed in speed and copiousness the record of Miss Katharine Lee Bates. Her "From Gretna Green to Land's End" (T. Y. Crowell & Co.) describes a literary scamper that leaves only the eastern counties untouched. As she hurls herself through the length and breadth of England, easily making two moves to any other pilgrim's one, she pours out a lively stream of fact and comment that keeps the reader amused and only too well instructed. The information, literary and historical, is thoroughly got up; and the American reader for whom the book was written need not resent the superficiality of the travelling, since it is not so much to the England of to-day that Miss Bates hurries his attention, as to those literary, legendary, and pathetic associations with which, by some more leisurely method, she has made herself at home. The book has an attractive appearance, and the illustrations are from good photographs.

Gherardi Davis has privately printed in a limited edition a study of "Regimental Colors in the War of the Revolution," illustrated by thirty-four plates, two of which are in colors. The illustrations, which are admirable, would alone make this volume of value, and the judicious notes and descriptions prove the wide and individual research of the author. He describes the British, French, and Hessian colors as well as those

of the States; and the result adds one more item to the long list of opportunities neglected by the national government. Many colors and standards were captured in the Revolution, and if preserved would have made an interesting exhibit. As early as 1814 only six were in the War Department, although it was well known that twenty-four had been taken at Yorktown alone. To-day five represent the total holding, but enough interest now exists to assure the preservation of this remnant. Other material was found in historical societies and in private possession; but when all flags were listed they made a meagre showing. It would be impossible to summarize the facts presented by Mr. Davis, but he proves that the use of the United States flag was not "regulation" as late as 1779, and that while the stars and stripes were used at sea, they were not in all probability used by the army. He thus accounts for the fact that no regimental stars and stripes of the period of the Revolution now exist. The volume offers a wholesome corrective to many accepted traditions, and will constitute a lasting record of the small number of widely scattered flags of that period now to be found.

In the four lectures published under the title "The Higher Ministries of Recent English Poetry" (Fleming H. Revell Co.), Dr. Frank W. Gunsaulus discusses in general the religious sentiments of the principal Victorian poets. Three of his chapters are given specially to Matthew Arnold, Tennyson, and Browning. The style is rather discursive and there is some "fine writing" which is suggestive of the preacher rather than of the literary interpreter and critic. Perhaps the most interesting part of the book is that which treats of Shelley, and it is remarkable that a clergyman should read with such an impartial mind the writings of the most pronounced atheist of modern times. For in Shelley's poetry Dr. Gunsaulus discovers a real religious element. Recognizing the pessimism which pervades the poet's works, Dr. Gunsaulus says:

> Shelley is the poet of the unsatisfied. No twentieth century, however weary she may be of doubt and analysis, can ever go back to the eighteenth, and avoid the protest of this clear-eyed soul—a soul who abides at the gateway, the type of the yearning spirit pouring forth his lofty expectations in exquisite rhythm, uttering his pathetic scorn with sweetest music, the very incarnation of the restless heart and thirsty soul which, with heated forehead, utters the cry of the human.

Yet while there is an appreciation of the genius of the poets about whom the author writes, there is also in every lecture a certain amount of bathos and sloppy extravagance.

The Rev. John Henry Burn, a Scotch Anglican, has made a good compilation of religious lyrics on the plan of the Church year. The volume is entitled "The Churchman's Treasury of Song" (New York: E. P. Dutton & Co.). Mr. Burn presupposes some capacity of poetical appreciation, and his selections are of good quality and taste. Anglican writers naturally predominate, although Watts, Anne Steele, Sears, and others from non-liturgical churches are represented. In the large number of poems, one for every day in the year and often several for special days, there are seventeen by Isaac Williams, fourteen by George Taylor Farquhar, thirteen by Lord Kinloch, ten each by George Herbert and Horatius Bonar, and seven from Tennyson, mostly stanzas from "In Memoriam." Mr. Burn has done well to include Clough's pathetic "O Only Source of All Our Light and Life." None of the poems of Addison are included, or any of the translations of John Mason Neale. Miss Borthwick is credited with "Jesus, Still Lead on," without note that the hymn is a translation of Zinzendorf's "Jesu, geh' voran." The poems are usually well adapted to the days to which they are assigned.

The interrogatory title of Franz Spemann's book, "Landeskirche oder religiöse Freiheit?" (Berlin: Hermann Walter), implies that a "State-church" is incompatible with "religious freedom" and asks the reader to choose between these mighty opposites. The fact that the author is not a free-thinker, but a strictly orthodox theologian and vicar of the Protestant church, adds additional interest to his work and makes it a significant sign of the times. It is evident that his views concerning an established church are shared by many of the German clergy, although they have not the courage to follow his example and enforce their convictions by taking off their clerical robes and renouncing all the social and pecuniary advantages of their position as "officials of religion."

That the idea of the separation of church and state is proving contagious also in the academic circle of Germany appears from the recent pro-rectorial address of Prof. Ernst Troeltsch of the theological faculty of the University of Heidelberg, published as a booklet of seventy-nine pages, entitled "Die Trennung von Staat und Kirche, der staatliche Religionsunterricht und die theologischen Fakultäten" (Tübingen: Mohr). Troeltsch, while declaring that the present relation of state and church in Germany in general and also in reference to religious instruction in schools and to the management of the theological faculties, is fairly tolerable, yet thinks that at bottom it is "eine tiefe innere Unwahrheit." He believes that church and state will probably never be able to adjust their relations except by a peaceful separation. From this point of view he outlines a scheme of the influence which, even in case this is done, the state is to exert over the religious instruction in the public school and over the appointment of theological professors. There are many persons in Germany that demand the abolition of the theological faculties as a part of the universities, chiefly for the reason that theology is not and cannot be pure scientific research.

Prof. Otto Pfleiderer of the University of Berlin has rounded out his discussion of the origins of Christianity by the publication of "Die Entwicklung des Christentums" (Munich: J. F. Lehmann). He began the discussion in his lectures of 1904-1905, later published in his "Entstehung des Christentums." This work also appeared in English, and was followed a year later by his lectures, "Religion und Religionen." The new volume—the third—covers substantially, though more fully, the ground of the second part of Harnack's "Essence of Christianity," and, like Harnack's "Evangelium in der Geschichte," follows out the development of Christianity to the Reformation, and also after that period. Pfleiderer's position is in general more radical than that of Harnack and the school of Ritschl; he denies the claim that in Christ there has appeared a perfect revelation of God or that such a revelation has been recorded in the Gospels. He accordingly will not recognize in the history of the Church, after the manner of Protestantism in general, a steady decay and decadence from the original ideals of Christianity, but he finds that in some respects these ideals find their expression in every period of the history of the Church.

Among the annuals published by the Germans none is more deservedly popular than the Neue Christoterpe (Halle: Müllers Verlagsbuchhandlung). The issue for 1908 has been edited by Adolf Bartels and Otto H. Frommel, although it still bears on its title-page the honored names of the founders of the series, Rudolf Koegel, Emil Frommel, and Wilhelm Baur. The contents are varied—story, description, history, poetry, and the like, all written from the standpoint of evangelical Christianity. Its more youthful rival is a similar collection called Aus Höhen und Tiefen, which is also richly illustrated and now appears in its eleventh year, edited by Dr. Karl Kinzel and Ernst Meinke and published by Emil Richter, of Berlin. The former volume costs 4 marks and the latter 4.50.

"Die eiserne Zeit vor hundert Jahren," by Richard Knötel (New York: G. E. Stechert & Co.) is a beautifully illustrated volume which deals with the Napoleonic era between 1806 and 1813, particularly in reference to Germany. The thirty full-page pictures in colors are designed to give as many *Heimatbilder* of German days of stormy trial and ultimate elevation. There are glimpses of the merchants returning from the Leipzig fair and bringing the terrible news of Jena and Auerstadt, of the German Paul Revere's rattling over the cobbles of terrified villages, of the brave Frau von Bonin giving safe escort on horseback to a royal chest of treasure, of the rough-handed conduct of French soldiery while quartering themselves in devout peasants' homes, of the quick drilling of the same clumsy and immobile farmer folk, and the march of the great army to Russia. These vivid pictures not only remind the student of the awful pathway trodden by the Germans in their upward struggle to their present liberty and power, but attest anew the superiority of their modern art over ours, at least in depicting the human figure in motion. The volume is tastefully ornamented with gold and color cover-stamps, inside cover illustrations, and various tailpieces.

During the past season the committee on American archæology of the Archæological Institute of America offered properly qualified students the privilege of joining the field expeditions of the Institute in Colorado, Utah, and New Mexico. A number of students availed themselves of the opportunity to participate in the practical work of exploring, mapping, and excavating ruins in the San Juan, and Rio Grande basins. These expeditions closed October 1. Through the courtesy of the secretary of the Smithsonian Institution the committee is authorized to announce that the government

excavations at Casa Grande, in the Gila Valley, Arizona, resume this month under the direction of Dr. J. Walter Fewkes, to continue during the autumn and winter, and that students may arrange through the Archæological Institute to participate in the work at this site. Students desiring to avail themselves of this opportunity should correspond with Edgar L. Hewett, Director of American Archæology of the Archæological Institute of America, No. 1333 F Street, Washington, D. C.

QUEEN VICTORIA'S LETTERS.

The Letters of Queen Victoria: A Selection from Her Majesty's Correspondence between the years 1837 and 1861. Edited by Arthur Christopher Benson and Viscount Esher; illustrated. 3 vols. New York: Longmans, Green & Co. $15 net.

On the personal side, these letters add little to our knowledge of the Queen's character. That had already been revealed and understood fully. Here we get only cumulative evidence of her kindness, her purity, and of the essential commonplaceness of her mind. She comprehended and satisfied the middle classes of Britain so perfectly because she was practically one of them. Her tastes and standards in art and literature and statesmanship were middle class. Intellectually, former writings of hers had displayed her limitations. Her Highland Journals would prepare one for the worst. The letters to Tennyson, included in the latter's biography, showed her literary obtuseness. But she at least knew her own failings in this respect. A memorandum by Prince Albert's private secretary in 1841 reads:

> Lord Melbourne said: "The Prince is bored with the sameness of his chess every evening. He would like to bring literary and scientific people about the Court, vary the society, and infuse a more useful tendency into it. The Queen, however, has no fancy to encourage such people. This arises from a feeling on her part that her education has not fitted her to take part in such conversation; she would not like conversation to be going on in which she could not take her fair share, and she is far too open and candid in her nature to pretend to one atom more knowledge than she really possesses on such subjects."

The Queen's private letters, of which the most numerous, intimate, and unguarded here printed were to King Leopold of Belgium, are very much what one would expect. They are warm-hearted, often to the point of gushing, but with a narrow range of interest, and without any literary or personal distinction. Take this specimen, written in 1844, when Prince Albert's father died:

> A father is *such* a *near* relation, you are a *piece* of him, in fact—and all (as my poor *deeply afflicted* Angel says) the earliest pleasures of your life were given you by a dear father; that can *never be replaced* though time may soften the pang.

A carefully educated woman of twenty-five who could write like that was evidently *capable de tout.*

It is, accordingly, the public aspect of the Queen which alone can give much interest to these volumes of her letters. One notes immediately a striking difference between her personal and her official correspondence. It goes deeper than a contrast of style, and reaches the whole habit of thought. This is doubtless to be explained by the fact that her more important communications to her Ministers, Viceroys, and Governors were written for her by Baron Stockmar or Prince Albert. The extraordinary influence of the former upon the Queen is explicitly avowed by the editors. It was one of the causes of the popular murmuring, early in Victoria's reign, over the too great predominance of German interests at Court. Stockmar was practically her private secretary, though Melbourne publicly denied it, and acted for a long time as a sort of political director to her. He brought with him a Prussian view of the monarchy too high for English consumption. But he impressed it upon the young Queen, and it led her into some of her first collisions with her Ministers. Prince Albert continued the same tradition to a certain extent, but he had a good head for politics, and soon became of the greatest value as an adviser of the Queen, and made himself, as these volumes bear fresh witness, a figure of real importance in the political world of England. It is plain that the Prince and the Baron, between them, had a great deal to do with shaping the Queen's ideas of her rights and duties.

Victoria was fortunate in her first prime minister. Lord Melbourne was a man of the world, cynical and sagacious, though not a first-class politician, but he acted from the beginning upon a very chivalrous conception of his relations to the young Queen. His attitude was a happy mingling of protection and deference. He led her wisely along the untried path of her royal duties, and gave her a personal affection which she returned. She showed him every confidence—indeed, leaned upon his advice, even after he had left office, a little too constantly for the peace of mind of Sir Robert Peel, who had become her Constitutional adviser. Some of the intimacies thrust by the Queen into her formal third-person letters to Melbourne, are amusing. Thus we find the ex-premier gravely writing, in 1841: "Lord Melbourne is very glad to hear of the princess's tooth." Victoria's stiff notions of propriety sometimes vexed Melbourne. When she insisted that no one, political obligations or not, should be appointed to the Household upon whom the slightest breath of scandal rested, Lord Melbourne groaned, as we find stated in a memorandum by Prince Albert, "that d——d morality will undo us all."

The Queen felt deeply at first the contrast between Melbourne and Peel. The latter, she wrote Melbourne, she found "such a cold, odd man she can't make out what he means." Later, however, she came to have a due respect for Peel's abilities and to appreciate his eminent services. It was from the irrepressible Palmerston that she had her worst trials—until Gladstone came. Palmerston would not flatter her; he would contradict and correct her; he even disobeyed her. This became so flagrant that he had to give up the Foreign Office. She made no secret of her distrust of him, and reflected with some satisfaction in 1850 that he was "too old to do much in the future." Palmerston was then sixty-five, but had still fifteen years ahead of him, several of them as Victoria's prime minister! Of Disraeli, all the Queen's first impressions were unpleasant. There are hostile and even contemptuous references to him. No one could guess from anything in these letters that he was to become chief favorite among all her prime ministers. To Cobden, she did not take a fancy. Peel's praise of him in 1846 "shocked" her, and she objected when it was proposed to make him a member of the Cabinet in 1847. In 1859, Palmerston suggested that John Bright be made a Privy Councillor. The Queen was "sorry not to be able to give her assent." "It would be impossible to allege any service Mr. Bright has rendered, and if the honor were looked upon as a reward for his systematic attacks upon the institutions of the country, a very erroneous impression might be produced as to the feeling which the Queen or her Government entertains towards these institutions." It is only fair to add that, later, Mr. Bright was welcomed at Windsor, not only as a Minister, but as a good friend. Queen Victoria, in her long life, underwent many such sea changes.

If her personal likes and dislikes fluctuated, her political convictions remained steady. She had no sympathy whatever with the democratic movement of her day. Class privileges (with class duties, of course) were among the fixed things in her mind, and she dreaded everything that looked like what she called "violence." When the Ministerial Reform bill was pending in 1852, she wrote to Russell: "The Queen takes it for granted that the Bill as approved by her will be stood by in Parliament, that Lord John will not allow himself to be drawn on to further concessions to democracy in the course of the debate, and that the introduction of the ballot will be vigorously opposed by the Government." A part of her enmity to Palmerston was due to the fact that she did not understand and did not like his connection with the liberating forces at work on the Continent and in England. To royalty as such she was always wondrous kind. Even her personal scruples had to give way a little when it was a question of moral lapses by a King.

The political interest of these volumes is rather of the minor order. There is a great deal about the rise and fall of Ministries and the ups and downs of parties; we are let into the intrigues of politicians; get some useful addenda to Greville's gossip, by way either of confirmation or correction. Even in foreign relations, however, which the Queen followed with assiduous interest, and in which the English monarch has still the greatest residuum of power, there are no revelations of high importance. We see the Queen petulant over the Spanish Marriages; we see her through the Crimean war absolutely certain that England was *not* laying her money on the wrong horse; we have from her pen an estimate of the character and ambitions of Louis Napoleon. Nothing of all this, however, is either very novel or very weighty. The letters stop with 1861. What the Queen was and did in the crisis of our civil war; what part she played at the time of the struggle between France and Germany; her rôle in the famous emergency of 1875, when Bismarck and Moltke thought of striking again—for this we have yet to wait. When the later records are given to the light, the political reputation of the Queen as a ruler may stand higher than it is left by these volumes.

We would not convey the impression that they are dull or disappointing. With many

arid tracts, they contain much that is entertaining. Melbourne, Peel, Russell, and Palmerston write interestingly. Disraeli's reports of the proceedings in the House read, as the Queen remarked, "like his novels." This is an anticipation of Mr. Balfour's description of Lord Beaconsfield's conversation—"a brazen mask, talking his own novels."

CURRENT FICTION.

The New Religion. By Maarten Maartens. New York: D. Appleton & Co.

"The old medication," cries the chief apostle of "the new religion," "is forgotten: hygiene, as a persistent occupation, is the medicine of the future! The coming age is going to think of and live for its body." This is not the first time Mr. Maartens has made merry at the expense of the medical profession; his merriment here is distinctly forced. The story is a queer hodgepodge of satire and sentiment, garrulous in manner, and often merely facetious in tone; an over-prolonged sniff at doctors and doctoring. Whether honest men or not, his physicians are invariably wrong in diagnosis and foolish in treatment. In short, most modern ills are to be traced to "the impassive Æsculapius, the fitful ruler of our fates. There is no ruiner of modern lives such as he." Even surgeons, it seems (we had supposed there was something in surgery), are chiefly occupied in cutting off perfectly good legs and in sewing up forceps and things inside their innocent victims. The gist of the whole matter would seem to be that physicians are either knaves or fools; mainly knaves.

Upon this cheerful theme, in the course of his rambling narrative, Mr. Maartens plays many groaning or strident variations. Everything turns upon the relation between physician and patient, the consequence being that his characters become mere exhibits. An odd thing is that several of them are sufficiently alive to impress one as worthy of a better fate. There is a good deal of effective satire upon medical fads, particularly as connected with the new game of hygiene—good-humored and self-contained satire such as really brings the matter home to the bosom of the ordinary reader. But the mood of the book as a whole seems to vibrate rather helplessly between snorts and giggles. Somehow the author has failed to hit the key; the story is neither fantastic enough nor sober enough to be more or less than a gentle irritant.

A Bachelor's Baby. By Thomas L. Masson. New York: Moffat, Yard & Co.

In this good-sized volume Mr. Masson has brought together a miscellaneous three-score of his recent humorous productions. Here are to be found short stories, dialogues, whimsical-serious essays, strings of modern apothegms, bits of verse, and what not. To speak of the volume comprehensively is not easy, considering its hodge-podge make-up, nor are any of the component elements important enough in themselves to need particularization. Mr. Masson's wit is facile, occasionally smart, often pungent, never very penetrating. In a weighty essay on "The Decadence of Husbands," he observes:

> There can be no question that, in spite of the obstacles mentioned, there is still a latent, lingering desire on the part of many to get married. Rash people are still trying their hands and pocketbooks at it. . . . No doubt tradition, habit, inertia are all largely responsible for this. No doubt a certain proportion will continue to get married long after it has gone out of style with the best people. There will always be old fogies.

It may be questioned whether by 332 pages of this sort of writing the author does not run danger of defeating his own avowed end, which, according to the Introduction, is "to amuse and interest the public" and "to present certain philosophical conceptions of life in literary form."

An Encore. By Margaret Deland. New York: Harper & Bros.

We doubt whether any American writer of fiction of the present generation has produced work more likely to last than the "Old Chester Tales" of Mrs. Deland. They have precisely the mellowness of atmosphere, precisely the delicacy of humor, of which the mass of our literature must confess its lack. And Dr. Lavendar, the *deus ex machina* of so many of the tales, is, one must think, worthy to go down to our great-grandchildren along with the beloved old men of fiction—Sir Roger, Uncle Toby, the Vicar, and the Colonel. This prettily bound and decorated edition of one of the most charming of the Old Chester chronicles is, we suppose, aimed at the holiday public. We hope it will hit the mark.

The Woman's Exchange of Simpkinsville. By Ruth McEnery Stuart. New York: Harper & Bros.

This is an attractive little holiday volume not unlike Mrs. Deland's. These Simpkinsville (Arkansas) people lack some of the graces of the Old Chester folk; but they are painted in like detail, and with similar affection. "Sonny" and his family are probably as widely known to magazine readers as Dr. Lavendar and his parishioners. Mrs. Stuart's touch is broader than Mrs. Deland's, and she is more open to the charge of sentimentalism, but this tale of the old age of Sonny's surviving sisters, and of the way in which he at last came into his own, is of a kind always sought by people who prefer their holiday trinkets in the form of sterling print, rather than of sterling silver.

A Turnpike Lady. By Sarah N. Cleghorn. New York: Henry Holt & Co.

The rural Vermont of somewhat more than a century ago is the scene of this quiet tale. The writer, it is clear, has informed herself faithfully in regard to the domestic life of those days, and we have descriptions, which sound veracious enough, of sugaring time and husking time, of spelling bees, of old-fashioned courtings, and of the various superstitions held in respect by the community. We have a glimpse, too, of the Tory side of the Revolutionary struggle. Whether the Green Mountain vernacular of a past century is accurately reproduced is beyond our determination; but at all events one recognizes an uncommonly successful writing-down of many of its present-day idiosyncrasies. For the rest, the story is quite inoffensive, told in a rambling, artless, unpractised fashion, that almost makes one question whether it were not intended as a juvenile. The writer's main undertaking, however, is to show us that true love is worth waiting for, even if it compels the sacrifice of comfort and social prestige and the embracing of poverty. "You better wait for it, Naomye," said the heroine's sister, who had eloped twenty years before with an itinerant fiddler. "Favor is deceitful and beauty is vain; but as the Good Book says: All for love, and the world well lost." Needless to say, Naomi's waiting received its reward.

Susan Clegg and a Man in the House. By Anne Warner. Boston: Little, Brown & Co.

A new series of monologues by Miss Clegg is matter for mild rejoicing. Susan Clegg is not, like Mrs. Wiggs, a creation of true humor, but she is a very funny caricature, or, if you will, photograph, of the New England spinster in her sourest and most absurd mood. It is the kind of thing announced on vaudeville programmes as "full of ginger—not a dull moment"; or in press notices as possessing "a laugh on every page." Such writing has, at the very least, its medicinal value; for if mellow humor is the balm of hurt minds, broad fun is a cordial for tired ones. Miss Clegg's experiences with a male boarder, as here recorded, are to be recommended heartily to people who may have found refreshment in "Three Men in a Boat," "Chimmie Fadden," or the sea worthies of W. W. Jacobs.

Gallantry. By James Branch Cabell. New York: Harper & Brothers.

Mr. Cabell's group of eighteenth century scenes has been wrought with cleverness, tact, and invention. He is frankly superficial and paints his pictures of George the Second's England, and France under Louis Seize, rather in snuff box style than with any complicated probing after the eternal human heart. Of course, it is not every one who cares to collect snuff boxes, but, granted the taste, "The Casual Honeymoon," all the adventures of Capt. Audaine and Miss Allonby, "April's Message," the whole history, in fact, of Ormskirk's courtings, form as satisfactory specimens as are likely to be manufactured at the present day. Moreover, in the plots, counter plots, and intrigues there is a grateful amount of lively movement. Unlike Thomas Hardy (in his biting eighteenth century studies), or Maurice Hewlett, Mr. Cabell does not attempt to reconstruct character, to create trenchant personalities. He busies himself about the satin-clad courtier, the airy fine lady, and the gallant. His miniatures are careful; though the touch is so light, the style seldom halts, and in the few instances where it lapses from that of his chosen period, it at least never ceases to be properly suited to the bloody or amorous minuets through which his puppets are stepping. In fact (never losing sight of the scale), no more discerning estimate of "gallantry" need be sought than that furnished by Mr. Cabell's own epilogue, where Ormskirk pleads:

> The author's obdurate, and bids me say
> That—since the doings of our Georgian day
> Smack less of Hippocrene than of Bohea—
> His tiny pictures of that tiny time
> Aim little at the lofty or sublime,
> Nor paint a peccadillo as a crime.
> Since though illegally all midgets mate,
> And flies purloin, and gnats assassinate,
> They are not haled before a magistrate.

This is his aim, and in large measure he attains it. If it be objected, that life was not then composed exclusively of dispatch boxes, robbers, spies, masqueraders, duels, and evening parties, without a second's breathing space between, the answer is that exciting rather than commonplace moments have been selected, as better suited to fiction; and not only selected: they have been trimmed, polished, and refined to a version suggesting the school of Watteau rather than Hogarth.

To place "Gallantry" more exactly, we may safely say that while not for an instant comparing with such a masterpiece as Mr. Hewlett's "Stooping Lady," it has infinitely more merit than many such popular successes as, to take one example, "Monsieur Beaucaire."

Camping and Tramping with Roosevelt. By John Burroughs. Boston: Houghton, Mifflin & Co. $1 net.

Theodore Roosevelt, the Boy and the Man. By James Morgan. New York: The Macmillan Co. $1.50.

The two most recent additions to the constantly increasing store of Rooseveltiana, different as they are in point of view and subject-matter, have one striking characteristic in common. They are both simple. The Presidential exponent of the simple life could not ask better examples of this sort of biographical writing. Of the two, the little book by Mr. Burroughs is the more intimate, and the more valuable, because of the light it throws on an interesting phase of the President's many-sided character. Like the books of Francis E. Leupp and Jacob Riis, it is the tribute of a friend, written from knowledge gained in close personal companionship, not from a perusal of newspaper files and public documents. Unlike their books, which attempted to portray Mr. Roosevelt in every field of his multifarious activities, Mr. Burroughs's volume deals only with the man as he appears in the woods and fields. There is not a word of politics in it. The book comprises two sketches, "Camping with the President," an account of the trip which the President and the naturalist took together through Yellowstone Park in the spring of 1903; and "President Roosevelt as a Nature Lover and Observer." In the latter, a random series of personal anecdotes, illustrative of all sorts of birds and beasts, from Oyster Bay sparrows to carved ivory elephants, the author bears this testimony to his friend, while at the same time he takes a sly slap at the "nature-fakers":

> I cannot now recall that I have ever met a man with a keener and more comprehensive interest in the wild life about us—an interest that is at once scientific and thoroughly human. And by human I do not mean anything akin to the sentimentalism that sicklies o'er so much of our more recent natural history writing, and that inspires the founding of hospitals for cats; but I mean his robust, manly love of all open-air life, and his keen insight into it.

The book is as sincere as it is frankly the work of an admirer, but it is such a tribute as any man might be proud of.

James Morgan's biography is a clear, straightforward account of the President's life from boyhood to the present day. The author expressly disclaims any attempt to analyze the individual or to advance or criticise his political policies. The book has not the personal touch that characterizes the writings of some of the President's other Boswells, but what it possibly loses in interest from the fact, it gains in value by its impartial recital of the varied and dramatic scenes in the career of "a man, who," to quote the author, "has the enthusiasm of a boy, and whose energy and faith have illustrated before the world the spirit of Young America." The book, however, is by no means a history for juvenile readers, although the title might suggest as much. It is crammed full of facts, chronologically, not topically, arranged, so as to make it a useful work of reference. There is very little superfluous matter or "fine writing"; the anecdotes are plentiful and even if somewhat shopworn, well chosen to illustrate traits of character. Mr. Morgan is the first man to write a real biography of Theodore Roosevelt as distinguished from the character sketches of which we have several excellent examples. He has accomplished a difficult task accurately and impartially.

Chronicles Concerning Early Babylonian Kings. By L. W. King. 2 vols. London: Luzac & Co. 16s.

Mr. King, the assistant keeper of the Egyptian and Assyrian antiquities in the British Museum, enjoys a high reputation as an editor of cuneiform texts. Although still a young man, he has already published more than most scholars accomplish in a lifetime, and the quality of his work is in keeping with the quantity. In previous publications, notably in his two volumes on the "Seven Tablets of Creation" and his three volumes on "Letters and Inscriptions of Hammurabi," he also displayed his ability in interpreting cuneiform texts, which is quite a distinct achievement from the mere copying or even translating them. In his latest production, he attacks the difficult problem of early Babylonian chronology, and with the help of new sources which he was fortunate enough to discover among the treasures of the British Museum, he has succeeded in definitely solving a number of difficulties that have hitherto baffled scholars. The early date of 3750 B. C. was assigned to the famous King Sargon on the basis of the statement of scribes in the days of Nabonidus, the last King of Babylonia (555-539 B. C.), that Sargon ruled "3,200 years" before Nabonidus. This date has for a long time been felt by scholars to be too high. Various theories have been put forward to explain the statement "away," including the radical assumption that the scribes, by an error, wrote 3,200 instead of 2,200. It has been left to Mr. King to prove by the direct evidence of a new chronicle that the so-called first and second dynasties of Babylon, instead of being successive, were partly contemporaneous. This fact was not taken into account by the scribes of Nabonidus; and since the second dynasty covers 368 years, this figure must now be deducted from the total of 3,200 years. By means of this reduction, the way is cleared for fixing the date of Hammurabi (the sixth and most important King of the first dynasty of Babylon) after 2000 B. C.—perhaps nearer to 1900 B. C. With this established, there need be no further hesitation in identifying Hammurabi with the King Amraphel of Babylonia mentioned in the famous and much discussed fourteenth chapter of the book of Genesis—the contemporary of Abraham. According to the scheme of the Priestly Writer in the genealogical sections of the Pentateuch, the interval between Abraham and the Exodus is 645 years, and since the date of the Exodus, which took place in the reign of Merneptah, can now be approximately fixed at 1234 B. C., the date thus obtained for Abraham, 1897 B. C., accords pretty accurately with the new date for Hammurabi. We thus obtain a safe point of departure for the early Babylonian chronology, though it is perhaps just as well to add that the substantial agreement between the date for Abraham, according to the Priestly Writer, and that for Hammurabi does not settle the question of the historical existence of Abraham, but only the reliability of the chronological traditions of the Hebrew scribes. Shortly before Mr. King's book appeared, Dr. Arno Poebel, a young Assyriologist of promise, had, on entirely different grounds, reached the same conclusion with regard to the relationship of the first and second dynasties of Babylon, so that the new theory thus reinforced will probably meet with unanimous acceptance.

The new system of chronology also furnishes the solution of a number of other problems which had hitherto puzzled scholars; and a point of some importance is the proof incidentally established for the substantial accuracy of most of the chronological data embodied in Babylonian and Assyrian annals. German scholars have during the past two decades vied with one another in proposing all manner of emendations for the various figures furnished by Babylonian chronicles, by date-lists, and by incidental references in the official annals, until scarcely a single date was left untampered with. While it seems certain that the ancient scribes did occasionally err, those errors have a certain *rationale*. The scribes, it is equally certain, were not "guessers," even when they indulged in round numbers; and it is rather curious that not a single one of these many recent conjectures, though often supported with much ingenuity, has been confirmed, while most of them have now been shattered by a single blow. The high date assigned by the scribes of Nabonidus to Sargon thus turns out to be not a guess, or a wilful exaggeration, but an error of the scribes in counting dynasties as successive which were in reality contemporaneous—wholly or in part.

The texts published by Mr. King also furnish a new synchronism between the history of Babylonia and Assyria, which shows that one of the oldest rulers of Assyria, Ilu-shuma, whose name has been found on various documents unearthed by the German expedition working at the ruins of the ancient capital of Assyria—the city of Ashur—was a contemporary of Su-Abu, the founder of the first dynasty of Babylon. This enables us to carry the history of Assyria definitely beyond the year 2000 B. C., and to give approximate dates for a considerable number of Assyrian rulers, both before and after Ilu-shuma, in regard to whose period there had hitherto been considerable doubt.

A third result of importance for which we are indebted to Mr. King's researches is

the evidence of an invasion of Babylonia by the Hittites at about 1750 B. C. Fresh interest in the Hittites has been created by the remarkable discovery of an extensive archive at Boghaz-Köi, which turns out to have borne the name Khatti, and was at one time, therefore, the capital of the Hittite Empire. Professor Winckler of the University of Berlin, who found a large number of cuneiform tablets at Boghaz-Köi in the summer of 1906, is again engaged in explorations in that region, and, according to reports, has been even more successful than last year in the discovery of more documents which promise to shed a new light on the movements of the Hittites, and which may prove to contain the key for the reading of the hieroglyphic Hittite inscriptions. The tablets at Boghaz-Köi do not appear to be older than the fourteenth, or, at the most, fifteenth century, so that the date now furnished by Mr. King is the oldest testimony we as yet have for this strange group of peoples, who at various periods were engaged in conflicts with the Egyptians in Western Asia, and at one time threatened to destroy the mighty Assyrian Empire. To find the Hittites advancing as far south as Babylonia in the eighteenth century comes as a great surprise to scholars. Mr. King has made it plausible that the Hittites even succeeded in sacking the city of Babylon and in removing as trophies of war statues of Marduk, the chief god of the Babylonian Empire, and of his consort, Sarpanitum. At all events, we find a king of Babylonia some centuries later recording the return to Babylon of statues of these deities which had been taken to Khani in northern Syria, situated within the Hittite domain.

Mr. King is a sober scholar as well as a sound one, and the self-restraint he exhibits in indicating with great frankness the difficulties that he has not succeeded in setting aside makes him a reliable guide for those who are unable to control his statements by recourse to his sources. Thus, he admits that the reconciliation of the chronological system of Berosus—which, to be sure, has not come down to us at first hand, and may have been tampered with in passing from one author to another—with the new data is apparently a hopeless task, though, on the other hand, the difficulties are not increased by the acceptance of King's deductions from his data.

Again, although some new information is to be gleaned from the valuable material placed at our disposal by Mr. King for the period lying beyond the first dynasty of Babylon, he judiciously refrains from the attempt and the temptation to fix the date of Sargon, one of the oldest of the Semitic rulers in Mesopotamia. So much, however, now seems certain; that not long after Sargon an endeavor was made by the older settlers, known as the Sumerians, to grasp the control from the Semitic invaders. A powerful dynasty with its centre in the old Sumerian capital, Ur, arose, and for a time at least held sway also over northern Babylonia. Since Mr. King makes out a good case for the thesis that the so-called Ur dynasty follows immediately upon the one represented by Sargon and his son, Naram-Sin, it follows that we must definitely abandon the high date still maintained by some scholars for the Sargon dynasty. In addition to the 368 years represented by the second dynasty, which now no longer enters into calculation, we may safely cut off a few more centuries, and bring Sargon down to about 3000 B. C. Further than this, however, we may not go at present.

Of the two volumes, the first contains the discussion of the new texts, and the second the texts themselves in accurate autograph copies, as well as in transliteration, and accompanied by translations. The copies are made with that finish and neatness to which King has accustomed us by his former publications. In the translations there is of course room for differences of opinion in minor details, and some of King's renderings are open to serious objections which cannot, however, be considered in detail here. The publication may be set down as the most important that has appeared in many years within the domain of Assyriology. It is a significant contribution to the earliest history of the ancient Orient. Apart from their intrinsic merits, King's two volumes are to be commended as models of good historical method in combination with sound philology and sober exegesis. The style is fluent and forcible, while the discussions are remarkably clear, so that the book can be read with pleasure as well as with profit by all interested in ancient history. There are too many repetitions which might have been avoided by footnote references.

The Memoirs of Ann Lady Fanshawe. Reprinted from the original manuscript in the possession of Mr. Evelyn John Fanshawe of Parsloes, with four photogravure portraits and twenty-nine other reproductions. New York: John Lane Co. $5 net.

Lady Fanshawe's Memoirs were first given to the public in 1829 by Sir Harris Nicolas, and reissued in 1830. There was no later reissue until 1905, when John Lane Company published a popular edition with illustrations and with an Introduction by Beatrice Marshall. The present edition, by the grandson of the first editor, is made directly from the manuscript (we may remark, by the way, that the editor, though multifariously learned, seems not to know the difference between the use of MS. and MSS.), in the possession of Evelyn John Fanshawe, of Parsloes, Essex. How necessary such a revision was may be seen by a comparison of the two texts. Names are constantly transcribed wrong in the edition of 1829, "Lady Norton" for "Lady Morton," "Lady Danby" for "Lady Denbigh," "Lord Charles Clare" for "Lord Cha(ncellor) Clar(endon)," "a horse" for "a hone" in the famous apparition scene in Ireland, etc.

It is good to have one of our slender classics renewed for us in this careful manner, although we cannot go all the way with the editor in his apparent enthusiasm for the Memoirs. He quotes the opinion of Horace Walpole, who had seen them in manuscript (as he saw all manuscripts) and who wrote of them in 1792 to the Countess of Ossory: "I had been told they were very curious, which was a little more than I found them, though not unentertaining"; and against this opinion sets that of Professor Mackail: "The most charming and individual of any English memoirs of the period, Mrs. Hutchinson's not excepted." The judgment of most readers, we think, will be closer to Walpole's than to Professor Mackail's. There are beautiful passages here and there, such as Lady Fanshawe's account of the love between herself and her husband, or the leave-taking of Charles I.; but there is nothing like the sustained elevation that gives to Mrs. Hutchinson's Memoirs the quality of high literature. There is an interesting picture of the life led by wandering cavaliers during the Rebellion and under the Commonwealth. Mr. Shorthouse, one remembers, drew largely on these Memoirs for his picture of Oxford court life in "John Inglesant," giving, by the way, a slanderous story of Mrs. Manley's about Lady Fanshawe under the name of Lady Fentham. The later account also of Sir Richard's short career in Spain as ambassador for Charles II. is not without picturesque qualities and historic value; but to see how amateurish Lady Fanshawe's writing is at bottom, one need only compare her meagre outlines with Madame D'Aulnoy's picturesque reminiscences of Madrid.

The most noteworthy part of the present edition is the elaborate notes, occupying far the larger part of the volume and giving full information about every thing and every person in any way alluded to by Lady Fanshawe. We do not at the moment recall any family memoirs of the period that have been worked out with such minute care. Perhaps some of the material, such as the brief, though not uninteresting, lives of well-known historic characters, might have been omitted to advantage, and the space given to more of Sir Richard's own letters and to a reprint of his more interesting poetical productions. The editor deprecates harsh criticism of errors which are almost bound to occur in a work of such elaborate and minute research. We can only say that the mistakes we have discovered are few and unimportant. The book must remain a standard work of reference for students of the period.

Political Problems of American Development. By Albert Shaw. Columbia University Press. New York: The Macmillan Co. $1.50 net.

In this volume Dr. Shaw has collected the lectures delivered last winter as the opening course of the new Blumenthal Foundation in Columbia University. His utterances are permeated by a "full measure of hopeful confidence in the character and the future of American democracy," and are, according to his preface, "mature and deliberate." It must, however, frankly be said that one may have absolute faith in the success of the great American experiment without agreeing with many of Dr. Shaw's opinions. With his optimism no one can find fault, but from his historical judgments and his forecasts of the future we must often dissent. Indeed, we cannot feel that this work will add to Dr. Shaw's reputation either as a writer or as a student of American problems. The whole volume smacks of the haste of journalism. It is frequently repetitious, and is not lacking in that dogmatic finality of opinion which is a pitfall for all editors.

To let the book speak for itself—we think

that most of our readers will be surprised to learn how deep an impress the aborigines have left upon our national character:

Certain Indian traits and qualities—those of physical courage and endurance, of silence and stoicism under conditions of danger and difficulty, of a certain unassailable personal dignity—have for a hundred years unquestionably so affected the American mind as to have entered very deeply into the quality of what we may call American personality. If all our pioneers were not at some time engaged in Indian fighting, they were all schooled in the need of being prepared for it. Outside of our Eastern cities, every American boy until within a very recent period has been trained in the use of arms, has had some knowledge of wild animals and woodcraft, and has imbibed something of that personal initiative, resourcefulness, and capacity for self-directed action that could not have come alone from our early provisions for democratic equality and universal education. It came in large part from the experience of subduing a great continent and from the actual or traditional dealings of our people with so remarkable a man as the American Indian.

Dr. Shaw's easy and popular philosophy that everything that is is wise and good may be seen on nearly every page. He is certain that the "constant efforts of philanthropists and idealists to give practical effect to our national pledges of justice toward the Indians have provided us with a series of problems of government and administration from which we have never at any time been wholly free"; but he lets fall no single word of anger at our betrayal of our wards or at our exploitation of them and their lands. Dr. Shaw is deeply interested in the negro, but here, too, he is quite satisfied that all is well. The North, he says, has come to see that the South must work out its own problem. The negro is, of course, deprived of the suffrage (the foundation stone in any democratic structure) but then, is he not allowed "to educate his children, and to work freely and securely at any trade or calling?" It happens that the vast majority of negro children are not educated properly (6,000 are uncared for in Atlanta alone), and that the negro is frequently disturbed at his trade, and sometimes altogether prohibited from following it. But the complacent statesmanship of Dr. Shaw passes over matters like these, just as it sees in Chinese and Japanese exclusion a wise policy wholly unconnected with questions of national ethics. Similarly our performances at Hawaii, and at Panama, and our war with Spain are either to be slurred over or approved.

Only when it comes to foreign policy does Dr. Shaw show indignation. Curiously enough it is against those statesmen who failed to purchase Canada from England during the civil war that he thunders most vigorously. Our latter-day ventures in expansion he approves here as in the *Review of Reviews*. But the curious reader cannot but marvel at this interpretation of the facts of current history:

In the great debate of the year 1900 the country specifically accepted and justified our Philippine policy in view of the circumstances that surrounded it. . . . This Philippine undertaking has already proved a costly and difficult one, but its lessons have been so salutary as to have justified it. . . . It has sobered and dignified our diplomacy, and has reacted very favorably upon our political conditions at home. . . .

Science.

Evolution and Animal Life. By David Starr Jordan and Vernon Lyman Kellogg. New York: D. Appleton & Co. $2.50 net.

This volume contains the substance of a course of lectures delivered jointly by the authors each year at Stanford University; and it is a noteworthy contribution to the popular literature of evolution. In less than five hundred pages we have an elementary and yet comprehensive introduction to our present-day knowledge of the facts, processes, laws, and theories relating to the life and evolution of animals. The names of the authors vouch for the reliability of the text, and their unbiassed treatment of moot questions is shown in a paragraph from the prefatory note:

We cannot talk long without saying something others do not believe. Others cannot talk long without saying something we do not believe. We wish you to accept no view of ours unless you reach it through your own investigation. What we hope for is to have you think of these things and find out for yourselves.

The book contains twenty-one chapters, and the subjects range from the physical basis of life, natural selection, variation, and heredity, through sex and ontogeny, paleontology, adaptations, and color. The last two chapters are devoted to instinct, reason, and man's place in nature. Thus in this single volume is given a bird's-eye view of the whole extensive field. Such a vast outlook cannot fail to be an inspiration to the student; indeed, many of our extreme specialists could gain much from it, in the correlation of their work with that of others; the microscopist might well take his eye from his instrument and, from his window, glance for a moment over a wide expanse of sea, land, and sky. An appendix contains a bibliography of general and special treatments of the chapter subjects, but these references are confined to books and papers published in English. Since both authors are zoologists, animals are generally given preference over plants, although Burbank's work has a prominent place.

Notwithstanding the extreme condensation, the text is clear and pleasant reading, brightened by original similes. For example, the illusion of special creation and permanence of type is stated to be due to the fact that "as a flash of lightning in the duration of the night, so is the life of man in the duration of nature." At the instant of brightness the branches, the flying clouds, the falling rain, all appear motionless and at rest. The position of the authors upon certain important questions, and their vigor of diction, are best illustrated by several short extracts.

There is no absolute definition for the word *species*. The word *kind* represents it exactly in common language and is just as susceptible to exact definition. . . . A species is an island, a genus, an archipelago, in a sea of death. . . Not a few so-called true species are only ontogenetic species held for a number of generations true to a type simply because the environment, the extrinsic factors in the development of all the individuals in these successive generations, are the same. But how these individual characteristics and changes can be put into the heredity of the race we do not understand.

As illustrative of variation:

Fill a bottle with flies. All in time will die of suffocation, but a certain few will outlast the many. Bring in a number of wolf cubs. Some will become relatively tame—some will remain wolves, and between the most fierce and the most docile we shall find all ranges of variation.

The illustrations are numerous and well chosen. The few slips which occur are unimportant: the starfish figured on page 23 is not walking, but righting itself; spermatozoan No. 11 on page 218 has no caption.

"Guides for Vertebrate Dissection," by Prof. J. S. Kingsley (Henry Holt & Co.), consists of three pamphlets, dealing respectively with the frog, the dogfish, and the necturus. Each pamphlet (they average about thirty pages) is complete in itself and is issued separately. The author has kept constantly in mind the needs and the limitations of the student. There are many questions which are left unanswered in order to stimulate independent investigation. For the same reason illustrations are omitted. The first mention of any scientific term is printed in blackfaced type. Brief descriptions for injecting and for making skeletons are given in the introduction, and each pamphlet contains an excellent bibliography. The intention, of course, is to have these manuals used under the direction of an instructor; otherwise the student may get into difficulties, as in the dissection of the nerves, that stumbling block to the beginner. Other sections treating the remaining groups of vertebrates are promised. The thoroughness and the small cost should make these guides widely acceptable.

The death is announced, in his seventy-third year, of Howard Saunders, the distinguished British authority on birds. Mr. Saunders was born in 1835, and first became absorbed in ornithology when as a young man he was travelling in South America on business. He was for a while editor of the *Ibis*. His published books include Vols. III. and IV. of "Yarrell's British Birds," "Manual of British Birds," and the British Museum Catalogue of Terns, Gulls, and Skuas.

Prof. Domenico Capozzi, known for his works on pathology, has just died at Naples at the age of seventy-six.

Drama.

MENANDER IN EGYPT.

PARIS, October 22.

A year ago, as was noted in these columns, Gustave Lefebvre, in the course of excavations at Ichgaou—the ancient Aphroditopolis the Little—on the banks of the Nile, discovered in a heap of papyrus containing accounts and contracts several rolls written in Greek characters. They proved to be four considerable fragments of as many different comedies of Menander. They have been examined in detail by a competent Hellenist, Prof. Maurice Croiset of the Collège de France. He has settled the text, and now communicates the results to the Académie des Inscriptions et Belles-Lettres. In all there are thirty-four pages of text. Our previous acquaintance with Menander was limited to the praise of the ancients—Quintilian putting him above Terence, who is supposed, *more Romano*, to have plundered him, and who

was set down by Cæsar as a demi-Menander—with a few bits of dialogue and wise saws. Altogether, this was not enough to furnish the modern critic with means of independent judgment. The new discovery is consequently an event in the literary world.

The first fragment gives the *dramatis personæ*, the argument, and several lines of the first scene of a piece. As the names and description of most of the hundred and eight comedies of Menander have been preserved, M. Croiset was able to identify all this as the beginning of "The Hero." The second fragment is far more important, comprising the principal scenes and entire development of the Ἐπιτρέποντες (from two under characters who "submit to an arbiter" a case which brings about the intrigue of the piece). The story is not very proper (except perhaps in Paris), but ends with high Greek morality by love coming honorably to its own. The third fragment is very incomplete—a prologue and a few scenes—but it is pieced out by previous discoveries made by Grenfell and Hunt, sufficiently to get at the story of ἡ περικειρομένη ("She, whose hair was cut")—a punitive Rape of the Lock, with a pathetic, happy ending. The fourth fragment is the most complete of all—the entire three acts beginning the "Samian Woman." The plot, as usual, unweaves a tangled web of past seduction and abandoned children; but the dialogue justifies the opinion of the ancients concerning Menander's conversational charm. The philosophical student of Greek religious practices will find by the way many disclosures of the license of the feasts attending the mysteries. But, says M. Croiset, the great thing is that we can now judge for ourselves the real talent of Menander—his mastery in rendering delicate shades of character and varied sentiment, and that which Quintilian admired, his marking off each of his characters by conversation belonging to his social condition. Peasants, bourgeois, soldiers, slaves—all are here revealed to our remote days by this disciple of Theophrastus and friend of Epicurus, this typical Athenian, who was drowned bathing at the Piræus. His statue in the Vatican shows a round, full-cheeked face, with eyes strongly asquint, a long nose and wrinkled forehead. With the new discoveries we have a complete Menander renaissance. S. D.

H. H. Furness, jr., son of the veteran editor, who has collaborated with his father and already issued a revision of the Variorum "Macbeth," has now the volume containing "Richard III." in press. It will be published early next year.

We have seldom had occasion to examine a more unnecessary book than "Shakespeare Studied in Six Plays," by the Hon. Albert S. G. Canning. (Philadelphia: Geo. W. Jacobs & Co.) It contains no learning and, except in the quotations, no wit; the style is that of a schoolboy; the general intelligence is barely mediocre. The plays here "studied" are, notwithstanding the title, seven: "Othello," "Macbeth," "King John," "Richard II.," Henry IV.," parts 1 and 2, and "The Merry Wives of Windsor." The method is simple. The author merely strikes out the speech tags and substitutes, "Iago retorts," "Brabantio exclaims, certainly with truth," "Then asks Roderigo." The following is typical:

Roderigo eagerly asks:
"Where shall we meet in the morning?"
Iago replies:
"At my lodging."
Roderigo rejoins:
"I'll be with thee betimes."
Iago replies:
"Go; farewell."

In the chapter on "Othello," no fewer than 169 pages are devoted to a narrative of the plot in this style, and the essay is closed with five pages of comment, partly obvious and partly wrong. Considerably over half of the play is quoted verbatim. The complete text could have been given in less space, and the change would have been pure gain. The few explanatory notes are borrowed from an out-of-date commentary, and are often inaccurate. We are totally at a loss to understand why the book was written, and, when written, why published; and it is noticed here merely as a warning.

One of the latest contributions to the poetic drama is the "Attila" of Laurence Binyon, produced with moderate success in London by Oscar Asche, one of the most promising actors of romantic and tragic characters. It is called a tragedy, but may be described more accurately as a high form of romantic melodrama. To historical accuracy it makes no pretence whatever, although some of the incidents are founded more or less remotely on fact. The scene is laid in a Burgundian city, where Attila, warned by a soothsayer of the impending death of his three sons, resolves to cast aside his wife, and wed the princess Ildico, who, after an interval of patriotic hatred, learns to reciprocate his passion. On the wedding night, however, Ildico discovers that Attila contemplates also a matrimonial alliance with the Roman princess Honoria, who has sent him a ring. This trinket she demands from him, and when he refuses she kills him in the bridal chamber with his own sword. As a matter of fact, Ildico did not kill Attila, and probably never even heard of Honoria, but the play is none the worse on that account, especially as nearly all the rest of it is pure fiction. Unfortunately, the invention is not always commensurate with the proportions of an heroic theme. The piece lacks coherence, dignity, and the sustaining purpose of an adequate motive. But Mr. Binyon has furnished some effective scenes for Attila—such as the consultation with the soothsayer and the various episodes connected with the wooing of Ildico—and many passages of spirited, sonorous, and occasionally imaginative rhetoric, which, when declaimed with the fiery vigor of Mr. Asche, would doubtless be exceedingly effective. Some of the descriptive bits are finely imaginative, but the verse, as a whole, is more remarkable for smoothness and directness than for elevation or variety of fancy. Attila himself is a striking figure, with his barbaric strength and imperious passion, but too much stress is laid upon the mere animalism of his nature. In this respect, as in others, truth might have been sacrificed profitably to romance. But the general literary quality of the play is undeniably good, and entitles it to respectful recognition.

"The Breaking Point," by Edward Garnett (London: Duckworth & Co.) has secured some amount of public notice because G. A. Redford, the English censor of plays, refused to permit a performance of it in a London theatre. Otherwise it is extremely unlikely that it would have attracted much attention. It is to be noted that Mr. Redford did not assign any particular reason for his veto, simply intimating that, in his judgment, it is not suitable for public representation. Perhaps he would have been wiser, as he almost certainly would have been less kind, if he had allowed it to be acted and drop quietly into oblivion. Mr. Garnett, and a good many others, have assumed that the play was suppressed because it is immoral. To that charge it is not fairly open. It does not glorify, or advocate, or palliate vice, and it is not salacious in fact or in purpose. But it is unnecessarily offensive to good taste, and is, moreover, an amateurish piece of work, founded upon highly improbable premises, unnatural in action, and, in spite of some violent theatrical situations, quite devoid of any real literary or dramatic value. The conduct of the principal personages concerned is so at variance with all ordinary experience of human nature that the mere notion of its having any illuminating effect upon existing social conditions is preposterous. As one of Ibsen's heroines says, "people do not do such things." Now that Mr. Redford has advertised the play, it is possible that more may be heard of it; but if it ever reaches the footlights here—unless in some greatly modified form—observant spectators will be tempted to regret that there is no American censor. In a preface Mr. Garnett maintains that the sole business of such an officer is "to prevent gross or prurient indecency on the public stage." If this means anything, it means that there should be no restriction upon that veiled suggestion, which is so much more pernicious than any open vulgarity. There is, of course, no intimation in this that Mr. Garnett would be willing to avail himself of any such license. He did not stop, probably, to consider the full scope of his words.

"The Point of Life," by Amelia Josephine Burr, is a little three act poetic play not unworthy the attention of an artistic independent theatre. Although the work of a novice, it exhibits some measure of constructive skill and a good sense of dramatic situation, combined with lively fancy and a literary style which is clear, facile, and in places eloquent. The play is remarkably compact and rapid in action, is vital in its characterization, and depicts the victory of a noble nature over fleshly impulse in somewhat crude colors but with indisputable veracity. The scene is laid in Florence in the sixteenth century and the spirit of the time and place is happily preserved. Benvenuto Cellini is enamored of Luciana, the beautiful and chaste wife of a rich merchant, Domizio. His declaration of love which she repels with fine scorn, so overwhelms her that she falls into a trance which is mistaken for death, and—her husband being absent—she, like Juliet, is placed in the family tomb. There Benvenuto seeks her and discovering that she still breathes, carries her off to the house of his sister, Liperata, where she partly revives and while still only semi-conscious, turns to him as her preserver and lover. In the fury of his passion Benvenuto would take advantage of her weakness,

but Liperata, by a moving appeal—as vigorous in expression as it is fine in sentiment—rallies his better manhood and he departs to meet the returning husband and bring him to his wife. The tale is melodramatic in its improbability, in its multiplication of concidence and the obvious artifices of its contrasting incidents. But these are the natural defects of inexperience and do not obscure the substantial motive of the piece, its local color, its animation, its living personalities, and its admirable literary quality. The character of Benvenuto is sketched with boldness and with insight. Liperata and Luciana are delicate and graceful examples of womanhood; and there is a capital page part, Cosimo. Some roystering scenes are drawn with much spirit and are enriched with rarely melodious songs. In short, the little play is full of promise and deserves the dainty form given to it by the Hiliside Press, of Englewood, N. J.

"The Christian Pilgrim," the stage version of "Pilgrim's Progress," in which Henrietta Crosman will appear, is to be presented in the Liberty Theatre next Monday. The piece is in five acts and eleven scenes, which show the course of Christian from the City of Destruction to the Celestial City, with illustrations of "The Wicket Gate" and "The Cross on the Hill," "The House Beautiful," "The Valley of the Shadow of Death," "Vanity Fair," "By-Path Meadow," "Doubting Castle," "The Shrine of the Wanton," and "The River of Death." The more important parts will be played by Tyrone Power, Miss Minna Adelman, Edward Mackay, Addison Pitt, Miss Corah Adams, and H. Roger.

Sarah Bernhardt has just begun another engagement in London, and the critics are practically unanimous in declaring that she shows few traces of the flight of years.

Music.

The Indians' Book. By Natalie Curtis. New York: Harper & Bros. $7.50 net.

Miss Curtis has called her volume "The Indians' Book" because the Indians are its authors. "The songs and stories are theirs; the drawings, cover design, and title pages were made by them. The work of the recorder has been but the collecting, editing, and arranging of the Indians' contributions." But this work of the "recorder" took many years and much patience. She visited many Indian tribes, sought interviews with the chiefs, and from them and others collected an abundance of valuable material. Her object was twofold: to make the white man better acquainted with the Indian, from the æsthetic point of view, and to preserve for the younger Indians the songs and legends of their ancestors. Unlike some of her predecessors, she soon abandoned the phonograph as "inadequate and unnecessary," and her equipment consisted solely of note book and pencil, a camera, and a color box for the use of the Indians who supplied the pictures for the book. Sections are devoted to the Eastern Indians, to those of the plains, the lakes of the Northwest, and the Southwest, and finally to the Pueblo Indians, who artistically present the chief points of interest. Each chapter is preceded by a few remarks regarding the history and character of the tribe under consideration.

In Miss Curtis's camera all Indians look pleasant; they are all gentlemen and ladies, as in the pages of the late Daniel Brinton; but there is no harm in this attitude, which, perhaps, comes nearer the truth than the old maxim that the only good Indian is a dead one. No attempt is made to determine how much of the Indian's poetic, artistic, and musical performances may be a result of the remarkable imitative talent which George Catlin noted many decades ago; but it must be said in general that the poems, stories, and tunes collected by Miss Curtis have the true aboriginal flavor. A good specimen is the Pima Wind Song:

> Far on the desert edges stands the cactus;
> Lo the blossoms swaying,
> To and fro the blossoms swaying.

The music of this song appeals to us much less than the words; and the same is true of most of the numerous tunes presented in this volume. Some of them are quaint and pretty; for example, the Hopi Lullaby on page 498, which would make an admirable theme for a piano piece; but on the whole our young composers who believe they can build a special and "national" species of music on the red man's tunes will not find much encouragement in the specimens here presented. Harmony, of course, there is none in the Indian's music, and Miss Curtis cannot be too much commended for not disguising these primitive tunes by dressing them up in European clothes. But the melodies, too, are in most cases disappointing. Catlin, no doubt, went too far when he spoke of an entire absence of melody in the music of the Indians, and declared that "their songs are made up chiefly of a sort of violent chaunt of harsh and jarring gutturals, of yelps, and barks, and screams." Stephen Powers was moved to tears by some of the simple Indian melodies he heard in California, and others have been deeply impressed on hearing this music—amid its proper surroundings.

Miss Curtis declares that "no civilized music has such complex, elaborate, and changing rhythms as has the music of the American Indian." This statement is not borne out by her many examples, which are rhythmically almost as monotonous and uninteresting as they are melodically, and not to be named in the same breath with the rhythmic complexities of a Wagner score, not to mention the Hungarian pieces of Liszt or Max Reger's rhythmic puzzles. Of interest are the author's comments on a rhythmical peculiarity of Pueblo music—a sudden holding back of the pace during one, two, or more bars. It is, she declares, "in no sense a rallentando, but an abrupt change of tempo with no loss of rhythmical precision. At the end of the slower bars the first tempo is resumed with the original impetus. Such change is merely a leap from one tempo to another and back again." Another peculiarity of Indian song which makes for expression is "a rhythmic pulsation of the voice on sustained notes somewhat analogous to the effect produced on the violin when the same note is slightly sounded several times during one stroke of the bow." These peculiarities are indicated by special signs in the music here printed. Miss Curtis has also followed Kurt Schindler's method of printing the songs in such a way that corresponding musical phrases are placed one beneath another like lines of verse.

When Oscar Hammerstein undertook the audacious project, last winter, of opening a new opera house in competition with the Metropolitan, he relied largely on the war of tenors which he expected would result when he pitted his Bonci against Conried's Caruso. The war, however, did not materialize, and Bonci was captured by the enemy. Thereupon Hammerstein imported another Italian tenor of repute, Zenatello by name, of whom he predicted great things. On Monday night, when the season at the Manhattan Opera House was opened with "La Gioconda," Zenatello won a great success, and the general opinion was that now Caruso might have to look to his laurels. Zenatello is a tenor of the manly sort; his voice is not only strong, but has a virile timbre, with none of the whine and bleat which mar so many Italian voices. His highest tones have a splendid ringing quality, and there is in them no appeal to the gallery. He sings like an artist, and as an actor enters into the spirit of his part. In fine, he is a valuable acquisition. So is Mme. Nordica, whose beautiful voice was heard to the best advantage; and there is a new contralto, Mme. Gerville-Reache, of whom good things may be expected. Under the bâton of Campanini, Ponchielli's rather stupid but effective opera was accorded a fine performance.

When Paderewski was last in this country his tour was cut short by a railway collision which came near ending his career. Fortunately he suffered no physical injury, but his nerves were so shattered that for more than a year he was unable to resume his concerts in Europe. That he has fully recovered his physical strength and mental buoyancy was made patent last Saturday, at his Carnegie Hall recital, by the very first piece on his programme—his own new Variations and Fugue, a work of the most strenuous sort played in a most dazzling and emphatic manner; also by the fact that after finishing his programme, which occupied an hour and three-quarters, he appeased the clamor of the enthusiasts with six extra numbers, requiring forty minutes more, without the slightest sign of fatigue. His new piece reveals his creative art in the phase of ripest musicianship; it is less melodious than most of his earlier works, but it displays an astounding mastery of all the resources of the composer's art, and its difficulties are such that probably not more than half-a-dozen pianists could play it. Among the other pieces played on this occasion one may single out for comment the Beethoven sonata op. 27, No. 1, which Paderewski played with enchanting early nineteenth-century simplicity and clearness; the Schubert-Liszt "Erlking," which was presented as a short, but thrilling, musical tragedy; two Chopin études, and two Liszt rhapsodies (Nos. 13 and 2), which, as usual, aroused more tumultuous enthusiasm than anything else. The next recital, on November 23, will bring two noveities of prime importance: Paderewski's own new sonata and the Liszt-sonata, which he has never yet played in America, and for which he has said he wants to do some missionary work.

For the second Sunday afternoon concert of the New York Symphony Society, on November 10 at Carnegie Hall, Walter Damrosch has made a Dvorák programme which will give one of the most complete pictures of this composer's activities as an instrumental composer ever presented here. The symphony will be the "New World," which in general popularity in this country seems to rank with Tchaikovsky's "Pathétique." Other Dvorák works to be performed are the "Carneval Overture" and the "Slavonic Dances," both characteristic of his skill in developing the folk-song and dances of Bohemia. Excerpts from the "Terzetto" will be played by the entire forty-six violins and violas of the orchestra, and a group of duets will introduce for the first time in America the Misses Eugenie and Virginia Sassard, who have won success in London and Paris by their singing of duets of Dvorák, Brahms, and the French composers.

Kubelik's concert at the Hippodrome, Sunday evening, November 10, will be his only appearance in this city for some time, as his tour of 125 concerts will keep him in the Middle West (opening in Chicago, November 14), for the first five or six weeks of the season. At the New York concert Kubelik will be heard in the "Sinding" concerto in A major, and other selections by Beethoven, Hubay, Saint-Saëns, Fibich, and Paganini, and will be assisted by the Russian Symphony Orchestra of seventy-five men, Modest Altschuler, conductor.

In announcing the date for the next Bayreuth Festival (July 22 to August 20, 1908) the management calls attention to the numerous complaints made by visitors to that town of the exorbitant prices charged by ticket speculators. Efforts are made to keep the tickets from these speculators, but they are aided by families living at Bayreuth, who reserve the seats for them. To put a stop to this proceeding, the management threatens to disclose the names of the disloyal citizens who thus aid the speculators.

Art.

Storia dell' Arte Italiana. By A. Venturi. Vol. V. La Pittura del Trecento. Milan: Ulrico Hoepli. 30 lire.

With the fifth volume of his great history Professor Venturi traverses the field already charted with admirable skill by Crowe and Cavalcaselle. And it cannot be denied that the comparison is in many respects a cruel one. Venturi quite lacks the cautiousness of his predecessors, is prone to state suppositions as facts, and frequently neglects even to tell whether a startling view is his own or another's. The result is a book which is misleading for the beginner and irritating to the adept. Yet it is a work which the adept must reckon with, if with tears. Venturi's vast encyclopedic knowledge, his keen æsthetic sense, his long familiarity with all the procedures of connoisseurship, give value even to his caprices. We shall note only what seem his most important contributions to the central problems of Cimabue and Giotto.

Giving up—too readily it seems to us—the Ruccellai Madonna to Duccio, our author claims for Cimabue not merely a large part of the choir and transept decorations of the Upper Church at Assisi and all the other works traditionally ascribed to the master, but also a great part of the ceiling designs of the Florence Baptistery, and a series in old St. Peter's, Rome. The latter are represented only by rude sketches of a much later date, and both these additions to the *œuvre* of Cimabue must be regarded skeptically. But the common sense reconstruction of Giotto's master as an artistic personality—agreeing broadly with the parallel studies of Fry and Aubert—is a genuine service to the history of Italian painting. We shall probably hear no more of that flippant journalism—sacrilegiously incorporated in the new edition of Crowe and Cavalcaselle—which endeavored to reduce Cimabue to the position of an historic doubt. As for the Ruccellai Madonna, the last word has not yet been said, and it is worth while inquiring if its Sienese appearance be not deceptive. Is it after all more Sienese than certain panels of Lorenzo Monaco a century and more later, and may not the similar effect be due to the similar cause of conscious imitation of the style of the City of the Virgin? May not the imitator even be Cimabue himself (as tradition still believes) before he had been liberated by contact with the Roman School? One who considered the picture simply as draughtsmanship—apart from its Byzantine calligraphy—would, we feel, be very slow to attribute it to a Sienese brush. The hands are plainly enough Esau's, but is not the voice Jacob's?

Venturi approaches the great topic of Giotto with fairly apostolic enthusiasm, and with much insight also. He is possibly led astray at times by seeking to determine too narrowly the part of assistants in the work generally attributed to the master. One must admire, without being convinced, the certainty with which he parcels out the St. Francis series at Assisi to the master and three helpers; and one must doubt, without admiring, when he declares the Franciscan Allegories in the crossing of the Lower Church to be a scholar's amplification of the more terse originals at Santa Croce. No works in the Giottesque cycle have in a higher degree his specific beauty of line and his real sense of ponderosity. In short, if the designs of these vaults are not by Giotto, can we safely ascribe to him with any certainty any painting whatsoever? Naturally these large matters are not to be settled in a note, nor is here the place to essay so thorny a topic as the authorship of the St. Francis series in the Upper Church. Here we have to do with two opposing views and an evasion. Venturi ranges himself with the tradition that the work is Giottesque, and about a third of the frescoes by Giotto himself. Crowe and Cavalcaselle, and now Aubert, regard the cycle as pre-Giottesque—a sort of emanation from Cimabue. Berenson, who has never treated the subject at length, takes a skeptical position, accepting these stories as vaguely Giottesque, and as containing something of Giotto, but declining on the ground of the damaged condition of the frescoes to make any more definite affirmation.

Now concerning these theories one may pay his money and take his choice, but we feel that few will venture to dissociate the series wholly from Giotto. Even if the legend were of no weight, it would be hard to imagine so remarkable a group of precursors painting only at Assisi and elsewhere leaving no trace of their activity. The probability seems to lie somewhere between the skepticism of Berenson and the cocksureness of Venturi. Throughout the invention seems Giotto's, but details, backgrounds, etc., were often left to subordinates. The master hand, unless it be admitted in the first story, seems to the present writer, hardly traceable until we reach No. 14, the Pilgrimage to La Verna. From there on for ten subjects Giotto seems to have taken a personal hand in the work, but it would be rash to assert that any picture is wholly his, or, for that matter, that several are not wholly the work of inferior hands. With this tentative suggestion that the subjects on the right wall were superintended by Giotto, and those on the left, excepting the last three—the work of the so-called "St. Cecily Master"—in considerable measure executed by Giotto, we must leave this perennial riddle.

Of Venturi's faithful chronicle of the fourteenth century painters after Giotto we can only say that the survey seems exhaustive, that, in particular, the tracing of the radiating influence of Simone Memmi and the Lorenzetti is very useful, and that the abundant cuts of entire fresco cycles from Cimabue to Agnolo Gaddi make the book a useful resource for reference.

Per Lamm will publish this month "La Caricature de la Conférence de la Paix," a collection of caricatures on the Hague Conference brought together from all sources.

In order to popularize classical art and to educate the people to a better appreciation of its masterpieces, the well-known art publishing house of Franz Hanfstaengl of Munich is publishing under the general title of Weichers Kunstbücher a collection of reproductions from the paintings of modern and former times, at the small price of eighty pfennige for each booklet. These new issues are chiefly based on the famous Hanfstaengl reproductions, and each contains about sixty examples. Up to the present time twelve such booklets have come out, treating of Rubens, Van Dyck, Rembrandt, Raffael, Reynolds, Teniers, Old Dutch Painters, Titian, Franz Hals, Murillo, Wouwerman, and Velasquez. These reproductions are, on the whole, excellent, though differing somewhat in quality. One drawback is that they are rather small, as a rule 7 by 10 centimetres. The publisher announces that it is his purpose in this series to issue a "Reclam der Kunst," in imitation of the famous Universalbibliothek, which for decades has been published in small pamphlets at a nominal price by the house of Reclam.

Alesso Baldovinetti, as an eclectic and experimentalist at the turning point of Florentine painting, was predestined material for the new connoisseurship. As a landscapist of merit he also has a certain claim upon unscholastic lovers of art. Happily enough, considering the contentious

possibilities in the case, he has escaped so far the maker of monographs, only to fall into the kindly hands of Emilio Londi, whose "Alesso Baldovinetti, Pittore Fiorentino, con l'Aggiunta dei suoi Ricordi," is published by Alfani e Venturi, Florence. This little study is informed with good sense and keeps clear of hero worship. In the main, it is a compilation and criticism of recent scattered investigations, but Signor Londi's original suggestions are always worthy of consideration. He attributes, for example, the St. Nicholas predellas in the Casa Buonarotti to Baldovinetti. On such a point one must reserve judgment. At least no better ascription has as yet been made. Signor Londi also raises the possibility that Baldovinetti may have been the teacher of Piero Pollaiuolo, and in a sense the conveyer of the tradition of Domenico Veneziano to the later realists. This supposition has something for it, but a little study of the decorative painting of the time (cassone fronts notably), such, for instance, as William Rankin is making in the *Burlington Magazine*, will demonstrate the wide diffusion of Domenico's influence. It seems an exaggeration, then, to make Baldovinetti the chief inheritor of the new tradition. In the main the little pamphlet, with its adequate illustrations, may be cordially recommended.

At the eighteenth annual exhibition of the New York Water Color Club, now open at the American Fine Arts Galleries on West Fifty-seventh Street, F. Luis Mora has won the Beals prize for the best water-color, with his Vacation Time—three women and two men in the stern of a sail-boat.

At Montross's gallery an exhibition of water-colors and pastels will be open till November 23. Among the artists represented are Horatio Walker, J. Alden Weir, Elliot Daingerfield, George H. Clements, D. W. Tryon, Childe Hassam, and W. L. Lathrop. At Macbeth's there are pictures by American painters, dead and living, including George Inness, William Keith, Ernest Lawson, C. B. Coman, William Sartain, A. C. Davies, Jerome Meyer, and George Luks.

For a number of years excavations have been going on at Silchester, in Hampshire, England, where a whole Roman town has been gradually unearthed. This season's work has closed with the discovery of what is perhaps the most interesting relic of Roman times found in the north. It is a small square temple, the ground plan of which is still in perfect preservation, showing a floor about twelve feet by fourteen. The outer walls are about thirty-six feet square, with a wide entrance on the eastern side. Against the western wall is the base of a platform, which evidently supported the image of the deity. Of the latter, several fragments have been found, which give us an idea of its original form. The figure is bearded and wears a long cloak and greaves ornamented with lions' heads. A fragment of one of the hands is grasping some object, which appears to be the lower end of a cornucopia. An inscription, also found recently, contains the word "Marti," which suggests that the temple may have been dedicated to Mars, of whose image the unearthed fragments probably formed part. On another fragmentary inscription occurs the word "Callevæ," which helps to establish the identity of the Roman town at Silchester with the Calleva, or Calleva Attrebatum, of the Antonine Itineraries. Several architectural fragments of the temple have also been unearthed, but only the inner area of the building has as yet been explored. When the surroundings are opened up, it is hoped that enough of the original fragments may be recovered to reconstruct the temple.

Finance.

THE PREMIUM ON CURRENCY.

During this financial crisis New York has witnessed a phenomenon not seen since the panic of 1893, and rare in any market of the world—a premium on currency, paid in the form of checks on solvent banks. In the early stages of the present panic, one of the incidents was the practical stopping of business in foreign exchange, because our credit was uncertain, and bankers were unable to borrow money for the importation of gold. Gold is engaged for import through purchase in New York of a draft on London for the amount desired; this draft, sold by a banking house with London connections, may be cashed in London and used at once to draw gold. But, obviously, before the operation can be completed, the purchase money must be raised through a bank loan, and paid in New York City. On the 24th and 25th of October, the money simply could not be raised; not until the banks, on October 26, decided on the issue of Clearing House certificates was this part of the operation made possible.

Once these facilities had been restored, engagement of gold in London began in quantity. The first engagements were legitimate on any basis of exchange, because the rate on London had fallen to 4.81, whereas 4.84 is normally the point at which English gold may be ordered for import at a profit. Moreover, American bankers had made large drafts against exported grain and cotton. But in the existing state of the New York market, with reserve money imperatively needed, inquiries for sterling bills as a basis for importation of gold soon far surpassed the volume properly authorized by these commercial bills. So keen was the bidding to get gold for import, that, as against the rate of 4.81 for sight sterling bills on October 26, the price had risen to 4.88 a week later, and was said, in some instances, to have touched 4.90 at the opening of the present week. But since 4.88½ is the rate at which, ordinarily, gold may actually be exported with a profit from New York to London, the use of these high-priced drafts on London for engagement of foreign gold indicated abnormal conditions. Soon it became manifest what this unusual factor was. Institutions or individuals in urgent need of cash for their reserves, in order to get gold by the next English steamer, actually bid a premium for the cash delivered in New York. Thus, if gold could commonly be imported at a profit with exchange at 4.84½, the offer of a premium of 3 or 4 per cent. would make possible what actually occurred this week and last—importation of gold with exchange at the exporting point.

To such operations, however, some limit must be set. If the only restriction were the needs of the importer, any premium could conceivably be bid, and the gold reserves of a European bank could be drawn on so long as that bank continued to pay gold freely. But no institution could permit such a drain without making at least an effort to check it. The Bank of England, having on Thursday of last week advanced its official discount rate from 4½ to 5 per cent., held a special meeting on Monday of this week and moved the rate up to 6. This action, putting a higher price on money, made the transfer of gold from London to New York more costly. For the time, however, the expedient did not check the movement, and the bidding for gold continued with exchange well above the normal export point. The final result of such conditions, which the London dispatches frankly describe as "barbaric," can be only guessed at. But as a matter of fact, the actual arrival this week of the first consignments of gold from London should stop these panicky bids.

This is not the first adoption of this emergency expedient to relieve a panic. Many people have forgotten the interesting way in which it was employed in 1893. At the crisis of that panic, when the deadlock of credit seemed for a time to be complete, and when shutting the Stock Exchange had been actually discussed in the governing committee, relief through foreign exchange was forced in the same way as on the present occasion. In 1893 the main objective point was established by a different mechanism. During the panic of the past two weeks the actual premium on imported gold has been paid, so far as can be ascertained, chiefly by banks directly to international banking houses. In 1893 the main purpose was the drawing of hoarded currency out of its hiding places in this country. With that end in view, one or two Wall Street brokers advertised an offer to pay in certified checks on New York banks a premium of 1½ per cent. for any kind of currency. Such an offer meant that the banks had largely suspended cash payments on checks, for otherwise no broker would give a check for $101.50 on a solvent institution in exchange for $100 worth of bills or coin. As a matter of fact the banks had not formally suspended, but they were generally refusing, from sheer inability, to pay cash for large checks. Somewhat the same situation has arisen in the past two weeks, but with this important difference: that to-day cash for the payrolls of employers has almost invariably been provided, whereas, in 1893 it was precisely such requirements which were not met.

Employers of labor, with their large weekly or monthly payments, could not wait, and it was they, directly or through their banks, who had employed the Wall Street brokers to announce the premium for currency. The offer was an experiment. Its result, however, as regards the drawing out of the hoarded money was successful. Within two weeks a sum of cash estimated by the brokers at not less than $15,000,000, was delivered in exchange for the checks. This $15,000,000 was, it should be observed, entirely independent of such gold as the market then obtained through foreign exchange. In all, $48,000,000 in gold was brought from Europe during the stress of 1893, and of this between $10,000,000 and $20,000,000 came, like the gold imports of

the present week, with exchange above the normal import point. Since at the height of the crisis of 1893 the brokers' premium for currency went as high as 4 per cent., it was inevitable that gold should have been imported under abnormal conditions, just as at present.

The economic aspects of that premium on currency were much discussed, in 1893 and afterward. Financial experts are generally agreed that what actually happened was not a premium on currency, but a discount on bank checks. Nothing even in the panic emergency of 1893 made gold or silver or banknotes worth more than before. Something, however, had made a certified bank check worth less. Where previously such a check represented power to draw cash at will, it now represented nothing of the sort; it was a claim to that amount of the assets of a solvent bank, not wholly available in cash till the panic subsided. But this simply meant that the check was worthless for the immediate purposes of the man with large payrolls falling due. To all intents, therefore, these checks were offered at a discount of 1½ to 4 per cent. Precisely the same principle applies in the present panic. The buying of gold in London for New York, with exchange at 4.89 or higher, through the paying in New York checks of a 3 per cent. premium on the cash, and the actual advertisement of a "premium on curreney," this week, by one or two Wall Street brokers, simply indicates that for the moment the checks on some New York banks were selling at a discount.

BOOKS OF THE WEEK.

Ancient Hebrew Literature. Arranged by R. Bruce Taylor. 4 vols. Dutton. 50 cts. each.

Anthropological Essays presented to Edward Burnett Taylor, by H. Balfour and others. Henry Frowde.

Arabian Nights. Edited by W. H. D. Rouse. Dutton. $2.50.

TWO IMPORTANT BOOKS IN BOTANY

Clements's Plant Physiology and Ecology

By FREDERICK EDWARD CLEMENTS, Professor in the University of Minnesota. xv+315 pages. 8vo. $2.00.

Physiology and ecology are not treated as separate subjects, but they are merged to give a comprehensive view of the activities and structures of plants and of plant formation.

Science: "This book, the result of more than fifteen years of ecological work on the part of the author, is a notable addition to the literature of botany in America."

Curtis's Nature and Development of Plants

By CARLTON C. CURTIS, Instructor in Columbia University. vii + 471 pp. 8vo. $2.50.

A book for the general reader as well as for the student. The essentials are always kept in mind, and the purpose to make familiar our common plants.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 14, 1907.

The Week.

The history of a panic is the history of a confused conflict of many causes; and unless you know what sort of effect each cause is likely to produce, you cannot explain any part of what happens—it is like trying to explain the bursting of a boiler without knowing the theory of steam.

That sentence of Walter Bagehot's might well be set as a copybook model for many of our rough and ready expounders of the financal trouble—these men with their glib "Morse did it," "The currency system did it," "Roosevelt did it." We have to distinguish, of course, between the real and the political explanation. Politically, Mr. Roosevelt will be held responsible. By an inexorable political law, the President who "created" prosperity must also preserve it, or he becomes unworthy of idolatry. To trace the larger causes is work for the financial historian and the social philosopher. But we are too close to the upheaval to be certain of all the forces which wrought it. At the same time, we can perceive, for example, that what has been called the "cosmopolitan loan fund" of the world had not only become larger than ever before, but was more fluid than ever, and had been more exhaustively drawn upon. Under the pressure, we have seen it running here and there like drops of quicksilver. That financial trouble in New York should close the Stock Exchange of Rome, as the dispatches tell us, betrays in a striking way not only the international character of surplus capital, but the long and severe strain it has undergone. Part of the trouble runs back to the state of mind of the people generally. The habit of extravagance has become fixed during these seven fat years. Luxuries have been bought as never before—luxuries of the kind that perish with the using, that not only lock up capital, but destroy it. Unproductive expenditure has been large, in contrast with reproductive outlays. It has been true, too, that profits and savings have been, in a probably unprecedented way, put into speculative securities. This meant that hundreds of thousands of people had not their customary margin in cash savings, upon which they could readily put their hand in a crisis. Beneath this luxurious temper lies the belief that prosperity will go on without a break. We may keep spending freely and without a tremor. But the same credulity easily translates itself into panic. From believing that there is no end to our riches, people pass to the other extreme and believe that all riches are about to take wings. Easy-going and unwinking luxury becomes in a night panic-stricken hoarding. We have only hinted at causes which go deeper than any person, any law, any party. Folly and improvidence were in for a punishment. They are now getting it.

Much attention has been paid to the somewhat startling figures of last Saturday's weekly New York bank statement; especially to the $51,924,000 deficiency below the 25 per cent. ratio of reserve to deposits required by the National Bank law. A little examination will prove, however, that the showing is by no means so sensational or disquieting as might at first glance be supposed. It is true that this deficit of last Saturday is the largest in our banking history. The largest reported in the panic of 1893 was $16,545,000, on August 12, and, although the banks ceased publishing their weekly statements in the panic of 1873, it is wholly improbable that there was any such deficit then. But the test of present conditions is not obtained by comparison of actual deficit figures, but by comparison of the ratio still maintained between reserve and deposits. The $16,545,000 deficit of August, 1893, left actual cash in hand amounting to 20⅝ per cent. of deposits; last Saturday's $51,924,000 deficit left a reserve ratio of 20¼. In other words, the New York banks are substantially no worse off than they were fourteen years ago. The reason why the present deficiency is so much larger than that of 1893 is that all other items in the bank statement are to-day much larger. Last Saturday, the New York banks held $219,794,000 in actual cash; when the deficit of 1893 was greatest, these same cash holdings were only $76,505,000. But, naturally, in the legitimate expansion of business between 1893 and 1907, loans and deposits had increased in a similar ratio. Where deposits, in that earlier panic, amounted to $372,200,000, last Saturday they footed up to $1,086,878,000. The conclusion to be drawn is that the New York banks, being nearly three times as strong in actual resources as in 1893, can report a deficiency in reserves three times as great and still retain fully as sound a position as in that year. Within four weeks of the heaviest deficit of 1893, a surplus over the 25 per cent. reserve had been restored, and the same thing is likely this year. As for the mere fact that reserves were so far invaded as to reduce their ratio to deposits from 25 per cent. to 20¼, every one knows that such use of the stipulated reserve, in a panic time, is precisely the reason why that reserve was prescribed by the banking law. The sound principle of banking, recognized ever since the celebrated "Bullion Report" to Parliament in 1810, has been that, in times of panic, banks should discount freely and fearlessly for all solvent customers, but at high rates, and should use their reserve fund for that purpose.

Vast programmes of legislation are being marked out for the coming Congress. It is to repeal the Sherman Anti-Trust law; it is to reform the currency; it is to vote $1,000,000,000 in appropriations; it is to get ten thousand recommendations from the President, and act upon all of them *instanter*. People who blithely make such predictions leave too many things out of their reckoning. They forget that politics will swallow up everything else at Washington this winter. The shadow of the Presidential election will rest upon the Capitol from the first day of the session. Everything that is proposed, debated, or enacted will be thought of primarily in relation to the political fortunes of some man or party. Under such circumstances, the actual work done—if we do not count intriguing as work—is pretty certain to be small. Congress is proverbial for finding its strength in sitting still. And if business depression hangs over the country into next year, the House, at least, under that master of how not to do it, Speaker Cannon, will be likely to sit stiller than ever.

When the Service Pension act was passed, many people who had opposed it tried to console themselves by the thought that, even if the pension-grabbers had triumphed, they would at least not be heard from again. This theory has already been proved baseless. Your pension-hunter's appetite can never be satiated. Hardly had the bill pensioning every one of ninety days' service become a law when there was a movement to obtain State pensions in addition to the Federal. Now, a more serious undertaking is announced. As soon as Congress reassembles, Senator Burrows and Representative Dawes are to introduce a bill for a retired list for all volunteer officers who served at least one year in the field prior to Lee's surrender. According to their ages, the beneficiaries are to receive one-half or three-quarters of the pay of regular officers of the ranks they held when mustered out—but nobody is to receive more than $2,000 a year. There is to be no back pay, and every pension now held by an officer is to be surrendered. It is estimated that 9,000 officers still survive who would benefit by this law; of these only two are major-generals and twenty-eight brigadier-generals, out of 680 of both grades. Precedent for the proposal

is a law approved May 15, 1828, giving to each of the surviving officers of the Continental Line the amount of his pay in the line up to the full pay of a captain. There were 12,500 who profited by this law, and they were at that time nearly all of the age of seventy or above.

We fear that when Secretary Taft returns he will have to provide for his carriage some other motive power than the arms and legs of his enthusiastic fellow-countrymen. As if the defeat of Burton in Cleveland were not enough, Samuel Gompers now says unkind things about the Secretary. Has the Republican Administration, then, created the highest wages on the face of the globe for nothing? Has the President shaken the grimy hands of scores of locomotive engineers, only to have an official spokesman of organized labor decline to give complete and unqualified support to the heir-apparent? The sentiments of Mr. Gompers, like those of Dick Deadeye, "disgrace our common natur'." Mr. Taft and his friends may draw some satisfaction from the fact that the candidates on Mr. Gompers's blacklist last year did conspicuously well in the elections. But, unfortunately, there are others who treat the plans for the Presidential succession with courtesy equally scant. Mr. Taft is popular now, and he always has been popular in this country; but it is becoming increasingly plain that his standing as a Presidential candidate would be actually better to-day without Administration support.

For the year ending June 30, a bulletin of the Interstate Commerce Commission shows that our railroads took more than their customary toll of deaths and injuries. The killed number 5,000, an increase of 775 over 1906, and the injured 76,286, an increase of 9,577. This is an old story, and it constitutes a national disgrace. That a certain proportion of accidents is unavoidable on the best-regulated railroads, must be admitted. The English roads have had at least three terrible disasters within a twelvemonth. But defective equipment, negligence, and recklessness are not accidental, and to them must be attributed a painfully large share of our annual railway slaughter. The bulletin speaks of the extraordinary number of derailments during the twelvemonth. Many of these were due to broken rails. That fact should certainly stiffen the railroad officials in their demand that the steel manufacturers make a better quality of rail.

The result in actual votes of the Hearst-Parsons deal in New York County deserves special study, because the whole fusion movement was frankly put upon a numerical basis. Herbert Parsons made no other defence, or pretence, from the first. It was all a question of figures and percentages. To every Republican who protested on the score of principle or consistency, Mr. Parsons had but one answer. He took out his pad and jotted down the election returns of 1905. In that year, the vote for Ivins in New York County was 64,289, for Hearst 123,292, for McClellan 140,264. Hence it was as plain as addition that the way to beat Tammany was to fuse the Republican vote with the Hearst vote. In actual result, however, Mr. Parsons's little sum figures out as follows:

64,289+123,292=117,000.

The reverse of this mathematical puzzle is displayed in Brooklyn. In Kings County, the Republican vote in 1905 was 61,192; that for Hearst, 84,835, and for McClellan 68,728. In Brooklyn, however, there was no fusion with Hearst. His tremendous vote was deliberately ignored, but with the result, in the returns for County Clerk, that the problem in subtraction contrasts in this way with Mr. Parsons's in addition:

61,192—84,835=79,969.

Such figures may lie, but they point an unmistakable political moral. Any politician who sits down with the election returns and proceeds to make his combinations purely on the basis of votes cast—ignoring the past, hazarding the future, leaving out convictions, making a jest of conscience—is certain to be confronted with such unpleasant results as stare Mr. Parsons in the face. He will always find an unknown quantity vitiating his nicely prepared equation. That unknown quantity is the moral element. People whose votes are to be "delivered" have a way of obstinately refusing to be counted as so many cattle. They will insist upon exercising their own judgment; and indignation at political chicanery and cynicism will always powerfully influence them. This is the consideration which never entered into Mr. Parsons's reckoning. His crushing defeat has writ large a moral which the most hardened politicians must hereafter take to heart. You cannot denounce a man one year as a dangerous incendiary, the deadly enemy of law and order, and then the next year embrace him as a brother, without having the people repudiate you and all your works.

A mixture of good and bad—as in most human things—appears in the reports on the condition of the civil service, read last week at the annual meeting of the Civil-Service Reform League in Buffalo. President Roosevelt and Gov. Hughes came in for praise; Mayor McClellan and the Federal officials of Buffalo for severe condemnation. Gov. Hughes's address was the valuable testimony of an executive who, in actual practice, and with a large amount of patronage, has found the best interests of the State conserved by adhering to the principles of the reformed service. Particularly effective was the Governor's quiet disposal of the time-worn flings at civil-service examinations. He would attach no undue importance to examination papers, but, "as compared with the system of making public office a partisan encampment, the system of competitive examination is so far in advance that there is no debate among reasonable men upon the question."

The Supreme Court of the District of Columbia heard arguments last week in an important boycott case. The Buck's Stove and Range Company is applying for a temporary injunction to restrain Samuel Gompers and others and the American Federation of Labor from boycotting it and its products. The company has already brought suit against Gompers and his associates on the ground that their interference with its business has constituted restraint of trade within the meaning of the Sherman Anti-Trust law. The attack upon the company arose out of the allegation that members of the Brotherhood of Foundry Employees had been compelled to return to a ten-hour day after having once worked for nine hours. The affidavits in support of the company's application make a book of 312 pages and show how far-reaching is the terrorism exercised by the Federation of Labor. The company was notified by agents the country over that they could not sell its products without incurring the enmity of local unions, and risking their entire business. A boycott of a firm of manufacturers has been something heretofore thought of as merely a local affair, applying, say, to Bridgeport only. But this amazing exhibit shows that the Federation followed up the products of the Buck's Company into State after State, and through its local branches did its best to destroy utterly the business of the company. Other, and quite different, ways in which the boycott is being used by the Gompers inner ring of eleven men, who control their two million followers from Washington, have recently been brought out by *American Industries*, the organ of the National Association of Manufacturers. It publishes in facsimile a letter from the officers of the Memphis branch of the International Union of Steam Engineers, "consisting of more than one hundred of the leading and most intelligent engineers of the city of Memphis," to the effect that its members will patronize only those dealers in engineering supplies who advertise in the *International Steam Engineer*, an "official paper" printed in Boston. Obviously, if the same tactics are employed in

other cities, the *International Steam Engineer* will shortly have the finest advertising display in the country, and its manager can retire in luxury, since he can ask any rate he chooses.

If anything were still necessary to convince fair-minded men of the emptiness of the Japanese war scare, so persistently fostered by the Jingo press, Foreign Minister Hayashi's declaration of policy through the medium of the Associated Press should be sufficient. No more manly or frank enunciation of a great Power's attitude has been reported for many a year, nor can we readily think of a statesman who has ventured so far in the expression of conciliatory sentiments without actually abandoning the conciliatory for the merely supine. It is, of course, open to those who gaze eagle-eyed on the Pacific and discern thereon Japanese armadas bearing hosts of invasion, to believe that all this elaborate explanation of the Japanese Foreign Minister is guile and deception. As a matter of fact, we have gone far enough in our recoil from the Japanomania of two years ago. No admirable quality that the mind of man could devise was wanting to the gallant little nation then; no sinister motive or capacity that the mind of editor can devise is wanting to the Mikado's people at present. They are dishonest, immoral, cruel, ambitious, and superhuman only in their ability to work mischief. The one quality of intense though shrewd patriotism, we do not deny them. Yet if people would only stop to think on present conditions in Japan and in international politics, how clearly it would appear that a shrewd and limitless patriotism itself counsels Japan to peace for years to come.

Men of impulsive nature like the German Emperor often do the wrong thing; but sometimes, too, they hit upon the right action at the critical moment. The Kaiser's visit to Edward VII., which is said to have been suddenly decided upon, is very timely. It cannot but prove a contribution to the cause of European peace, and it loses nothing of its significance in coming so dramatically close upon the dissolution of the Hague Conference, with its disappointed hopes. The meeting of the German and British monarchs completes the circle of *rapprochements* and *ententes* which has been drawn about the European Powers in the course of the last three years. First, Great Britain and France entered into the now celebrated "understanding" which removed the colonial possessions of both Powers outside the scope of possible future contention. Spain, through her close relations with France in the matter of Mediterranean policy, came under the influence of the dual agreement. Since England has always been the friend of Italy in the Mediterranean, there followed, as a result of the Anglo-French *entente*, a decided relaxation in the chronically jealous relations between France and Italy. The very integrity of the Triple Alliance seemed threatened when Italy joined with France against Germany in the Algeciras Conference of last year. France, a mediator in turn, has no doubt hastened the recently concluded agreement between Great Britain and Russia. And now it is not improbable that Russian influence has helped to bring about the interview between Edward VII. and William II. It is true that where everybody is everybody else's friend, the chances for quarrelling are not removed. Nevertheless, the peace of Europe must profit when Germany abandons her attitude of suspicion.

No one expected any other outcome of the suit brought by Chancellor von Bülow than the punishment of the journalist who libelled him in such a criminal way. Von Bülow is by no means a generally popular man, but he has the respect of all intelligent political observers. Indeed, even the cartoonists of the Opposition give him a kindly appearance, at the moment of ridiculing his ideas and satirizing his utterances. That Von Bülow's position has been shaken somewhat by the revelations in regard to the court camarilla is undeniable. The way in which the Foreign Office is now seen to have handled the Moroccan affair is also bound to injure him; for the former Under-Secretary of State confessed profound ignorance of some of the actions brought to light by the Harden revelations. Meanwhile, the Chancellor's efforts to carry on his "block-policy" of uniting Conservatives and Liberals are meeting with greater and greater opposition. The Radical Liberals are doing their best to break it up, and to enter into a working agreement with the Socialists. The Centre, too, is no less antagonistic than it was a year ago. Hence, the coming session is likely to witness some vigorous onslaughts upon the Chancellor, whose long summer absence from Berlin has increased the anxiety of the public about his health.

An agitation in favor of restoring the death penalty, which has been virtually abolished in France by the commutation of death sentences to life imprisonment and by the suppression of the annual appropriation for the maintenance of the guillotine in the Department of the Seine, is reported to be rapidly growing. Crimes of violence in the large towns have been increasing to what the greater part of the French press describes as an alarming extent; the *apache*, or thug, has become a prominent character in contemporary journalistic art; and the pleasant life that awaits the convicted murderer in the perpetual care of a kind-hearted government has been contrasted by the Opposition press with the mode of life of the average laborer or peasant. The government, indeed, is about to introduce into the Chamber a bill for the abolition of capital punishment. That it does not overlook the seriousness of the present situation, however, is shown by the initiation of measures looking towards the reorganization of the police system all over the country. Such twofold action is wise, for it proceeds on the principle that if punishment is really a deterrent of crime, its efficacy depends, not on the degree of severity, but on the certainty of its application. The history of the movement for the abolition of capital punishment is often that of a spasmodic abandonment of the death penalty, with its equally spasmodic reëstablishment under the influence of temporary panic. That the French government is bent upon putting the issue to a fair trial is evident from the recent action of President Fallières in commuting the death sentence of the perpetrator of a peculiarly atrocious crime, in the face of public indignation.
